THOMASTON, Conn., Oct. 31.—Badge shoot of the Empire Rifle Club, cold, raw weather with strong wind:

E Thomas	10	12	12	11	9	11	11	11	10	10—107
G A Lemmon	9	11	11	10	8	11	10	10	8	11— 99
F A Perkins	11	10	10	10	11	11	10	9	7	10— 99
C F Williams	11	9	8	12	10	10	11	10	9	7— 97

ZETTLER—DORRLER.—A match, 100 shots, 12-ring target, possible 120, will be shot by C. G. Zettler, champion of the Zettler Rifle Club, and M. Dorrler, champion of the Bullshead Rifle Club, Nov. 8, 8 P. M., Zettler's gallery.

VALUELESS SCORES.—To be of interest scores should be accompanied by details of distance, bullseye, etc. Without such data scores are utterly valueless except as a record for the single club shooting them.

RICHMOND, Ind.—Our club are all off deer hunting in Northern Michigan, so there are no scores to report from here this week.—J.

NEW HAMBURG, Oct. 27.—The season's shooting for the Hamburg Gun Club closed yesterday. Up to Oct. 6 twenty-one matches were shot for the first prize, silver cup. Out of these S. G. Holley secured ten, and won; Thos. Puddicombe five, A. F. Spring four and F. Bourne two. The three matches for second were between Puddicombe, Spring and Bourne. The first was won by Puddicombe and Bourne dropped out. Second match:

Puddicombe.....1011111100—6 Spring.....1101111111—9

Last and deciding match, Oct. 26:

Puddicombe.....1111111101—9 Spring.....1110111001—7

Puddicombe takes second. Our average for the season is 64.20 per cent., shooting swiftest notch Ligowsky C. P., 18yds. Certainly the boys have found the trap of much benefit so far in their autumn shooting for game.—SANCHO.

THE TRAP.

Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

THE GREAT T— T—.

Editor Forest and Stream:

The art of wing-shooting with a rifle is an accomplishment that very few of the devotees of the gun ever suceeed in mastering. I call it a science, for science it certainly is, requiring an eye of exceeding sharpness of vision, a mind quick to calculate distance, speed of object shot at, reflection of light, direction of wind, and muscles trained to answer the slightest demands of the brains.

These are some of the requisites that go to make up the successful wing-shot with a rifle. In the highest degree do we find these requirements developed in Mr. T— ——, of this city, better known on the frontier as T— T—.

Your correspondent found him one day last week while taking his usual practice, and while being unaware of our identity he gave one of the most wonderful exhibitions of skill with a rifle that it has ever been our lot to witnesss. And here let me state I have seen all the champion shots and professional marksmen of the age shoot. Among the many feats performed by Mr ——, the following are the most notable: An attendant throws two balls in the air. At once cocking his rifle he broke both within a yard of each other before they had reached their full height. He next pitched up a glass ball himself; picking his rifle off the ground he broke the ball before it reached the sod. He then shot at bead pencils, dimes, nickels, marbles, etc., hitting them with the greatest ease. In fact, the most difficult shot seemed easy to accomplish to him. All of the above shots were performed while standing on the ground.

T— T— next tried shooting from the back of a horse running at full speed. This he does using neither saddle, bridle, strap nor pad. In this manner he broke double and single balls without a miss, using a heavy Blank's repeating rifle. He also broke a ball while in the air, after missing it on purpose three times, breaking it with the fourth shot. His next feat was to break a ball thrown directly at him as he came down the range at full gallop. This he does in grand style. Leaving his horse to the ever-ready attendant, he performed many of the fancy stage shots, such as knocking the ashes from a cigar, shooting an apple from the head of a friend, and hitting a quarter held between the thumb and forefinger. These he does with the aid of a small glass, with the rifle held in one hand, upside down and over the shoulder. He also broke several glass balls in the air, using a Somebodyelse's .45-caliber double-action revolver. With this same weapon he did some fine target work at 30 yards. Laying aside the revolver he took up his shotgun, breaking balls right and left with such ease and precision as can only be acquired by long practice. Your correspondent was assured by several sportsmen who are intimate with Mr. —— and have hunted with him on the plains that T— T—, as he is familiarly called in the West, is one of the best field shots to be found anywhere and a sportsman in the full sense of the word.

On being introduced to your correspondent he begged of him not to report what he had seen him do, as he did not want to figure before the public as a great shot, or attain the notoriety attached to a public character. Mr. —— assured me that he knew that several of his old pards in the West could beat him shooting and not half try. On learning that I was somewhat of a shooter Mr. —— invited me to visit him at his home on the south side. Proceeding to his tepee we were confronted on all sides by guns, rifles, revolvers, long bows, arrows, hunting scenes, deer and elk horns and buffalo heads, trophies of T——'s prowess as a hunter. Indian moccasins, robes, saddles, etc., mementoes of his wild life on the plains. It is here, seated on a wolf robe, and reading the latest number of the FOREST AND STREAM, that T—— is at rest, surrounded by four or five splendid looking hunting dogs, prominent among which may be mentioned Dash and Dart, two imported Scotch staghounds.

The following sketch of the life of this remarkable man may not be out of place. T——was born on the south bank of the Mahoning River, in Youngstown, O. At an early age he became accustomed to hunting, fishing and boating; he soon became an expert in the use of all weapons pertaining to the chase. At home in the saddle, equal to hunting in the surrounding forest, or fishing in the river, he soon became inured to the hardships and dangers incident to such pursuits. Having inherited from his forefathers the true Irish love for a roving military life, he early turned to the great West as a place where his adventurous spirit could find plenty of scope. On reaching an age when most boys would be thinking of book or ball, T—— with a single companion started for the wilds of Arizona. In this then unexplored and uncivilized region he had a varied and romantic experience, hunting, scouting, mining and herding amid the hostile Indians and wild beasts of the mountains. While engaged against the hostile Utes of Southern Colorado he received a wound which necessitated the best of treatment or it would have resulted in his death. For this reason we find him East until he again gets in shape to return to his wild Western home. T—— stands six feet tall, straight as an arrow, well proportioned and exceedingly muscular, with a clear complexion, bright, laughing blue eyes, curly brown hair, falling in ringlets to his shoulders. Socially he is a success, combining as he does the education and manners of a gentleman with the more rugged virtues of the Western hunter and frontiersman. In fact he is a typical Westerner, one we often read about but seldom see in real life. T——'s friends here and in the West are legion. BLUE ROCK.

NEW ENGLAND CHAMPIONSHIP.—The champion individual badge shoot of the New England Trap Shooters' Association drew together Oct. 28 on the grounds of the Boston Gun Club, at Wellington, a fine selection of the trap shooters of the New England States. Worcester, Fall River, Providence, Exeter and Brockton were represented, and many members of the Massachusetts Rifle Association, Malden Gun Club and Boston Gun Club were present to compete for the generous prizes offered. It will be noticed that C. C. Gray carried off the elegant badge presented by the National Target Company, of Knoxville, against the best shots of the New England States. The other events are recorded below:

First event, 5 single clay pigeons, 18yds.—W. L. Davis and C. H. Gerrish divided first, E. W. Buffington and E. W. Tinker divided second, C. C. Gray third.

Second event, 5 pair double clay-pigeons, 16yds.—H. W. Weller and W. T. Perry divided first, W. L. Davis and Buffington divided second, Tinker and A. H. Wright divided third, E. S. Aldoes fourth.

Third event, 7 single clay-pigeons—Buffington and Wright divided first, Weller second, C. Ellsworth third, C. M. Stark fourth.

Fourth event, 7 blackbirds—Weller and Stark divided first, Davis second, Wright third, Tinker fourth.

Fifth event, 5 blackbirds—Stark and Poud divided first, D. Kirkwood second, Davis third.

Sixth event, 3 pair blackbirds—Lawson first, Stark second, Tinker third, Gerrish fourth.

Seventh event, individual Contest, at 9 singles and 3 pair double Knoxville blackbirds for the elegant gold badge presented to the N. E. T. S. A. by the National Flying Target Co., of Knoxville, Tenn.—C. C. Gray carried off the trophy. This match was divided into two different sweeps, the winners of which were as follows: At singles Stark and Gray divided first, Webber and Edwards divided second, Gerrish and Wellington divided third, Tinker and Williams divided fourth; at doubles: Buffington first, Edwards second, Lawson third, Webber and Williams fourth.

Eighth event, 7 clay-pigeons—Davis first, Gilman, Buffington and Farrar divided second, Pond third, Perry fourth.

Ninth event, 7 clays—Lawson first, Webber and Buffington divided second, Stark third, Stanton fourth.

Tenth event, 7 clays—Davis and Stark divided first, Lawson second, Webber third, Perry fourth.

Eleventh event, 5 clays—Davis and Lawson divide first, Gray second, Buffington third.

Twelfth event, 7 clays—Stark and Kirkwood divided first, Lawson and Swift divided second.

Thirteenth event, 7 clays—Lawson first, Swift and Stark divided second, Holden third.

Fourteenth event, 5 clays—Lawson and Stark divided first, Swift second.

Fifteenth event, miss and out—Stark first, Lawson second.

BOSTON GUN CLUB.—A number of the members believing that Friday as a business day is not best suited for their practice at trap shooting at Wellington, Mass., the Boston Gun Club shooting days will be arranged as follows: Nov 11 and 25, Dec. 9 and 23, 1885; in 1886, Jan. 6 and 20, Feb. 3 and 17 and March 3 and 17, upon which dates will also be shot tournaments at clay pigeons, etc. The 7-shot scores shot in practice and at the tournaments will all be eligible and count for the prize lists, of which liberal ones are provided for members and visitors. The three best scores of seven birds each on any six of the above ten days making the number of scores to count for prizes 18; no limit to the number of scores shot. One trap at all these shoots will be kept for practice and minor sweeps. The programme on above dates will be as follows: First event, 5 birds, clay pigeon, 30 cents entrance; second, 2 pairs, clay pigeons, 50 cents entrance; third, 7 birds, clay pigeons, $1 entrance; fourth, 3 pairs Knoxville blackbirds, $1 entrance; fifth, 7 birds, clay pigeons, $1 entrance; seventh, 5 straightaways, blackbirds, $1 entrance; eighth, 5 pairs clay pigeons, $1 entrance; ninth, 2 men team match, 7 single clay pigeons per man, per team $2 entrance; tenth, 7 singles, clay pigeons, $1 entrance; eleventh, 2 pairs clay pigeons, $1 entrance; twelfth, 5 blackbirds, 50 cents entrance. The sixth event is left open for possible challenge matches. Visitors Boston way may enjoy a good time with a capital set of shooters by taking a run to the ground on dates given.

SAN FRANCISCO, Oct. 22.—The Forester Gun Club's last pigeon shoot of the season which took place at Agricultural Park Sunday, attracted a large number of spectators and passed off, as usual, very pleasantly and satisfactorily. Seventeen members faced the trap for the medal shoot, and, although none of them succeeded in making a clean score, the average shooting was good, especially when it is considered that very little practice has been indulged in recently. John Gerber made the best score, securing all of his birds except the tenth. His response, when presented with the medal, will long be remembered as a masterpiece of oratory. During the medal shoot a stray wild goose flew over the field, at a height of about 60yds. A score of voices shouted, "See that goose!" and W. E. Gerber, slipping a shell into his gun, fired at the bird, bringing it down in fine style, and receiving applause for the best shot of the day. Following is the score of the medal contest:

W Gerber, 31yds.	1001111111100— 8	G Watson, 26yds.	10101101110— 8
J W Tedd, 26yds.	1110011011111—10	J E Kane, 31yds.	1111110111011—10
H Gerber, 26yds.	1111110010101— 9	Rinstaller, 31yds.	0011101101011— 7
G Schroth, 31yds.	1111101101111—10	F Tebbets, 31yds.	1101011111111—10

M Coffey, 31yds.	1011111001111— 9	O Miller, 31yds.	0101110101001— 7
J Gerber, 26yds.	1111111111011—11	J Zuver, 31yds.	1111111101101—10
H Eckhardt, 26yds.	0100101111011— 7	H Hurd, 31yds.	0111010011111— 8
WHamilton, 31yds.	1101111111011—10		

BRANTFORD, Ont., Oct. 28.—A meeting was held at the Kerby House this evening for the purpose of forming a gun club in this city. The object of the club being for mutual improvement in the art of shooting, and in assisting to enforce the laws for the protection of game in this province. A good representation of leading citizens were present. The following are the names of the officers elected: Dr. William T. Harris, President; Mr. John Bishop, Vice-President; Mr. J. T. Slater, Treasurer; Mr. Herbert Yates, Secretary. A committee was appointed to draft a constitution and by-laws for the club, and report at a meeting to be held on Wednesday evening, Nov. 4.

CONNECTICUT.—The State shoot was held at Bridgeport, Oct. 28. Best score for prizes made by T. Beers, of New Haven, 23 out of 25 clays. Last shoot of the series will take place in New Haven, Nov. 25.

MALDEN, MASS., GUN CLUB.—The club held its regular weekly shoot at Wellington on Oct. 31. There was a fair attendance. Following is the result of the several sweeps: 1st event, 5 blackbirds, Shumway first. 2d event, 5 blackbirds, Crosby and Wilson divided first. 3d event, 5 clay-pigeons, Lawson first. 4th event, 3 pairs clay-pigeons, Snow and Wardwell divided first. 5th event, 5 blackbirds, Shumway first. 6th event, 5 birds, Wardwell first. 7th event, 10 clay-pigeons, medal match, Schaefer first, Stanton and Wilson divided second, Wardwell third; Dick Schaefer won the first medal with 10, Wilson the second with 9, and Wardwell the third with 8. 8th event, 5 blackbirds, Stanton, Sanborn and Adams divided first. 9th event, 5 blackbirds, Pillsbury, Lawson and Crosby divided first. 10th event, 5 birds. Lawson first. 11th event, 5 birds, Lawson first. 12th event, 5 blackbirds, Lawson first. 13th event, 5 birds, Snow, Schaefer and Lawson divided first. 14th event, 5 blackbirds, Wardwell and Stanton divided first. 15th event, 5 birds. Lawson first.

NATIONAL GUN ASSOCIATION TOURNAMENTS.—Special Notice.—Members desirous of organizing tournaments in their vicinity, under the auspices of the Association, are requested to notify the undersigned. All the expenses of the same will be paid by us. Make your arrangements for 1886. We propose to establish a circuit of tournaments annually. Claim your dates now. General office and headquarters, Macon, Ga.—MATT R. FREEMAN, Vice-President and General Manager; F. C. ETHERIDGE, Secretary, Macon, Ga. Send 10 cents for hand book containing rules, constitution, etc. "Fairly started and its future depends entirely upon the manner in which the sportsmen throughout the country respond."—C. M. STARK, April 18, 1885.—*Adv.*

Yachting.

GALATEA.

It is probable that next season we shall see a series of races similar to those lately sailed here, and for the same prize, the challenging vessel at least being a new one, the Galatea, though whether or no Puritan will be selected to meet her remains to be seen. As the matter now stands, Mr. Webb, in a letter to the New York Y. C. previous to his starting for England, requested that the challenge of Galatea, accepted this season, be permitted to stand over until next year. The club in reply have notified him that they will consider any challenge received from a recognized yacht club, which puts the matter back where it originally was, and leaves it to Mr. Webb and Lieut. Henn to renew the first challenge.

The performance of the yacht this season has been most disappointing, and certainly not such as to justify her selection to try again for the Cup, but if any one should know her well it is her designer, in whose hands the matter of challenging was left, and he evidently has full confidence in her ability under proper conditions. Since the days of her launch she has been unfortunate, sticking on the ways, aground on her first passage, doing well by streaks in the races, but failing to win prizes, her skipper, in spite of his old reputation, failing entirely, and finally the loss of her mast. Altogether the sum of her misfortunes is a large one, but taken one by one they argue little against the boat and by no means prove that with some minor alterations, a smaller rig than the first, and with a good man at the stick, she may not next year prove first-class. She has the advantage of an owner who is a most enthusiastic yachtsman, a practical sailor, and who for years commanded in person his own yacht the Gertrude, and next season she will have what she has missed this year, the thorough supervision and care of her designer. His duties with Genesta have for the time prevented Mr. Webb from sailing in Galatea or giving any serious attention to her defects and their remedies which he of all others should be most competent to deal with, but by next season she will doubtless be out in new shape under his direction and with a better show of success.

While a more extreme boat than Genesta, the difference is not radically great, and after the success of the latter and Tara it is not too much to expect that Galatea may prove to be a worthy member of the trio. The main point of difference is in the distribution of the ballast, which in Galatea is spread fore and aft to an unusual extent, being run into her keel, a semi-circular trough of steel. Unlike the other two, her plating is also of steel, but the speed of other steel yachts proves that this alone does not account for her poor performance, though it may have hindered her some last season in consequence of scaling. A late number of *Land and Water* sums up her season's record as follows:

"A very disappointing vessel hitherto is the Galatea; in fact, her career has been another instance of great expectations unfulfilled. It is no secret that her designer anticipated her to be a better vessel on every point of sailing than the Genesta, but she has not yet proved so, although it was thought, when they were put through the mill together on the Clyde, just before the Genesta left for America, that the new vessel would be the better as soon as everything had got settled into its place. The method adopted of putting in her ballast was, however, by no means a happy one, and in spite of what any of the painfully scientific gentlemen may say or theorize, it is wrong as can be to go right to the end with fixed dead weight. Galatea has a trough full, which, according to accounts, might have been got lower down than it is. There is some deterrent influence at work which pulls the vessel back; in fact, when being hard driven, she puts one in mind of the sailor's featherless poll parrot, who was always brandishing his naked wings and threatening to fly—in short, Galatea seems trying to get off, but cannot. She is a fine, bold looking cutter, and if good looks went for anything would sail fast, while it is not the want of her steel plating being fair that stops the vessel; in fact the work is equal to that of the Vandura and Wendur, which is, indeed, saying a great deal. The vessel was given a fair chance to win prizes, but made a sorry show; in fact the only occasions in fourteen races that a really meritorious display of speed can be pointed to were in the sweepstakes up the Swin, and on the first day of the Royal Clyde regatta. Her winning total amounted to an insignificant second prize of £20, gained in Belfast Lough, when Irex beat her upward of seven minutes. She sailed her maiden race in the match from Southend to Harwich, and led the fleet home, but did not save her time for a prize; and her other unsuccessful essays in the South were at Harwich regatta, the match up the Swin to Southend, the Royal Thames and New Thames matches, from the Lower Hope round the Mouse and back; the Nore to Dover race and one engagement to Dover. Galatea was docked while on the Thames and again on reaching the Clyde, and sailed but two matches in Scotch waters—those of the Royal Clyde Club. She backed out of the Ailsa Craig match on that blowy morning when Wendur and Marjorie went out through Fairlie Sound, but sailed round the Belfast Lough course in a smart breeze and got a second prize on the first day of the Royal Ulster regatta. The breeze proved too heavy for her to carry her swaggering spars on the next day, as she got dismasted, and afterward, at Greenock, had a new stick of 3ft. less altitude stepped. She resumed racing inside the Wight in the Royal London match, and, in fair sailing weather, was beaten twenty-two minutes by Irex and about one and a half minutes by Lorna. In a subsequent trial at Southampton and in two at the Royal Yacht Squadron regatta she was simply nowhere at the end of either day, and her racing career came to a remarkably summary close. Galatea afterward put the long boom ashore and went about under a trysail, looking in that guise highly suggestive of a sparrow bereft of its tail. She is a vessel of very large displacement—perhaps beyond the bounds of expedience—and, according to *Lloyd's Yacht Register*, her depth is 13.33 feet, against 11.75 of Genesta, while Galatea has a fraction the lesser beam. Her principal dimensions are: Length on load water line, 86.72ft.; breadth, extreme, 14.99ft.; tonnage, Y. R. A. measurement, 89.65 tons. She is steel through and through, and was built by John Reid & Co., of Port Glasgow, from a design by Mr. J. B. Webb, for Lieut. Henn, Royal Navy."

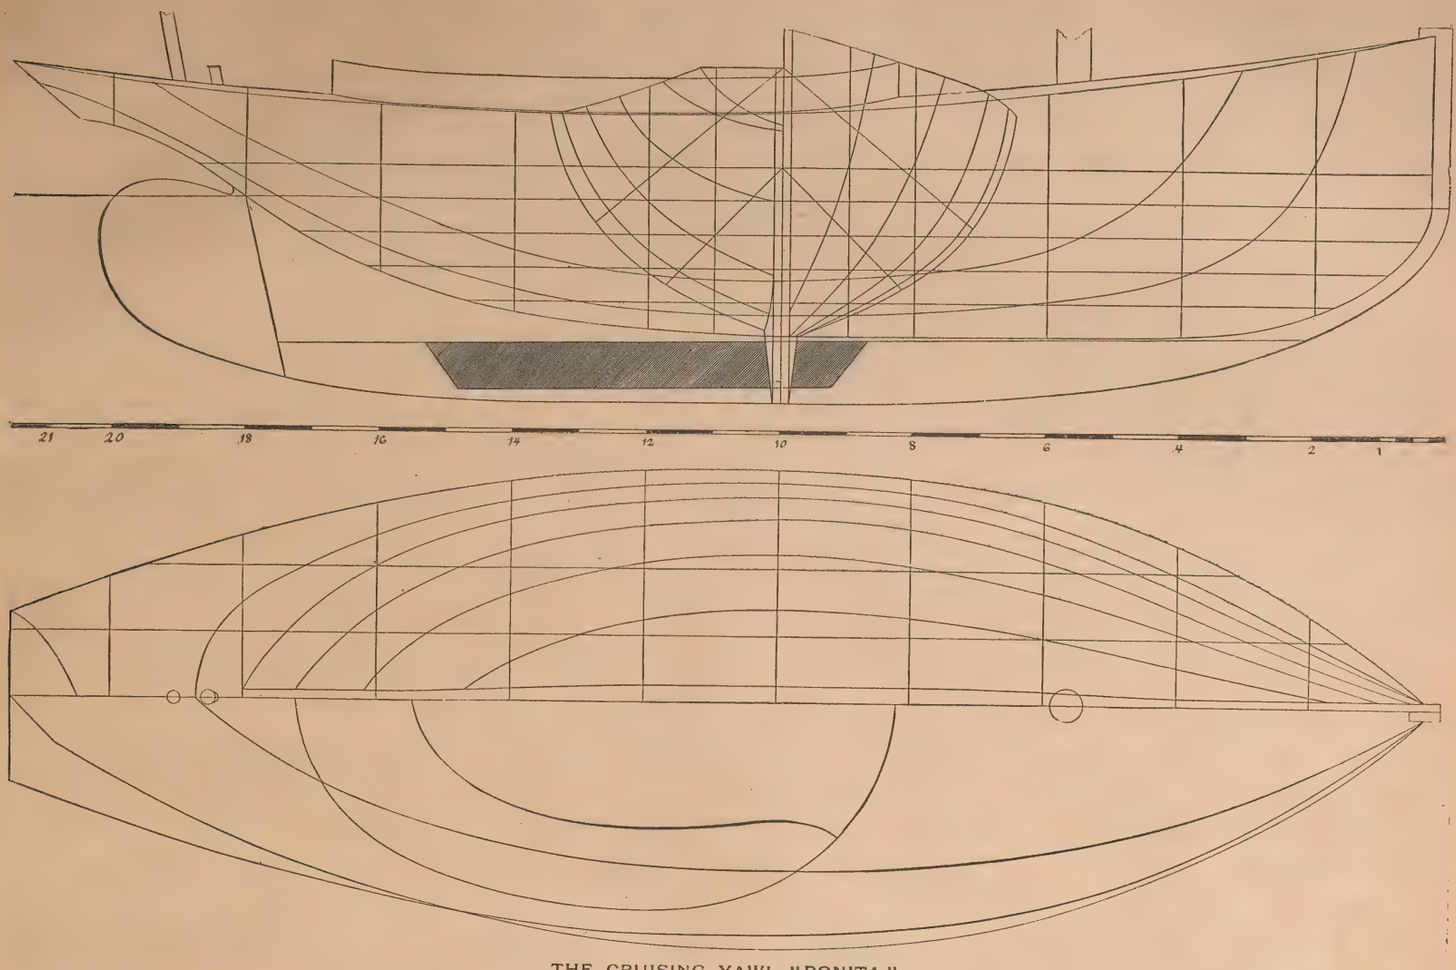
This record does not promise much for a yacht that is to take part in a great race, but there are still many points that may be remedied between now and next season, a new sail plan, perhaps a change in the ballast, a good skipper, and such other changes as her work this year have suggested, may show Galatea to be equal to her fellows in the early races of the year. If she is not as good as the best, and a little better, there is no chance for her doing what Genesta has not done.

WHAT NEXT?

From the time when some wicked cutter men, probably bribed by British gold, first introduced that evil institution, the lead mine with double-head rig, to the waters of Staten Island, although the pernicious principles that they advocated have been widely spread; there has been one spot where the sloop man was safe from any encroaching improvement, where the American eagle could flap his wings over a fleet of centerboard boats, stubby of tail and shoal of draft, and boasting but one jib. Other places might admit cutters, might try lead keels or add a staysail, but Bay Ridge was still true to its ancient principles, born of the neighboring flats of Gowanus. No lead keels were wanted there, in fact the attempt to use one, and its failure through bad engineering, served for some time as a most effective argument against them, the dropping of a shoe of a few hundred pounds because of the use of iron bolts, being magnified into the loss of a heavy lead keel because such things could not be properly secured.

Into this last refuge of the faithful, various foreign innovations have at times insinuated themselves. Yachts have changed their rigs until even a double jib is no longer specially noticeable, and even a real cutter last year was enrolled in the club. This season the fell work has still gone on from bad to worse, one or two old boats ventured to try outside ballast, a new yacht, the Daphne, was built with a lead keel and, sad to say, has turned out very fast; but the last cruel blow has lately fallen when the Crocodile, the best of a type that was considered perfect, a boat that was fast in her class and all that a boat should be, was hauled up to have two tons of her inside ballast transferred to her keel.

If this is so what may we expect next? Now that lead keels have been fairly adopted we may look for no less radical a change than the enactment of fair and enlightened rules of measurement, under which the boats of other clubs can enter. "'Tis the first step that costs," and that step has now been taken. Lead keels and staysails are at last recognized. A new rule of measurement must in time follow, and then farewell to the last of the "protection" which has kept alive for so long the orthodox American sloop. Have conservative owners of antediluvian tendencies no rights which others must be compelled to respect? Is there no club left where they may find defense from the unwished for improvements of foreign designers? Must they wake up, put on lead keels and sailor rigs and yacht in real earnest, or fall out of the race? Until lately they have had one haven of safety where the hated cutter could only enter by sawing off her stern and stowing her keel inside; and now this last refuge is thrown open to the enemy. Where will they go next?



THE COST OF MODERN YACHTS.

The question of the relative excellence and cost of the various methods of building is one that directly concerns all yachtsmen, and it is of special interest here, as the present tendency is toward English practice, which differs in a marked degree from our own. Anything worse than the method of building once too common here, and even now often met with, it is hard to conceive of. Heavy and bulky material, a lack of all proportion, and the absence of proper fastening were the main characteristics of this style, which is gradually giving place to something better. Yacht building in England, on the contrary, had gone through a process of evolution similar to that which many trades, notably engine and carriage building, have experienced here, methods of construction and materials at hand were carefully studied, every part was reduced to the least consistent with ample strength, and all superfluous weight was eliminated, and special attention was paid to the proper joining of all parts. This system, thoroughly carried out, has made the English racing yacht as strong and light as an American carriage is noted for being, but the objection has been made that the cost of such work is too great. Skill, both in design and in handiwork, has been substituted for rougher labor and haphazard construction, and of course skilled labor is more expensive to a certain degree. The amount of material used is less, if anything, but it is of a more expensive class and better quality, mahogany instead of yellow pine, copper in place of iron.

The question to be determined is whether the increased cost of English yachts is due merely to the employment of a truly proper grade of material and workmanship, such as is essential in a well constructed yacht, or whether it is due to a super-refinement of construction that can be dispensed with; whether, in fact, the undoubted advantages of the system cannot be obtained without too great an expense. In America for instance, the cost of yachts built as in England, with double skin, teak and copper, has been so great as to limit them to a few, but there is no doubt but that a thorough study of English methods with our native woods, would give a far lighter and stronger boat than the usual style of shipbuilding in miniature.

The question of cost has lately been discussed in the London *Field*, a correspondent asserting that a modern 5-tonner, say 33ft. 6in. on water line, would cost considerably over £500 or $2,500. This assertion has brought out the interesting letter given below, in which are all the details of cost. For $2 000, the sum mentioned, a centerboard sloop of about 28ft. waterline and 12ft. beam, with a cabin house, giving more room in one way than the 5-tonner, would be turned out here in the ordinary style, but it would mean plank keel, cedar or yellow pine planking fastened with galvanized nails, oak sawed timbers, light sails and gear, and iron ballast of pigs, or a part cast to fit; and any comparison of size and cost with the following example, must take these items into consideration.

SIR—On reading Mr. S. Kelly's letter on the cost of 5-tonners, I cannot resist giving my actual experience of hard facts on the subject, because I should be sorry to let such an impression as he strives to put forth go on a circular tour, such as it will in the columns of the *Field*, without giving it a flat contradiction. I happen to have seen the Freda, 5 tons, and remember she is planked with mahogany; also sheathed inside over timbers with same, and was coppered and very elaborately fitted up inside, all of which is quite unnecessary and absolutely obstructive to speed, besides costing a lot of money. My 5 Circe was built in winter of '80-1. Her principal dimensions are: W. L., 30ft. 9in.; beam, 6ft. 1¼in.; draft, 5ft. 9in.; freeboard, 2ft.; over all, 37ft. 6in. Material: English elm keel, 5ft. wide, 6in. thick; timbers, oak and alternate American elm steamed; keelson, greenheart, 5ft. by 4in.; galvanized angle-iron floors; stem and stern-post and deadwoods all of oak; beams larch, stronger than pitchpine; knees, galvanized iron; American elm planking; pine topsides; sheerstrake, bulwark and coveriug board, and all fittings, mahogany; rail, American elm; mast, Oregon pine; spars, white pine; wire rigging, Newall's imperial steel; blocks, galvanized iron strops; Ratsey's sails. She had mahogany fittings, pantry, seats, etc., in cabin. The actual cost was: Builder, for hull, spars, ironwork and fitting lead keel, including cabin fittings, £180; lead, £80; sails, £70; blocks, £11 12s.; wire rigging and rope, £10; rigger, £5; anchor and chain, tested, £3 12s. 6d.; paint, £8; upholstery, £7 10s.; general outfit, £10; painting, £15; total, £400 14s. 6d. With the exception of the wire rigging and rope, and the painting and general outfit items, I have taken the above from the actual bills in my possession. Lead now is only £10 a ton; this reduces that item £20. I myself got all these contracted for by tradesmen in the port of Barrow, except the sails. The boat is well built; in fact, all the main timbers are fitted like cabinet work, and she can be classed at Lloyd's. The blocks are as good as can be turned out anywhere. She is perfectly tight, and does not work in the least when hard pressed. She is in appearance, either in or out of the water, one of the prettiest vessels anywhere, and as fast and fine a sea-boat as anything of her length afloat. I consider a racing boat will cost less than a cruising one: for the former, in the small classes, should have no cabin fittings whatever beyond a port and starboard plank to sit on, open rail for sails, and movable box that will go out through the skylight when racing, to hold compass, lamps, candlesticks, crockery, etc. As the cost of these small boats is an important matter to junior yachtsmen, the matter is interesting, and it would be more so if Mr. Kelly will give particulars as to the cost of the 5-tonner, which was many hundreds over £500. One paid hand is not sufficient between ports unless there are some good amateurs on board as well. Two professionals are little enough crew between ports by themselves; but a boy will do for second hand in a cruiser.

THE CRUISING YAWL "BONITA."

THE CRUISING YAWL BONITA.

THE little yacht whose lines and sail plan we publish this week will be familiar to many yachtsman, as she hails from New London and has been frequently seen there during the past summer. She was designed by her owner, Lieut. C. D. Parkhurst, U. S. A., who has used her steadily for cruising and harbor sailing about New London and the Sound. She is a veritable single-hander, as her owner uses her alone in all weather, the division of sail making the labor light. While the design shows many points capable of improvement, it has the essential features of a good cruising craft, safety and accommodation, the arrangement described below making the boat a refuge in bad weather and at night, while she has the large cockpit needed for sailing parties.

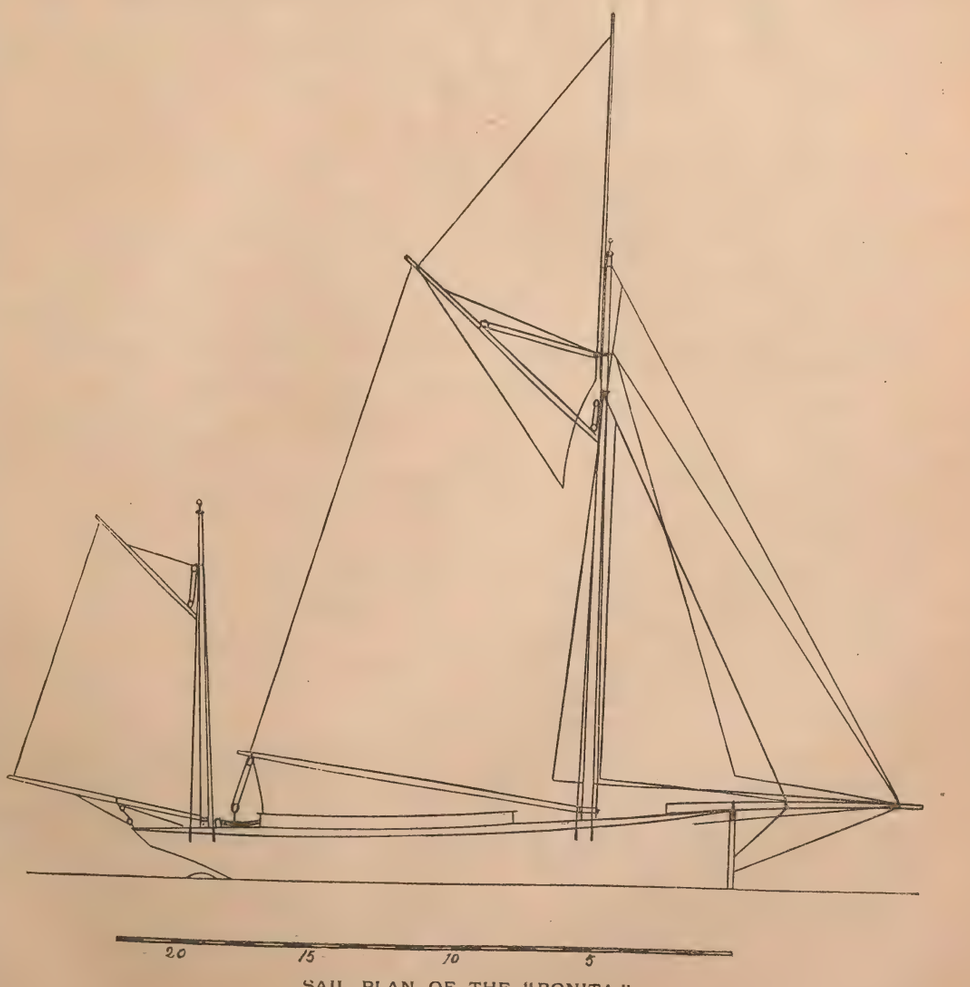
The Bonita is a keel boat, 21ft. 6in. in length over all, 18ft. waterline and 7ft. beam, with 3ft. draft of water; carvel built, of cedar with oak timbers and heavy oak keel and keelson. Her outside keel is 11in. deep, and has 560 pounds of lead cast therein.

She is fitted with open cockpit 9ft. long and 5ft. wide at the widest part, with seats and room enough for a party of six or eight for a day's sail. There is a storm cloth provided for closing up all the front part of cockpit—leaving simply standing room for her helmsman—in case of heavy or rainy weather, or for use when cruising for sleeping purposes. She has also an awning 12ft.x7ft. for use when lying at anchor in harbor, when fishing, etc., or for use at night to sleep under. She also has a deck tent that rises 4½ft. above her deck, giving 7ft. standing room from floor of cockpit for use in cruising for turning her cockpit into a good roomy cabin. This tent is made to pitch over a jointed frame for each end, with ridge and eave rods, and is very rigid and steady even in the hardest winds. The roof being a hip roof gives standing room at the eaves as well as the center.

To pitch the tent the main boom is unshackled from its goose neck after furling the sail, and the whole affair is thus swung up out of the way by the halliards. The frames then are set up, the foot of each frame fastening to small brass screw-eyes in the deck. The tent being stretched over, guys are taken to the main and mizzen masts, holding all firm and solid. The doors are on the side, opposite to each other, and can be rolled up and fastened, giving plenty of ventilation when needed. The walls can also be rolled up and fastened, leaving the top for a canopy during the day.

The floor of the cockpit is fitted with a grating and this latter can be raised and laid upon movable rods fitting with sockets under the edges of the seats so as to make a platform level with the seats and the whole width of the cockpit. Here a long wide bed can be made, and from one to three can sleep as comfortably as at home or in camp on land, though rather close stowing for three. Under the deck two can also sleep on a pinch, and one has done so frequently. From floor to deck is nearly high enough for one to sit upright, and there is plenty of room for either sleeping or stowing duffle. Up in the peak is a locker for spars, sails, etc., and under this is a large air tank. The whole of her overhang is filled with an air tank made to fit, and behind her staving she is filled with air tanks also, and every other space otherwise not used is fitted with the same.

Her ballast is lead, weighing exactly 2,045 pounds, cast part in the keel, and part in blocks to fit under her floor and close to her skin, so as to place the weight as low down as possible. With this ballast it is hard work to get her rail awash, and every inch she goes down under press of her sail makes it so much the harder to get her down the next inch. She has never taken in water over her lee washboard, and very seldom has had her rail awash for any length of time, even though she has been out in heavy winds and seas. Her deck is as dry as a bone also; she, in fact, hardly keeps her deck tight from any wetting she gives it by shipping water.



The lead in her keel is securely fastened by Muntz metal bolts, coming up through heavy oak keelson with nuts run down close. She has extra floors of heavy natural grown oak to support her keel, so that she can carry much more ballast outside—or inside for that matter—without straining or starting her gunboard streaks.

Her bowsprit, masts and spars are all of spruce. The bowsprit is shipped over the stem and does not reef. It has heavy bobstay and shrouds of galvanized iron wire rope, setting up with turnbuckle for bobstay and lanyards for shrouds.

Her forestay comes down to clamp out on her bowsprit 2ft. from her stem to give larger foresail than stay coming to stem would give, and her outer stays come to iron band near bowsprit end, all being of galvanized iron wire rope, as are also the shrouds to main and mizzen mast. Forestay sets up with lanyard, outer stay with turnbuckle. The sail plan shows the exact sizes of the sails, including balloon jib, which sets with snap hooks on outer stay and fills up all space forward. It can also be used as a spinnaker, the same halliards being used to hoist it and a boom, not shown, used to boom it out.

The topsail is set on a club that hoists from deck with double halliards. When not in use it stows alongside the main shrouds by lashing thereto, being too long to lash to main boom or stow on deck.

The mainsail is fitted with double reef points, the mizzen and

SAIL PLAN OF THE "BONITA."

forestaysail with single, but ordinarily the forestaysail is not reefed; it is lowered instead, and the jib used alone for head sail. The fore staysail is fitted to boom and works itself, so that in sailing by the wind the jib sheet is the only rope that has to be tended.

All sheets lead aft and belay close to the hand of the helmsman, and one man can handle her all alone with justice to both himself and the boat, even in heavy weather. She will steer herself and allow the crew to go forward and set topsail in light winds. As the topsail clews up it can be taken in by clewing when one is alone, should it come on to blow too heavy to carry it.

As with all yawls, sail can be reduced in a hurry. She has been tried under all combination of her sails and she trims and works well under all, and is by no means slow either under headsails and mizzen.

The woodwork on the Bonita was executed by Messrs. Rogers & Comstock, the well known boat builders of New London, Conn., and the iron work by Mr. Higgins, and is a first-class job. Her rigging was fitted by Capt. Burdick, of the yacht Surprise, and her sails made by sailmaker Storry, whose work is to be seen on many New York yachts. She is fitted with two anchors and a folding kedge, and has all the outfit necessary for cruising by day or night. She also carries a light canvas canoe as a quarter boat without any trouble.

THE RIG OF SMALL CRUISERS.

A CORRESPONDENT in Quincy, Ill., who contemplates a cruise to Florida in a yacht 25ft. over all, and 7ft. 4in. beam, drawing about 3ft., with an iron centerboard, asks some questions as to the best rig. If, as we suppose, he is going alone, or must be able at times to work the boat himself, the yawl rig will be the easiest and best. We give an example of a similar boat this week, but would advise a single jib, as better in this case than double head rig, as in the yawl the jib will be the small. The question was well summed up in the FOREST AND STREAM of Oct. 1. The general proportions of the rig of the Bonita will suit our correspondent's boat, but we cannot give full dimensions without more details. He also asks as to iron fastenings for salt water, as copper is difficult to obtain. The latter would be much preferable and may be had in New York of any size, but iron, if galvanized and properly puttied over, will last for an indefinite time. The difference in first cost is not worth considering if the boat is really a good one and copper can be obtained as cheaply as in the larger cities. We clip from the *Field* the following suggestions on singlehanded sailing which will be of value to our correspondent and to others of our readers:

Whether an 8 tonner can be sailed by the owner and one man without too hard work depends, of course, mainly upon the boat, the owner and the man. The boat must be handy, steer easily, carry a steady weather helm, not break off in the hardest puffs, come about easily under head sails only, also under head sails and a half-set mainsail or storm trysail, be seaworthy, well found, and with halliards, sheets, and all leads running fair and clear, and conveniently rove; and she should also turn to windward under foresail and mainsail, and lie to with safety in any weather. The owner must of course be perfectly at home at the helm, and be able to handle both head sheets without assistance in going about. But I think that is not all. In fairness to the man he ought to be able not only to shift a small jib or topsail for a larger (which is easy enough), but to strike a big topsail (mine had an 18ft. yard), or shift the largest jib for a smaller in a good stiff breeze while turning to windward, and with no assistance, except "a hand to the sheet," which the helmsman can lend, while halliard and tack are being got up and down. He should also be exceptionally expert in heaving the lead. Of course the man ought to be everything that is admirable; but the qualities I value most highly are cheerfulness and willingness. I have had many a pleasant cruise with a lad, whose want of ability as a yachtsman was more than compensated for by his cheerfulness, that "instinct" common to youths brought up at sea (at least on board fore-and-afters), and his other good qualities. Last but not least, owner and man should each be able to round the vessel to and pick the other up without a shadow of a chance of missing the mark at the first offer.—HANDY BILLY.

A TEST FOR ROPE.—the following test for manilla rope is given in the *Field*, and we reproduce it, as it may be of sufficient interest to our yachtsmen to induce some of them to try it. Good cordage is about as important as any part of a yacht's equipment, and it is economy in all cases to use only the best, and the following test may be of use in determining the material: "Some four or five years since," the *Times* says, "a new fibre known as sisal hemp was introduced into the market, being so named from the place where it is produced, which is Sisal, Yucatan, in the Gulf of Mexico. This fibre has an excellent appearance, closely resembling that of Manilla hemp, but it possesses only half the strength and one-third the durability of the latter. Hence it is unsuited for the manufacture of rope for shipping, or, in fact, for any purpose where a sound and reliable rope is required, especially where sudden and excessive strains have to be met. The price of Sisal hemp, moreover, is only about half that of Manilla, and hence an inducement is offered to unprincipled rope manufacturers to mix the two kinds of fibre and supply it as a pure Manilla hemp rope. It is well known that advantage is but too frequently taken of this inducement, the manufacturer well knowing that there is little or no chance of the purchaser ever detecting the fraud." We do not think this "fraud" is much practiced by rope makers, and a statement that hawsers are not tested for the Admiralty is not correct. The test for pure Manilla or Sisal is said to be as follows: "Three pieces of 3in. rope were procured, one made from pure Manilla hemp, one from pure Sisal and one from an equal mixture of Manilla and Sisal, the fibres having been carefully intermixed before the yarns were spun. Each of the ropes was untwisted and from a strand of each was taken a piece of the yarn about 6in. in length. Each piece of yarn was untwisted and separated into loose fibres, which were separately rolled between the palms of the hands, producing three balls of fibre, each about the size of a large walnut. These balls were then placed on an iron fire shovel and each lighted and thoroughly burned out. There were then three piles of ashes of perfectly dissimilar appearance. The Manilla hemp produced an ash having a dull grayish-black appearance; the Sisal hemp left an ash of a whitish gray color, while the combined Manilla and Sisal fibre gave a grizzly white and black ash, reminding one of nothing so much as a man's beard when turning from black to gray. The presence of the two fibres was distinctly apparent by the different colors of the ashes."

A REPLY TO "H. B.'S" LETTER.—*Editor Forest and Stream:* In your last issue I read a communication from one who signs himself "H. B.," in which he informs us that the Puritan is like nothing under the earth, on the earth, in the water or on the water. Then verily she must be or the air, and what name shall we give this conglomeration? Webster is not equal to the emergency. "H. B." tells us in one breath that the Puritan resembles nothing; in the next breath that she resembles the Shadow. Any one who has seen the two yachts' models knows the error of this statement. "H. B." asks for a clear, concise definition of sloop and cutter. The same definition that held good on the advent of the Saxon (or Kitten) in Eastern waters does not answer at this writing, according to his opinion. There was no difficulty then in drawing the line between cutter and sloop. He knows how the Saxon was hooted at whenever she entered in a regatta. Not he or any other sloop advocate dreamed that the rig of the Saxon would ever be used to keep the Cup in this country, and if any one had told them so he would have been annihilated. All this controversy seems to have been brought about in order to let the Puritan advocates down easy. As to whether the races were for the Cup or to determine the difference between cutter and sloop, I say that they were for the Cup, and that at all hazards, as shown in the races. Perhaps it would have been as satisfactory to "H. B." if he had confined himself to the class of yachts I admire so much instead of a compromise. There is a difference between an American original and an American copy. In regard to the skimming dishes that have been and now are this side of Cape Cod, he evidently has forgotten the Comino, Wayward, Undine, Madcap, Siren, Whitecap, Lillie, Magic, the last if I am correctly informed, a veritable skimming dish and one that has made it about as warm for the Shadow as any other boat ever did.—LOYALTY.

A SHOAL DRAFT STEAM YACHT.—Cruising about Florida is every year becoming more popular and to it we owe in a great measure the development of the shoal draft type at this time when the tendency is toward deeper boats. To this is in a great measure due to development of the sharpie and also such yachts as the new schooner Wihn. A new steam yacht of the same class is now building at Greenpoint, by Mr. S. H. Pine, for Mr. Pierre Lorillard, who will use her in the South. She will be 110ft. long, 20ft. beam, and 4ft. 6in. draft. Her engine and boiler will be as light as possible and she will have two screws, each 3 bladed and 4ft. diameter. The hull will be of wood, oak keels, hackmatack frame and yellow pine planking, all fastened with yellow metal, copper and locust treenails. She will be rigged as a schooner with pole masts.

A DINNER TO CAPTAIN ELLSWORTH.—The fellow townsmen of Captain Joe Ellsworth have rejoiced much of late over his successful work on the Puritan, and on Wednesday of last week nearly two hundred of them met at Schuyler Hall, in Bergen Point, to do him honor. A number of New York yachtsmen were present, as well as many yachtsmen from Bayonne and Bergen Point. Mr. Meigs, of Bayonne, presided and introduced Captain Ellsworth. Mr. Hardenburgh presented a handsomely engrossed and framed series of resolutions, passed by the citizens of Bayonne, and also a diamond stud. A dinner was then served, after which speeches were made by many of the yachtsmen present.

THAT FINAL RACE AGAIN.—*Editor Forest and Stream:* After reading carefully Mr. Kunhardt's account of how a "fluke" won the second Cup race for the Puritan, I am still unable to see it, and write for further information if you are not weary of the subject, as I believe your readers are not. Many like myself, while in no sense yachtsmen, still have sailed catboats and small sloops sufficiently to take a great interest in all that relates to these races, and though they are ready to be convinced that the so-called skimming dish is by no means an ideal boat, nevertheless believe the race should be decided strictly on its merits as actually sailed. Now, it seems to me the situation on the beat home was this: The Genesta on the short starboard tack to the southwest, started with a lead of two minutes down the course before the Puritan turned the mark—say a quarter to a third of a mile. According to Genesta advocates, on this tack she not only held all she had, but increased her lead, and at the same time went to windward of the Puritan, so that when both boats came about almost simultaneously at 1:22, Genesta was half a mile to windward, and led on the course N. N. W. by a quarter of a mile. Very soon after this occurred the squall, wind rising from twenty to thirty-five miles an hour, accompanied with a shift of three or four points to the north, now blowing almost into the eyes of the yachts, which accordingly fell off to about north by east, and ran this course until 2:16 P. M., when it was discovered that the Puritan, from being a quarter of a mile astern at 1:22, had drawn ahead all the way from a half mile to a mile, and thereafter, when again on the starboard tack, was able to come down on the Genesta with a free sheet and so win the race. I cannot see how all this bears out the assertion that the Puritan won by a fluke. The first surprising thing is that the Puritan beats back in three minutes thirty seconds less time than the Genesta is able to, and yet the Puritan sails in distance one mile and a half further; or in other words, the Genesta, to have sailed the same distance as the Puritan, would have required, at the speed of both boats, at least twelve minutes more than the Puritan actually did it in, and that, too, allowing the very high speed of a mile in six minutes, unquestionably too high a speed for their windward work. Now, I cannot see how this result in figures can be gainsaid; and if it cannot be, then is it not preposterous to say that the Puritan won by a fluke? To me the fluke appears to be based on a confusion of the position of the yachts at 2:16, when the Genesta came about for home, with that which they occupied the better part of an hour previous, when the squall and shift of wind occurred. It is said that at 2:16 the Puritan was about a mile ahead on the port tack. When the yachts came about for home, by the shift of wind occurring some forty minutes previous this mile was converted into windward advantage, Puritan came along with a full on, pinched Genesta, and won—a palpable fluke! But the question is not answered. How came the Puritan to be that mile ahead? And this is the critical question, is it not, on which the whole race depends? If that mile, or a considerable part of it, was due to honest sailing, then all the Puritan gained after it was won not by fluke, but by the speed which had gained for her the advantage which she afterward used. How was it? Thus: In one hour and ten minutes the Puritan had wiped out the quarter mile lead of the Genesta, gone about a mile to the fore during the heaviest weather of the day and during the stiffest windward sailing. Was this remarkable performance due to a shift of the wind of three or four points? How did the Puritan perform? I quote the *World*, including the remark to Puritan's disadvantage already quoted by Mr. Kunhardt, with the immediately following lines omitted by him: "The white sloop, however, constantly outreached her and drew ahead, her lee bow being at 1:45 full a quarter of a mile away. The cutter evidently was holding to windward better. At 1:50 they got a pretty sharp squall from the north northwest, but the British boat carried her topsail in grand style. It did her more harm than good, however, as it kept shaking, and the Yankee sloop, with topmast snugly housed, made much better weather of it, and drew more and more ahead. The squall passed, but left behind it a strong breeze and fine weather. The sun soon got up, the water flying clear over the top of the Luckenbach's pilot house, and this was cutter weather and no mistake. It did not seem to trouble the sloop, however, and the more the sea got up the more she beat the cutter. She not only outreached her, but she held a better wind, and was gradually eating up into the British boat's course." Thus the *World*, one of the journals which inclines to the opinion that the Puritan won by a fluke. What was the situation when the wind shifted? If the view of the race taken by Genesta's friends is correct the cutter then had the sloop down to leeward about half a mile (for be it remembered that all the distance on the southwest tack, due to the two minutes lead round the stake, and all her gain on the tack, became wind and advantage as soon as the yachts stood on the port tack, and cutter men are sure Puritan had not decreased the lead), and a quarter of a mile astern, unless Puritan reached on the Genesta, which cutter men say she could not. Now then, Puritan down to leeward and astern, wind hauls up sharp on port bow, practically into the very eyes of the yachts. Boats shift their course to about north by east, and Puritan is still down on Genesta's lee. Unfortunately, also, if the changed angle of the course has helped Puritan any, it is away from the finish, and she has got to make it all up again when she comes about. Does not this correctly describe the situation as it then was, from the cutter point of view? And are there in the elements of a fluke big enough to give Puritan her lead at the end of this tack, all the way from half a mile to a mile; enable her to beat the twenty miles back in three and a half minutes less than Genesta, covering in so doing a distance which Genesta would take nine to twelve minutes more than herself to do? It is the discussion of these questions on which this much disputed race depends.—READER. *Editor Forest and Stream:* Mr. Kunhardt was more than half right after all in his ultraisms, and in his repeated warnings that we did not possess a ship able to hold the Cup. It was perhaps due to his badgering and seemingly unpatriotic sentiments, that the Puritan was built and that the Cup remains. What constitutes a cutter or sloop is now of little moment, since the happy medium has been reached in this new type. That the better parts of the extreme wide and narrow boat could be embodied with success in a half-breed was a pet theory of mine now made manifest in the Puritan. The performance of the compromise under the circumstances is almost miraculous. The short time allowed for her construction, the little opportunities afforded for practical tests, where the slightest mistake might cause defeat, makes her to-day the boat of all boats. That she could beat the Genesta just as she pleased was manifest from first to last. The Galatea's challenge is an earnest that we must look sharp if we hope to retain the Cup. Would it not be well to build another Puritan more powerful. One not only able to defend the Cup, but go over to England and bring back what the Genesta has taken away.—R. G. WILKINS (Camden, N. J.).

AMERICAN Y. C. RACES.—A race was sailed on Oct. 10 on the Merrimac River, off Newburyport, by the boats of this club. Banneret won the first prize, making a record for her of 10 firsts and 2 seconds for 12 starts, including the championship of the Hull Y. C. in the second class keels. Course for first and second classes, 10 miles; third and fourth, 8 miles. The summary of the race is as follows:

FIRST CLASS.

	Actual.	Corrected.
Torment, G. W. McKay	2 16 14	1 51 14
Vici, Perkins & Bowen	2 21 42	1 53 52
Gracie G	2 25 18	2 01 28
Naiad	Withdrew	

SECOND CLASS.

Banneret, J. F. Brown	2 19 41	1 51 24
J. S. Poyen, Jr., D. B. Pierce	2 21 21	1 55 01
Ione, J. S. Poyen	Withdrew	

THIRD CLASS.

White Cloud, N. Rodigrass	1 56 56	1 25 36
Jumbo, Charles Cobb	2 02 49	1 28 25
Maud	2 25 31	1 53 39
Puritan	Withdrew	

FOURTH CLASS.

Pert, J. Goodwin	2 03 03	1 28 15
Ivory Soap, S. Goodwin	2 04 25	1 29 37
Amelia	2 08 05	1 33 09
Dot	2 11 20	1 36 16
Lillian	2 16 35	1 41 55
Mascot	2 39 37	1 59 05
Yankee Maid	Withdrew	

THE SPEED OF SMALL YACHTS.—The 10-tonner Manola, 38ft. 4in. waterline, lately made a good run from Cherbourg to Kingstown. Over 223 knots of the distance the average speed was 7¼ knots, a maximum of 8⅝ knots being maintained at times. The sea and weather were bad during most of the run, part of it being made under trysail. Only three persons, two of them amateurs, were on board. The Satellite, an old-time yawl of 70 tons, also reports an average of 8.4 and 9 knots, on two runs of 22 and 17 hours each.

A DINNER TO PURITAN'S OWNERS.—On Oct. 28 a dinner was given at the Parker House, Boston, in honor of Mr. Edward Burgess and the owners of the Puritan, Mr. John J. Jeffries presiding. At the head of the table were the Gordet Cups, won by Fortuna and Puritan, and on the wall was Mr. Halsall's picture of Puritan. A number of informal speeches were made and the occasion was a very pleasant one.

ANOTHER BUBBLE BURST.—The steam catamaran Henry W. Longfellow, built by Commodore Voorhis, of Nyack, and that was expected to revolutionize river navigation, has gone the way of many similar craft and is now offered for sale. The Nereid, a similar venture in the sailing line, now ornaments the old basin at Staten Island, an utter wreck.

YACHTING NOTES.—Little is doing now at Piepgrass's yard. Side by side are the cutters Mona and Muriel, and directly astern of them are Maggie and Madge. All are secured, moved up on land and in shape for the winter. Two steam launches, Parol and Trifle, are also laid up near them. The steam yacht Tillie is laid up in the basin and next to her is the Orienta. The latter is having a general overhauling, new spars, topsides caulked and painted, and repairs to engines. Her two Herreshoff boilers will be removed, and a new one of the same make substituted.... At Driscoll's yard a new centerboard sloop is now in frame, building on speculation. She is about 50ft. over all, with moderate beam, a good overhang, and considerable depth and rise of floor. The frame is of oak, the keel being a substantial piece 13in. deep, with heels of frames well boxed in, while 6in. of it is outside. The frame is of sawn hackmatack. The boat promises to make a roomy and able cruiser.... Elsena, steam yacht, is laid up at Twenty-third street, Brooklyn.... A painting of the yacht was lately presented to the New York Y. C. Radha, steam yacht, lies at the foot of Gouverneur street, E. R., overhauling for a southern cruise. Polynia, steam yacht, will be tried by her new owner, Mr. W. H. Starbuck, and afterward will go to Philadelphia for repairs and alterations. Vedette, steam yacht, is in Munim's basin, Utowana is at Edgartown, Nooya is at Twenty-fourth street, E. R. She will have a larger boiler and wheel this winter.

THE CHALLENGE TO THE ATALANTA.—The full text of the challenge sent by Mr. J. B. Herreshoff, in behalf of the Stiletto, to Mr. Jay Gould, is as follows. As it has been accepted by Mr. Gould it is probable that the race will take place next year: BRISTOL, R. I., Oct. 28, 1885. *Jay Gould, Esq.*—Dear Sir: I hereby confirm my verbal challenge of last evening, to race your 85ft. yacht Atalanta with the Stiletto, for a $500 champion cup, under the same conditions named in my former challenge. The course to be from Fort Adams wharf, at Newport, leaving Fisher's Island on starboard hand, to the buoy off Sand's Point, at the head of Long Island Sound, distance being about 150 miles. The race to take place early next season. I think this will give you as clear a course as you desire, it being on the ocean and Sound. I will hold this challenge open for thirty days. Respectfully, JOHN B. HERRESHOFF.

TYPE AND SPEED.—The views expressed in Mr. Kunhardt's letter concerning the equal possibilities for speed in all types, seems to be gaining ground in the yachting world. We find in *Le Yacht* of Oct. 10 the following among its correspondence: "Florinda against Julanar, Arrow against Formosa, Puritan against Genesta, constitute proof that the question of speed can be solved in a variety of forms, when we find the Bentalls, Cossops, Webbs and Burgesses succeeding in solving the problem by different methods; they have recently shown that in vessels constructed upon the principles of naval architecture one can in some way or other invert the influence of chief factors, replacing beam with depth and arriving at like results. . . Well applied mechanical laws permit the production of boats of various forms, but of like power and also like speed."

THE DRAWBACK ON IMPORTED COAL.—A section of the Custom Laws of the United States reads as follows: "A drawback of 75 cents per ton shall be allowed on all bituminous coal imported into the United States, which is afterward used for fuel on board of vessels propelled by steam engaged in the coasting trade of the United States or in the trade with foreign countries." A late decision of the Treasury Department is to the effect that the above clause does not apply to steam pleasure craft, as they are not engaged in domestic or foreign trade.

YACHTS PHOTOS.—We have lately received a number of handsome photographs of yachts taken by Mr. N. L. Stebbins, of Boston, the views being selected from a large number taken at all the leading races of the season in New York and Eastern waters, including the Cup races, which Mr. Stebbins followed in his own tug. Within the past year he has taken some 600 pictures of large and small yachts and of other vessels, a full list of which is now ready.

BUFFALO Y. C. RACES.—The Buffalo Y. C. sailed a race on Oct 10 in a fresh S. W. wind and a heavy sea, four boats starting, the schooners Alarm and Edgar B. Jewett, and the sloops Ripple and Turk. Three prizes were offered, a barometer, yacht ensign, and foghorn. Alarm led at the start but finally the eyebolt of her foresail broke, losing topmast and bowsprit and springing both masts at the deck. Ripple won, with Edgar B. Jewett ten seconds later.

THE ARRIVAL OF GENESTA.—On Oct. 28, at 9 A. M., Genesta sailed into Portsmouth harbor, after a good passage, made in the excellent time of 19 days 19 hours. The news of her safe arrival will be welcome to many here who have watched the brave fight she made in our waters this season.

BRUNHILDE.—Mr. Phelps's schooner Brunhilde arrived at Malta on Oct. 20. She is bound for the Suez Canal.

Canoeing.

THE EXECUTIVE COMMITTEE MEETING.

NEXT Saturday the annual meeting of the Executive Committee of the American Canoe Association will be held at Oswego, the point determined on by Com. Rathbun. Besides the selection of a meeting place and other routine business of the Association there is little to be done his year, as the rules and laws previously enacted are working well and no change has been found necessary. There is one matter, however, or the greatest importance, that will come before the Committee—the extension of the Association in the West. This matter has engaged the attention of the leading men in the A. C. A. for some time, as the membership and active interest in Association matters has thus far been mainly in the East and Canada. Several schemes have been suggested for the organization of a Western branch of the A. C. A., and the time has now arrived for putting one of them into practice. The details of the plan have been well discussed and are now determined on, and all that is needed is the hearty coöperation of Western canoeists, without which the Association can do nothing. Circulars have been sent out to all whose addresses were known, and on the number of replies received will depend the success of the new measure. Next to this the most important change is the establishment of a senior class, on Mr. Gibson's plan, which will probably be carried out. We shall give a full report of the meeting next week.

RACING AND CRUISING CANOES.

Editor Forest and Stream:

I am afraid that "Seneca" has put his foot in it, and that the thousand or so canoeists who, according to him, are not canoeists, will be buzzing about his ears for making fun of their pet hobby. Although I am one of the aforesaid "thousand or so," and have expended a vast amount of time and patience, to say nothing of the cuts, bruises and punctures I have inflicted on my suffering digits in monkeying and tinkering at my craft to bring it to that state of perfection which is the goal of every canoeist's ambition, I must say that I agree with "Seneca." The canoe has been overdone. Instead of the plain, serviceable craft in which McGregor, Bishop, Aldrich and the founders of the N. Y. C. C. were wont to take their cruises in, we have a craft, the principal component of which is varnish and nickel plate, held in position by a bewildering conglomeration of lines and battens and blocks and cleats, and good intentions to put on some more as soon as we can find room for them. I know how it is myself, because I have one of the things that "Seneca" says is not a canoe, and I am pretty well inclined to believe him.

A few years ago we were satisfied to sit in the bottom of our canoes and jog along comfortably with cute little sails, if the wind was fair, and we didn't care so much whether we went to leeward or not; if it was a head wind we paddled, and our boats being lighter than they are now, we didn't mind it. But now it is all changed. We have to sit up on a hurricane deck when we want to sail, and "hike over" to windward at every little puff; our boats are loaded down with metal rudders, tillers and centerboards till they are rendered heavy and useless for inland cruising in swift water; they are too long and heavy to be handled quickly with the paddle, and a rudder is useless in rapids; and what kind of fun is there in one man making carries with a canoe weighing one hundred pounds or over? for there are more Class B canoes that weigh over one hundred pounds than there are those that weigh less than ninety. For cruising on large rivers and canals they are all right; but where there are no carries why not have a larger and a more comfortable boat? The most delightful cruises are those made on small streams, where there are many riffles, and oftimes a carry around a mill dam, or other obstruction, and after lugging a big Class B over such places all day it is somewhat exasperating to have the handle of the centreboard kneading your backbone all night.

But the question is can this state of affairs be remedied? Can the A. C. A. so limit the spread of sail in the races as to abolish the deck seat and tiller and render reefing unnecessary? The size of canoe limited and the spread of sail also limited, canoeists will cease to evolute the canoe into a single-breasted biker, and pay more attention to long cruises, where the canoe is in its proper sphere. As it is, the majority of them spend the greater part of their time in trying to balance staggering loads of canvas, and in making things look pretty for the meet. With the abolition of large sail areas there are many that would attend the meet and enter the races that now stay away because they do not care to bring up the rear of the procession with such an enormous gap between it and the head; a set of racing sails

are useless for any other purpose, and those who love canoeing for its own sake, when they have a few minutes or hours to spare for a sail on lake or river, do not care to carry a great cloud of canvas for the sake of practicing in anticipation of entering the races at the meet, and it is only constant practice with such large areas that give the necessary confidence and skill to the present leaders of the fleet.

It requires as good seamanship to sail with a small area as with a large one, and if all boats are limited in sail area it will require the best qualities of boat and man to be brought out to win a race, just as much as at present. SPIKE.

ON A BARNEGAT CRUISER.

ON BOARD THE BARNEGAT CRUISER,
Cheesequake Creek, Oct. 31, 1885.

Editor Forest and Stream:

Just dropped in here from Prince's Bay for a harbor to-night (Saturday). Had to pull the Barnegat cruiser up against the tide, almost missed the breakwater at the creek's mouth in the darkness, but managed by luck to get inside, and rowed up past the two bridges, past Charley Applegate's inn, and am anchored opposite the high bank a few rods above the latter. You have cruised around here yourself and know where I am. It's blowing cold outside; but I've got the tent up over the cockpit, the oil stove is booming inside, and while I'm waiting for my supper to get well settled I'll refer to the last FOREST AND STREAM, which I've brought along, and write you a few lines about canoes and Barnegat cruisers.

I know that, as "Surge" says, there are a great many canoeists whose only canoeing consists of "sailing or paddling about a harbor of an afternoon." My own business has been such that that sort of canoeing was the only kind available for me for months at a time; and it was during these periods that I used what he calls "the best racing canoe," and when I got a chance for a week's outing I cruised in them, too. I found the Pearl, Nautilus and Sunbeam hard to paddle, but they sailed very nicely indeed, provided I carried so small an area that it wasn't necessary for me to be constantly "trimming ship" in order to keep from capsizing. Of course I found them rather cramped for sleeping in and living aboard, but such disadvantages I could endure for an occasional short cruise. Another reason why I have used sailing canoes instead of a sneakbox when not cruising a great deal is because I admire the beauty of a well-finished canoe and have always had a weakness for the aesthetic in boats. But for practical cruising purposes only, beauty and all that aside, I cannot commend the sailing canoe. Then I fasten to the homely sneakbox for good and all.

"Surge" prefers a canoe because it can be housed and is therefore always dry. Well, my Barnegat cruiser has lain at her moorings for the past week in all the severe rain storms of that period, yet to-day when I took off her hatches for a three days' cruise, there were my blankets and grub and everything perfectly dry, not a drop of water, even in the little bilge well. I leave all my outfit locked in her through the whole cruising season, and am not bothered to pack and unpack her at every cruise.

I can get home as easily as "Surge" can in his canoe when becalmed. It is actually less exertion to row my cruiser than to paddle a loaded Sunbeam canoe. I am also as independent as "Surge" in his canoe. I never use any ballast in the cruiser except my outfit, and I can handle my boat under sail alone easier because I have so much more room.

For steady work I prefer rowing to paddling. I was even guilty of putting bow facing oars on a Nautilus canoe eight years ago. "Jersey Blue" misjudges my feelings toward the A. C. A. in his interesting letter. I do not believe all of those who attend meets are either racing sharps or "hotel cruisers," for I know many of those he mentions in his letter who are neither, but from what I have read of the meets I have been led to believe that the real cruising canoeists present were a minority. How many of those present at the last meet would anchor in old Cheesequake such a cold, windy night as this is, and enjoy it in complete solitude? "Jersey Blue" would, "Dot" would, "O. K. Chobee" would, and "Katrina," and Gibson and Oliver probably; but aren't there three who wouldn't for every one who would?

The "improvements" in canoes that "Jersey Blue" lays such stress upon are all improvements for racing purposes. The reason why McGregor, Bishop and "Nessmuk" have "left canoes as they found them," in their primitive construction, is because these men are cruisers and not racers; and they know that the more you "improve" a canoe in the way "Jersey Blue" mentions, the more you ruin the craft for cruising purposes. Simplicity is not a necessary factor of racing, perhaps, but it is the *sine qua non* of cruising. The canoe is too small a craft for complications of gear, and it is a great point in favor of the Barnegat cruiser that it admits of using abundant cleats, and tholepins, and tabernacles, and centerboards and tillers without detracting from its utility as a cruising craft. The reason is that it is so much more roomy than a canoe.

I have never attended an Association meet, and if I have said harsh things about it that it does not deserve, I am truly sorry. Very like we are on both sides writing mistaken ideas through inexperience. If I had attended meets instead of using up my vacations in cruising I might believe in racing, and if "Jersey Blue" and the rest of you had owned a Barnegat cruiser and lived aboard of her for a fortnight or so, you might perhaps find her better than a canoe for open water cruising.

Well, I am almost falling asleep over this letter, and will close. The wind is so high that I am afraid of dragging my anchor if I leave up the tent, so guess I will take it down, pull the hatches over the cockpit instead, and turn in. Good night. SENECA.

AN INTERNATIONAL CHALLENGE CUP.

A MEETING of the New York C. C. was held at the residence of the Commodore on Oct. 28, at which, after some general business was transacted, the proposal to offer an international challenge cup, to be competed for by members of foreign canoe clubs, was laid before the club by Com. Monroe. It was at once resolved to offer such a cup, and on motion Messrs. C. J. Stevens and Chesebrough were appointed a committee to act with the Commodore in selecting designs and raising funds for the purpose. An amount sufficient to cover the cost of the cup was at once subscribed by those present, and a draft of the proposed conditions of the races was presented for approval. The following letter has been sent to the secretary of the Royal C. C.:

To the Secretary of the Royal C. C., England:

SIR—The New York C. C., at a meeting held Oct. 28, voted to offer an international challenge cup to be sailed for by canoes, as it seems probable that some of the Royal C. C. members will visit America next year. The conditions under which the races will be sailed are appended, subject to modification if it seems desirable to members of the Royal C. C.

CONDITIONS.

1. The canoes competing must come within the limits defined by the N. Y. C. C. rules, which are identical with those of the A. C. A. and the R. C. C.
2. The cup is to be held as a perpetual challenge trophy.
3. The competition is open to any authorized representative of any canoe club sailing under foreign colors. Only two canoes to sail in any race—one from the challenging club and one from the club holding the cup.
4. Two victories to be necessary to either win or hold the cup, and therefore three races may be sailed—the same canoes competing in each.
5. The races to be sailed on the waters of the club holding the cup.
6. Races sailed in the United States to be contested on New York Bay under the auspices of the N. Y. C. C.
7. The distance sailed over in each race must not be less than eight nor more than ten miles, and within a time limit of three hours.
8. The races must be sailed during the fourth month after date of receiving a challenge.
9. The N. Y. C. C. rules to govern the races, these are practically identical with all canoeing and yachting rules.
10. The cup must in all cases be held by the club and not by its representative. Should the club holding the cup dissolve its organization, the cup will then revert to the N. Y. C. C.

C. BOWYER VAUX, Secretary N. Y. C. C.

THE NEW RACING CLASS.

Editor Forest and Stream:

In answer to Mr. Vaux's inquiries relative to my suggestion of a senior class, I should like to say that I had not examined the records at all to see who would be included. Perhaps I ought to have done so, but have not had leisure. If, however, only two men would be affected by a four-race rule, by all means make it three races to promote, or even two. I supposed that some five or six men would be affected now, and two or three more next year; certainly taking fewer out will do little good.

I would not have the seniors take any prizes of the regular programme. The combined sailing-paddling is, I think, just the race we want the entries stimulated for. Let the seniors enter by all means, but for the pleasure only.

Still, the committee, if they consider the matter worth taking up, will give attention to these matters, and will weigh Mr. Vaux's good ideas as carefully as the original proposition. R. W. GIBSON.

KNICKERBOCKER C. C.—The sixth race for the club sailing trophy was held on Saturday afternoon, Oct. 31, over the regular 3-mile course, viz., around a stakeboat off Fort Lee and return. Wind, strong and puffy from the north, ebb tide. The air and water were both too cold to offer much inducement to canoe racing and the Nettie, Edwin Fowler, and the Inertia, E. W. Brown, were the only starters. Nettie carried a reefed mainsail and small dandy, and Inertia had her 35ft. dandy forward and small dandy aft. The beat across the river was very close, Inertia forging ahead during the squalls, and Nettie pulling up between them. Inertia was first to jibe around the stake and catching a good breeze while Nettie was still under the lee of Fort Lee, obtained a lead of 100yds. which she easily maintained to the finish. The canoes each carried 50 pounds of ballast, and they behaved admirably in the rough water, the Sunbeam being considerably drier than the Shadow. The Coquago, Com. Greenleaf, and the Rahda, Mr. P. W. Foster, were on hand to render assistance in case of a capsize. Most of the K. C. C. canoes are still in active commission and a large fleet may be seen off the club house any pleasant Saturday afternoon.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

H. C. B.—The grounds are among the most famous in the country, but are now pretty well taken up by clubs. The most direct route is to Detroit.

J. S., Brooklyn.—Will you please answer the following question? Who handled Baronet in the Eastern Field Trials on Robins Island, 1881? Ans.—Baronet was handled by A. J. Titus, we believe.

L. S., West Rutland, Vt.—You may not hunt deer in Vermont. The few deer there are those which were imported, and their progeny. They are protected by law. For panthers try the mountains nearest Rutland.

G. A. M., Paterson.—What are the dimensions of a trout and bass reel plate (or cross bars) as adopted by the Rod and Reel Association? Ans. Length, 2½in.; width, ½in.; diameter of circle, ¾in.; thickness at the ends, 2-100in.

X. Y. Z., Denver, Col.—B asks for the stud services of a dog, which A assents to, provided he receives two pups. The bitch has seven pups—two dogs and five bitches. Is A entitled to first and second choice or first choice of dogs and first choice of bitches; or no choice at all, but must take what B gives him. Is there an unwritten rule which gives the owner of the dog, "first pick of the litter," in the absence of any agreement. If there is such a rule, if there is an agreement changing to two or more pups, does it still follow that the owner can first choose all of his? Ans. The unwritten rule is that the owner of the dog shall have his pick of as many pups as he is to receive. In this case the owner of dog may insist on first and second choice, but it would be rather hard for him to do so; and the graceful thing would be to take first and third choices.

Canoe and Camp Cookery.
By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 96 pages Price $1.00.

PIEPER

Nos. 586, 588, 589 and DIANA.

There is Nothing Else in the World Like Them for the Money.

Mr. W. K. Haynie, Chappell Hill, Texas, writes under the date of Aug. 21, 1885:

"I have given the Pieper Diana gun you sent me a thorough trial, and I endorse it in the strongest language. I am satisfied I have the best gun I ever shot, and I have used many of leading fine makes both English and American. I have broken glass balls at 87 yards, and killed ducks with No. 6 shot at 75 to 80 yards. It shoots buckshot equally well; I brought down two deer, one with the right and other with the left barrel. There is no possible shot the gun won't make. The finish is equal to the shooting. I am recommending the Pieper to all my friends."

For Sale by all First-Class Dealers in Arms.

SMALL YACHTS.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice.

By C. P. KUNHARDT.

THE FOREST AND STREAM PUBLISHING COMPANY takes pleasure in announcing the publication of a magnificent quarto volume, bearing the above title. This book covers the field of Small Yachts, with special regard to their design, construction, equipment and keep. The opening chapters are devoted to a consideration of the model and the draft, their relations to one another, and the purposes which they subserve. Full directions are given for producing the plans of a yacht with reference to the chief points in design, and the method of taking off the lines of a boat already built is likewise described in detail.

All elements entering into design, such as Resistance, Stability, Balance of Rig, Handiness, Displacement, etc., are dealt with in separate chapters. The rules necessary for the mathematical computations, and a review of theory and practice close the first division of the book.

The second portion comprises the description of the Plates, covering the whole range of type in small yachts, from the shoal catboat and American centerboard sloop to examples f the narrowest and deepest British cutter yet built. These yachts have their lines, build and fittings depicted in the Plates, which are drawn to scale. With their aid and the specifi- ations presented, the reader is placed in possession of accurate information concerning the mould, accommodations, rig and characteristics of all styles of yachts which have received avorable recognition. Sporting boats, combination row and sailboats, and various examples of special form are introduced.

The third division offers a comprehensive review of single-hand sailing, to which small yachts are especially adapted. Directions are given as a guide in selection of type and sail plan, and subsequent equipment and proper management.

The iron work of yachts, their gear, yawls, stearing apparatus, boat building and much other closely related matter is entered upon. The new International Rules of the Road, Signal Service, and a bibliography appear in the Appendix.

The work is profusely and handsomely illustrated with 150 illustrations inserted in the text, besides the sixty-three plates as follows:

LIST OF PLATES.

"FOREST AND STREAM SERIES."

DEER HUNTING.

BY JUDGE JOHN DEAN CATON.

BY and by it will be time to hunt antelope and deer. It is always time to read about them. Judge Caton's book on the antelope, elk, deer, moose and caribou of America discusses in a readable way the life history of these animals and the methods of their capture. It is the work of an enthusiastic sportsman who has nad a wide experience and has devoted the leisure of years to studying these interesting game animals. The volume is very fully illustrated, and is a perfect storehouse of information and entertainment. The first edition was sold by the Boston publishers at $4. Price $2.50.

WOODCRAFT.

BY "NESSMUK."

A COMPACT pocket handbook of condensed, boiled-down, concise, clear, comprehensive, sensible, practical camp gumption. "Nessmuk" has been "in the woods" in Michigan, New York, Pennsylvania, and South America, and this is a book for outers, wherever they kindle their camp-fire. The author believes in "smoothing it." He has learned how; now he tells others. It is much easier to learn from "Nessmuk" than from Dame Experience. We should not be surprised if "Woodcraft" completely revolutionized the methods of camping out. If you are going to the woods, read "Woodcraft" before you go. It may add to your trip a hundred fold. Price $1.00.

DOG TRAINING.

BY S. T. HAMMOND.

HE was a promising puppy, and when you turned him over to the breaker to be educated, you thought he was bound to make "the best dog in the world." And you'll not soon forget how disappointed and disgusted you were when the dog, the breaker and the big bill—all three turned up together, and you saw that the animal's spirit was broken and it would take a steam calliope to make him mind. Now, this could not have happened if you had been wise enough to buy a copy of Hammond's book, and in your odd leisure moments *train* the dog yourself instead of having him *broken* by some one else. We are selling edition after edition of this book, and it is revolutionizing the system of preparing dogs for work in the field. Price $1.00.

SHORE BIRDS.

A PAMPHLET for those who "gun" along the shore. Tells of: I. Haunts and Habits—Where the bay birds live and what they do at home. II. Range and Migration—Where they go to breed and where to spend the winter. III. A Morning Without the Birds—An episode of shore shooting. IV. Nomenclature—A list of our American species of *Limicolæ*, with a description of each species. V. Localities—Where to go to shoot them. VI. Blinds and Decoys—How to shoot them after you have reached the grounds. 45 pp., paper. Price 15 cents.

ANGLING TALKS.

BY GEORGE DAWSON.

AS a political writer of conceded power, Mr. Dawson wielded a trenchant pen; when he terned from the conflict of parties to the praise of the favorite pastime of "simple wise men," his essays, limpid as the crystal streams, are aglow with the soft summer sunlight and melodious with the songs of birds. When angling was the theme, he wrote from a full heart and in closest sympathy with the scenes and pursuits described. These "Talks" are brimful of manly, wholesome sentiment; there is in them all not a particle of cant. Their sincerity and overflowing spirit at once win the reader, and he perforce shares the author's enthusiasm. The effect is magical, like that of the mimic players in Xenophon's *Memorabilia:* he who reads, if he be an angler, must go a-fishing; and if he be not, straightway then must he become one.—*Extract from Publishers' Preface.* Cloth, price 50 cents.

CANOE "AURORA."

BY DR. C. A. NEIDÉ.

A CHARMINGLY written and always entertaining account of a canoe cruise from Lake George, New York, down the Ohio and Mississippi Rivers to the Gulf of Mexico, by the Secretary of the American Canoe Association. To read the cruise of the "Aurora" is the next best thing to having made it; and the reading is decidedly more pleasant than would have been participation in some of the misadventures related. 216 pp., cloth. Price $1.00.

F. A. ALLEN'S SPECIALTIES.

MONMOUTH, ILL.

ALLEN'S DUCK CALL—Improved, Nickel Plated; the most natural-toned, easiest-blowing, smallest and only Metal Duck Call ever invented and the only one that perfectly imitates the *wild* duck. Sent by mail on receipt of $1.

ALLEN'S BOW-FACING OARS—Can be attached to any boat in five minutes, shipped instantly in the roughest water; work much easier than the common oar. In duck shooting they are invaluable; you see the bird the instant it leaves the water. Sent by express on receipt of $8.

ALLEN'S SHELL GAUGE—Will reduce brass shells to their original size in one-half minute, making them as smooth and solid as when new. On ordering mention gauge wanted. Sent by express for $1; by mail $1.30.

ALLEN'S DECOY DUCK FRAME—Is a simple device for holding the dead duck in a natural position in the water. Price $4 per doz. **SEND FOR CATALOGUE FREE.**

THE ALFORD & BERKELE CO., 77 Chambers St., N Y. (P. O. Box 2002)

CANOE HANDLING.

By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners: and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

A FAMILIAR TALK.

With the approach of a new year it is not necessary to announce any change in our manner of conducting this journal. Just what the FOREST AND STREAM has been in 1885 we hope to make it in 1886. It will be run on the same old principles, tested by experience and approved by prosperity. It will be just as entertaining, just as instructive, just as frank and outspoken, and just as helpful.

We are sometimes asked to explain the reason of the FOREST AND STREAM'S constantly widening influence and prosperity. Well, there is no

Trade-Secret

about it, and we do not mind telling you. It is this: We have not expended our energies in preposterous spread-eagle proclamations of tremendous attractions in the dim and distant future, but have pinned our faith to present performance, each week, and fifty-two weeks in the year. This in the kind of journalism that is bound to succeed. Nothing very occult about it, you see.

Another element of strength is the jealousy with which we have maintained the inherent dignity and entire respectability of the pastimes discussed in these pages, and the extreme care we have taken to keep the tone of the columns such as renders the paper fit for any man to receive into his family. We are assured by men, whose good opinion we value, that they do not think it necessary to make

A Weekly Scrutiny

of the contents of the FOREST AND STREAM before venturing to lay it on the family table, We determined, years ago, that a clean paper must win its way among sportsmen (not "sporting men"). The fact that it has done so is now cited, not that we may boast of our own prescience, but as a most gratifying evidence of the high standing of the field-sports to which this journal is devoted.

In other words, the reason why the "Forest and Stream" is liked by sportsmen is that the "Forest and Stream" is the kind of paper that sportsmen like.

This, as we have said before, is complimentary all around. A third element of the paper's popularity is this: It has some hundreds of correspondents and contributors, who write for it because they have something to say. You have heard the story of the German professor who was assigned to prepare a thesis on the elephant. Now, he had never seen an elephant, so he evolved one out of his inner consciousness. Though we never read his essay, we have not the slightest doubt it was a very dry one. But if the German professor had ever come across

A Real Live Elephant

in an African jungle, he could have written a thesis on the beast that would have had some animation in it. That is just the secret of the interest of the FOREST AND STREAM'S contributions. They come from men who have seen or done or heard something to write about. Nothing dry in their notes and sketches and letters. They put it on paper just as entertainingly as they would talk when gathered in camp after the hunt, or sitting about the fire and comparing notes of the day's shoot. These stories and sketches come to us from sportsmen who represent every phase of life—all the professions and trades and occupations, from which busy men now and then turn aside for a bit of fun by the stream or in the stubble.

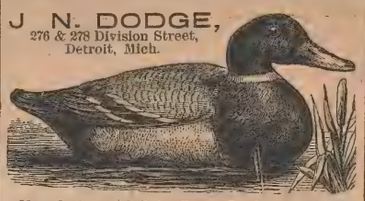
Of course the great bulk of matter appearing in this paper has related to the game and fish of our own country, for that, after all, is what FOREST AND STREAM readers are most interested in. And what a variety there has been! Squirrel shooting in the woods back of the barn, antelope on the distant plains, quail in the wheat stubble, and "chickens" on the prairie; ruffed grouse on the wing and "partridge" on a limb; elk on the "hogbacks," moose in the timber, deer in the brush, caribou on the barrens and coon in the hollow. All sorts of game by all sorts of methods, and in all sorts of places, and by all sorts of people.

Give Cuvier a Bone.

and the great naturalist could construct from it (or he pretended he could) the whole of the animal, living or fossil, to which it must have belonged. Give a man (say 500 years hence) the file of the FOREST AND STREAM for 1885, and he will not need to be a naturalist to reconstruct from its pages the animals and birds and fishes of this country (and he'll find in it a vast deal of curious and instructive information about the "true sportsman," too).

So, you see, the FOREST AND STREAM is a journal of recreation. We do not mean alone that it treats of recreation, but in its columns *is* recreation. This is the practical nineteenth century realization of the old story of

The Magician's Carpet,



on which one sat cross-legged and wished himself in a lovely garden a thousand miles away. With the FOREST AND STREAM in hand you do not need to be a magician to transport yourself in a second to the hemlock browse and the trout pools, the quail cover or the "chicken grounds." Perhaps, after all, we should have named this first, when we began to tell you the secret of FOREST AND STREAM'S success as a sportsman's paper.

The weekly issues of the FOREST AND STREAM form two volumes each year of twenty-six numbers, or 500 pages each, and the file constitutes a library of permanent worth. Twenty-four volumes have already been published. We furnish handsome file binders (price $1.50) which hold twenty-six numbers.

Subscriptions may begin at any time. Per year, $4; $2 for six months. Remit by post-office money order, draft or registered letter. Give name, town, county and State. Address

FOREST AND STREAM PUB. CO., 39 Park Row, N. Y.

J. N. DODGE,
276 & 278 Division Street,
Detroit, Mich.

Manufacturer of Cedar Decoy Ducks of all kinds. First quality, $9 per doz.; second quality, $7 per doz.; third quality, $5 per doz. Also Geese, Brant, Swan, Coot and Snipe Decoys. Duck and Turkey Calls. Decoys made like any pattern furnished without extra charge.

St. Clair Flats Pattern, much larger than the bird; less than one-third the weight of solid decoys. The exact position of a duck on water at rest and unalarmed. The lightest and best decoys made. Heads in different positions; glass eyes, hollow and flat bottom. Do not require weighting to keep them upright. Painted the exact imitation of the natural bird. $15 per doz. Sold by all gun dealers, to whom I give a large discount. If your dealer does not keep them I will send, freight paid, on receipt of price. Illustrated price list free. I also make solid decoys after the Monroe Marsh Pattern, semi-flat bottom; price $11 per doz.

Champion DONALD, pointer (Bob ex Sappho). Fee $35.
Champion BOB, Gordon setter (Lang ex Floss). Fee $25.
The above-mentioned dogs are winners of many prizes, and have sired some of the best dogs now on the bench and in the field. For particulars address A. H. MOORE, 1711 Spring Garden street, Philadelphia, Pa. oct29,4t

Mt. Pleasant Kennels.
In the Stud—King Charles spaniel Young Prince Arthur, imported April, 1885. Best K. C. in America. 1st prize in Boston's late show. Full pedigree. Fee $25. Charm, large, strong and stylish, black and white ticked, English setter, 2d prize in N. Y., sire Guy Mannering; dam, Bow Bells. Fee $15. Argus, a beautiful Gordon setter; sire imp. Argus; dam, Beaulah. Fee $15. For Sale—Two solid black and tan Gordon setter puppies, beauties; full pedigrees. Also two first-class English pug bitches, 8 mos. old. C. T. BROWNELL, Box 835, New Bedford.

IN THE STUD.
ROUGH-COATED ST. BERNARD
FIRST CHOICE.
Winnings: 1st, Toronto; 1st, Philadelphia, in May, and 1st, Philadelphia, Oct. 1885, and many prizes in England. Fee $40. Address MAPLE FARM KENNELS, Garrison's, N. Y. oct29,4t

The Kennel.

ENGLISH SETTER BITCH, WELL BROKEN, fine retriever; will exchange for a first class Colt or Parker breechloader. Address Lock Box 297, New Brunswick, N. J. nov5,1t

FOX-TERRIER PUPS FOR SALE, 3 MOS. OLD (Belvoir blood), Nettle (A.K.R. 1704) Mixture (A.K.R. 2697). Gamest and most beautiful of fox-terriers. Address W. H. COOKSON, Box 305, Hudson, N. Y. nov5,2t

FOR SALE.—FOX-TERRIER STUD DOG BRIAR (A.K.R. 1898) and St. Bernard Karl Bonivard (A.K.R. 481). Will sell low if taken at once. Box 290, Pittsburgh, Pa. nov5,1t

WANTED.—A SPAYED BITCH (COLLIE PREferred) to give immediate alarm at approach of strangers; pedigree immaterial. Box 290, Pittsburgh, Pa. nov5,1t

FOR SALE.—DARK RED IRISH SETTER, thoroughly trained and fine retriever. Will show him on game. Good pedigree and a handsome dog. Address C., P. O. Box 1,547, Philadelphia. nov5,2t

BEAGLES.—FOUR VERY FINE DOG PUPpies, by Bannerman out of Una (A.K.R. 1224), winner of 1st and special at Chicago. DR. E. B. WESTON, Highland Park, Ill. nov5,1t

ENGLISH BEAGLE HOUND PUPPIES, EITHER sex; $10 each. Extra fine ones and several months old. N. ELMORE, Granby, Conn. sept24,tf

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, NOVEMBER 12, 1885.

VOL. XXV.—No. 16. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices $1.00 per line. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by the Saturday previous to issue in which they are to be inserted.

Transient advertisements must invariably be accompanied by the money or they will not be inserted.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. Newsdealers in the United Kingdom may order through Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, $5 per year; $2.50 for six months.

Address all communications,

Forest and Stream Publishing Co.

ANSWERS TO CORRESPONDENTS.

ANOTHER SYNDICATE.

THE failure of the Yellowstone Park Improvement Company is ancient history. No doubt from its composition it would ultimately have fallen to pieces of its own weight, but we had the pleasure a couple of years ago of giving it a few blows which helped to shatter the structure. It was a grand scheme—that of capturing the whole Park and all its privileges for a period of ten years—really grand. But in its execution it was a failure.

Another syndicate has now been granted by the Interior Department very liberal rights within the Park. This company have been given a lease authorizing the erection of six hotels, the establishment of telephone and stage lines, and the placing of a steamer on the Yellowstone Lake. These are large privileges, but the names of those who are interested in this project give promise that the work which they have undertaken to perform will be well carried out. The names of the gentlemen forming this syndicate are given as M. D. Carington of Toledo, C. B. Wright, Frederic Billings and J. C. Bullitt of Philadelphia, John Perry and Charles Gibson of St. Louis. Messrs. Wright, Billings and Bullitt are, we believe, in the direction of the Northern Pacific Railway, and the two former have at various times been president of that road. The other gentlemen are said to be prominent capitalists in their respective localities.

The lease authorizes the erection of hotels at the Yellowstone Lake, the Lower Falls, the Mammoth Hot Springs, the Norris and Upper Geyser Basins, and at a point on the Grand Cañon. It is stated that plans have been prepared for the erection of the hotels and that work will be begun as soon as the weather will permit.

The unsatisfactory hotel accommodations in the National Park during the past summer caused somewhat serious discomfort to many of the people who visited this region. Since the Park has become so popular and the number of people who go through it has so greatly increased, the need of a good hotel has been greatly felt. Many of those who make the trip are entirely unaccustomed to anything approaching rough living. They come out from the East with the idea that the hotels of the Park are like those to which they have been accustomed, and they expect every accommodation and comfort that would be found in an ordinary and well-kept hotel. In this they have been disappointed. At the National Park Improvement Company's hotel the service last summer was as bad as bad could be, and to get anything fit to eat was a matter of the utmost difficulty.

We may feel sure that the proposed new hotels will be very differently managed. Aside from the business advantage of having them properly kept, it will be greatly to the interest of the Northern Pacific Railway to have them models of their kind, and some of the members of this new syndicate being interested in the railroad, it seems reasonable to believe that the two corporations will work harmoniously together, each doing all that it can for the interest of the other.

The persons interested in this new project are energetic, reputable and successful men, who may be trusted to carry out in the best manner possible whatever they undertake. In this respect they are very different from some of those irresponsible speculators who were prominent in the defunct National Park Improvement Company.

POSSESSION IN CLOSE SEASON.

AN important game law case was decided in the First District Court for Bristol county, Mass., last week. Suit was brought against a game dealer for having in his possession a number of quail prior to Oct. 15, the beginning of the Massachusetts open season. It was shown that the quail had been killed in Connecticut and shipped from that State into Massachusetts. The Court held that this did not constitute a valid defense, the wording of the statute being very explicit on this point:

> Whoever takes or kills * * * a quail between the first day of January and the fifteenth day of October, or, within the respective times aforesaid, sells, buys, has in possession, or offers for sale any of said birds, whether taken or killed in this Commonwealth, or elsewhere, shall be punished by fine of twenty dollars for every such offense, except that any person may buy, sell, or have in possession quail and pinnated grouse in January, February, March and April, if not taken or killed contrary to the provisions of this chapter.

That is good law. In this case the birds came from another State, but for every one bird brought from Connecticut the Massachusetts dealers have ten taken in their own State. Under the Massachusetts law the market dealers' scandalous evasion upon plea of imported goods cannot hold. The Massachusetts Fish and Game Protective Association deserve commendation for bringing this case to such a termination.

By the way, the quail exported from Connecticut must have been illegally taken out of that State, for the Connecticut statute expressly forbids shipment of game. The willingness of the game dealer, Cheever, to deal in contraband goods is only a fresh illustration of the dou't-give-a-continental-about-the-game-law spirit of most game dealers, and shows how hollow are their pretensions when they pose as friends of game protection.

A TROPHY FROM THE YELLOWSTONE.

WE have now at this office an old-fashioned Sharps rifle which has a little history—a history with a moral attached. It will be remembered that last summer George Reeder and John Ferguson were arrested in the National Park and brought before Justice Metcalf, where they were charged with killing two elk and eight beaver. For one reason or another the trial of the two men was postponed from time to time, but at length it came off, and resulted in the conviction of both of them. Reeder was an old market-hunter; and for several years it has been an open secret that he has been supplying the hotels with game illegally taken. As the senior and leader in the offenses of which he was convicted, he was sentenced to six months' imprisonment in the common jail and to pay a fine of $100 and costs. His partner in the affair, a much younger man, was sentenced to pay $75 and costs; both to stand committed till the fines were paid. Their horses, guns and pelts were confiscated according to law and were sold last Monday at the Interior Department at Washington. Two or three years ago we had seen in George Reeder's possession a capital heavy Sharps rifle. It was not so heavy as an old-fashioned buffalo gun, but in all essentials seemed to us what a hunting gun ought to be. Thinking it likely that this was one of the guns to be sold, we sent on to an agent in Washington and had him bid in this gun to the FOREST AND STREAM. It has just been forwarded to us. It is worth all that we paid for it, though it was not purchased as a speculation. We secured the weapon simply because it is in the fitness of things that a rifle confiscated because of illegal use in the National Park should find its way to a journal that has done so much to protect and preserve the Park and its game.

It is a serviceable arm, and ought to have been put to a better use than killing game in the National Park. It is a Sharps .44.70, thirty-inch barrel, weight twelve pounds.

BACK TO GRINDSTONE.

TO a large number of our readers the news will be welcome that they will meet again, for the third time, at the old camp on the St. Lawrence. The question was considered at the meeting of the Executive Committee on Saturday last, and after some debate, it was decided to hold the 1886 meet on the old site. Objections have been made by some who wish to visit a new place each year, and by others who desire a location that would be more favorable to certain sections, as the Eastern States, and these objections have been carefully considered, the Commiltee desiring to comply with the will of the majority. The fact that the Commodore, on whom much of the work must fall, was a resident of the locality, had its influence, and also the question of expense, as a camp at Grindstone this coming year will be much less expensive than any new location. Had the other site proposed been selected, in Lake Champlain, it would not have been possible for Commodore Rathbun to be present in advance and to superintend its preparation, while at Grindstone he can do the work with comparative ease.

The main feature of next season's meet will be the presence of a party of English canoeists, and it is the duty of all our canoeists, East or West, to do all they can to make a good showing on that occasion. Some who desired a new location may be inclined to stay away; but it should be a matter of national pride with all to make the meet as large and important as possible.

The finest canoes and the best sailors will be gathered there, and no better opportunity could be afforded to novices who wish to study canoeing and to those at a distance who have never visited a meet, to become acquainted with the A. C. A. and its members.

The East will be well represented; now what is needed is a good showing from the Western canoeists. It is hoped that this year will see the fulfillment of the plan just prepared by the Association for its extension in the West, and that it will be marked by the hearty coöperation of Western canoeists with their fellows in the East in welcoming and entertaining their visitors.

TEACHERS OF MORALITY, who themselves, when out of the confines of their own circle, violate law and bribe others to join in the immoral business, ought to be brought up with a short turn. It is a pretty story that is told by our correspondent "Special," in his account of some professional men in Maine. It is a pleasure to add the other side, for many hundreds of professional men go to Maine every year who are law-abiding in the woods as well as out, and whose morality is not of that tenuous sort that fades away the second they leave home. There is some reason to hope that in course of time, all men, of whatever station in life, shall recognize their obligations to be good citizens wherever they may chance to be. The progress in this respect is at least encouraging; and there is no reason to despair of a final change in public sentiment, so universal and decided that game laws shall have obedience, not unwilling but hearty and sincere.

DOG SKELETONS.—We printed last week a note from Mr. Frederick A. Lucas, of the National Museum, requesting assistance in the museum work of completing a series of crania and skeletons of typical dogs. When a good dog dies send him to Washington. This will aid science; and it will be a much more sensible and fitting course to pursue than to inter the carcass with funeral rites and, as was done not long ago in the case of a famous dog—with indecent and blasphemous reading of the burial service.

THE "SIGNS" point to a favorable season for wildfowl this year. In another column will be found some notes of the coast shooting grounds most readily accessible. We hope before very long to give an unusually detailed and reliable description of the Atlantic seacoast shooting and yachting resorts.

AMATEUR PHOTOGRAPHY is one of the most pleasant and satisfactory pastimes to follow in conjunction with pleasure excursions and camping expeditions. The art of taking pictures is by no means difficult; and the prints serve as most admirable souvenirs of the scenes and incidents they recall.

STEAM YACHT RACING.

THE report of the Regatta Committee of the American Y. C., which we publish this week, will furnish an interesting study to all interested in steam yachts.

The regatta of last July was the most extensive affair of the kind ever attempted here or abroad, and its success reflects great credit on the club and its officers. Owing to the number of entries and prizes and the computations involved, it is but lately that the report was completed, and it was only made public at the last meeting of the American Y. C.

It now gives in a compact form the most valuable details of the leading American steam yachts, and affords a basis for comparison of the boats and also for the perfection of a system of time allowance for steam yachts. This subject is a stumbling block in the way of regatta committees and only last year brought to grief the first steam regatta in America; but this season the club have been more fortunate. The subject has been studied carefully by a number of experts and no less than four systems were tried in the regatta. The general principle governing all of them is that certain theoretic speeds are to be expected from certain elements of size or power, and the actual peformance of each yacht is compared with its theoretic work, and rated as it exceeds or falls short of the latter. The table computed by Mr. F. S. Kinney, a gentleman who has devoted much time to the study of steam propulsion, is based on an average of the speed of existing yachts of various sizes, the result being an estimate of the speed of fairly good boats of different lengths, from 50 to 300 feet. The actual speed of each yacht entered was compared with the estimated speed for its length, its rating depending on the difference, plus or minus, between the two. Of the ten yachts competing for the cup given by Mr Kinney, only one made the course in less than the estimated time, the others being from a few minutes to several hours behind. In the systems of Messrs. Emery and Isherwood the theoretic speeds are computed from the waterline length, and the actual and theoretic performance are compared in each case, as under the Kinney system. In the Lundborg system, as well as the one tried last year, not only length but the propelling power is considered in the computation, but while the formulas are complicated the results are of little value, as it is impossible to estimate even approximately the value of each factor in them.

The regatta of 1885 was a success in every way, both as to the actual racing and also as a pleasant cruise for the club, and the results are very encouraging for so young an organization. There can never be the same interest in a steam yacht race as in one between sailing craft, the sight being less imposing and the handling of the boats being unseen, but racing must have its place in the development of this, as in all other sports, and the manner in which this feature is now being conducted in America augurs well for its success. The matter is comparatively a new one, the subject of rating is a difficult one, and it has received little attention here or even abroad, but the earnest manner in which it is now being pushed by the American Y. C. must bring good results in the near future.

[From a Special Correspondent.]

RESOURCES OF THE NORTHWEST.

THE Dakota of to-day is the Iowa of ten years ago. The Dakota of five years hence will be the Iowa of to-day. So rapid is progress and development in the West. Ten years ago it would not have been thought possible that a decade could have made such a change in the Territory. From a sparsely settled prairie the region has become one great farm.

The wheat product of the Territory is always greater than the requirements of the settlers, and always—even in the worst seasons—the farmers have a considerable surplus. The wide belt of country which is tributary to the Northern Pacific Railroad, pours a very large proportion of its product in to Minneapolis, and this city proves itself able to take care of it all.

Perhaps a few figures may convey a more exact idea of the milling capacity of this thriving town than can be given by any general statement. For the year which ended Sept 1, 1885, the total flour product of Minneapolis was 5,450,163 barrels, as against 4,797,340 for the previous year, an increase of 652,823. There were shipped from Minneapolis 5 298,541 barrels, as against 4,814,424 for the previous year. The exports were 1,989,552, an increase of 257,552 barrels over the year ending Sept. 1, 1884.

These figures demonstrate that Minneapolis is the largest primary wheat market in the world, her receipts during the year exceeding those of Chicago by 11,000,000 bushels. The total number of bushels received during the past year was 32,112,840, against 23,514,576 the year previous. Shipments were 5,584,320, against 3,132,749 in 1883-4.

These statistics give some idea of the producing power of the Northwest during the year past. Let us look at some figures for one week in October last, taken from the *Northwestern Miller*. It says:

> Once more the mills have forged ahead of all previous records. Last week [ending Oct. 17] they touched an output very little below 30,00 barrels daily. This was accomplished, too, with one mill of medium size wholly idle. The flour production of the week was 177,800 barrels, averaging 29,631 barrels daily, against 151,108 barrels the preceding week, and 146,000 barrels for the corresponding time in 1884. This is an actual gain over the heaviest work done last year of 25,000 barrels for six days, and is to a large extent attributable to the rapidity with which new wheat may be ground. As more of the new crop is used, the capacity of the mills seems greater. The new wheat is generally going into larger exclusive use, and as the millers become acquainted with it, they are more favorably impressed with it. For the current week two mills, with a combined capacity of 1,300 barrels, have been cut off, one from damage by fire and the other for repairs. An even twenty are left in operation. They are uniformly doing heavy work, but it is more than likely that the output will fall off somewhat. The millers have begun to talk about shutting down, and say that will be the only course left for them to take, especially if freights are advanced at the close of navigation as is usual. They claim they are not more than clearing themselves and that flour must either go up or wheat go down before there can be an incentive to keep the mills in operation. The receipts the past week were wheat, 1,606,640 bushels. Shipments: Flour, 107,453 barrels; wheat, 108,640 bushels; mill stuff, 6,089 tons. Wheat in store in public elevators: Minneapolis, 3,398,028 bushels; Duluth, 1,306,825; St. Paul, 763,000.

So much for the wheat products of the country which is tributary to the Northern Pacific Railroad.

But it is written, "Man shall not live by bread alone," and although it is the grain of this wonderful country that has attracted the most attention, and proved the greatest source of wealth to its settlers, the cattle country which lies west of it is not less important from an economic point of view. All through Dakota, as all through Iowa, a great deal of stock is raised, but it is all farm stock, and—near the line of the railroad at least—range cattle have no place, except on the extreme western border of the Territory. These farms, however, produce and fatten in the aggregate a vast number of cattle, but their numbers are small as compared with the great herds which inhabit the country which was but a few years ago the buffalo range. The buffalo has gone and the Indian has been forced on to his reservation, and now the plains are free to the cattle and the cowboys who ride the range. It is all in the way of improvement and progress, and it puts money in men's pockets and benefits the country, but is it not, too, just a little bit sad to see such changes as this take place? To see nature wholly thrust aside and industry taking her place.

The stock country of the Northern Pacific Railroad commences at the Little Missouri River, and extends westward into the mountains. Over the most of this region up to the present time it has not been found that crops could be grown with certainty without irrigation. Therefore, while the valleys of all the streams are cultivated, the uplands are for the most part left free to the cattle.

It is but little more than ten years since I traversed the region lying between the Missouri and the Little Missouri. It was then as dry a country as one would wish to see, and the general opinion of those who passed through it at that time was that it would never be available for crops, but might support a few cattle Now one sees wheat fields on all the bluffs, irrigation is not thought of, and the cattle have been pushed on to the westward. Where in 1874 we saw deer, elk and antelope in considerable numbers, are now thriving towns. This apparent climatic change warrants the belief that a few more years may see wheat grown without irrigation on the uplands west of the Little Missouri River. Now, however, the cattle feed all over the hills. Grand cattle they are, too. Most of them are descendants of the stock driven across the plains many years ago to Oregon and Washington and Western Montana, and since then still further improved and graded up by the frequent introduction of thoroughbred bulls. Occasionally one sees a few head of Texan cattle; not the old-fashioned broad-horned steer, with a greybound body and long, slim legs, but the modern improved Texan, who still has about him enough of the characteristics of his Spanish ancestor to be recognized at once by a practiced eye. These have been brought in from the south to fatten on these northern pastures, where the grass is so much more nutritious than it is on their native plains that it is said that there is a difference of 400 pounds between a four-year-old steer reared in Texas and the same animal driven when a yearling to Montana or Wyoming. On the whole, the cattle seen in Montana are very fine—better, it seemed to me, in the northern portion of the Territory than in the south. The rapidity of the growth of this business has been something phenomenal, and since it has become fashionable for wealthy young Americans and Englishmen to start ranches, there has been a fear that cattle raising might be overdone. This does not seem probable. It is true that two or three years ago there was such a rush to buy ranches and stock to put on them that the prices of cattle rose to ridiculously high figures; but that time has passed. Cattle have gone down to reasonable figures, and, while the fabulous profits of ten years ago will never be made again, the business, if conducted on business principles, is a safe and paying one. People must have beef to eat.

Montana up to within a comparatively short time has been rather behindhand in the matter of large herds. It is one of the oldest cattle-growing Territories, herds having been started in the western part of the Territory early in the sixties; but it is only within the last six or eight years that the Territory has come prominently to the front as a grazing region. Now, however, it has as large herds as can be found anywhere in the West, and what is more, a number of the largest companies in the southern country are moving their bands up north into Montana. The fact is, that the mildness of the climate, due to the frequent Chinook breezes, gives this Territory a great advantage over others which have a colder climate. The snow—on the prairies, at least—does not fall to any great depth, and is almost sure either to be blown off by a cold wind, or, what more frequently occurs, to be melted by a Chinook. The cattle are thus always able to find food, and so the winter loss is very small. It might be thought, because Montana is so much further north than Colorado, that the winters would be much more severe, and so the danger to stock greater, than in that State; but this does not appear to be the case. Besides the modifying influence of the warm winter winds from the Pacific coast, the fact that the plains of Montana are for the most part much lower than those of Colorado and Wyoming, tends to make the winters mild and easily endurable. No better proof is needed of the fact that Montana is a great cattle country than the rapidity with which the good ranch locations have been taken up. Sheep are said to do well here, though of course in sheep, as in all other occupations where the profits are great, the risks are also great as compared with cattle.

It goes without saying that in a country where cattle will do well horses will do much better, and I have been somewhat surprised to learn that horse raising has been somewhat neglected in this Territory. There are, of course, horse ranches; but from what I could learn they are not as numerous as I should have supposed they would be. It costs no more to raise a horse than it does a steer, and the horse, if he be the right kind of an animal, is usually worth more than the steer at four years old. Moreover, there is vastly less risk about horses than there is about cattle. A horse will dig through the snow and keep fat where a steer would starve to death, and under ordinary circumstances, without shelter or feeding, will do much better through the winter and come out in better shape in spring than the latter. No doubt more and more people will take hold of this industry as time passes. It is one that seems likely to pay well.

All this is of the prairie. The changes wrought in the mountain country by the last few years are not less remarkable. We hear every now and then of new discoveries of gold and silver in Montana and Idaho. Rich strikes are reported and claims of untold value staked out. There is a wild rush to the new camps. People utterly ignorant of mining pour into them. Then comes the reaction. Those who imagined that a fortune was to be had for the mere trouble of shoveling dirt out of a hole, find that there is another side to mining, and become discouraged. There is an exodus of these simpletons, and the mines are reported by them as being valueless. The excitement dies away and is forgotten. But some of the old hands, the men who are competent to judge of the ground, are likely to "stay with" their claims. They develop them, find new leads, and before long the camp is founded on a solid basis. Mills go up and the mines are worked.

Through just this process of development many of the mining camps of the West have passed. The excitement of the Cœur d'Alene district was an example of this kind. Most of those who went there in the first excitement, reached the mines in the dead of winter, when the snow lay four feet deep on the ground. They were utterly unprovided for this state of things, and it was but a short time before they began to leave in crowds. People laughed at the fools who had gone there, and it was said that the excitement had been got up for speculative purposes. Now, however, the mines of the Cœur d'Alene are known to have proved extremely rich, and I was shown this summer a lot of the most beautiful gold quartz specimens that I have ever seen. It is thought by many old miners that the camp will soon equal Butte in importance.

All through these mountains new mines are being constantly discovered, and I believe that the mineral wealth of the Territory has as yet been scarcely touched.

Over the main range, and beyond the mining district just referred to, lies another rich belt of country, rich certainly in timber and in its agricultural possibilities, and probably rich also in mines. The grain of Oregon and Washington, and the splendid horses and cattle which they produce, are known all over America; while the forests which clothe the mountains of the Pacific slope send their products as far as distant Australia. Even the waters furnish a crop which is well worth the gathering, as the statistics of the salmon-canning industry show.

While presenting so many attractions to the settler, the region is a delightful one to the tourist and pleasure seeker. From the lovely lakes and oak openings of Minnesota one crosses the broad plains to reach the gateway of the Yellowstone Park. Satiated with the marvels of this wonderful region, he proceeds westward through the picturesque scenery of the Rocky Mountains, and again crossing and recrossing the Missouri, passes over the range down Clarke's Fork, past peaceful Pend d'Oreille, mountain-girt, over the plains of Washington Territory, by Snake River and down the Columbia to Portland. Here he may pause again and rest for awhile in view of the majestic snow-clad peaks which tower from ten to fourteen thousand feet above him. Thence he may go to Puget Sound, famed for its loveliness, and from there may continue his journeyings in any direction with the sure prospect of finding fresh scenes to delight him. Alaska is within easy reach, and he will be wise who devotes a few weeks to the stupendous scenery of the Inlet region of British Columbia.

FRIENDS OF ADIRONDACK DEER PROTECTION will be glad to learn that Gen. Curtis is to go back to the New York Senate this year. It was through the determined efforts of Gen. Curtis that the non-hounding bill was pushed through and made a law; and so long as he remains in the Senate proper game protection will have a staunch supporter.

The Sportsman Tourist.

EAST OF THE CASCADES.

THE section of British Columbia from which these notes are forwarded, though by no means such a hunter's paradise as some other portions of the Province, will be found to yield fair and varied sport to the painstaking hunter who is willing to undergo the necessary hard work to bring his efforts to a successful conclusion. A few years ago the foothills in this vicinity were covered with a luxuriant growth of bunch grass, but as bands of cattle multiplied, summering and wintering on the same range, the country began to assume a bare appearance. Wormwood and other plants succeeded the bunch grass, however, and these, with the quantity of grass yet remaining, made fair pasturage. A few miles back in the hills, where cattle are driven for the summer of late years, the feed is still excellent.

The small stream from which the local village receives its name is a feeder of the Bonaparte River, which, in its turn, flows into the Thompson, the chief affluent of the golden Frazer. Both Cache Creek and the Bonaparte flow through bottoms thickly covered with cottonwood, birch and willow, which affords good cover for rabbits and ruffed grouse. Wing-shooting in these bottoms is almost impossible, however, owing to the denseness of the brush, and the hunter will usually find his best companion a dog that will flush the birds and then bark at them as they tree. Not very sportsmanlike, perhaps, but usually giving fair returns, the writer's first half day's bag this season being six and a half brace and the next five and a half.

For some distance up the hills that skirt the Cache Creek and Bonaparte valleys there is no timber except in the gulches which carry their quota of water down to the main stream, but a half hour's ride will suffice to bring one to scattering pines. These gradually become denser as the mountains are ascended until, interspersed with fir, they afford abundant shelter for game. Here begins the blue grouse shooting, which is generally excellent and will fully compensate the sportsman for the fatigue of the trip, the writer having on one occasion bagged fifteen of these noble birds in a cross-country walk of a few miles. At the commencement of the season good sport may be had with prairie chickens by going back a few miles in the hills where the grass is more plentiful and gives greater shelter to the young broods. A friend mentioned the other day that, when hunting cattle on Hat Creek and other tributaries of the Bonaparte, he and his party came across hundreds of chickens. Later in the fall they begin to frequent the stubble of the grain fields, and fair shooting may then be had without leaving the lowlands. The lakes in the neighborhood, of which there are numbers, are in spring and autumn alive with ducks of various kinds, and in some of them wild geese are also plentiful.

From the end of September, when the deer begin to come down from their summer ranges, to the beginning of the close season, deer are abundant, and though a kill may not be made every day by still-hunting, a satisfactory result surely awaits patience and perseverance. By camping out for a few weeks in September and October, when the deer are fat, and before the keen frosts commence, a surprising quantity may be obtained, as many as sixty-five having fallen to the lot of one hunter last season. Large game is steadily increasing in number, for, as the Indians become more and more habituated to the white man's ways, they depend to a greater degree upon agricultural and other labor, and proportionately less upon their guns and traps, with the natural result of making game not only more plentiful, but much more accessible. By traveling back some distance into the mountains bear may be met with, the Indians bringing in a few skins every season. Grizzly bears are reported to have been seen, but this may be doubted.

In nearly all the waters fishing is excellent, the fly being readily taken, though sometimes a grasshopper kills when nothing else will. In Cache Creek and the Bonaparte the trout are small, a one-pounder in the latter stream being an exceptional fish. The take is usually large, however, strings of seventy-five to a hundred and twenty having been the rule with the writer when fishing in July and August of last year. Reliable persons speak of some of the mountain lakes as being unsurpassed for heavy catches of trout. The friend referred to above stated that he and a brother fisherman took 210 trout from Hat Creek one evening, while other members of the party were preparing supper. To use his own expression, "the fish would jump at the raw hook." The Thomson River, a beautiful clear stream, distant five or six miles by good wagon road from Cache Creek, will give the angler splendid sport, the trout being large and gamest of the game.

By way of practically illustrating the nature and quality of the deer hunting, a sketch, which may prove of interest, is given of a day's work on the Cache Creek hills. It is not intended to convey the idea that similar results are to be expected every day, but it certainly falls far short of what may be and often has been done on the same ground. It is to be remembered, too, that the hunt was made on foot out and back again, necessitating a large expenditure of time and labor before reaching and after leaving the real hunting ground. The trip could as well have been made on horseback, for there is scarcely a spot that may not be easily and safely reached on horseback in this part of the country.

With about three inches of snow on the ground, the writer started from the settlement, intending to hunt through the timbered and grassy country on top of the mountains north of Cache Creek. After leaving the open hills and while climbing a steep and rocky sidehill just before reaching the first thickly-timbered bench, a big old blue grouse presented too tempting a mark to be resisted, and he was accordingly scalped at forty yards. The echoes of the report had not died away before three deer went bounding down the mountain, no doubt startled by the unlucky shot. There was no fair chance to shoot as they rattled through the timber, and by the time they showed on the bare ground they were safely out of range; so, after watching them till hidden from view in a deep gulch, the upward journey was resumed with fervent vows never again to shoot at a grouse in a deer country.

Turning easterly on reaching the bench, the traveling was superb, the snow being soft and noiseless and not a twig to snap under the foot. The first sign of the proximity of deer was given by a faithful old retriever, who had been permitted to share the hunt. Throwing up his head he snuffed eagerly, and pleaded by look and act for leave to go. The closest inspection failed to reveal any reason for his excitement, but the next few steps proved that Spring's nose was not at fault, for up jumped a fine buck and disappeared in the timber before a shot could be got. As the country was familiar, an attempt was made to head him by striking over the point of a little ridge overlooking an open stretch which he would be likely to cross. Calculation was at fault, however, for nothing more was seen of him. Numerous fresh tracks, all making for the ridges above, led to a turn straight up the hill. Five or ten minutes' travel showed a couple of medium-sized deer on the slope ahead taking their way leisurely along the hillside. Too late to get a crack at the leader as he crossed a little opening on the trot, the bullet was donated to his chum, who dropped in his tracks only to struggle to his feet again and make off in the wake of the first. A drop or two of blood, a scrap of hair, and nothing more. The pair crossed the top of the ridge, bounded into the hollow beyond, where they were joined by five or six others that had been quietly feeding, and then off to the next ridge, where their white flags waved an aggravating good-bye as the whole band entered a stretch of country too rough for further pursuit.

Turning westward then along the highest slope of the mountain, through scattering firs and grassy hollows, a few hundred yards brought into view a bit of ground that seemed expressly made for deer. Standing on a little elbow of rock, beyond which the landscape widened so that the eye had an onward sweep for five or six hundred yards, the writer gazed and gazed again till all but certain that not a deer was within the range of vision. Suddenly, as if by magic, a magnificent doe, that had been standing perfectly motionless, strikes the eye, and once her shape is caught seems as plain as if against the sky. Rifle to the shoulder, a quick but sure sight, the pressure of the finger, and with the report she is tearing down the grassy slope, a broken foreleg swinging as she goes. Through a clump of small firs, round a little knoll, and the eye loses her; but where she first stood or near it fidgets a young buck evidently preparing for a start. The swiftest of glances along the barrel, another crack of the Winchester and his hindquarters lie helpless as he struggles frantically to raise himself by means of his forelegs. A steady shot from the knee reaches his brain and ends his misery.

Meantime a third deer has been slipping off through the trees until, satisfied that he is safe, he gives a broadside chance at three hundred yards (the others were just a hundred and twenty) of which advantage is duly taken, but his day has not yet come, and he bounds off unhurt. Then to the trail of the wounded doe, whose every blood stained jump is plainly discernible. A dozen yards from where she was last seen she lies dead, shot through the heart, a perfect beauty, the sight of whose noble figure lying stretched upon the stained snow chases away every feeling of weariness. To the honor of Spring be it said that through the whole of the exciting scene he had remained faithfully by his master's side. The two deer were dragged to the foot of the timber, and home was reached by the middle of the afternoon. Five days later, curiosity led the writer to see if the coyotes had found the deer's entrails, and within twenty yards of the spot where the doe fell, he shot a solitary deer which was doubtless the last of the trio. R. M. C.

CACHE CREEK, B. C.

IN LONESOME CANYON.*

FROM the window where I write, the eye overlooking the deep broad valley beneath with its serpentine river, the broad stretches and undulating mesas intermediate, rests upon the ragged and irregular masses which are the foothills of the Mogollon Mountains. The plains are studded with dwarf growth, sage brush, greasewood, yew, mesquite and countless varieties of the cactus, some of them wonderful in their brilliant, wax-like forms of beauty.

Higher up, as the ground is more broken and torn and scarred by intermittent and headlong torrents, the vegetable growth changes to a hardier nature. Stunted pines and firs dot the olive green of the manzanita with darker shades, while at intervals the somber verdure of the cottonwoods marks the depressions of the plateau like the buttons which sink in the velvet of your easy chair. But at the point where the foothills rise, brilliant croppings of rocks, fantastic in form and gorgeous in color, are crowned by the redder stems of the Norway pines or the silver bark of the aspen, pillars which support a luxuriant coronal of foliage. Through the sharp and hidden clefts of these mountain skirmishers in the plains are entrancing vistas of grassy hollows high up in the mountain's secret places, bordered by the pines, whose tops still murmur with the music that pleased the ears of old Theocritus.

Through one of the deepest of these cañons tumbles a mountain stream with a roar wonderful in this land of silence. The waters are enlivened by numbers of beautiful mountain trout, some like our own, but of a darker, tawnier hue and fiercer nature, as befits their abode. You will comprehend the attractions of such a place to a sportsman, especially as the angling is supplemented by fine hunting; for in the neighborhood deer, antelope and bear abound, and on the grassy uplands are bands of turkeys that in weight and style discount their puny market brethren.

Follow up this stream (Oak Creek is its name, so singularly inappropriate that it jars to write it), and after threading a labyrinth with perpendicular walls to the height of several hundred feet, you suddenly find yourself at the entrance of a vast amphitheatre. On all sides the mountains rise to the clouds, their terraced sides forming seats for Titanic spectators, and the small green inclosure a stage from which it would seem that even the victor could not escape. This retreat is known only to a few white men. It has been named the Indian Ranch; and it has a ghastly history, like its old Roman prototype. Several years ago, after the Apaches were supposed to have been conquered and caged, all through this region murders and outrages were frequent. The miscreants could not be detected. Prospectors failed to return from their trips. Miners were slain; women outraged; settlers cut off. None escaped to reveal the perpetrators. The troops failed to arrest the march of terror; and many persons attributed to renegade whites these nameless crimes. At last, through the instrumentality of a squaw, a government scout with a band of men followed an unknown trail to this rock-bound Indian Ranch. Seven bucks and three squaws, including the one who betrayed them, were surrounded and put to death. These few Indians, emerging from this impenetrable retreat, were the agents who had wrought all the mischief in their nocturnal excursions.

With what I know of this region, and having plenty of food well hidden, I would as lief the whole army hunted me, and I would snap my fingers in derision. The whole place has a suggestion of gloom and bloodshed. Two miles down the stream the bottom land widens out broad enough for a garden, and here is a cabin once occupied by a man named Wilson. After the Indians had been driven from the neighborhood, Wilson supported himself by the product of this miniature farm and by the game killed in hunting. He was a man of middle age, hospitable but reticent. As he never told the reason of his self-exile, you are at liberty to call to the aid of imagination the accessories of a love affair or the insinuating mystery of a crime. But having known him I could believe no ill of him, and my task of tracing his last acts is as simple as it is to follow a blazed trail. I spent two months of mid-winter in the mountains above his home, and we occasionally met, with rifle on shoulders, and exchanged our small talk in regard to the abundance or scarcity of deer, the "bar" sign and kindred matters relating to woodcraft. He was a keen hunter and a good shot and his remarks overflowed with valuable hints to a younger man. The last time he left me, it was after a night spent by the camp-fire in one of the picturesque mountain parks, and in parting, I wished him good luck, and on his part he left behind a pleasant impression. One night about ten days ago, a messenger appeared at the mines in great haste, saying that Wilson's body had been found by a cowboy, lying in a cañon of Oak Creek, and the justice of the peace desired us to go with him to view it. We were soon mounted and on the way, picking up here and there a stray ranchman until the jury was sufficient. A ride of fifty miles brought us to the entrance of the gorge, where we dismounted, the better to follow our guide. The familiar features of the place once delightful, now filled me with dread which culminated in horror when we paused before the sad remnant of what was once a man. From the evidences about, the whole tragedy was an open book to these frontiersmen. Wilson, some seven days before, accompanied by two burros and his dog, had started for a neighboring ranch to secure his supply of potatoes. While on the steep trail which leads into the recesses of what I called the ampitheatre he discovered a bear, and from the tracks it must have been a large one. Wilson was a brave man and prepared himself for a struggle. He left his coat and spurs with the burros, and with his dog followed the bear; came upon it suddenly at a sharp turn of the rocks, and as his rifle showed us, two shots had been fired. Unless the bear's heart or brain was pierced the man's situation was extremely perilous. He had attempted to throw himself into a tree, but the bear had caught him by the heel, tearing off the sole of his boot and throwing him upon the ground. Now a fight, with his knife as a weapon, began, and the prints upon the ground told us that it was a desperate one. The bear escaped with two balls and that hunting knife in his body, and left poor Wilson lying face downward in a shallow pool, his skull crushed and his ribs broken. Seven days, watched by his hunting dog, he lay there before discovery; and now, horrible to write, comes a blow to the euphemistic exaltation of the canine race—the dog had eaten and lived upon the flesh of his slain master. Worse yet, the dog is still lying under my window while he waits my verdict as to palliating circumstances. A rifle ball will probably be his fate.

"What is your verdict, gentlemen?" said the coroner.

"Too much b'ar," said the gentleman at my right, and we all indorsed it, slightly qualifying the words. We dug a grave near by and wrapped the dead man in his blanket.

The solemnity of that saddened group of men could not be heightened by priestly words. "He wasn't afraid of nuthin'," muttered the friend at my right; and we all regarded it as a competent ritual. There, in the heart of the Mogollons, Wilson lived; there he died, and there we buried him in Lonesome Cañon.

This is the end of my story. At least it has the merit of truth. Many bear stories seem to us aprocryphal, but this entirely lacks humor; it is an unvarnished relation of simple facts and a tragic termination. F. E. M.

AMATEUR PHOTOGRAPHY.

Editor Forest and Stream:

The camera is fast becoming a necessary part of the outfit of the sportsman and tourist. I remember but one article on the subject in your journal, and that was by one of the editorial staff. I was tempted to take up the art of photography by the hope of securing some views of camps in the West. I was a greenhorn in every sense of the word. My notions of what was necessary and of the process were of the most vague description. I had no guide but the pamphlets issued by those who have the outfits for sale, and of course the main object of these is to sell. If my experience will help any one in the craft I will be glad of it. Let no one think that amateur photography is an inexpensive amusement, for it is not; very few amusements are. But one can get as much enjoyment for the money expended as in any other way I know of, and it is an enjoyment that is lasting, for the results can always be seen. When the hunter or the fisherman can combine the art with his other pursuits, he will have great pleasure in looking over his pictures and showing them to his friends; and descriptions of jaunts after game or into the country are much more interesting when so illustrated. When at home during the long winter evening hours, or on dull, stormy days, the sportsman photographer can get out his views of the pleasant spots "to memory dear," and live over again each happy hour spent in the wild wood, by the dashing stream, or in the rocky fastness of some mountain valley. Certainly then, though the amusement is expensive, the price paid for the whistle is not too much.

Can everybody make photographs? I am almost tempted to reply yes; but perhaps I should say that if a person is possessed of patience in a moderate degree, and any tact for "doing things" at all, he can make photograhs. How long will it take to make good pictures? That also depends. You may make a good negative the first trial, though the chances are that you will not. But by paying attention to points wherein you fail, you ought to get one or two good negatives from your first dozen plates; and as you progress you will improve.

For an outfit, my advice would be get a 5x8 camera, because you can use a smaller plate if desired, and with a 5x8 you can cover a large field, or by tipping up take a fair-sized full-length portrait. There are several good makers of boxes, but it pays to get a fair quality at the start, say one costing $12 to $20. This is exclusive of the lense, but should include the tripod (which should be telescopic, for obvious reasons) and one plate holder.

There are lenses and lenses; and no doubt it would be nearly impossible to get any one lense to do everything properly. As in other matters, a thing which performs one service well, will fail in some other. Combination tools

may work and they may not. If you want a lense to make interiors and exteriors of buildings, photograph groups, or animals and general landscape not too far distant, I would cordially recommend the Morrison wide angle lense, price $25, but this lense is not warranted to do instantaneous work, and it will not do it, except under certain conditions. It will do good work on the water, and can be worked with a very quick shutter, for pictures can be taken very quickly on the water. For long distances the Morrison wide angle lense has too short a focus, and will not give the best satisfaction. Still it is a good lense. It is claimed that the wide angle "Sutter" lense has that fault rectified, and that it will give clearness in the distance. However, let me impress this one thing upon the mind of the purchaser, get a good lense; for you will not regret it, and with it, if you fail in procuring good pictures, you cannot blame your instrument. Don't pay less than $25; and as much more as you care to. A wise plan would be to try several lenses before purchasing and then to take the one that gives the best satisfaction all round.

Always keep a record of your exposures; this is recommended in the book of instructions issued by some of the firms dealing in these goods. If you fail on one plate and have a record you will soon know why. Develop your own plates, for by so doing you learn how to get the correct exposure. If you do not develop your plate, but have it done by some one in the business, your experience counts for naught, and you will probably continue to spoil plate after plate; and if you get a fair picture it will only be by chance. After securing a good negative there is no trouble in making a good photograph, for the printing and toning of the paper positive can be done by sight, and is not "guess work," as is the exposure of the negative; for one really has to guess at the strength of the light from the appearance on the ground glass, and then guess again in regard to proper development. Of course in time the guess work becomes judgment. Therefore, one can suit their convenience about making their own prints from the negatives. It is the same in regard to making the silver or sensitized paper. But I do not think it will pay any amateur to make their own paper, unless using quite large quantities.

One beginning to take pictures should read books on the subject, so as to become acquainted with the theory and terms; and then get some friend who is posted (or gain access to some photographer's gallery) to give a few lessons and points. Following this course, one may rest assured he will soon take fair pictures. Though there are many now taking up the art, there would be more did every one know the fascination and the enjoyment of the pastime. I send you two views, taken, developed, printed and mounted by the writer, for you to pass judgment on. And if they do not prove that one who knows nothing of the business and teaches himself can take fair views, I hope you will so express yourself; but if they do prove that it can be done, they will be vouchers for my sentiments on this subject.

PRAIRIE DOG.

[A $3 single lens will not give straight, sharp architectural lines. A $60 double lens will. Both will take instantaneous pictures. The lens has nothing to do with the quickness of the picture, but it depends entirely on the strength of the light and the sensitiveness of the plate.]

Natural History.

LIFE AS A PROTECTOR TO THE EARTH.

ON our seashores the heavy ocean surf beats in with awful violence, dashing against the rocks and beaches with a force that wears away the hardest stone, and gradually, bit by bit, rends pebbles from the solid granite cliffs and grinds them into grains of sand. The power of these waves and the work which they can accomplish can be judged only by those who have repeatedly watched the surf roll in, seen it move large boulders and heard the rumbling on pebbly beaches as scores of rocks are grinding each other into sandy bits. The eroding force of such billows is tremendous, and the hardest rocks decay before their power. Examples of wearing into these cliff can be seen on any rock-bound shore where chasms and caverns show the past works of these mighty forces. How fast their work of grinding away is now proceeding may be seen on any beach, where bricks and glass can be found worn smooth and rounded and where few or no pebbles are found with angular edges, although such broken rocks are continually carried into the sea.

But our rocky shores are covered, below highwater mark, by a coat which deadens the force of the beating wave and takes it upon itself. This coat is formed by the seaweeds, which cover the tough old granite with their soft, flexible structure. These easily destructible plants are capable of withstanding the beating of the surf, and, in fact, they owe their very existence to the rushing waves which will so easily destroy the much tougher rocks. If it were not for this protection the rocks would rapidly crumble away; the sea would encroach upon the land with greater rapidity, and it would be difficult to estimate what the result would be.

On land, lichens are serving a similar purpose. They take a hold on the barest cliffs and send their roots into the seams in the rocks. At first they crumble the rocks, but this soon ceases, for an earth has been formed and other plants grow, until gradually the rock is hidden beneath a soil which serves to protect it from further erosion by rain and frost. That soil is a protection is shown by the fact that rocks lately uncovered show glacial scratches made ages ago, while uncovered rocks have since that time become rough and have lost all trace of former ice action.

If we take two rivers, tributaries of a larger one, one draining a forest covered valley, the other a valley from which trees have been cut down, it will be seen after a rain that the former is clear and limpid, while the other is filled with clayey mud. The rain in the former pattered down first upon the trees, then upon the leaves, from which it was easily shed, but in the latter case the bare earth was struck, or only grassy sod was there to protect the earth, and the mud was washed off. The effect of rain on the soil can be seen in a freshly plowed field, and if there were no sod the soil would soon be washed away, and the barren rocks alone be left. It is estimated that since the fall of the Roman Empire one-third of the tillable land has become bare rock, simply through lack of care in protecting the soil from the rain. If proper precautions are not taken much damage may result from this cause in our agricultural districts where the soil is not deep.

In rivers where willows line the banks or extend into the stream, during a flood the water will be made to run slowly by contact with the trees, and the mud will be deposited. This is soon chained down by the ever-growing rootlets, and after a few years the edge of the river will be transformed into dry land. Much land might be reclaimed in this way.

The growth of willows on a river's edge is of the utmost importance to man, and where they have been cleared away the river has in many cases widened. In this way the Ohio has, since the white man first came, widened itself perceptibly. Man must be on the lookout for such things if he intends to hold that which is his on this earth.

The final case of life protection against extensive changes in the earth's surface, which I shall mention, is that of grass and trees growing in the sand of certain regions. Those who have visited the shores of France have seen huge sand-hills which have been piled up within the memory of man, and have heard wonderful stories of how hills travel across the country before the wind, carrying destruction with them. On a smaller scale sand-blowing is illustrated on our coast at many points, notably Nantucket and Cape Cod. I have in mind a case in Massachusetts where a valuable farm was destroyed by the blowing in of sand from the sea, the cause of its blowing in being that a forest of trees behind the farm was cut down, and then certain eddies of wind favored the formation of sand dunes. In France the government has taken the matter in hand, and is planting vegetation to prevent the encroachment of the sand.

RALPH S. TARR.

NOTES ON THE VIRGINIA BLACKSNAKE.

I KNOW of no truer friend to the Virginian than the blacksnake, and yet his worst enemy is the Virginian, especially the negro.

Very few of our countrymen know what a friend they have in the black serpent, so common here with us. They destroy every copperhead, moccasin and rattlesnake that crosses their path, and when either one of the above mentioned venomous snakes meets the blacksnake it meets its death. One day in April, a year or two ago, I tied a string around one of my hound's neck, and tried to slip off from my pack for a squirrel hunt, as the hound I had was a splendid tree dog. But on this occasion he treed a squirrel so near the house that my other hounds heard him, and in a few minutes all my pack were at my heels. I had not gone more than a mile from my house before the hounds bounced a large red fox, and he made off immediately toward the Peaks of Otter. He crossed Sharp's Mountain in a few minutes, and in less than half an hour from the time I left home he was climbing the Peaks with my pack close in his rear. In the mean time I had stationed myself in one of the passes of Sharp's Mountain, hoping to get a shot at old reynard and stop my hounds, as the day was very warm; and besides I wished the old fellow's scalp to help pay for several lambs he had stolen from me.

After waiting for an hour or more without hearing the dogs, I concluded I would take a still-hunt for squirrels. I had walked about a hundred yards from the pass when I heard a noise near some rocks to my right, and thinking it was a squirrel playing in the leaves I very cautiously made for the rocks where the noise was and jumped over. Instead of a squirrel I saw a large blacksnake trying to get at something under a rock near by. In order to see what he was after I moved very cautiously to the left and got a good view of the rock. It was shaped like an egg, and near the ground was a small hole or indentation in the rock, and coiled up in this hole was one of the largest copperhead moccasins I ever saw. The blacksnake was doing all he could to get his enemy out of his retreat to kill him, but knowing the deadly bite of his opponent he was afraid to tackle him in such a retreat. The blacksnake would crawl from one side of the rock to the other in order to divert the attention of the copperhead; but its watchful eye saw every movement. I suppose things went on in this way for fifteen or twenty minutes, the blacksnake trying every scheme he knew to get the moccasin out of his fortification.

The battle had become very exciting to me by this time, and I wondered what plan the blacksnake would adopt to dislodge his enemy. At last I saw the blacksnake move on the upper side of the rock and stretch himself at full length and give his tail that peculiar shake upon the dry leaves which sounds so much like the deadly warning of the rattlesnake. This noise diverted the moccasin's attention; he immediately turned his head in the direction of the noise. That movement was the cause of his death, for in an instant the blacksnake, like a flash, had sprung upon his neck, coiled himself about his body, and they were now rolling and tumbling down the mountain. The battle was of short duration. The blacksnake just gave himself a stretch, just as a person does when they wake up from a sleep, and that was the last of the moccasin. The blacksnake soon uncoiled himself from his dead enemy and moved off about his business. I went to the dead snake, and I think every joint of his frame must have been broken, for there was not a sign of life in him; even the tail did not move.

After examining the copperhead carefully, I thought I would see if the blacksnake had received any wounds in the conflict. He had moved some ten or fifteen rods from the battlefield, where he lay stretched out, watching me. When I went up to him he showed the white feather and put off down the mountain in double quick time, but I pushed him so close that he took to a bush for refuge. I hauled him down, and examined him carefully, but found no wound upon him, not even a scratch.

As snake stories are generally below par with most people, I will mention only one more instance of the blacksnake killing a copperhead, although I could cite a dozen different battles between blacksnakes, moccasins and rattlesnakes which I have witnessed. The above mentioned instance was in the year 1881 I think. With a Presbyterian elder I was going to church one Sunday morning when a noise on the roadside attracted our attention. Upon examining the spot from whence the noise proceeded we saw two young snakes in deadly conflict. One was a copperhead, and the other was a blacksnake. Both were young, not more than a foot long The blacksnake came off victorious and when we left the young rascal was trying to swallow his enemy. This battle was witnessed by the elder before mentioned, and the gentleman is living now, and will vouch for the above should any one doubt it.

The blacksnake is one of the best rat catchers we have, and one will soon drive all the rats out of a barn or house. In fact they are worth a dozen cats, for whenever one of them puts his head into a rat hole the inmates leave immediately. A gentleman here in our county keeps more than a dozen in his mill, and he says he rarely sees a rat or mouse.

It is true that the blacksnake does sometimes destroy young birds, but very rarely is this the case, and when he does, it is extreme hunger that causes him to do it. In all my experience of the blacksnake, only one instance can I mention where he attacked young birds, and that was several years ago. An old robin had made her nest in an apple tree near my house, and had hatched out four young birds, which were doing well. One day about a week after hatching I heard the parent birds making an unusual noise, and went to see what was their trouble. I found that a large blacksnake was near the nest and was trying very hard to get its head into it, but the old birds fought it so hard it did not succeed. I got me a good switch and gave Mr. Snake a genteel whipping, and he left in a hurry, but never returned any more for to dine on young robins.

There is no harm in a blacksnake. His bite is not poisonous; in fact, I never saw one bite, although I have tormented one for hours to see if it would bite a young hare, but never got one to bite yet. I have a friend who lives near me who often puts a blacksnake in his bosom for amusement, and often keeps them there for hours at a time, and says he never had one to harm him. The worst enemy the blacksnake has here in Virginia is the negro, and I would wager almost any amount that if one of the colored brothers was to see a blacksnake and rattlesnake in a battle, he would invariably kill the blacksnake first, and if either got away, they had rather it were the rattlesnake. The stories they tell of the blacksnake are equal to the "Arabian Nights." I think that the Legislature of Virginia should protect the blacksnake by all means, as the serpent is entirely harmless.

Sportsmen, protect the blacksnake, for by so doing you will protect a friend who will invariably destroy every venomous reptile he meets with; and if you are pestered with rats and mice, get a blacksnake and put him in your barn and he will drive them out faster than a dozen cats. But if you have a negro for a servant, do not tell him you have put a blacksnake in your barn, for you would never get that darky in the barn again if you did.

CATAMOUNT.

LIBERTY, Va., Nov. 3.

BIRDS OF MICHIGAN.

BY MORRIS GIBBS, M.D.

54. *Dendroeca pinus* (Wils.) Baird—Pine-creeping warbler. An abundant resident for five months of the year in many portions of the State, but not considered as a common species in other quarters. Quite a regular migrant and much inclined to follow a belt of pine land, or if a pinery is not near, heavy tamaracks or hemlocks are selected. This bird is particularly partial to pine lands, and collectors living in other sections can scarcely comprehend how numerous the birds are in the heavy pineries in Central and Northern Michigan. The pine warbler is one of our earliest arrivals, often being heard by April 20, and undoubtedly in many instances arriving earlier, as they do not sing on their arrival probably, and are therefore not identified in the tops of tall trees. It is also one of our last warblers to depart. It was observed in some numbers in Lake county, about 44° north latitude, from Oct. 12 to 15, 1883, while we were deer hunting. The weather was quite cold; snow fell, and water about our improvised home froze to a thickness of one-half inch. The birds appeared cheerful, and flitted about in the tops of the lofty pines often uttering their sparrow-like songs.

Usually the birds are found in numbers from May 1 to 20 in the southern parts of the State, while in the autumn they are not so abundant and are seen in late September a few days. The birds breed abundantly from 43° north and I cannot doubt but that they remain during summer as far south as 42°, but have yet to meet them, as I have not visited a large pinery so far south. I have found a few old nests which were considered as belonging to this species, but new nests have not been taken. The birds as a rule, I think, build well up in trees. Although so often observed in the tops of the tallest pines, and apparently very shy, nevertheless they do occasionally descend to the ground, and during migrations are not rarely found in fields or at the edges of small thickets. I have several times had the pleasure of observing specimens which were migrating through some half-cleared pasture lots. They were often on the ground feeding, and were quite unsuspicious and leisurely in their movements, and in their actions much resembled the yellow redpoll, flying from stump to stump and passing along rail fences in the same easy manner as that common field species.

This species has come under my observation in eight different counties and I consider it a well distributed warbler in all pine-growing sections. I found it plentiful in Mackinaw county, the extreme northern point of the Lower Peninsula, but could not record it in the Northern Peninsula, neither has it appeared in any of the lists of that region. Its song is a peculiar sparrow-like chatter, which is quite familiar to most collectors, but so unlike the notes of the warbler that new collectors are often deceived when it is heard issuing from the tops of the pines. The notes are odd and can not be described on paper. The warbler is very active in its movements and is seldom quiet for an instant. It is a persistent insect hunter and undoubtedly beneficial.

55. *Dendroeca palmarum* (Gmel.) Baird—Redpoll warbler. I am not positive that the bird which I refer to is rightly named above. The changes incidental to each new catalogue issued are many, and not always acceptable; but as such variations are constantly appearing we must apply them as best we can, even at the expense, perhaps, of describing a bird which we have not named correctly. These remarks are made because of the two names to the above-named warbler, where one name only was previously used. In older works we have "Yellow Redpoll Warbler *D. palmarum* (Gm.) Brd.;" next we get a list in which we have "113. *D. palmarum* (Gm.) Brd. Redpoll Warbler," and after it "113*a*. *D. palmarum hypochrysea* Ridg. Yellow Redpoll Warbler," evidently a variety. Without proper means of identification how is one to tell whether a specimen in hand is the original species or the new variety. As looking at it in this light, shall we call our bird the species of the old specific name, the new English name, or the new variety with the old and proper English name with the addition to the old specific name? When either the scientific or the common name is alone changed we can still claim our acquaintance with a species; but when both are changed or one made a variety and embellished with a trinomial we are at a loss, and I am in the dark from the last Smithsonian catalogue whether I have 113 or 113*a*. Let us hope that in the proposed list revised by the American Ornithologists' Union, which will appear when the committe agree on the nomenclature of our birds, that we shall have a standard

which will at least stand for a quarter-century and be regarded by author of new works as correct, and not to be disagreed with by each new writer.

We have a yellow redpoll warbler anyway, and it arrives from April 20 to May 4, and remains until June 1 before passing entirely out of the State. It never remains within our boundries during nesting season to my knowledge, nor could I find it in early June in our Upper Peninsula. The birds appear again from the north in September, and remain as late as Oct. 15 very frequently. A few notes of captures may be of interest: 1875, May 15, Kalamazoo county; 1876, April 25 and May 13, Kalamazoo county; 1879, April 27, Kalamazoo county, and May 3, Kent county; 1880, April 27, Kalamazoo county; 1881, May 1, Montcalm county; 1882, May 9 and 14, Mountcalm county; 1883, May 8, Newaygo county; 1883, Oct. 13, Lake county. The redpoll offers striking peculiarities in its habits, which distinguish it readily from all the other members of the genus. It is essentially a bird preferring clearings, pasture lots and open groves, and in this respect differs widely from the others of the *Dendræcæ*. It is more often found associating with the yellowrump and prairie warblers than any of the genus, but is more frequently seen in company with the sparrows in half cleared tracts. It also has an almost constant habit of jerking its tail, by which it is readily identified during our walks in the fields. It is often seen following hedge rows or rail fences during its periods of migration and much resembles the *Seiuri* in many of its movements. It usually keeps near or on the ground, but is occasionally shot while feeding well up in the trees. I have often seen it on the ground feeding among the dead leaves, and on one occasion it was observed in the road feeding in the dust, a decidedly odd situation for a graceful warbler. It is an active bird and very industrious in its search for insects, which it often catches on the wing, in which performance it is quite adept. After seizing the insect it suddenly pauses in its flight, and if near the earth suddenly drops, or if in a bush comes to a sudden halt near a limb. In this respect it even resembles a pewee in its sudden check after a capture and return to its perch.

The song of this pleasing bird I have never heard. During its migration only a few faint *cheeps* being uttered, which, even when connected by repetition, can hardly be termed a song, so faint and irregular are they.

CRAYFISH.

Editor Forest and Stream:

Two or three weeks ago I had presented to me by Mr. S. L. M. Barlow about two dozen crayfish from Illinois, and turned them into my trout stream. I have never seen any of these fish before on Long Island. Are they likely to thrive? Are any of the Long Island streams inhabited by crayfish, or are these the first introduced? THOMAS CLAPHAM.

ROSLYN, L. I., Oct. 30.

Editor Forest and Stream:

Crayfish, or as they are called here, fresh-water crabs, were, and I believe are now to be found in many of our streams here in Northwestern Vermont, as well as in the eastern townships, Canada. STANSTEAD.

HIGHGATE, Vt.

[Crayfish are cultivated by the Germans for the table. Some are brought to New York market from Wisconsin and other places. Their burrowing habits make them dreaded by owners of dams, and our fishculturists regard them as great pests. We fear that Mr. Clapham may have cause to regret the introduction of these crustaceans.]

ALBINO ANTELOPE.—The Siamese have their white elephants, but it has remained for Wyoming to produce a pure white antelope, and then it required a long chase on the part of the hunters to capture the rare and beautiful animal. It was first discovered about six weeks ago, and ever since that time the hunters have been after it with all energy. On Saturday last T. D. Abbott and Charles Rathbun went out on the chase, and found it near Wall Rock Cañon, where, after some trouble, they succeeded in capturing it. Mr. Rathbun has returned to this city, and Mr. Abbott will come in with the pelt to-day or to-morrow. The hunters say that this is the first white antelope ever seen or heard of, and that it was a beautiful specimen, only about one year old. It is a pity it could not have been captured alive.—*Laramie (Wyo.) Boomerang.*

DOMESTICATING WILDFOWL.—Cold Spring Harbor, N. Y., Nov. 2.—I have received several more woodducks this fall, but no new species. Some of my old birds are now in new plumage and some have not yet moulted. One pintail drake has moulted but is not yet in full plumage; the same can be said of the widgeon and mallards. The mandarins, now two and a half years old, never looked so well. I have not yet been able to get any blue-winged teal nor a mate for the little green-winged teal whose drake died a year ago. So far there has been no loss of birds by death, and a wider range next year may result in breeding some.—FRED MATHER.

DESTRUCTIVE ELECTRIC LIGHT TOWERS.—During a rainy night in October I picked up under one tower one hundred and five birds, killed under this tower alone, and there are several in the city. This was only one night, but every night more or less birds were killed during migration. Those killed on this particular night were chiefly insectivorous birds, as Maryland yellowthroats (*Geothlypis trichas*), house wrens (*Troglodytes ædon*), indigo bunting (*Passerina cyanea*). Migratory birds have about all passed over at this date, Nov. 4, 1885.—G. NOBLE (Savannah, Ga.).

GROUSE AND SNAKE.—Bodines, Pa., Oct. 30.—*Editor Forest and Stream*: A rather singular coincidence was observed near here lately. Two friends of mine, while walking in the woods, noticed a ruffed grouse acting in a very strange manner, and upon approaching her found a small green snake some fifteen inches in length wound tightly about its neck. As they drew near the snake unwound and hid in the leaves, while the pheasant, quickly recovering, took refuge in flight.—H. C. GREEN.

ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN DURING OCTOBER, 1885.—Purchased—Two seals (*Phoca vitulina*); two brown pelicans (*Pelecanus fuscus*), male and female; two European quail (*Coturnix communis*), male and female; and six summer ducks (*Aix sponsa*) three males and three females. Presented—One brown capucin (*Cebus fatuellus*), one coati (*Nasua nasica*), one Leach's petrel (*Cymochorea leucorrhoa*), one cow bird (*Molothrus pecoris*), one tooth-billed pigeon (*Didunculus strigirostris*), four alligators (*Alligator mississippiensis*) and eight banded rattlesnakes (*Crotalus horridus*).

Game Bag and Gun.

ANTELOPE IN KANSAS DRAWS.

IN August, visiting a friend on his ranch in Lane county, Kansas, 80 miles west of here, I found myself in the home of the antelope. That whole region lies in what was originally called the Great American Desert, viz., a vast timberless prairie, closely sodded with buffalo grass, the sweetest morsel to the antelope. Part of the country is rolling and a part gently undulating, with much which is apparently flat; but if you closely notice it you will discover a very gentle slope in what appears most flat. These flats, as they are called, are the parts most frequented by antelope. They reach from three to ten miles without a break. From the boundaries of the flats, draws (ravines they would be called in the East) begin almost imperceptible at first, very gradually increasing until in the first mile you will have a draw fifty feet deep and half a mile wide. The antelope may be found at times near the beginning of these draws, and may then be approached near enough for a shot, though the depression is so slight that the most careful and patient crawling are required. In fact, frequently you cannot crawl, but must lie flat on your breast and pull yourself along with your hands by holding to the grass. The game can often see you, but by great care and remaining motionless when they look toward you, and putting forward only when they are grazing or looking away from your direction, being also careful of the wind and the color of your clothes and content to advance six inches at a time, you may get near enough for a shot. We tried this several times, and in each case succeeded in approaching close enough. You travel on horseback and ride till you discover the game, usually at a distance of a mile or mile and a half.

I was accompanied by a friend familiar with the country. As we came near the summit of a swell we saw two antelope grazing near the head of a draw, about three-quarters of a mile away. We showed only our heads and they didn't perceive us. We rode into a near draw, picketed our horses about a half mile from them, and then approached them, advancing up the draw until within five hundred yards. Here the draw made a turn to the south, and as the wind came from the north we could follow it no longer, for the wind blew directly toward them at the turn of the draw. So we were obliged to move directly over the intervening swell instead of continuing in the draw, which would have been much the safest approach. As we reached the summit we saw the doe. The buck was the one we desired the most; but we dare not wait nor move further for fear of discovery. Now the important but difficult question of distance must be determined, there being no objects to aid you; and being compelled to fire lying down, the intervening ground being also invisible, makes it a much more difficult problem than one who has never hunted on the plains would imagine. I wanted to raise the sights of my rifle one notch; but my friend advised not, saying it was not over one hundred yards. I deferred to his judgment, but the sequel proved him mistaken. After a very careful aim I fired, the ball just barely passing under the body, thus proving that a raise of one notch would have been just my sight. I fired again as she ran, without result. Then the buck made his appearance, running across our front. We paid him our compliments three times, but failed to stop him. On stepping off the distance of the first shot we found it to be a strong one hundred and thirty yards. Of course we were not as well pleased as if we had killed, but felt highly elated at having been able to approach near enough for a shot which before this I had doubted my ability to do.

A few days after this, with the same friend, I rode out again and discovered two more antelope (doubtless the same seen there before). They were lying down 150 yards beyond the head of the same draw. The day was very hot, the sun was shining bright. We picketed our horses in the same place as before and advanced up the draw again. This time the wind was favorable, but when we came to where the draw turned south, we were in plain view of the antelope. No other way of approach being possible, we began to crawl up the draw, beyond the head of which and near the highest point of the swell the two lay, a fine buck and doe, about 350 yards distant. A portion of the way we had some weeds for concealment, but half the way we were in plain sight, and had to be very careful not to move when they looked down the draw, as they did frequently. But we pulled ourselves forward whenever they turned their attention in another direction. They were very watchful and our progress was correspoddingly slow. When we finally got within 150 yards, we were able to crawl without discovery for 50 yards close under the slope. Then we had to snake it along again till as near as possible. We judged them to be not over 100 yards. Wiping the perspiration from our faces and waiting a few moments to rest and steady our nerves, having become much fatigued with our exertion, an hour and a half having elapsed since we began operations, we now prepared to fire. Just as we were about steady, both the antelope rose up, having finished their mid-day rest. They were not alarmed, but we had not a moment to lose, for they would speedily move off. Taking careful aim at the buck, I fired a left rear quartering shot and heard the bullet thud very distinctly. The buck gave no evidence of being hit, not wincing a particle, but moving off with the doe in a gentle leisurely trot. From what we hear, and our experience corrobarated it so far, this is characteristic of the antelope. They differ in this respect from any other animal we ever hunted. They give absolutely no evidence of being hit, but move off as if unharmed. Before we could fire again, they disappeared over the swell in a gentle trot. W followed at a walk, and on reaching the spot where they had stood, saw the buck lying flat and motionless not 50 yards from the spot we fired upon him. The doe stood about 200 yards away looking at him. W fired at her but missed; on walking up to the buck, we found him dead, the ball had struck him in the center of the left ham, ranging forward and upward, and passing out on the opposite side, a few inches below the back. He proved to be a very large, fat animal, with an unusually large pair of horns. We dressed the carcass, and after much trouble got it upon one of our Texan horses and started for the ranch, three miles distant, in one of the hardest thunder and rainstorms I remember to have seen. Of course we got thoroughly soaked, but what did that matter? I had killed my first antelope and was correspondingly happy.

A few days after this I rode out alone in an opposite direction from camp. After riding five miles I saw a band of eight of them about a mile and a half away. Looking through the field glasses—something that one should always carry—I found them to be a buck and seven does. They were grazing toward a draw. I turned back, rode into the same draw about a mile below where I judged they would approach it, picketed my horse, and walked nearly a mile. Now came the difficult part—to see them without being seen. After much careful peeking I discovered them near the edge of the draw, or rather one of them, lying down about 500 yards away. I moved on until, as I thought, about right, and then began to crawl up to the break of the draw on one side. I could see nothing yet, so crawled about twenty yards further, and then gently rising to a sitting posture, I saw a doe lying to the right, 150 yards away. But I could see no others. Looking directly ahead, what was my astonishment to see two does standing up not over 125 yards from me, and at their feet I could see a splendid pair of horns which I knew belonged to the head of a fine buck; but I could not see his head, and dared not rise high enough to do so.

I wanted those horns badly, but just at present I was in a predicament. I dare not move a finger while the two does were standing in open view and so near. I judged they would soon lie down, as all the rest seemed to have done. After waiting ten minutes, which seemed an hour in my uncomfortable position (for like a pointer I stiffened when the scent or rather sight struck me), finally one lay down. Oh, if the other would only lie down now and relieve me from my cramped position, I would then get those horns. At last, down she went. I took a long breath and stretched my cramped legs. After a good rest I began to pull along toward those horns, at the same time keeping a sharp watch on the doe lying to my right, and whose ears I could see while hugging the ground closely. At last those coveted horns were in view as far down as the head; but I dare not raise my head high enough to see more, for the buck was facing me, and I knew the two does at least were by his side. Which way they were lying I could not tell. On I pull again a few feet further, intending to fire at the head as soon as I could see it. But now to my chagrin I see that I can go no further toward the buck, for the doe to my right can plainly see me and will be sure to notice me if I move forward. I lie still and think the matter over. Can I back out and approach from another quarter? Too much risk of discovery I decide. But how can I give up so handsome a pair of horns—almost mine? A bird in hand is worth two on the plains. So I decide to make sure of the doe, and trust to a running shot for those beautiful horns, more beautiful now than ever, as my chances of possessing them grew less, for I could hardly hope to hit him on the run. At last, raising my sight one notch, I fired a quartering shot at the doe and heard it strike. But not stopping to see what took place further, pumping in another shell I fired at the buck, now trotting across my front at the head of six does close behind him, and carrying away with him those horns that ought to have been mine. At the first shot I missed, and fired again, three times scoring a goose egg. Then I watched them, feeling sure the wounded doe must soon halt. I noticed one doe a few feet behind the rest. By the time they had gone 600 yards she reeled and fell. Walking up I found her dead; dressed her and then went after my horse, hoping to load the carcass upon him, but doubting my ability to do so, for those Texans are opposed to carrying anything if they can help it.

I was not disappointed. He had no inclination to carry it. I hitched the picket rope about its neck, mounted and pulled it along the grass by the horn of the saddle, which, by the way, is the only manner a Texas horse will pull anything; he has no use for a collar, and the less work of any kind he is given the more docile he is. These ponies are just mean enough to leave you on the plains, ten or twenty miles from any place, if they can get rid of you, by fair means or foul. They look handsome when roaming the plains, but beauty is often deceptive, even in a horse.

I got along finely for half a mile, when I found that the hair and hide was fast disappearing from the side in contact with the grass, so I turned the animal over on the other side and moved on half a mile further, when the same result happened. I was still four miles from camp. I unfastened the picket rope, rode to the ranch and returned with a wagon. Now came the difficult task of finding the antelope on that vast plain, with not a shrub nor landmark of any kind for miles. Before starting for camp I had taken bearings with my compass from an old deserted house several miles away from the spot I left the antelope. Guided by this, after a short search I found her and took her to camp. We had several other hunts, one with greyhounds, of which I may tell you later. E. R. WOODROW.

LARNED, KANSAS.

SOUTHERN DUCKING GROUNDS.

FROM several authentic sources it is learned that the prospect for good goose and duck shooting this winter, in the waters of Virginia and North Carolina, is very fair. Already a large number of birds have put in an appearance although the weather has been warm. Many of the birds are young ones, which is considered by the coast gunners as a very good sign. Last year there was little or no shooting for brant along our coast. The Hog Islanders who used to supply our markets with these delicious birds made but two small shipments. This year, however, they say it will pay to follow the birds up, and all hands are busy now painting and rigging up their stools. Below are reports from two of the most important fowling grounds on the Atlantic seaboard:

THE VIRGINIA BROADWATERS.

Geese, brant and black ducks are now quite plentiful in the broadwaters between Accomac county and Hog Island. Off Brant Hill there is an abundance of feed, and the brant are bedding there in great numbers. In Burton's Bay, to the north, a number of young brant have been seen. There are blinds at the mouth of Trout Channel, and already some fair bags have been made. At present the best black duck shooting can be had in Cherry Creek and in the creeks running through Matulican marshes. On these marshes there are also great numbers of curlew and sand snipe. A new gunning club, with Mr. Ben West of New York city, at its head, has located, and built a club house on the marshes south of Burton's Bay. The club has a limited number of members—all old-time sportsmen.

Owing to the filling up of the ponds on Paramore's Beach the black duck shooting on the island is a thing of the past. The salt pond, however, at the north end of the island, has increased in size, and during the northeast storms is a great resort for geese. A party of Northern gunners have taken possession of Revel Island, which lies to the southward of Paramore's Island, and they have been building bush blinds in all the available sinks in the upper broadwater.

The inhabitants of Hog Island and Cobb's Island are pre-

paring for a big gunning season. They say that a very large percentage of the fowl in the bays this year are young birds. Last season there was but little brant shooting in this section, but there is promise that the resident gunners will make up for lost time this winter.

THE CURRITUCK MARSHES.

During the very hard northeast storm in the latter part of October which occurred along the North Carolina coast, the local gunners who frequent the marshes whenever they get a chance have been guilty of more or less poaching on the ducking shores owned and leased by the different shooting clubs. They are at present threatening the frontier owned by the Palmer's Island club, and occasioning no end of trouble to Mr. William S. Foster, the superintendent, and the under keepers. It has therefore been found necessary to erect look-out houses on the marshes, from which the keepers can have a good view of the outside shores. One house has been erected on the outer point of Horseshoe Island. Everything is being done to keep the law-breakers at bay, but they are very obstinate in their attacks, and in some instances have resorted to night shooting.

From the present outlook the shooting at Currituck will be remarkably good this season. There is an abundance of good food. On Oct. 25 there was a good show of ducks in the marshes, and on the 28th ult. the geese began to circle into the Sound. The weather has been warm, and on the main land there has been a great deal of sickness. There has been no frost as yet, the thermometer ranging from 65° to 85°. The Palmer's Island members are making many improvements. They have been erecting a large kennel house for their retrievers and hunting dogs. The mails run via Snowden's Station as last year, no change having been made in the time.

CALIFORNIA GAME NOTES.

ALTHOUGH our shooting season opened on the 1st of October, it has not thus far been a satisfactory one. Contrary to the rule, we have not as yet been favored with a rainstorm—except in the mountains—and all efforts to find quail in abundance in their usual haunts have been unsuccessful. The foothills are scorched and dry, and the watercourses few and far between. Hence the birds appear to have sought the impenetrable chapparal and greasewood thickets further up the mountains, where neither man nor dog can follow them. It will take a few good showers of rain and a snapping frost or two to drive them out and down upon the lower hills, where they will be within reach of the sportsman, and where dogs will have a chance to do satisfactory work. However, as we have a good, long open season—from Oct. 1 to March 1—we can afford to wait a few weeks yet, even till December.

If anybody thinks that the valley quail of California affords poor sport for others than the pot-hunters, he is mistaken. That they can be shot in vast numbers by the "ground-sluicing" process is true, as I suppose it is of every other kind of quail; but our valley bird really lies well to the dog when found where the brush or timber is not too dense. The coveys are apt to flush wild at first, but at the first shot they scatter well and hide very close. I have known persons to follow them for hours and not get a shot, simply by neglecting to blaze away at the first rise. They do say that down in the southern part of the State these birds do not lie well, but in the central and northern counties they do. Just now everybody that enjoys sport with gun and dog is wishing (if not praying) for rain and a cold snap. But, aside from the necessities of the sportsman, more delightful weather than we are now enjoying could not be asked for Lovely as is the California springtime, the autumn is to me even more charming, especially the October and November months. Here in Sacramento—and throughout the great valley of the Sacramento—the temperature now runs about from 40° in the early morning to 70° in the afternoon. The air is soft and hazy, and we have not had a really strong blow since June. It is just the kind of weather that makes a fellow feel as if he wanted to be abroad in the woods and fields, of course with gun and dog. When thus accompanied I have often noticed that one's enthusiasm over the beauties of nature lasts much longer than under other conditions, even if it be no more intense at the outset.

Those who prefer wildfowl to quail shooting are also resting on their arms, waiting for the great influx of ducks from the north. A great many ducks are bred annually in the tule region along the Sacramento, and the advance guard of the northern army comes along soon after September 1; but the height of the ducking season does not begin until well along in November. This year the sloughs and small lakes are all dry as yet, and the ducks have mostly gone to the bays and larger lakes. A few canvasbacks have been shot recently within a couple of miles of this city, and mallards, teal, sprig, redhead and other common varieties have been in market for some time. Geese are quite plentiful already, and very soon the poultry stands will be filled with all kinds of wild game. The deerslayers fairly steeped themselves in gore the past summer. The number of deer that were slaughtered since July, within a radius of 75 or 100 miles of Sacramento, would foot up into the thousands. The woods are full of white men and Indians who kill the deer for their hides (contrary to law, of course), and they are helped out by crowds of graceless scamps from the cities and towns, who go "camping" every summer. These chaps come home and get the newspapers to puff them for having killed from 10 to 30 deer each during a month's raid in the hills. Of course they sell the hides, like the other fellows, and throw away the carcasses. It is simply shameful the way our deer are being destroyed, and I only hope that some of these guerrillas may live long enough to realize what brutal proclivities mastered them in their younger days.

Owing to the lateness of the season the Pacific Coast Field Trial Club has not yet been able to determine upon what grounds the trial shall be run in December. The probability is, however, that the dogs will be turned loose in Marin county, where a member of the Executive Committee claims to have found some good ground and plenty of birds. The Derby will be light this year, as several owners of young dogs declined to risk $2.50 and make their nominations as early as May 1. As it was, there were seventeen entries; but distemper, poison and doses of lead have made sad inroads upon the puppy ranks. The all-age entries will close Nov. 15, and it is expected that they will foot up from twenty to thirty. The club find it difficult to secure good judges, but will endeavor to have the best the State affords. Interest in dogs is steadily on the increase, and in a few years California will be able to boast of a large number of blue bloods. There are a great many here already, all of the most noted Eastern sires being represented.

Excellent snipe shooting is reported from the marsh lands about the mouths of the Sacramento and San Joaquin rivers. In fact, a San Francisco paper stated last week that the local market was glutted with English snipe. I like snipe shooting perhaps better than any other, and must try and pay my respects to the long-billed fellows down that way at the earliest opportunity. CARL.

SACRAMENTO, Oct. 27.

GAME IN THE PINE TREE STATE.

THE superintendent of the Maine Central Railroad has issued an order to his station agents which will interest sportsmen who go to the Pine Tree State to hunt moose, caribou or deer this fall. In substance the order says that, although under the statute a railroad or an express company could legally transport each season one moose, two caribou and three deer, yet, with all the number of trains, stations and agents connected with that line, it would be impossible for agents to know when the limit had been reached, and the superintendent therefore orders that none whatever of such game be transported. This is regarded as a strong move in the right direction by those favorable to game protection, and, since the Maine Central and its branches cover nearly all the avenues of transportation from the State, except by water, it now looks as though but few moose or deer could be got to market from Maine this season. Some of the other transportation companies are likely to adopt the same rule of action.

The Maine commissioners are working with their usual energy to bring those vacationists who have been down to Maine and shot moose, deer or caribou in close time this year, to justice. They have able detectives at work and disclosures, unpleasant to those who have been wonderful hunters on the sly, are expected. Mr. Stillwell declares that what surprises him beyond measure is how that even clergymen from other States can come down into Maine in close season, bribe guides to aid them, and then deliberately break the law of the land, only to gratify a passion for killing. Such wickedness is invariably followed by lying. Guides are corrupted into swearing falsely, by money, and both clergymen and lawyers are instigators of such crime, to save themselves from paying the fines that law fixes upon their overt act. As for schoolmasters, several of them are indicted for killing moose or deer in Maine out of season, and they dare not visit that State, for fear of arrest. Truly they must regard the fun as dearly bought.

These clergymen preach obedience to law and order at home; these lawyers would not be guilty of openly breaking the statutes of their own State, and then subornating witnesses to swear falsely about it; but each goes into Maine intending to take game unlawfully. But what is the result when they get found out? In nine cases out of ten they prove to be cowards—"squeal," as the speculators say—when they get nipped. They write to the Maine Game Commissioners asking for clemency. The letters are generally addressed to Mr. Stillwell, because his name appears first. That gentleman has such letters in his possession by almost a score. The letter frequently confesses the crime; generally promises never to do so again; winds up with asking permission to come into the State again. Mr. Stillwell's answer is always the same: "I am not a judge. I did not make the law, but I have sworn to enforce it, and while the oath of office is on me I shall do it!" He also closes with assuring the applicants that if they touch Maine soil again they will be arrested.

Such devotion to a cause where the pay is very small and the curses are many, is saving the moose and deer to Maine, and they are increasing wonderfully. Would the same earnestness and force were behind the game and fish protective laws of every State in the Union! Hounding deer is effectually wiped out in Maine, as it is to be hoped it may be by your aid, good FOREST AND STREAM, in the Adirondacks. A gentleman, for many years a resident in Maine and who is to this day in the habit of traveling over the sparsely settled portions of the State extensively, remarked the other day that "he never saw anything like it. Ten or fifteen years ago there were no deer. Now they are getting to be very common. They come out into the fields to feed. Their tracks are as common as sheep tracks. Only keep down crust-hunting and keep out hounds, and Maine will yet be as noted for her deer as for her lakes and woods."

It is with pleasure that I hear that the Province of New Brunswick has made a non-exportation game bird law, although I am not yet able to state the form of it or give FOREST AND STREAM a copy. SPECIAL.

A TEXAS QUAIL SHOOT.

Editor Forest and Stream:

During the latter part of October, and at the end of a mild Texas norther, a party consisting of Wellmer, Purnell and Hanna resolved to go upon a general hunt, and having loaded down two buckboards with all the paraphernalia of a hunter's outfit, left town, looking like two Yankee tin peddlers going West to have the country grow up with them. After traveling twenty-five miles northeast of Austin, we arrived at our camping grounds on the head of Willow Creek, where ducks, snipe and quail were said to be abundant. Arriving a little before dusk, we set to work hunting quail for supper and succeeded in bagging a few. We selected our camping grounds a hundred yards from the tank or pond, under some hackberry trees, which made a delightful place to camp, and, with plenty of wood, we soon had a rousing fire and a fine supper, and after telling a few stereotyped camp stories, retired for the night. All was lovely, calm and serene on this balmy autumnal night, until all at once night was made hideous by the howling of legions of wolves within a short distance from camp. That, with innumerable hoot owls in the trees close by, was something that did not detract from the monotony of camp life.

Next morning we were up bright and early, and heard the first piping notes of Bob White coming from every quarter, and we anticipated fine sport for the day. At daylight we took our stands at the pond, and a little before sunrise Purnell succeeded in bringing down a couple of canvasbacks out of a large flock that came sailing over, going south. That ended duck shooting for the day. We repaired to camp and after breakfast started out for quail. The surrounding country consisted mainly of cactus, chapparal, quail and rattlesnakes. One of our party killed a large rattle, which he nearly stepped on; it had ten rattles and a button, which would indicate the gentleman was ten years old. The prickly pear was so dense that we could not work a dog, and so we had to rely on still-hunting and trust to the hawks to scare the quail up. Talk about hawks, they were there by the thousands, and could be seen in every direction as far as the eye could reach. Some of them would hover over a covey of quail, and would not leave at our approach; so we succeeded in killing them. We disposed of some forty hawks during our four days' outing. As to quail, we had as fine sport as any sportsman could wish, and would have returned with about sixty birds if the weather had not turned out so warm. An idea of the number of quail in that vicinity may be drawn from the fact that during the year 1877 one party of pot-hunters trapped over eleven thousand there. But thanks to our Legislature, it undertook the framing of adequate game laws for the protection of this noble bird, and quail are to-day more plentiful than at any time since the war.

Our trip home was devoid of any startling incident, save that every team we met took fright at us, and several of them came near running away. I presume we were taken for the advance of a circus. BOB.

AUSTIN, Texas, October, 1885.

BOSTON, Mass., Oct. 30.—My score of birds for this season is four woodcock, one partridge and one black duck, and as I am no game butcher and do not hunt for count I took as much enjoyment as on some former trips when I made much larger bags. The first flight of woodcock arrived here from the 12th to the 16th of October, and seemed to be coming and going a few at a time for a week or ten days. Quail are not very plenty. Partridge in some places are more plenty. The section where I have hunted has been good cover for them for years, but this year the flocks have been broken and thinned out by market hunters so they are hard to find. One market hunter has made a specialty of hunting ducks for the market, starting out before daylight and visiting all the ponds for miles around and doing nothing else during the fall migrations, shooting some and frightening away the rest. Such a man is a nuisance in any neighborhood, much more so in a State like this where game is so scarce. Maine, New Hampshire and Connecticut have made laws that forbid the shipping of game out of their States, which will save a good deal of their game but will have a tendency to a greater slaughter in Massachusetts, Boston being the chief market in New England. It will also have a tendency to make land owners post their land to preserve the game. Most of the woodcock shot in this State are flight birds; very few breed here compared to former numbers. The largest woodcock I have ever shot and weighed tipped the scales at 11 ounces.—G. L. B.

VERMONT DEER AND PANTHERS.—Highgate, Vt., Oct. 31.—Signs of deer are to be found on nearly all of our mountains in the northern portion of the State, though no panther; but we have a worse evil, the sly cruster, who runs down his venison and keeps his own secrets hid from his neighbors, excepting in the extreme northeastern part of the State, where this work is done more openly. I believe that your correspondent, Ned Norton, could throw some valuable light on this subject. Our people are over-zealous to help exterminate but lax to assist in the work of protection.—STANSTEAD. In the *Evangelist* Rev. S. W. Powell writes from Wilmington, Vt.: "Ray Pond, about three miles above the village, was stocked with black bass about nine years ago, and there are said to be seven and eight-pound fish there now. A few begin to get out into the stream. Sawdust has banished the trout. Once in a while deer stray as far south as this from the wild region up north, in which some ten years since a number were turned loose, and have been protected since by stringent legislation. The low bounty for killing the panther—only $20—does not tempt hunters to undertake the serious labor and peril. One that weighed 180 pounds was killed a year or two ago, I was told, and shown at Brattleboro. How many deer, not to speak of domestic animals, would it take to maintain such a monster for a year?"

GAME NEAR NEW YORK.—One of the best hunting grounds near by is reached by the D. L. & W. R. R., which takes you direct to Oakland Station (or Cresco) Monroe county, Pa., some forty miles northwest of the Water Gap. Here pheasants are numerous, and woodcock, rabbits and a few quail may be found. The country is rather high and rough for quail, however. I spent four days at Cresco last week, and found out for myself what old hunters have been telling [illegible] several years. There is game at Cresco and plenty [illegible] woods abound with partridges. In a two days' [illegible] parties must have started fifty birds, but owing to the [illegible] underbrush very few could be seen. We secured [illegible] dozen jump birds and several woodcock. Seven miles northeast from Cresco are the Goose Ponds, near which deer may be found. Two were started about four miles from Cresco last Tuesday, and any hunter who travels the country from Goose Ponds to the Bushkill will be rewarded with venison. Five miles west of Cresco are the Beech woods, which afford a roost for thousands of wild pigeons. Altogether Cresco is a good place to locate for a few days. Hunters who go out there need not buy any game at Washington Market on their return. If they are fairly good shots they can get enough in the woods to fill a good-sized game bag.—T. V. W.

TO THE SUNK LANDS.—The Memphis *Appeal*, Nov. 3, reports: The little pleasure steamer C. O., about which the *Appeal* had an extended notice some time ago, arrived yesterday afternoon, and is lying at the upper wharf awaiting the arrival of four of the participants in the cruise expected by rail from Louisville this afternoon. The C. O. is owned by Judge Longworth, the distinguished Cincinnatian, and in command of Geo. B. Ellworth. Judge Longworth is accompanied by a party of his friends, among them Col. A. Wilson and Dr. Henshall, both well known to piscatorial fame. The latter gentleman is keeping the boat's log, which will be an interesting page in marine literature hereafter. The C. O. leaves this afternoon for the mouth of St. Francis River, and will ascend that stream *Deo volente* and a sufficiency of water, to the happy hunting grounds of the Sunk Lands up about the headwaters. It is a happy party, equipped to unlimited expense and good judgment, and it is hoped they will realize all the sport dreamed of when the excursion was planned.

WHO TAKES THE DEER?—*Editor Forest and Stream:* In answer to "G. F. K.," Sayville, L. I., in FOREST AND STREAM for Oct. 15, page 228, "Who Takes the Deer?" here is my experience: Ten years ago this season we were in the Adirondacks (Essex county), and I asked the same question of one of the old settlers and hunters, and the answer was: The dog takes the hide; and I think that was all, although I was told it might sometimes be considered policy to give the owner of the dog a quarter of the carcass as a preventive of his accidentally mistaking you sometime on purpose for game and serving you as you did the deer.—DRAWER 1606.

IN CAHOOTS.—Denver, Col., Oct. 30.—*Editor Forest and Stream:* "In cahoot" or "in cahoots" has been a familiar phrase to me ever since I can remember such things (was brought up in Ohio). But never, until since various correspondents have been discussing it and wondering over it through FOREST AND STREAM, did I understand or suspect that it meant anything rascally or disreputable. It simply means a partnership, and is generally applied to a petty partnership, such as two or more boys trapping quail or fishing together with an agreement to share and share alike in the results. Sometimes it is applied to more important partnerships, of temporary duration, especially by persons who have fallen into the habit of using the words. I have often heard it spoken "in cahootnership." It is simply an American provincialism, fully as expressive as many others and quite as sensible. It is possible that a band of chicken thieves might agree to go "in cahoots," or, if more "tony," they would refer to their organization as a copartnership.—W. N. B.

SOUTHWESTERN KANSAS.—Gardner City, Kans., Oct. 30.—A couple of friends returned yesterday from a week's tour through the southwestern counties. They report having seen abundance of game. On one occasion, upon reaching a plateau, quite a panorama was disclosed. Scattered in the foreground were at least a hundred antelope; skulking about were coyotes; while further away was a drove of fourteen genuine live buffaloes, and gangs of wild horses. They saw also numbers of curlew, plover and mallard ducks. I was premature in announcing the extinction of gray wolves in this locality. I learn that a grand wolf drive has been organized, to take place shortly at a point on the railroad fifty miles west of here, the grays having played havoc among stock south of the Arkansas. A prominent stock man has sent out word for all of Southwestern Kansas to come and partake of his hospitality during the big hunt. I hope to attend, and if so will send an account of it.—RAMBLER.

POSSESSION IN CLOSE SEASON.—Boston, Mass., Nov. 3.—In the First District Court for Bristol county, at Attleboro, Mass., George W. Cheevers, a provision dealer of Attleboro, was fined $40 and costs on Wednesday on two counts, charging him with selling and having in possession quail before the 15th of October. The evidence showed that the quail were killed Oct. 10 in Connecticut, where the season opens Oct. 1, but the court held that under the statute passed in 1881 this did not constitute a valid defense. As the first case under this statute the case is one of interest to dealers and sportsmen. Simeon Bowen, Esq., of Attleboro, appeared for the defendant and J. R. Reed, Esq., counsel for the Massachusetts Fish and Game Protective Association, for the government.—HENRY J. THAYER, Sec. Mass. Fish and Game Protective Association.

PHILADELPHIA NOTES.—Nov. 7.—The opening of the ducking season at the Havre de Grace and Gunpowder river grounds gave good shooting on Nov. 1. As is always the case when shooting is allowed in these waters for the first of the season, the fowl were not at all wild and stooled beautifully, having arrived and taken possession of the flats during the last two weeks of October, and were not molested. Many redheads were boated and blackheads were numerous. Canvasbacks are scarce, the weather thus far having been too mild to bring them. Sportsmen who have returned this week from quail shooting trips complain of the warm weather and the heavy growth of weeds and other thick cover they everywhere encountered, but report the number of coveys as compared with last year have increased.—HOMO.

COLORADO GAME.—Denver, Colo., Oct. 30.—A fair supply of game is now coming into this market, consisting mainly of deer, antelope, bear and ducks. A few grouse and quail—the latter from the Missouri Valley. For some reason there are hardly any geese or brant in this region this fall. A hunter killed three black bears in the edge of the mountains about fifteen miles from this city, the other day. They were all young ones and in excellent condition. After killing them the hunter prudently went after reinforcements, as he expected an old one was hunting in the same neighborhood. But the carcasses were found undisturbed and no other bear was seen. Duck shooters bring in large bags from the neighboring ponds and lakes.—W. N. B.

GUNPOWDER BRIDGE AGAIN.—A South Baltimore would-be gunner who went out to shoot ducks from the Gunpowder Bridge yesterday morning, came back with a cold and wet clothing, but no ducks. He said the next time he went duck shooting he would go where ducks were tender. He stated to a number of friends that he fired about twenty rounds at as many ducks flying over him, and he knew that there was no fault in his aim, as he heard the shot strike the ducks, but not a duck would fall. His wife, he said, advised him to go to market when he wanted wild ducks again, and he believed the "old woman" had more sense about capturing ducks than he had.—*Baltimore Times.*

SCRANTON, Pa., Nov. 6.—Woodcock have been quite plenty. The first day I was out I shot 16, the second day 6, and the fourth day 21. Rabbits are so plenty that they are a nuisance. Gray squirrels are very numerous about seven miles from here. I have been out only twice and shot 23 grays and one fox; was at Stroudsburgh, Monroe county, last week, and bagged 14 quail. A party is in the woods for deer, and they have sent in word that they have shot two.—W. B. L.

THIS TIME IT WAS FOR A DEER.—A report from Eau Claire, Wis., Nov. 5, says: James Dana, brother of the editor of the New York *Sun*, was out hunting with E. Van Trott near Thorpe, this county, to-day, and, mistaking Trott for a deer, shot him in the back. The victim of the accident will probably recover. Mr. Dana is prostrated with grief at the occurrence.

MENOMONEE, Wis., Nov. 3.—A number of residents on the Red Cedar, Eau Claire and Chippewa rivers are using measures to enforce the game law. A few days ago four noted hunters from St. Paul were arrested and fined in Barron county for hunting down deer with dogs, a statute being in force prohibiting hunting deer with dogs.—WING SHOT.

NATIONAL PARK PRIZES.—The Interior Department sold at auction last Monday, in Washington, two rifles and several bear skins and beaver pelts which had been confiscated by the Superintendent of the Yellowstone Park from persons unlawfully hunting in the reservation.

RED FOXES IN TREES.—Highgate, Vt.—I have known several instances here where hounds have driven red foxes up leaning trees, and it is quite a common thing to run them into hollow trees, where there is an opening at the base of the tree; in the latter case our hunters smoke them down.—STANSTEAD.

MICHIGAN.—Cedar Springs, Nov. 3.—Weather here cold, with some snow. Ruffed grouse more plenty than for several years; one man bagged eleven in one day last week. No squirrels except the small red ones. Quail almost extinct; the past two winters have been too cold for them.—W. H. W.

VERMONT.—East Berkshire, Nov. 3.—Game is not very plenty this fall. Scarcely any ducks in the river, while there used to be plenty of them. Very few gray squirrels but one may find some ruffed grouse. I have a beagle and shall try the rabbits this winter.—H. B. L.

VERONA, N. J., Nov. 3.—The Verona Valley Gun Club has been organized here. Its purpose is to look out for the game and fish interests of this vicinity. The officers are: Oscar W. Jaeger, President; Otto Erickson, Treasurer, and M. W. Thurston, Secretary.

WATERBURY, Conn., Nov. 5.—N. Wallace, of this city, with a friend, bagged thirty-seven partridges and eight woodcock during the three days' shoot at Norfolk last week. The birds were shown at the Scovill House.

LYNCHBURG, Va., Nov. 7.—No killing frosts with us as yet, consequently the leaves and green weeds effectually prevent any good shooting; and in addition we have had rain most every day this month.—W. A. S.

A WATER SHOT.—Sing Sing, N. Y., Nov. 5.—On Nov. 2 James Smith, in Sing Sing Bay, shot with a No. 8 bore gun, in one shot, eight canvasback ducks and two widgeons.

Camp Fire Flickerings.

"That reminds me."

172.

THE following incident is quite likely fresh in the memories of some of your Rutland, Vt., readers. A few years ago one of our Highgate fishermen speared in the river here a very large maskinonge; in its stomach was found a nearly full grown muskrat and a piece of basswood edging which was some eight inches in length by two inches wide. Shortly after the capture of this fish one of our sportsmen, while visiting a friend in Rutland, met a number of congenial friends of the rod and gun one evening in the office of Dr. ——. Story and jest were soon passing and after a number of long yarns had been spun our friend related truthfully the facts about the capture of this big maskinonge. After he had finished silence reigned until one old sport turned to his left hand neighbor and said in an undertone, "I say, do you know why that fish swallowed that piece of edging?" "No, I don't know; what did he swallow it for?" "Why, to stretch that muskrat skin on." Our friend left, and on his return home said that those Rutland fellows couldn't be made to believe that there was in the world any game larger than a hedgehog, or a fish larger than a quarter pound trout.

STANSTEAD.

HIGHGATE, Vt.

173.

Not a bad answer was made by a sportsman returning from the marshes, when asked if he had shot anything, "No," he said, "but I have given the birds a good serenading." J.

THE TOURNAMENT.

BY one of those accidents which are said to happen in the best regulated families, two of the figures in our illustrations of the fly-casters last week became mixed. If those interested will transpose Figs. 1 and 3 and read the description in that light, it will be as we intended. The figures were sufficiently well drawn to enable those who are familiar with the men to recognize them, and the positions are just as the camera seized them. It is evident from a study of the figures that most of the men threw the rod further back than they are aware of, and too far to be as effective as it might be.

We have received several comments on the tournament, chiefly suggestions as to rules and the time for holding the next one. We do not think it worth while to publish them because by the time for holding the next meeting to decide on the date of the tournament of 1886 they will be forgotten. The proper time to make suggestions is just before the committee revise the rules, although those concerning the date might be in order at all times. There are several members who are in favor of a spring meeting, and urge the fact that the weather is more certain. There will, no doubt, be a business meeting before long, when this question can be brought up.

There have now been four tournaments held by the Association, they having adopted the "FOREST AND STREAM Tournament" of 1882 as one of theirs, and interest in the contests is increasing, the work of organizing a tournament goes on with less friction, there are fewer protests made, and the records in the classes, except the amateur single-handed fly-casting, have been broken nearly every year. If this latter feature continues we may predict that in a few years the enormous distance of one hundred feet may be reached by a fly in the hands of some of our experts. No one who has not measured his casts beside a buoy line realizes what it is to cast eighty feet. Many who imagine that they are casting that distance when fishing or practicing would find that the rigid buoy line told that they lacked many feet of it. Sixty feet is a long cast and all beyond it must be worked for by patient practice and perhaps with the assistance of a tutor or coach. Nothing is more common than to hear of some man who "can cast a hundred feet," and wonderful stories are told of the castings of unknown men, but these do not show themselves at the contests. It seems as if the limit had been reached and that a single-handed eleven and a half foot rod could not be made to do more than has been done in casting ninety-two feet, but a few years ago we thought the same when eighty feet was covered.

As a rule the casting of the amateurs affords the best study of grace in the position of the men, and of style in the handling of the rod and delivery of the flies, and is therefore the best school for the student who wishes to learn the art and make application of it in angling; and we know that several old anglers have taken mental notes thereon and received much benefit from their observations.

We have been presented with photographs of the recent tournament near London, taken by Mr. Thomas B. Mills, who cast there and whose name often appears in the Central Park contests. These pictures show a platform elevated about three feet and set in the side of the bank along which the casting is done. The measuring line is marked in yards and is stretched on the bank along the edge of the water, where it is supported by stakes. The casting is done on a running stream, and the arrangement does not appear to be as perfect as ours for convenience of casting or of recording the results.

ODD ANGLING EXPERIENCES.

Editor Forest and Stream:

Having had many interesting accounts of "remarkable shots," why should not the Waltonians have a chance to tell of some of their remarkable catches? While casting for trout on Upper Chateauguay Lake last year, in a listless manner, I had a strike that at once aroused me to the business in hand. The line went whizzing off the reel at such a rate that I saw at once a sudden check would be fatal to all hope of final success, if not disastrous to the rod. Meanwhile my boatman trimmed the boat for a big fight, cautioning me to be more careful this time, as I had previously lost the largest trout I was ever hooked to from hasty reeling. But I kept steadily at work, the supple rod curving gracefully under the constant strain, thus proving that it was not bogus, but made of the true material. But—not to make the story longer than the fight—I finally worked my game up to the boat's side, so that by a careful sweep of the landing net my boatman deposited him in the boat; and two more surprised men are not often seen, for instead of a four or five pound trout, as we fully anticipated, we saw one of less than eight ounces! On examination we discovered that he had gone for the fly with his mouth, but had struck it with his tail, and fastened the barb in the firm muscles near the caudal fin, so that I had not only the weight of the fish to reel in, but the active resistance of his entire locomotive powers—much the same as pulling a cat over the fence by his tail. J. H. D.

POUGHKEEPSIE, N. Y.

A TRAMP FOR TROUT.

THE angler must sometimes play soldier and sleep on his arms, ready for the attack at the first gray of dawn.

Leaving the train at a little cross-roads station at midnight, shouldering our knapsacks and baskets and taking rods in hand, we started on our midnight tramp through the mountains. Keeping on the railroad, we walked about a mile, until we came to the tunnel through the mountains. As we ascended the hill, in order to get over the tunnel, we aroused a nest of ugly-looking tramps, who were waiting to jump some freight train at the mouth of the tunnel While we were walking over the tunnel the freight train entered it, and we could hear it rumbling far beneath us.

Crossing beneath the railroad, down past the old mill, across the river bridge, we were again on the mountain. By this time the moon had gone down and left us in utter darkness. As I had been over this portion of the road before I knew its ins and outs. The road zigzags up the mountain side to the top, and then winds over a flat country and down into the hollow again. After a walk of forty minutes I thought that we must be in the neighborhood of an old lumber road, and made a plunge into what seemed to be an opening in the woods, but which proved to be only a watershed from the road. On the next attempt we succeeded in finding the road, and in a few minutes the welcome sound of running water was heard, and we knew that we had reached our destination, the site of an old sawmill which had been abandoned years before. An old oversnot wheel, a few standing timbers and the ruins of an old race, with a portion of the old tram road, were all that remained, but the ground was well strewn with old slabs, edgings and other off-falls from the mill. Finding a log, we gathered up some sticks and soon had a fire burning. Then procuring two broad slabs, we placed one on top of the log on either side of the fire and were soon asleep. I had been sleeping for perhaps half an hour when I was awakened by one of those forest pests, a hoot-owl. I lay down once more and managed to get a few minutes' more sleep, and then woke to find the gray morning appearing. I at once called W., and we went down to the creek and soon had our eyes opened with a dash of cold mountain water.

We had improvised two pails out of tomato cans, and W. had brought some coffee, cream and sugar. He soon had a cup of coffee fit for a king, and we were ready for the fun. Jointing our rods we went to the river. The first cast I made was near the mouth of the old flume behind a moss-covered rock, and I was rewarded by a handsome trout. A few yards above, at an old fallen tree, a beauty rose to my fly two or three times, but I failed to secure it. W. followed and the trout rose to his bait, but he also failed to hook it. Up the stream we went, both taking a number of fish. At a point where the water had been damned up by driftwood we came to a large pool, just the place where you will always find the largest fish. Near the center of the pool protruded a large rock, and over this I made a cast. A fine fish took my fly and immediately went to the bottom, where he lay. I thought that he had missed it, and that the whirl of the eddy had taken it down, but a gentle pull showed that there was something on the other end of the line, and after a few dashes I landed the fish, at the imminent risk of breaking the tip of my light rod. W., at a point just below this place, had turned and was fishing down the run.

I went on until I reached the falls, the last of a series, in all of which the stream makes a descent of 150 feet. At the head of this stream there is a large spring in which there is said to be a number of very large trout, which refuse all kinds of flies or bait. I have had a great desire to go there and give them a trial, but it is a very difficult place to get at. At the falls is the largest pool on the creek; and behind a large rock, on which the falls break, an old patriarch made his appearance, but would not deign to take any of the dainties that I cast to him. Retracing my steps I overtook W. who had been quite successful, as his creel showed.

We went on fishing down stream, each alternately going

ahead. Coming to a strip of shallow water W. ignored it, and although it did not look very promising I found it to be one of the best places on the run, and here I secured twenty-three fish, all nice sized trout. From a pool beside a big rock W. landed three beauties in about two minutes; and just below this I caught the two largest caught that day, and they were fine ones too.

At the mouth of the run, where it empties into the river, we found a party fishing for bass, but they had not been very successful as the stream was muddy from a recent rain. At a pool at the mouth of this run a gentleman a few days before had taken a brook trout weighing about three pounds, a size which is very rarely attained in this section of the country. We made a few casts in the river and took a bass or two; then found a riffle and waded the river. It had been threatening rain for some time and now a furious thunderstorm broke over us; but notwithstanding this we sat down on a rock and cleaned our fish, of which we had about 150. We then made our way by a new road over the mountain and finally reached the station, two footsore, weary fishermen after a tramp of twelve miles through the mountains. Our shoes, which had been whole and in good condition when we started, were now torn and worn so that they would scarcely stay upon our feet. But, for all this, we felt amply repaid, as we had had a glorious day's sport; and after all we appreciated the fish the more because of the work and skill required to take them.

At the station we met a gentleman who often fishes this run and he said we had the best string of fish he had ever seen taken there in a single day by two rods. YOUGH.

CONNELLSVILLE, N. Y.

PENNSYLVANIA TROUTING.—Scranton, Pa., Nov. 6.—The season throughout the Lackawanna Valley has been most inviting this year. Rod and gun have been favorite means for recreation among the professional gentlemen of the city, and many of them have been most successful. The trout fishing was all that could have been asked for. I have brought home many fine strings. When the season first opened, Dr. H. and Rev. S. and myself one fine morning gathered together a good supply of tackle and went out into the mountains about sixteen miles to a stream that was said to contain no trout, for no one seemed to ever have any luck. We came to the remains of an old dam, and at the foot, or rather where the water flowed over, there was a large deep hole. I baited a hook with a very tempting worm and quietly dropped it into the water, and in less than one-half a minute I had a trout that weighed one and a half pounds. We caught five pounds of trout in that one place, and when we went home that night we had twenty-five pounds. Black bass fishing has been the best in five years. Jones Lake has been the favorite fishing ground, and so has Lillie Lake.—W. B. L.

CARP IN OHIO.

Editor Forest and Stream:

I notice that the numerous correspondents of your paper make very little reference to the raising of German carp by the farmers of this country, and yet here in Northern Ohio every farmer who can possibly make an artificial pond either by damming or draining, is certain to do so, and nine ponds out of ten will be stocked with carp; the tenth, perhaps, with black bass.

A short time since I had occasion to visit a farm in Geauga county, whose owner is a large and successful raiser of carp. His mode of operation was as follows. He had dammed up a spring near the house and made a pond covering perhaps an acre. From the Fish Commission at Washington he obtained fifty small carp which were duly placed in the pond. These were doing finely when their natural enemies the sunfish got into their pond in some unexplained manner. The farmer was certain that sunfish originate in the soil of ponds, but of this I am not assured. At any rate they were there and a war of extermination began. The only remedy was to drain off the pond and begin again. When the water was all drawn off, lime was thickly sprinkled over the bottom. This proved eminently successful, the sunfish leaping out on to the bank rather than die in the lime.

When the pond had filled again the residue of carp, only thirteen in number, were replaced. These were then two years old, the largest weighing a little over six pounds. He now has a pond brimming over with magnificent carp all of the first spawning. His pond has already more than paid for itself in the number of fish sold to other farmers.

The largest now measures thirty-four inches in length and are so tame that one can sit in the stern of his boat and by dipping a piece of bread in the water attract shoals of fish. They are caught in this way. They are unsurpassed as food and will, I think, in this part of the country, soon crowd out black bass in artificial ponds. WATT.

CLEVELAND, O.

OYSTER AND MUSSEL CULTURE IN ENGLAND.—Charles W. Harding, Esq., of King's Lynn, Norfolk, has devoted much time and attention to the culture of both oysters and mussels in England and is an acknowledged authority on the subject. He controls eleven miles of mussel fishery on the coast of Norfolk, and has hatched the European oyster, which is said to be bi-sexual, in an aquarium. He writes us that after the young oyster has left its parent, or parents, it is black, and that the lowest temperature they could be hatched at was 68 degrees, Fahr., while at 74 degrees, "overwhelming quantities came off." He further says: "My waistcoat pocket is 72 degrees Fahr., and I hatched thousands in a small bottle containing a stopper, but had no means of keeping them alive afterward. All oysters in England are hatched in less specific gravity than 1.025, but the full strength of the water is 1.027 in the English seas, but they grow better in water that is less salt when they are a few months old." Mr. Harding has recently patented a contrivance for improving and fattening most molluscs, especially oysters and mussels, and also to protect them from heavy seas. Several of his apparatuses were erected last summer for the Duke of Sutherland on his mussel fishery in Loch Fleet, and the manager reports that the mussels grow much faster under this system and thinks they will be sizeable for bait in a little under three years, while heretofore they required from five to seven years.

THE POPE AND THE LARKS.—Pope Leo has taken up his favorite Autumn amusement, lark-catching in the Vatican Gardens. According to the description given by the correspondent of the *Independance Belge*, this sport seems strangely cruel. Numbers of fine singing larks, it is said, are blinded with a red-hot needle, and concealed in cages in a fine laurel grove, where flocks of larks fly across from seaward during their autumn migration. The blind songsters decoy their fellows by their loud strains, and nets are then deftly dropped over the unlucky birds attracted. The Pope himself often extricates the birds, and kills them in the approved fashion by crushing their heads between thumb and finger.

FIXTURES.

BENCH SHOWS.

Dec. 15, 16, 17 and 18.—First Annual Dog Show of the Western Connecticut Poultry, Pigeon and Pet Stock Association. Frank D. Hallet, Superintendent, Winsted, Conn.

March 16, 17, 18 and 19, 1886.—Western Pennsylvania Poultry Society's Dog Show, at Pittsburgh, Pa. C. B. Elben, Secretary.

April 6, 7, 8 and 9, 1886.—Second Annual Dog Show of the New England Kennel Club. Jean Grosvenor, Secretary, Boston, Mass.

FIELD TRIALS.

Nov. 12.—New Jersey Kennel and Field Trials Club. Field trials for members only at Fisher's Island. A. P. Vredenburgh, Secretary, Bergen Point, N. J.

Nov. 16, 1885.—Seventh Annual Field Trials of the Eastern Field Trials Club, High Point, N. C. Entries for All-Aged Stakes close Nov. 1. W. A. Coster, Secretary, Flatbush, L. I.

Nov. 17, 18 and 19.—Second Annual Field Trials of the Philadelphia Kennel Club at Rio Grande, N. J., for members only. Entries close Nov. 1.

Dec. 7.—Seventh Annual Field Trials of the National Field Trials Club, Grand Junction, Tenn. Entries for Derby close April 1. B. M. Stephenson, La Grange, Tenn., Secretary.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **2908.**

THE ROBINS ISLAND CLUB.

FOURTH ANNUAL FIELD TRIALS.

THE field trials of this club began Wednesday morning and terminated at noon on Thursday. The weather during the running of the dogs was all that could have been desired, except for two hours Wednesday morning, when the wind blew hard from the northwest, making hunting the west side of the island cold and unpleasant. Tuesday afternoon quite a number of members and invited guests wended their way to the great quail preserve of the country. Desiring this year to avoid the trouble of hunting birds which, having been hunted for the best part of a month, were wild and wary, the time appointed was made as near the expiration of the close season as was practicable. Despite this change the shooting of Monday and Tuesday had aroused the birds to the coming danger, so that few of them were close-lying, but in nearly every instance got up wild. In the party which arrived at Cutchogue by the evening train were the following well-known gentlemen: Hon. Calvin E. Pratt, C. F. Lewis, Col. L. C. Bruce, Gouverneur M. Smith, M.D., A. B. Converse, W. H. Force, A. S. Swan, S. Fleet Speir, M.D., Chauncey Marshall, W. H. Hester, A. T. Plummer, L. H. Bullard, W. L. Pomeroy, J. B. McCue, J. N. Jarvie, S. B. Duryea; and others whose names I cannot recall. The ride from the station was a cold and dreary one, the sail across the bay adding by the piercing air still another chill. When the club house was reached a grand fire of white oak logs blazed right merrily upon the hearth stones of the sitting room, making the room most comfortable. Wraps were removed and the genial glow of the hot coals under the andirons soon put all in good fellowship, while frank and hearty conversation filled the echoes of the club's reception place.

Immediately after adjournment from dinner to the sitting room, an open meeting of the club was held, President Speir in the chair. The Doctor announced the unavoidable absence of Dr. Bridges, who had consented to act as judge. Upon motion, Mr. Pratt was named as judge to fill the vacancy. Messrs. C. E. Pratt, C. F. Lewis and Leslie C. Bruce judged the competing dogs throughout the trials. The rules of the club allow the members to change the name of entry, substituting another dog at any time before the order of running is drawn; hence our list of Oct. 29 is somewhat incomplete. The competing animals were:

ALL-AGED STAKES.—SETTERS.

ST. ELMO VI. (Dr. S. Fleet Speir), black, white and tan setter (St. Elmo IV.—Lucy).

GOUT (Dr. S. Fleet Speir), Irish setter (Massey's Duke—Hudson's bitch).

BLADE OF GRASS (L. H. Bullard), orange and white setter (St. Elmo IV.—Countess Louise).

PRIDE OF ROBINS ISLAND (C. Marshall), orange and white setter (pedigree unknown).

PRINCE HAL (J. B. McCue), orange and white setter (St. Elmo—Maida).

FRED (J. B. McCue), black and tan setter.

ST. IVES (L. Waterbury), lemon and white setter (St. Elmo—Maida).

BRIGHTON (S. B. Duryea), black and tan setter (Gypsum—Wrag).

COUNT JACK (Jas. N. Jarvie), black and tan setter (Chancellor—Fan).

DAVE (H. E. Polhemus) liver setter (pedigree unknown).

ST. ELMO V. (Dr. S. Fleet Speir), black, white and tan setter (St. Elmo IV.—Countess Louise).

DAN T. (Dr. S. Fleet Speir), black, white and tan setter (Jesse Gladstone—Chatelaine).

DOCTOR (W. H. Force), black setter (Sid—Fan).

ROMEO (Dr. S. Fleet Speir), Gordon setter.

POINTERS.

BESSIE (W. H. Force) lemon and white (Sensation—Minerola).

BEAU SUFFOLK (A. S. Swan) lemon and white (Tam O'Shanter—Fannie).

In accordance with the rules of the club Romeo was now selected to run the bye with Prince Hal, so that the order of running need not be changed after a start was once had. The drawing resulted as below:

St. Elmo VI. against Bessie.
Gout against Beau Suffolk.
Blade of Grass against Pride of Robins Island.
Prince Hal against Romeo.
Fred against St. Ives.
Brighton against Count Jack.
Dave against St. Elmo V.
Dan T. against Doctor.

The prizes for the All-Aged Stakes were three in number, each handsome pieces of silversmith's art, first a solid silver cup, second a handsome silver dog collar of quaint design, third was a dog whistle.

The entries for the Brace Stakes were:

BESSIE AND FORCE (L. Waterbury) pointers.
DOCTOR AND ST. IVES (W. H. Force) setters.
PRIDE OF ROBINS ISLAND AND PRINCE HAL (Chauncey Marshall) setters.
GENERAL ARTHUR AND ST. ELMO VI. (S. Fleet Speir) setters.

As the trials of the club are run by a scale of points it is hardly necessary to state that each dog makes his record as he runs, and that two are worked at a time in order to get through the work quickly. The order of running was as given in list of entries. For the Derby originally quite a list of names had been sent in, but disease and ailment incident to puppyhood had so reduced the list that only six qualified, and of these, two showed so little knowledge of field work that they were withdrawd almost as soon as put down. They were drawn to run in order as here given:

DERBY OR PUPPY STAKES.

GYPSEY QUEEN (L. H. Bullard), blue belton.

COUNT PARADOX (Geo. B. Sheldon), Irish and English setter.

FORCE (L. Waterbury), lemon and white pointer (Vandevort's Don—Bessie).

ST. ELMO VI. (S. Fleet Speir), black, white and tan setter (St. Elmo IV.—Lucy).

LADY FLOSS (H. J. Cullen), black and tan setter (Pilot—Fan).

FRED (H. C. Cullen).

This ended the serious business of the night, and until a late hour the club house rang with song and jest, the Irish anthem of Mary Kelly's Beau bringing down the house. It was long past midnight ere the "downy couch" was sought, for some men, like dogs, when keyed up for play or work seem never to flag or grow weary. Scarce had tired heads impressed the pillows with their shape, when loud rang through the halls the rising bell. With many a sigh and long drawn yawn the late ones of the night turned to the early birds of the morning. Sharp 7 was the breakfast time, and the striking clock had hardly chimed the hour when once more rang out the clangor of the bell. The table was surrounded with a jolly lot of sportsmen who, with many a jest and jibe, chaffed each other regarding the—to be—victorious canines. At 8 the first brace was called by the judges and the fourth annual trials of the club inaugurated.

ST. ELMO VI. AND BESSIE

were cast off to the west of club house and worked southwest over the uneven pasture where in 1878 Mr. C. H. Raymond's Lemonade did such great work. At about half the hour Bessie pointed, and was neatly backed by St. Elmo. Both dogs roaded on, when quite a number of birds flushed wild some distance ahead of the dogs, and flew to the eastward. The dogs were hunted in the same direction. St. Elmo soon located them, and was backed by Bessie at command. The work of St. Elmo was of good character, indeed, unusually so considering his age, just eleven months. He soon scored a couple of points. Birds flushed to order, marked down and followed. St. Elmo found them in short order. Excited by the whirr of the rising birds the pup forgot himself for a second, but the second thought checked him at the very verge of a break. Another point was made by St. Elmo which Bessie disregarded; she roaded up and passing the pup ended the heat by a lovely flush. Dogs taken up after a forty minute run, and the next brace ordered down.

GOUT AND BEAU SUFFOLK.

This heat was soon decided, for both dogs ran wild, showing but little training and not much of natural ability. After a succession of flushes occasioned by too much speed for nose possessed, the brace was ordered up at 10:10. Of the two the pointer Beau was the better, hunting with fair speed and good style, but with little hunting "gumption." Gout is a big, stocky dog, red in color, and as a horseman would say with white points. Flushing or rather running pell mell over a big bevy of birds, sending them in every direction, was the direct reason for the destruction of all hope of winning the fond owner may have indulged in.

BLADE OF GRASS AND PRIDE OF ROBINS ISLAND

were cast off at 10:15, and hunted toward the east bluff of the island. Finding birds here Pride worked well and handsomely, scoring point after point, Blade in the meantime acting in disorderly fashion. Pride followed southwest to where the birds were marked down. He soon found them and pointed them in staunch fashion when located. Blade, called up for a back, was out of reach and hearing. Birds were flushed by Judge Pratt, who shot and killed, Judge Bruce following suit. Blade now appearing, he was ordered to retrieve, which he made a mess of. Pride brought in the other bird, but in a faulty manner. Dogs taken up at 10:30.

At this point St. Elmo VI. was taken in hand to show his quality as a retriever. Told to fetch, he found the dead quail in short order, but only retrieved in fair style. Bessie was then tried. She found the quail, but acted badly, chewing the bird till the bones cracked. Time, 10:40.

PRINCE HAL AND ROMEO

were cast off on the north side of island in the open. Romeo stopped for a moment, Hal backing, though somewhat unsteadily. Recovering himself Romeo roaded along some distance and then circled off. A turn was made to the belt of timber on the north side, and we were hardly in the wood when Judge Pratt flushed a bevy. These were followed to the open. At the timber's edge Hal flushed a bird badly; he seemed lacking in ambition, as if overworked. Having slight chance of capturing even the whistle he was taken up at 11:10, and the fifth brace turned down without loss of time.

ST. IVES AND FRED

were hunted in open pastures to west of club house, along these in southerly direction, then a sharp turn to left and through the thin belt of wood clear across the island to its eastern edge. No birds were found in this tramp, but a fair knowledge was obtained of the hunting quality of the dogs in both open and cover. St. Ives was so far ahead in all this that there was no comparison. Turning from the east to the south, both dogs stopped to wing, a big bevy flushing a long way off. These birds were followed, and but short time had elapsed before St. Ives found and located them. Fred came loping along, saw Ives, failed to back, roaded up, passed the Saint and took the scent ahead of the pointing dog. Birds flushed to order. St. Ives steady as a clock, Fred only so at command of handler. Hunting still toward south, many birds got up wild, now and again flying from the limbs of the scrub oaks, going so near hats and heads as to occasion involuntary "ducking" of the heads of those under these branches. Moving still toward the south along east side, Fred flushed two singles. St. Ives finally gained a good point, his handler flushed to order, the dog steady to wing. Moving along Fred flushed a large bevy. St. Ives "got on," pointing a close-lying bird in good form. When flushed to order there proved to be two. Judges Pratt and Bruce each credited with a kill. Dogs ordered to retrieve, did so, but in awfully bungling style. St. Ives, whom the writer has seen do most excellent work, was all "out at elbows," so crude and raw was his performance. Dogs taken up at 12:20 P. M. and the sixth brace turned down.

BRIGHTON AND COUNT JACK.

Both Gordons, the first a compact, pony-built animal, though of large size; the last a rangy, loosely-made animal, with more than a fair share of legs. Of fair speed and style, Brighton showed by far the better dog. Fifteen minutes' hunting and no birds found, then a halt was called for lunch in picnic style, as the paragraphers have it, "under the shadows of the umbrageous oaks." To say it was enjoyed is to say but little, for men and dogs were worked fast and hard. At the close of the feast the judges, in accordance with the powers given them, ordered up the Gordons as not having merit enough to win. Still the writer is of the opinion that it would have been better to have given the dogs an opportunity on birds, certainly the owners would have been better pleased. Granted they could not have won against speedier animals, they yet might have shown capital quality in the way of nose and breaking had birds been found, the exceeding merit in the latter points overcoming the demerits gained in the former-named deficiencies. At a quarter past 1 a fresh start was made and the seventh brace cast off. This start was at the edge of the woods, which cross the island from west to east on the south side and growing a hundred or so yards from the water's edge. The dogs were

DAVE AND ST. ELMO V.

Both these were rattlers in quartering and pace. Dave going

like a locomotive on a tear, while St. Elmo V., quite as speedy, went with smoother action. South Point being soon reached Dave scored a nice point, but the quail got up wild and sought safer quarters. St. Elmo running down wind stopped short on a lot of birds which got up scared, St. Elmo dropping to wing. Dave a moment after got a point in good style, well backed by the Saint. The birds flushed themselves. Dave lost his patience and made a masterly dash after them, putting to flight a bird or two that had remained. Another lot of quail was found by the Saint. Dave, rank and excited, chased again and was thrown out by rank disobedience, he paying no attention to the commands of his handler. Taken up at ten minutes before three and the last brace cast off a moment afterward.

DAN T. AND DOCTOR.

This heat was the feature of the stake. Seldom if ever at a field trial is seen a heat run out in such good form in all respects. From start to finish it was exceptionally fine. The dogs were started near the south point and hunted through the clusters of bayberries and bunches of blackberry canes without finding a feather. Leaving the high ground, a descent was made to the foot of the bluff, where sand and sedge makes the point extending for half a mile into the bay. Turning the point to the left, the dogs hunted north. Not a dozen rods were covered before the Doctor pointed in grand fashion. Dan T. proved a little fresh, roading in alongside of the black dog and taking scent himself. Birds were flushed to order, and Judge Bruce and Dr. Speir each killed a bird as they rose. Ordered to retrieve, Doctor found and brought his bird to the handler in rare good style, delivering to hand while on his haunches, with head well up. Dan T. also retrieved his bird, when ordered, in nearly as taking a manner. The only respect in which Doctor excelled Dan T. was in the matter of obedience, the black dog appearing to know better and to be more familiar with the ways of his handler than Dan T. with his. Dogs taken up at 2 P. M. The judges here stopped for a consultation, which resulted in ordering up Doctor, Pride of Robins Island, St. Elmo V. and St. Ives to compete for the different prizes to be awarded.

DOCTOR AND PRIDE OF ROBINS ISLAND.

At 2:50 P. M. these two dogs were cast off directly on south point and hunted north in the open. Scarce had they started when a number of birds were flushed by the spectators. Quail were scarce flushed when Pride pointed, Doctor backing. This proved a false stop. Pride stopped again soon, and was again nicely backed. Bird flushed to order Off still to the north when the Doctor located a bird, Pride backed handsomely. After a moment's pause Doctor roaded on, stopping after a few yards had been gone over. Birds got up wild after point was established. Rattled by the shooting Doctor was a little unsteady while Pride lost his head and indulged in quite a chase. Pride brought in dead bird in good fashion. Down to the south beach and into the wire grass. Hardly in when Pride stopped, the Doctor backing elegantly. Pride roaded on after his stop. Doctor wheeled to right into scrub oak, hunted through the timber, came out again to the beach and picked up the birds a hundred yards ahead of Pride, the latter stopped his roading and backed the physician. A hundred birds flushed wild before the point. One killed out of a dozen shots. Both dogs dropped to wing. These birds flew to the top of the high bluff where the bayberry bushes at its edge made capital cover, followed by dogs and men. The top was but reached when both dogs pointed. Here followed a scene beyond comparison exciting. Judges Pratt and Bruce each had guns, ditto handlers, ditto many of the on-looking club members. Birds were flushed to order, as they rose were fired at and missed. At the reports up got bird after bird in regular succession, until the air seemed alive with fluttering pinions. Dogs dropped to wing and behaved better than the men. Dog trials were forgotten, and each man that had a gun went to shooting. The firing was "at will" and sounded like the practice firing of a regimental company. After guns were emptied a "brace up" followed, and the business of the day resumed. Ordered to retrieve not a bird was found, though Superintendent Lecompte did bring in a wing feather or two. Brace taken up and

ST. IVES AND ST. ELMO VI.

cast off at 3:40. In but few moments Saint stopped indecisively, puppy fashion. One or two quail got up under Judge Bruce's feet, who fairly executed a *pas seul* to wing. These birds followed, found by the Elmo pup, who had but stopped when the game flushed wild some yards ahead of him. A bad quarter of an hour followed. The birds had been so rattled they lay like stones, and only got up when about to be trodden on. Reaching southwest point St. Ives false pointed on top of bluff, the puppy dropping to a back. On the west bank both dogs stopped, but a hundred yards apart. Each handler claimed a point. Ordered to flush, Dr. Speir stepped to side of Elmo, who roaded on a dozen yards and again stopped; St. Ives on his original point. Speir flushed the bird. St. Ives evidently was working on back track, as no bird could be found in his front. At the flushing of Elmo's bird a big bevy rose but a short distance ahead. Another quarter of an hour followed, in which a half dozen bevies got up, but all wild and out of distance. Along the west shore to gravel pit. Here St. Ives got in some good work, stopping and roading for a hundred yards, followed in good fashion by the puppy. Birds were flushed to order, Judge Bruce getting in a good double. Dogs ordered to retrieve. St. Ives failed altogether, and the puppy brought in his bird cleverly. Another move ahead, each dog scoring a false point. Judges stopped for argument, and dogs ordered up. Time 5 P. M. As it was now nearly dark it was decided not to commence the Brace Stakes until Thursday morning. At the setting of the sun was seen a cloud effect of surprising beauty. This sunset was alone worth the trip to Robins Island to see. Words even the most effulgent would fail to describe the beauty of the various tints and shadows. Following is the

ALL-AGED STAKES SUMMARY.

Name of Dog.	Merits.									Demerits.				Total.
	Pointing.	Pace.	Backing.	Style.	Staunchness.	Ranging.	Quartering.	Obedience and disposition.	Retrieving.	False pointing and flushing.	Breaking in.	Break'g shot.	Breaking shot and Chasing.

Prince Hal, Count Jack, Brighton and Dave, no record taken.

Thursday afternoon opened bright and mild. Topcoats were discarded, and before the work was done many wished for summer suits. A move was made from the club house at 8:50, and at 9 o'clock the first of the braces,

FORCE AND BESSIE,

were started in the big field east of buildings. Force showed much more style and speed than Bessie, she appearing a little off. Through this big pasture lot to east bluff, then a sharp turnabout and the little fringe of woods hunted west, then another turn to open field of center of island. Here Force located birds in a little patch of corn, Bessie backing in unsteady fashion. Birds flushed themselves, marked down and followed. At northeast beach Bessie made a half-hearted point, which was backed nicely by Force. Quail got up wild. As the character of the work was of inferior order, dogs were taken up at 9:50 and the second of the braces,

DOCTOR AND ST. IVES,

sent to the front. The flushed birds were followed. A moment or so after starting, Doctor false pointed, this backed in good fashion by St. Ives. Started on Doctor went not over a hundred yards when he stopped again. St. Ives coming up failed to back but ranged up alongside of Doctor and took scent himself. Ordered to flush no bird was found. On again for not over a dozen rods when both stopped stiff, roaded on a yard or so, then each dog circled off in a wide reach. In this run several birds were either flushed or got up wild, the writer knows not which. At last Doctor got on scent and stopped short and sharp, St. Ives unsteady at back, and moved up past the Doctor, deliberately flushing what proved a big bevy. The Doctor was steady to wing. St. Ives a rusher. Ordered on, Doctor again pointed; this time St. Ives obeyed his handler and backed at a "down charge" position. Birds flushed by Judge Pratt, Doctor steady to wing and to gun, St. Ives broke shot and indulged in quite a chase after the flying birds. Dogs taken up at 10:20 and the third of the braces immediately started.

GENERAL ARTHUR AND ST. ELMO VI.

Cast of toward south point. Hunting to southwest Saint pointed; Arthur coming round patch of high bayberry bushes pointed also. Dr. Speir put up bird, both dogs staunch on point and to wing. Judge Pratt flushed a bevy, Dr. Speir shot and killed. St. Elmo ordered to retrieve, did so in good style. The bird, a crippled one, was delivered to handler still alive. More birds were then located, each dog getting several points and mutually backing each the other. Arthur retrieved in even better fashion than Elmo VI., as befitted his greater age and experience. Taken up at 10:45, the last of the braces,

PRIDE OF ROBINS ISLAND AND PRINCE HAL,

were put down at ten minutes before 11. Worked toward south point, which location never failed of birds. The dogs soon found game and both pointed. Marshall put up birds to order and a general fusillade followed, but without result. The dogs were all off, Prince Hal entirely so. The character of the work was such that dogs were ordered up at 11:15. After the capital work of the preceding heat they had not a show to win. Had Pride been running with a better mate the contest might have been prolonged, but the result would not have been changed. So ended the contest for the Brace Stakes of 1885.

BRACE STAKES—SUMMARY.

Name of Dog.	Pointing.	Pace.	Backing.	Style.	Staunchness.	Ranging.	Quartering.	Obedience, disposition.	Retrieving.	Total.
	35	20	7	6	6	6	6	4	10	..
General Arthur / St. Elmo VI.	30	16	6	6	5	5	4	4	9	85
Pride of Robins Island / Prince Hal	25	15	7	5	5	4	3	3	..	67
Doctor / St. Ives	25	16	4	5	5	5	4	3	..	67
Force / Bessie	20	16	0	4	2	4	4	2	..	52

At conclusion of running in brace stakes no rest was allowed by the judges, but the first of the puppies in order of drawing were instantly called up and cast off at south side at 11:30.

ST. ELMO VI. AND LADY FLOSS.

Hardly had a moment elapsed ere the Saint located and stopped. Floss, new to her handler and apparently to her work, paid no attention to backing or to the scent. Starting to flush, no bird was found from edge of bluff down to wire grass of the beach. Here Saint made a point; bird got up wild, followed by three others. Moving on, Elmo got a point in undecided manner; bird put up. Lady Floss to all appearances entirely ignorant of field work and its requirements. Dogs taken up and

PARADOX AND FORCE

cast off a few moments before 12. Force behaved nicely, but Paradox too young to understand what was required of him. He minded well, but was puppyish in the extreme. Force had so easy a thing that the judges ordered the puppy withdrawn and Gypsy Queen to be put down in his place. Dogs ordered on afresh at quarter past 12. The south side followed and around the southwest point, and then the west side hunted to north. Queen wild as an untamed colt and scored to her credit two or three grand flushes, in one of them the bird getting up within a foot of her nose. Force, his conduct influenced by such example, also flushed a bird. At edge of wood at top of hill overlooking "Devil's half-acre," a tremendous bevy of birds flushed themselves and flew to the thick cover of the low-lying branches of the scrub oak. These were followed. Force here did some capital work, pointing and roading until he located them to his satisfaction, when he stopped staunchly. Queen, who had been acting as "Surveyor-General" of the Robins Island Department, caught sight of Force and swooped down upon him as a hawk to a crippled bird. Rushing past his point, she went for the birds, and they went also in all directions, a half hundred at least. Although the dogs were hunted a quarter of an hour longer, this practically decided the heat.

DERBY, 1885—SUMMARY.

Name of Dog.	Pointing.	Pace.	Backing.	Style.	Staunchness.	Ranging.	Quartering.	Obedience, disposition.	Retrieving.	Total.
	35	20	7	6	6	6	6	4	10	
St. Elmo VI	25	16	0	6	5	5	4	4	4	69
Force	20	15	0	5	5	4	4	3	8	64

Lady Floss, Gypsey Queen, Paradex and Count Fred no record taken.

So ended the fourth annual trials of the Robins Island, a success in every possible way. As for the number of birds, well, one can say that nowhere can such bevies be found. The only thing that approaches it is the quail in the foothills of California, and there only in numbers, not in the gameness of the bird. PECONIC.

ABOUT THOSE WHO KICK.—Hartford, Nov 6.—*Editor Forest and Stream:* Your very interesting correspondent, Mr. W. Wade, writes at different times the following: "I never 'kicked' at a judge's ruling yet; and I think it a poor business." Again he says: "For myself, I glory in belonging to the noble army of 'kickers'." If Mr. Wade would kindly explain why he has met with a change of heart he would confer a favor on—A. E. COLLINS.

THE EASTERN FIELD TRIALS.

THE following additional entries for the All-Aged setter and pointer stakes of the Eastern Field Trials Club have been received. Mr. Coster, the Secretary, is at High Point. He has received notice of registered letters at Flatbush which probably contain other entries that we shall not be able to publish until next week:

SETTERS.

BUCKELLEW (W. A. Coster, Flatbush, L. I.), orange and white English setter dog, 6yrs. (Druid—Ruby).

ELCHO, JR. (Dr. William Jarvis, Claremont, N. H.), red Irish setter dog, 4½yrs. (Elcho—Noreen).

SLOCUM (Bayard Thayer, Boston, Mass.), Gordon setter dog (Thayer's Turk—Beauty).

GATH'S MARK (Dr. J. N. Maclin, Keeling, Tenn.), black, white and tan dog, 17mos. (Gath—Gem).

GLADSTONE'S BOY (Dr. G. G. Ware, Stanton, Tenn.), black, white and tan dog (Gladstone—Sue).

SPORTSMAN (J. W. Murnan, Keeling, Tenn.), black, white and tan dog (Gladstone—Sue).

ROSE OF KILLARNEY (L. W. White, Bridgeport, Conn.), red Irish bitch, 2yrs. 3mos. (Killarney—Lill II.).

POINTERS.

RUE (Bayard Thayer, Boston, Mass.), lemon and white bitch, 6yrs. (Snapshot—Ruby).

BLOOM (James L. Anthony, New York), white and liver ticked bitch, 4yrs. (Leach's Bang—Whipple's Lady).

BANG BANG (Westminster Kennel Club, Babylon, L. I.), white and lemon dog, 4yrs. (Bang—Princess Kate).

MADSTONE (Westminster Kennel Club, Babylon, L. I.), liver and white bitch, 2yrs. (Tory—Moorstone).

JILT (Neversink Lodge Kennels, Guymard, N. Y.), liver and white bitch, 2½yrs. (Croxteth—Lady Gwendoline).

NEWS FROM HIGH POINT.

LEAVING New York on Thursday, Oct. 29, at 3:40 P. M., I expected to reach High Point the next morning at 10:06, but the severe storm had changed the babbling brooks into roaring torrents and two bridges on the Virginia Midland road were damaged, necessitating tedious waits, and I did not arrive here until after 2 o'clock Sunday morning, over forty hours late. This was exasperating, as I had intended to make good use of the lost time in getting in condition for the trials among the quail. Mr. Jas. Carswell, of the U. S. Fish Commission, was on board the train with a consignment of German carp for Wytheville, Va. There were sixteen large ones for breeding and one thousand small ones for distribution in the vicinity. He had also fifty blue carp, fifty tench and one hundred and fifty goldfish. At Lynchburg, where he changed cars, he had lost four of the large fish and one of the small ones. This was doing very well considering the delay and many transfers. He will return with some two-year old Penobscot salmon, rainbow trout, grayling and salmon trout and one thousand rainbow trout of last spring's hatching.

On Monday after my arrival here I looked up old friends and spent a few hours very pleasantly. In the afternoon, in company with Mr. Coster and a friend residing here, we took a short turn among the quail. As this was not a public trial I do not feel called upon to record the score; suffice it to say that the dogs performed very well, finding seven large bevies of well-grown birds—highly-educated birds, too, for although we held dead on them they knew just the instant to dodge, and many of them escaped. A dozen of them, however, dodged the wrong way and will never more play their tricks upon the too-confiding sportsman. On Tuesday afternoon we tried a different locality and found about the same number of birds, but Mr. Coster had Buckellew along, and, like Col. Scott's coon, they knew thas it was of no use, and we brought home about thirty. This was an afternoon of rare sport. The weather was simply all that we could ask, the dogs did capital work, and the guns did just enough execution to make it interesting. It is not all of shooting to shoot, and all of us can bear witness that an occasional miss—not too many—greatly enhances the sport.

Wednesday was very nearly a repetition of the previous day, except that the wind was high; but perhaps this was all for the best, as we had a good excuse for the misses.

On Thursday—oh, that Thursday! I wish that you would record it in big red letters—on Thursday I circumvented and laid low a proud young gobbler. My pen utterly refuses to record the description of a tithe of the joy and satisfaction that filled my heart as I stood alone in the silent forest gazing upon the noble form and beautiful plumage of my long-sought quarry. More than thirty years have passed since last I bagged one of these royal birds. Last year while here I persistently haunted their range, but only succeeded in getting two or three shots at long range and one or two feathers. The boys chaffed me unmercifully and talked turkey to me until I was tired; but now the whole aspect of affairs is changed. Securely fortified with the bright memory of that successful chase, I can complacently smile at their feeble attempts at wit.

Quail shooting around High Point is capital, birds are very plenty, and for the most part well grown. There have been several hard frosts and the weeds are cut down so that the dogs can be seen fairly well. There has been an abundance of rain and the ground is soft and the flinty stones give under the dog's feet instead of standing on edge firmly imbedded in the hard baked clay, as was the case last year. The most serious drawback to the enjoyment of sport about here is the unwillingness of many of the land owners to shooting over their grounds. I have had no trouble on this score, but on the contrary have uniformly met with a cordial welcome. Many of the handlers complain that they have considerable difficulty in obtaining sufficient ground to work their dogs over. This state of affairs should not continue, for the trials bring a large amount of money to the place, which is largely distributed among the land owners in payment for their produce, and they should certainly be willing to make some return by according full privilege to those who promote and support the trials. There is a decided feeling among members of the club that unless there is a change for the better in this respect some other locality will be selected.

Some of the handlers are located near here, and all of them report their dogs in much better condition and doing better work than last year. I have seen many of the dogs, and instead of wearing the tired out, used up appearance of last year, they are all in splendid form. Tallman is at Thomasville, eight miles from here, with the setters Foreman, Plantagenet, Nellie II. and Elcho, Jr., and the pointers Beaufort and Bradford. He reports them all as doing well, and speaks very highly of Beaufort and Plantagenet. Luke White is at the same place with the pointers Bang Bang, Bang Grace, Madstone, Duke of Bergen and Pocahontas and the Irish setter Rose of Killarney. Bang Bang, he says, is doing much better work than he did last year; he also says that Bang Grace and Madstone are doing finely. Pocahontas is in season and probably will not run. John White is also at Thomasville with the pointers Tammany and Vision. He reports both as greatly improved. Vision will only run in the Members' Stake. W. T. Mitchell is located here with the pointers Graphic, Bloom, Sport and Ned and the setters Pendenis and Blue Lily, for the All-Aged Stakes, and three Derby entries. He says that all are doing well, and speaks highly of the natural abilities of Graphic, Bloom and Pendenis. The latter is entered in both the All-Aged and Derby. Hart Haight is at Salisbury, about thirty miles from here, with the pointers Donald II., Flash R. and Lucia. He will also have in a few days Dr. Speir's setters St. Elmo IV. and Windermere. He also has one or two starters in the Derby. He also had Scout, a notice of whose death may be found in another column. This morning I received a telegram from Mr. Gregory request-

ing me to come to Salisbury. I arrived there about 1 o'clock, but found Scout dead. As he died very suddenly there was a suspicion that he had been poisoned, but an examination failed to reveal the slightest trace of poison. His lungs were very badly congested and this caused his death. He ran the day before when it was very hot and on the way home there was a shower, which wet him thoroughly, causing him to take a severe cold. Haight was feeling very badly over his loss, as the dog was going better than ever and he fully expected to get him to the front. I saw the other dogs at exercise and all of them went in capital form and have greatly improved since last year. Picket, a Derby entry, will make it hot for some of them if he goes as he did then. T. M. Aldrich is at Progress with the pointer Rue and the setters Slocum and Blarney, he also reports his dogs doing well. Capt. McMurdo is at Kittrell's with his string; and John Lewis is near Raleigh. Chas. Tucker is coming with twelve that he reports as fit to win in any company. B. Waters also has a string of winners. Short and the others I have heard nothing from.

I have not been able to learn much regarding the Members' Stake. Among the probable starters are C. Fred Crawford's Foreman, F. R. Hitchcock's Vision, W. A. Coster's Buckellew and Brimstone, J. O. Donner's Lady Sufferin, Geo. T. Leach's Corinne, D. T. Gregory, Jr., 2d's Lucia, Bayard Thayer's Rue and Slocum, and possibly two or three others.

A few of the members of the club are here and are having fine times. We expect fresh arrivals every day now, and are looking for a very large attendance at the trials. SHADOW.

HIGH POINT, N. C., Nov. 9.

HIGH POINT, N. C., Nov. 10.—The weather is superb.

NATIONAL FIELD TRIALS.

Editor Forest and Stream:

Herewith find entries to the All-Aged Stake of National Field Trial Club:

SETTERS.

CLIFFORD (Ramapo Kennels), black, white and tan dog (Emperor Fred—Fairy Belle).

BOB GATES (B. M. Stephenson), black, white and tan dog (Count Rapier—Belle of Hatchie).

LEE B. (Dr. A. F. McKenny), black and blue ticked dog (Count Rapier—Kate B).

GATH'S MARK (Dr. J. N. Maclin), black, white and tan dog (Gath—Gem).

COUNT RAPIER (W. B. Gates), black and white dog (Druid—Magnolia).

RODERIGO (Memphis & Avent Kennels), black, white and tan dog (Count Noble—Peep O'Day).

REBEL WIND'EM (Memphis & Avent Kennels), black and white dog (Count Wind'em—Novel).

TASSO (Jerry Cockrell), black, white and tan dog (Startle—Nelly C.).

GLADSTONE'S BOY (Dr. Geo. G. Ware), black, white and tan) dog (Gladstone—Sue).

SPORTSMAN (J. W. Murnan), black, white and tan dog (Gladstone—Sue).

GUS BONDHU (Luther Adams & A. W. Tucker), black, white and tan dog (Dashing Bonchu—Novel).

BADEN BADEN (W. E. Venable), liver, white and tan dog Lincoln—Blaze).

AMERICAN DAN (T. W. House), black, white and tan dog (Lincoln—Daisy Dean).

COUNT NUTT (Ed. von Donhoff), red dog (Rob—Babe).

DORA (J. H. O'Reilly), red bitch (Box—Rowena).

PRINCESS HELEN (Ramapo Kennels), orange and white bitch (Thunder—Donner's Bessie).

FLOUNCE (Murnan & Ware), orange and white bitch (Druid—Ruby).

JUNO A. (Memphis and Avent Kennels), black and white bitch (Druid—Ruby).

RESS (Memphis and Avent Kennels), black bitch (pedigree not given).

BESSIE A. (Memphis and Avent Kennels), lemon and white bitch (Dashing Lion—Armida).

QUEEN BESS (B. F. Price), black, white and tan bitch (Gladstone—Donna J.).

BELLE OF PIEDMONT (Edward Dexter), black, white and tan bitch (Dashing Rover—Ranee).

LILLIAN (F. H. and D. Bryson), black, white and tan bitch (Gladstone—Sue).

LADY C. (B. M. Stephenson), black, white and tan bitch (Coleman's London—Belle of Hatchie).

POINTERS.

TRINKET'S BANG (Wm. Titterington), white and liver spots dog (Croxteth—Trinket).

RICHMOND (J. E. Gill), lemon and white dog (Vandevort's Don—Beulah).

DUKE OF BERGEN (F. R. Hitchcock), liver and white dog (Bang Bang—Fan Fan).

GRAPHIC (J. L. Anthony) liver and white dog (Bonus Sancho—Fursdon Juno).

MAINSPRING (J. T. Perkins), liver and white dog (Mike—Romp).

KESWICK II. (Dr. J. N. Carson), liver ticked bitch (pedigree not given).

B. M. STEPHENSON, Secretary.

LA GRANGE, Tenn., Nov. 5.

A FACTORY IN NEW YORK.—The Spratt Company (limited), of London, so well known as the manufacturers of the celebrated dog biscuit, have opened a factory here in East Fifty-sixth street. The demand for these biscuits from England, the continent and America, appears to have been too much for the resources even of the Spratts enormous factory in London. The Fifty-sixth street factory is very large, and though at first it will be devoted entirely to the manufacture of dog food, it is intended eventually to make all the medicines, biscuits for pet dogs, and so on here. It is understood that on the opening of the factory a public reception will be given, so that all will have an opportunity to inspect it. The factory here is under the management of Mr. G. G. Cleather, but Messrs. F. O. de Luze & Co. will still continue to sell the Spratts biscuits.

THE COCKER SPANIEL FLY.—Savannah, Ga., Nov. 4.—*Editor Forest and Stream.* In your paper Oct. 29, I see Mr. E. Holley, Jr., claims names of dog and bitch cocker spaniels by Col. Stubbs out of Fly. I am owner of Fly, liver and white cocker spaniel bitch, whelped July 2, 1878. I have owned her since October, 1882; she was never bred to Col. Stubbs. I bred her to Romp (Col. Stubbs—Busy B). I have only raised three bitches from her; one I have and two others are owned in this city. Inclosed find pedigree from McKoon, of whom I bought her.—G. NOBLE. [Mr. Noble's Fly is given on the slip he sends as by Snipe out of Princess. The Fly mentioned by Mr. Holley is given as by Fido out of Baby. They appear to be two different dogs.

STRAYED OR STOLEN from Ittner's Villa, Tremont, N. Y., black spaniel Lady Bub (A.K.R. 998), answers to name of Jessie. Small white spot on chest, tail docked long, clean cut head, pleading eyes, timid nature. Gone three weeks. Finder will confer a favor by addressing as above, or D. C. Frank, 873 Broadway, New York.

PEDIGREE WANTED.—Can any one give me information as to breeding of Irish setter Shot, owned by the late Henry W. Halleck and imported by Mr. James Gordon Bennett?—A. W. P. (Huntington).

DEATH OF SCOUT.—Mr. D. G. Elliot, of New Brighton, Staten Island, has had the misfortune to lose by death his pointer dog Scout. He died on Saturday last at Salisbury, N. C., from congestion of the lungs. Scout ran in the Eastern Field Trials two years ago, but was unplaced, last year he came out in grand form, and after showing excellent work was beaten for first place and divided second with Mainspring. He was doing capital work this year and all who saw him run confidently expected to see him a winner. M. Elliot will have the sympathy of every lover of a good dog.

JOHN E. OWENS, the comedian, paid special attention to his stock when able to give active supervision to his farm, and he has a fine herd of thoroughbred Jersey cows on his farm in Baltimore county, Maryland. Another of his fancies was for fine dogs, especially setters and pointers. He was fond of shooting, and often had his friends visit him to join him in partridge hunting. The last time Mr. Owens returned from Europe he brought with him two Irish setters, which he named Ben and Aleck. The dogs are known throughout the neighborhood for their sagacity and beauty.

PHILADELPHIA KENNEL CLUB.—A run over a small portion of the Rio Grande grounds, yesterday, where the field trials of the club are to be held, found enough birds to insure the running out of the heats. It has been determined to run the Puppy Stakes first and give the youngsters all the advantage possible, for the coveys would become too scattered if the All-Aged Stakes were run in advance. The one Gordon entry in All-Aged Stakes attracts considerable attention, for it is said the dog is a good one.—HOMO.

SOMERVILLE, TENN.—The county fair here had an exhibit of dogs. The setter and pointer puppies were judged by Mr. P. H. Bryson. There were fifteen entries: 1st, B. M. Stephenson's Rubicon (Ben Hill—Zoe); 2d, J. Hobson's Dell Rivers (Gladstone's Boy—Flirt C.). Very high com., B. M. Stephenson's Susan and Katrina (Ben Hill—Zoe); Hobson and Rivers's Belle of Lucerne (Gladstone's Boy—Flirt C.); also, C A. Stainback's unnamed, unpedigreed dog and bitch.

NOTA BENE.—The December number of the A. K. R. will close the volume for 1885. It is highly important to all concerned that the show and field trial records of all registered dogs, together with any corrections, should be brought up to date. Send in early. The Register numbers now reach up to 2908.

KENNEL NOTES.

KENNEL NOTE BLANKS.—For the convenience of breeders we have prepared a series of blanks for "Names Claimed," "Whelps," "Bred" and "Sales." All Kennel Notes must be sent to us on these blanks, which will be forwarded to any address on receipt of stamped and directed envelope. Send for a set of them.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Rock, Robert LeD. and Maud X. By Detroit Kennel Club, Detroit, Mich., for liver and white English setters, whelped May 15, 1883, by Lexington Nixey (A.K.R. 177) out of Kelp (A.K.R. 110).

Duke Gasceon. By Frank Plume, Thomaston, Conn., for liver and white pointer dog, whelped June 22, 1885, by True (Sprague's Morn—White's Grace) out of Zoe (A.K.R. 1444).

Frost's Bang. By W. A. Strother, Lynchburg, Va., for lemon and white setter dog, age not given, by Rebel Wind'em out of Frost.

Cora Frost. By W. A. Strother, Lynchburg, Va., for lemon and white setter bitch, age not given, by Doctor Duer out of Kate.

Col. Spottswood Pagan. By W. A. Strother, Lynchburg, Pa., for black and white setter dog, age not given, by Doctor Duer out of Queen Frost.

Bang Up. By James B. Reddie, New York, for liver and white pointer dog, whelped June 29, 1885, by Donald II. (A.K.R. 2545) out of Lady Bang (A.K.R. 698).

Sir Roger. By City View Kennels, New Haven, Conn., for silver fawn pug dog, whelped Oct. 7, by Bradford Ruby (Lovat—Jenny) out of Beauty (Major—Daisy).

Our Joan. By City View Kennels, New Haven, Conn., for silver fawn pug bitch, whelped Oct. 7, by Bradford Ruby (Lovat—Jenny) out of Beauty (Major—Daisy).

Nannon. By City View Kennels, New Haven, Conn., for silver fawn pug bitch, whelped Oct. 7, by Bradford Ruby (Lovat—Jenny) out of Beauty (Major—Daisy).

Daisy D. By Mrs. C. C. Dewey, New Haven, Conn., for solid liver cocker spaniel bitch, whelped Sept. 3, 1885, by Earl (Obo, Jr.—Black Garry) out of Scooty (Snipe—Flora).

Harry Malcolm. By Chas. S. Fitch, Fort Washington, New York, for black and tan Gordon setter dog, whelped July 23, 1885, by Malcolm (Duke of Gordon—Dream) out of Dream IV. (champion Grouse—Dream II.).

Rubiette. By Geo. C. Tate, Jr., Malden, Mass., for dark red Irish setter bitch, whelped Sept. 2, 1881, by Rocket (Elcho—Eileen) out of Lady Elcho (Elcho—Rose).

Nannie. By Geo. C. Tate, Jr., Malden, Mass., for black and white English setter bitch, whelped March 28, 1884, by Lelaps (Leicester—Delano's Doll) out of Hadie (Sumner's Frank—Dobson's Jessie).

Joe. By H. A. Hoffman, Red Hook, N. Y., for liver and white cocker spaniel dog, whelped June 2, by Colonel Stubbs (Captain—Flirt) out of American Daisy (Chance—Fly).

Reserve Kennels. By Dalliba, Billings & Munhall, Cleveland, O., for private kennels of setters and pointers, in place of Forest City Kennels, the old style.

Clan Alpine Kennels, By J. D. Shotwell, Rahway, N. J.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Nannie—Laelo. Geo. C. Tate, Jr.'s (Malden, Mass.) English setter bitch Nannie (Lelaps—Hadie) to Dr. C. E. Wing's Laelo (Lelaps—Wing's Rose), Oct. 5.

Tra-la-la—Bradford Ruby Chequasset Kennels' (Lancaster, Mass.) pug bitch Tra-la-la (Young Toby—Tantrums) to City View Kennels' Bradford Ruby (Lovat—Jenny), Sept. 16.

Beauty—Bradford Ruby. City View Kennels' (New Haven, Conn.) pug bitch Beauty (A.K.R. 1360) to their Bradford Ruby (Lovat—Jenny), Aug. 14.

Daisy—Bradford Ruby. John Obrien's (New Haven, Conn.) pug bitch Daisy to City View Kennels' Bradford Ruby (Lovat—Jenny), Aug. 2.

Daisy II.—Bradford Ruby. City View Kennels' (New Haven, Conn.) pug bitch Daisy II. (A.K.R. 1361) to their Bradford Ruby (Lovat—Jenny), July 1.

Musette—Bradford Ruby. Jesse Welch's (New Haven, Conn.) pug bitch Musette (Young Toby—Titania) to City View Kennels' Bradford Ruby (Lovat—Jenny), June 28.

Floy—Change. Reserve Kennels' (Cleveland, O.) English setter bitch Floy (Rob Roy—Blanche) to S. H. Surwell's Change (Dashing Dan—Daisey Starlight).

Topsy—Bradford Ruby. W. D. Holsapple's (Hudson, N. Y.) pug bitch Topsy (Punch—Judy) to City View Kennels' Bradford Ruby (Lovat—Jenny), Oct. 25.

Fairy—Treasure. Kenucky Pug Keunels' (Newport, Ky.) pug bitch Fairy (Napoleon—Beauty) to their Treasure (Friiz—Bango), Nov. 3.

Sin—Kingan. Detroit Kennel Club's (Detroit, Mich.) pointer bitch Sin (Hindoo—Princess Bow) to their Kingan.

Ruby Croxteth—King Bow. Detroit Kennel Club's (Detroit, Mich.) pointer bitch Ruby Croxteth (Croxteth—Lass) to their King Bow.

Rose Pope—King Bow. L. Melchor's (Battle Creek, Mich.) pointer bitch Rose Pope (Joe Pope—Nellie Pope) to Detroit Kennel Club's King Bow.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Dora Gordon, Chas. S. Fitch's (Fort Washington, New York) Gordon setter bitch Dora Gordon (Dash—champion Mona), Nov. 9, ten (four dogs). by R. M. Johnson's Phil.

Daisy II, City View Kennels' (New Haven, Conn.) pug bitch Daisy II. (Major—Beauty), Aug. 30, six (three dogs), by their Bradford Ruby (Lovat—Jenny).

Musette—Bradford Ruby. Jesse Welch's (New Haven, Conn.) pug bitch Musette (Young Toby—Titania), Aug. 30, one dog, by City View Kennels' Bradford Ruby (Lovat—Jenny).

Bess. Fred E. Parker's (New Haven, Conn.) pug bitch Bess (Napoleon—Beauty), Aug. 18, five (three dogs), by City View Kennels' Bradford Ruby (Lovat—Jenny).

Lassie. F. W. Rothera's (Simcoe, Ont.) collie bitch champion Lassie (A.K.R. 445), Nov. 3, six (one dog), by his champion Lorne (A.K.R. 446).

Patti. Thomas W. Mills's (Montreal, Can.) imported brindle bull bitch Patti (Toreador—Betsy), Oct. 30, eight (six dogs), by his Guillermo (A.K.R. 671); all brindle.

SALES.

☞ **Notes must be sent on the Prepared Blanks**

Maggie Black, white and tan beagle bitch, whelped Dec. 31, 1884 (Marc Antony—Flora), by Josh M. Gross, Harrisburg, Pa., to C. H. Laing, White Cloud, Mich.

Harry Malcolm. Black and tan Gordon setter dog, whelped July 23, 1885 (Malcolm—Dream IV.), by H. Malcolm, Baltimore, Md., to Chas. S Fitch, Fort Washington, New York.

Earl—Scooty whelp. Solid liver cocker spaniel bitch, whelped Sept. 3, 1885, by Ideal Kennels, New Haven, Conn., to Mrs. C. C. Dewey, same place.

Earl. Black cocker spaniel dog, whelped Aug. 28, 1884 (Obo, Jr.—Black Garrie), by Ideal Kennels, New Haven, Conn., to A. McDonald, Rockland, Me.

Fairy. Apricot fawn pug bitch, whelped March 4, 1885 (Napoleon, A.K.R. 2037—Beauty, A.K.R. 1360), by City View Kennels, New Haven, Conn., to Chas. A. Leonhard, Newport, Ky.

Fuss. Silver fawn pug bitch, whelped July 18, 1885 (Bradford Ruby—Flossy, A.K.R. 2250), by City View Kennels, New Haven, Conn., to Barnard B. Savage, Orange, Conn.

Duke Gasceon. Liver and white pointer dog, whelped June 22, 1885 (True-Zoe, A.K.R. 1444), by E. M. Crouch, Thomaston, Conn., to Frank Plume, same place.

True—Zoe (A.K.R 1444) *whelp.* White, black and tan pointer dog, whelped June 22, 1885, by E. M. Crouch, Thomaston, Conn., to John Barclay, same place.

True—Zoe (A.K.R. 1444) *whelp.* White and black pointer dog, whelped June 22, 1885, by E. M. Crouch, Thomaston, Conn., to Edgar Bennett, same place.

True—Zoe (A.K.R. 1444) *whelp.* Lemon and white pointer dog, whelped June 22, 1885, by E. M. Crouch, Thomaston, Conn., to B. Butler, Plymouth, Conn.

Mo. Stone fawn, black points, pug dog, whelped July 18, 1885 (Bradford Ruby—Flossy, A.K.R. 2250), by City View Kennels, New Haven, Conn., to B. D. Hubbard, same place.

Max. Stone fawn, black points, pug dog, whelped July 18, 1885 (Bradford Ruby—Flossy, A.K.R. 2250), by City View Kennels, New Haven, Conn., to Chauncy Ives, New York.

Toodles II. Apricot fawn pug bitch, whelped Sept. 6, 1885 (Tuck—Toodles), by Henry C. Burdick, Springfield, Mass., to M. B. Breck, same place.

Frolic. Fawn and white Italian greyhound bitch, whelped July 1, 1885 (Don—Nellie), by Henry C. Burdick, Springfield. Mass., to Robt. J. McKay, East Liberty, Pa.

Nellie. White Italian greyhound bitch, whelped Sept. 2, 1879 (Don—Spunkie), by Henry C. Burdick, Springfield, Mass., to H. R. Surles, Worcester, Mass.

Ringwood—Collette whelps. White, black and tan beagle bitches, whelped April 28, 1885, by N. Elmore, Granby, Conn., one to W. T. Percival, Stanton, Mich., and one to L. W. Laing, White Cloud, Mich.

Judge—Lucy whelps. White, black and tan beagles, whelped Jan. 28, 1885, by N. Elmore, Granby, Conn., one dog to Hon. Amory R. Starr, Marshall, Tex., and one dog to Henry L. Curtis, Peace Dale, R. I.

Trailer—Roxy whelps. White, black and tan beagle dogs, whelped July 14, 1885, by N. Elmore, Granby, Conn., to A. C. Krueger, Wrightsville, Pa.

Banshee. Brindle and gray deerhound bitch (A.K.R. 1238), by F. A. Cannon, New Haven, Conn., to W. M. Rankin, same place.

Hec. Black, white and tan beagle dog, age not given (Flute—Collette), by C. S. Krebs, Tamaqua, Pa., to P. M. Roedel, White Cloud, Mich.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

G. E. H., Newport, R. I.—Give your dog a pill of the citrate of iron and strychnia, two grains, three times daily, concealed in a morsel of raw meat. Persevere in this and we think you will see a marked improvement.

D. R., Troy, N. Y.—A spaniel, after recovering from distemper, has a dry, parched nose, is quite weak, and a little staggery in hind parts, is nearly blind. When looking into his eye in a strong sunlight the pupil can be faintly seen, but the cornea appears to be cloudy and not transparent. He eats well and is quite playful. What can be done for him? Ans. Have some pills of the citrate of iron and strychnia made, each to contain two grains. Give one pill three times daily bidden in a bit of meat. Drop a few drops of solution of zinc sulphocarbolate, strength two grains to the ounce, into the eyes twice daily. Report results.

B. H. S., Wellesley, Mass.—Will your kennel editor give me directions for knowing and treatment of distemper? Up to what age are dogs liable to have it? Ans. The premonitory symptoms of distemper are loss of appetite, dullness, often cough, chills, fever, often vomiting. After a few days' profuse semi-purulent discharges from the eyes and nose, the fever increases, the cough becomes more loose, often diarrhœa comes on. The height of the disease is reached in a week, as a rule. The dog becomes very much emaciated. The dog may recover from this stage, or the inflammation may go down into the lungs, giving pleuro-pneumonia, which is very fatal. The disease is more common to the first six months of puppyhood. In treating, the dog should be quarantined; should have dry, well-ventilated quarters. While fever exists, tincture of aconite should be given with spirits of nitrous ether, two drops of the former and fifteen drops of the latter in a tablespoonful of water every two hours. At the start ten grains of quinine can be given in one dose. Add chlorate of potash to the drinking water, a teaspoonful to the pint. Give fluid diet—milk, with lime water, tablespoonful to pint; beef soups without fat, a little scraped raw beef mixed with the white of a raw egg. Feed four or five times daily, by force if necessary. If great weakness shows itself, give brandy or whisky, a teaspoonful every hour.

POINTS WORTH CONSIDERING.

1. Because of the compact style of its typography the FOREST AND STREAM actually contains, weekly, more reading matter pertaining to its chosen field than is found in any similar publication in the world.

2. In general excellence the reading columns of the FOREST AND STREAM are of a higher grade than those of any similar publication in the world.

3. Taking into account the amount and the character of weekly reading given, the FOREST AND STREAM is away ahead of any similar publication in the world.

4. If a sportsman wishes a sportsman's paper, he will be better suited by the FOREST AND STREAM than by any similar publication in the world.

The other day a dog which was following a carriage turned aside and ran into a yard on Park street. He might have expected to pick up a fall and winter stock of bones, but in this way he was disappointed. He was about turning away when a dog owned in the house flew out and rushed upon him in the most reckless manner, and in the course of ten seconds there was a bite-as-bite-can contest of the fiercest description. A woman considerably past the prime of life came out of the house as the dogs rolled around, picked up a club lying on the grass near by, and seemed about to enter the struggle. She raised the club two or three times, but let it fall as often, and finally stood an interested spectator of the fight. Among the dozen pedestrians halting at the gate was a man, who called out: "Say, stop 'em! Stop 'em!" The woman raised her club, but hesitated to strike. "Why don't you stop 'em?" shouted the man. "I'm waiting," she replied. "For what? Don't you see they'll kill each other?" "I'm waiting to see how it comes out. If my dog can lick him, it's all right. If he gets the bulge on Rover, I'll even up the chances with this club." Rover got a neck hold, and shook the stranger until his yells were heard blocks away, and, when he was finally permitted to sneak off, the woman flung down her club and mounted the steps with the remark: "Nobody nor nothing has been killed as I know of, and every one of you could see that it was a square fight, and victory for the best dog. Please don't rub the paint off that gate."—*Detroit Free Press.*

The latest Nevada romance is that three hogs at Hawthorne devoured eight boxes of giant powder. The owner of the stuff, in his anger, hurled a rock at one of the animals, which caused her to explode with great force and to scatter fragments of flesh all over the surrounding country.

Rifle and Trap Shooting.

"Forest and Stream" Trajectory Test.

(*Continued from page 293.*)

THE arrangements for testing the weapons were of the simplest sort, yet such at the same time as to secure absolute certainty in all the results obtained. The question of a rest was the first one to be settled. We know that much has been said *pro* and *con* on the matter of rests for rifle shooting and no end of theoretical talk and some experiments have been put forth to show that a fixed rest is not a proper one for the purpose of testing a rifle. There is much talk of buckling barrels and springing metal, yet in a test for trajectories it would be manifestly impossible to use other than such a rest as would enable us to say with perfect certainty that the barrel muzzle at each shot was at a fixed and known distance above a base line. This a rigid rest enabled us to determine and for this reason a fixed rest was decided upon. The government rest at the Sandy Hook Ordnance Proving Ground was placed at our disposal, and this was taken to the range at Creedmoor. Originally constructed for use in testing the Springfield army rifle, there were certain changes, made necessary before the rest could be used for the long

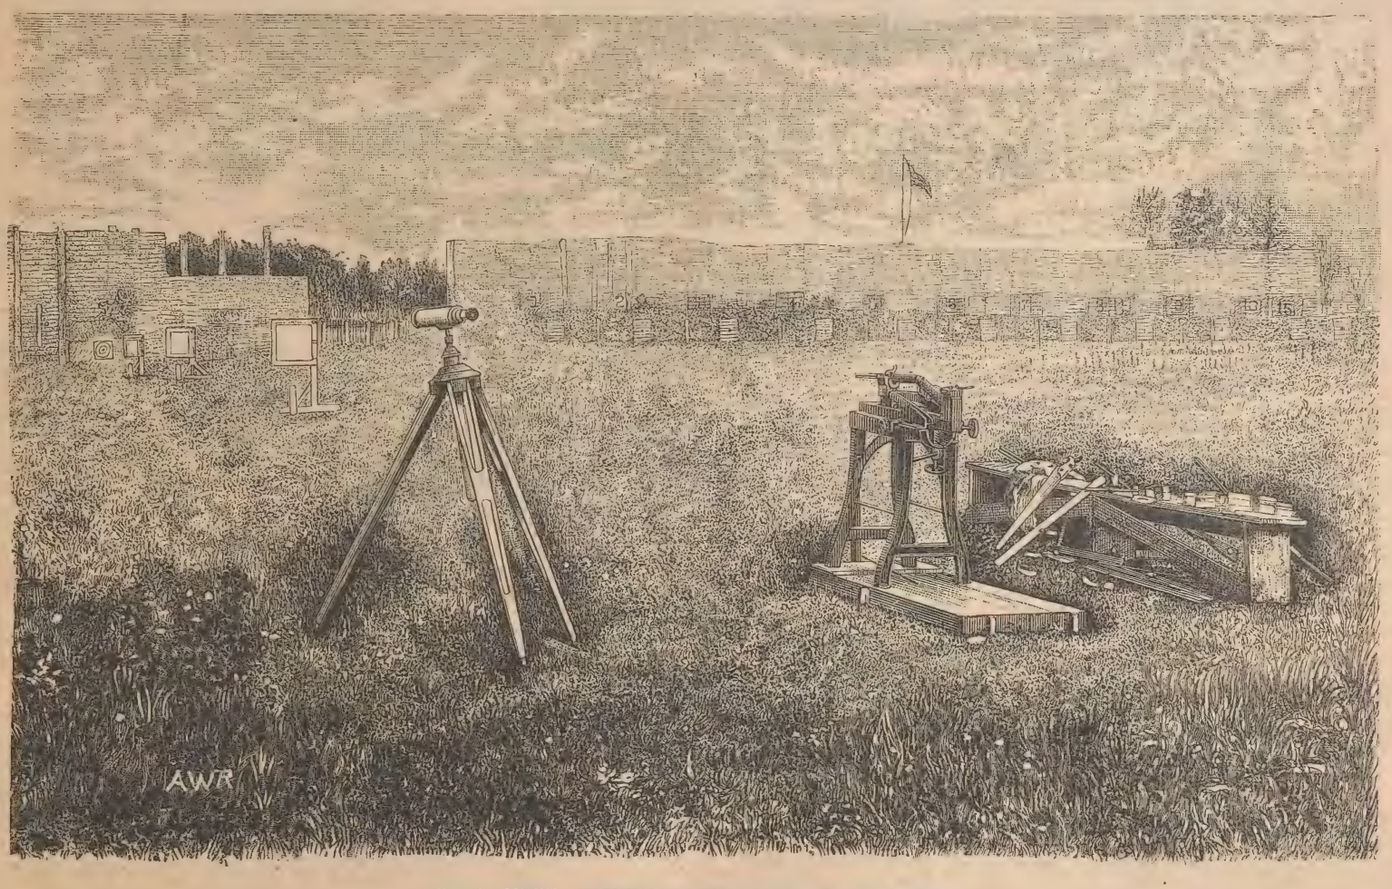

Fig. 1.—VIEW SHOWING GUN REST AND SCREENS.

under-lever action rifles such as the Winchester, Whitney, etc. To enable these breech actions to be worked without removing the piece from the clamp, a slot was cut in the base which was made to lift up from the rear, working from the front end, and at each dropping into place going back exactly to the same position, against stationary lugs. The rifle was held in place by the hinged clamp which passed over the barrel, having a high hollow center, permiting a free line of sight. The butt-plate rested back against the upright at the rear, being protected from abrasion by a leather lining. When placed in, the side plate came up with a hinge motion, while a screw at the top held it in place. Nothing could be simpler, and every bearing point was protected with narrow strips of rubber packing to prevent any cutting or bruising of the wood or iron work of the rifles. Once in the rest and set level across the barrel, and this fact tested with a spirit level, the adjustment of the sight upon the target became a comparatively easy matter. The lateral adjustment was secured by the screws seen at either side near the rear end. This gave a motion of the entire upper part of the rest holding the rifle, the rear end describing a curve about a fixed joint or stout pin directly below the front end. Of course with each screw brought home the rifle frame was held as in a vise, and by turning upon one side as the other side was loosened, the front sight described a line across the target face. Elevation was attended to by a screw with its accompanying jamming nut seen at the rear of the rest. There was a constant bearing upon the end of this screw bolt and with it there wa

comparatively little difficulty in getting the finest sort of a sight and shifting ever so slightly as the peculiarities of the rifle seemed to require. The entire iron rest weighing nearly 200 pounds and bringing the rifle muzzle between three and four feet above the platform, enabled us to make ready shifts from one rifle to another and put each rifle at the moment of pulling the trigger on exactly the same equality. To insure steadiness the rest was placed upon a broad heavy plank foundation, the planks shown being three inches in thickness and some five feet long. Screws through the rest feet made its firm hold to the platform a matter of quick and ready adjustment.

Having fixed our rifle in position for the first shot, attention may be directed to the screens. In the general view of the range laid out for the tests, they will be seen at equal distances down the range. At the two hundred yards trial they were placed at fifty yards, one hundred yards and one hundred and fifty yards respectively from the muzzle of the rifle, while at the one hundred yards test the distances were twenty-five yards, fifty yards and seventy-five yards. The screens were of the lightest form of tracing paper of the grade known as "Alba" in our shops. This is not the ordinary tissue paper, but is, instead, an oiled tracing paper such as is generally used in architects' and engineers' offices in making copies of drawings. We have heard of wrapping paper being used for such tests, and again of ordinary tissue paper. The former would, of course, offer a great obstruction to the flight of the bullet, particularly if the screen was not carefully placed at right angles with the line of flight, while the very light paper disks may not always be stretched on the frames with that drum-head tightness necessary if exactness is aimed at. The frames used were of pine five-eighth inch thick with a three-inch width at the inner and upper streaks, two inches down the outer edge and one inch across the bottom. When halved at the corners this made a very stiff frame. They were squared carefully by the carpenter when made, and enabled the paper when pasted on to draw firm and tight. The opening was twenty inches in width and twenty-four inches in height. To hold the frames in place uprights were provided; these were of three by four inch joist firmly planted upon a cross base having two arms each four feet long with foot braces to keep the upright plumb. The arrangement gave a very firm support to the screens. These last were held in place against the uprights by iron clamps indicated on the drawing. The thumb screw in the clamp permitted the ready attachment of a screen and its movement at will up or down, while a single turn of the screws fixed it at any desired height. The target used was the paper one of the Massachusetts decimal pattern. It was really, it will be seen, a matter of the slightest consequence what pattern of target was used, but these being accurately printed and being readily obtained afforded a means of keeping a permanent record of each shot fired in the tests.

On reaching the range the first thing sought was a clear space where the two-hundred-yard range might be located General Wingate and General Robbins had both been mos kind in proffering the facilities of the range, and in order to interfere as little as possible with the regular matches and troop practice, the old Running Deer screen was chosen to shoot against. In many respects this was advantageous, as it gave a wooden back; while the smaller screen at either wing, not very clearly shown in the drawing, enabled the marker to stand safely within a few feet of the target during the delivery of the shots.

The first step was to have an accurate range as to distance, and then to have a base line fixed from which we might in all confidence measure perpendicularly the shot holes as made. The task of doing the surveying necessary to determine these very essential points was intrusted to Charles H. Haswell, whose ability and standing as an engineer and professional man are known throughout the world. When he had finished his labor there were seven stakes standing in line, each was firmly driven into the ground, and into the top of each was a screw having a flat top. The first stake stood against the broad target fence, the next twenty-five yards up the line, the next at fifty yards, the next again at seventy-five yards, the next at one hundred yards, further away was one at one hundred and fifty yards, while the last one was at two hundred yards. They were in exact line, and the broad-headed screw in the top of each were brought exactly to the same level and that within the thousandth of an inch.

It will be seen at once that we had now all the preliminaries for an accurate test, since it was comparatively easy to take the measurements at the target, at the several screens, and at the rifle muzzle from the basic line provided. The rifle was first placed carefully in rest, and when securely clamped down a few shots were fired until the bullets were found to gather themselves in or near the bullseye. It mattered not to any great extent how the sights were used, or whether the sighting was on the bullseye. All we cared to know was that the rifle was holding well, and that we could rely on getting the next few shots on the target paper. Then a cleaning rod was passed through the barrel and it was ready for the deciding shots. All this time, of course, there had been no screens in the way. These were now put up. From the top of the stake in front of the rifle rest, which in this cut is the 100-yards stake, the distance was taken with the Brown & Sharpe standard steel micrometer scale to the center of the rifle barrel. This was fixed by a fine pin put in the center of a small wooden plug accurately fitting the bore. On each screen a fine ink line, put in with a drawing pen from a T-square placed across the screen, had been placed as a line of measurement. This line was brought to the same distance from the stake below it as the rifle barrel was above the stake below it. The line on the screen was tested with a spirit level, and with the screen placed exactly at right angles with the line of bullet flight there was no danger of the glancing of the bullet, which, as every

rifleman knows, may take place from the slightest obstacle. Each screen was placed thus while the target, having had such a fine India ink line drawn across its center, was pinned to the plank backing with this line exactly at muzzle distance above the base line stake below.

When everything was in readiness and the signal given that the range was clear the first shot was fired, not sighted at the target direct, but upon the slight black patch which had been placed on the screen nearest the rifle as a precautionary measure. The shot hole through each screen was numbered, and the same shot given the same number on the target. This was done before another shot was fired, and with abundant assistance did not consume a moment's time. When the next shot was fired it too was numbered consecutively, so that when through the five shots allotted each rifle there were corresponding numbers on each of the three screens and on the target as well. While the firing was going on observations were made as to the state of the atmospheric conditions. Readings were had from the barometer, from the wet and dry thermometer and from the anemometer. The accuracy of these observations is fully shown to the matic that the instruments used were selected from the extensive stock of Gall & Lembke, of 21 West Union Square, this city.

Before taking the rifle from its rest or disturbing the screens and target, the measurements were renewed and verified at each point along the line—at the rifle muzzle—from the screw head to the hair line drawn across each screen—and to the similar line on the target. These having been taken and duly entered, the clamps were loosened and the screens set free, the thumb screws which held the target were drawn and a few turns of the screw at the top of the rest permitted the rifle to be lifted out. It will be noted that the essential parts of each screen were the fine line and the numbered bullet holes, and this permitted the cutting out of the thin paper sheets and their careful preservation in a portfolio for future measurement. Supposing a shot to have hit exactly upon the center-line of the bullseye, then the distances of the shot-hole above the line on the several screens would have been the trajectory height at those distances, respectively, but the great majority of the bullets struck above or below this center line, and this necessitated additional calculation, simple, yet not to be slurred over. In all there were over fifteen hundred of those measurements to be taken and tabulated on screen and target.

In the case of the tip-up barrel rifles, such as the Wesson and Stevens, and in the muzzleloaders, there was an additional bother in the necessity of taking the muzzle height at each placing of the rifle in the rest. The screens remained untouched, and with the small black aiming patch on the first screen nearest the rifle, there was no difficulty in getting on the target. Yet in making the office calculations afterward, each shot in each screen is considered with reference to the muzzle height when that particular shot was fired.

NOTE.—Our attention is called to the fact that the Marlin .40 70 should have read .40-60, as that is the nomenclature adopted by the makers. As we have before stated, we used the ammunition recommended by the maker, and what that ammunition really is our examination will show. While the Marlin .40-60 may be the designation given in the catalogue, how near the charge came to being 60 grains our weighing expert will report in due time.

[TO BE CONTINUED.]

RANGE AND GALLERY.

SAN FRANCISCO, Oct. 25.—The fall meeting of the California Rifle Association opened at Shell Mound this morning. The day was beautiful—none better could have been selected. The attendance was large. There were advertised five matches, but owing to the high tide which covered the beach and rendered impracticable the skirmishers' match, there were only four that came off. The first was the Siebe team match, open to teams of six representatives from any company of the National Guard or Police department who have never made more than 70 per cent. in any California Rifle Association matches, for a trophy presented by Captain Ludwig Siebe. The conditions of the contest were 7 rounds at 200yds. with Springfield rifles. There were 2 entries—the Police team and a team from E Company, Second Artillery, N. G. C. The trophy was won by the former. The scores were as follows:

Police Team.		Company E. Second Artillery.	
T Flanders	4553335—28	Sergt Kelly	4445543—29
J.Kelly	4451254—28	C Bateman	4444454—29
J A Stanley	4451254—28	Lieut J H Flynn	4343444—26
G O Comstock	3343434—24	J Howard	4343244—24
Wm Ringle	4332444—24	Corp J McClosky	4332354—24
E R Alford	2433323—20—152	Sergt Clark	4223224—19—151

In the platoon match, or volley shooting, there were also two entries, viz., a team from the Police Department and another from the Nationals, Companies C and G, First Infantry, N. G. C. The conditions of the match were that each team should consist of eighteen men and that each should be allowed to fire but one volley, and at the command of an officer in charge, at the 200-yard target, each straggling shot to forfeit a hit. Score to be counted: First, greatest number of hits, and, secondly, the value of each according to the C. R. A. rules. The match was won by the policemen. Captain Douglass gave them the word, while Captain Klein did the same for the Nationals. The scores of each team, and the name of the winning one, were:

Police Team—Hook, A. T. Fields, C. C. Wells, N. T. Fields, Sergeant Fleming, Sergeant Gans, Comstock, McCarty, Geary, Whitman, Harris, Cayat, Boughton, Stanley, Sergeant Flanders, Kelly, Sergeant Nash. Every man hit the target, there being 5 center shots, 6 threes and 6 twos, a total of 54 points.

Nationals, Companies C and G, First Infantry, N. G. C.—The target was hit 13 times. Ten centers were made, 1 three and 2 twos, a total of 47.

The match for the champion medal of the Association, held by Special Officer P. D. Linville, was won by T. E. Carson, of C Company, First Infantry, N. G. C. The match was open to all members of the Association, the National Guard of California, Army and Navy or Police departments. Entries unlimited. Rounds ten, with any military rifle under the rule, 200yds. Five cash prizes, namely, $10, $8, $6, $4, $2, in addition to the medal, which is the first prize, to become the property of the marksman winning it three times at regular meetings of the C. R. A. The prize-winners were:

T E Carson	5545455555—47	Charles Nash	4544555554—46
P D Linville	5455555554—47	S E Beaver	5455554454—45
A Johnson	4454455545—46	J A C MacDonald	4454455455—45

An extra prize of $10 for the most bullseyes made during the day in the match was won by Linville.

Beginners' Match.—C. Meyer won the Donahue Beginners' Trophy, the competition for which was open to all competitors who have no record exceeding 70 per cent. at the meetings of the C. R. A., 200yds., 5 shots, with any military rifle under the rules. First prize presented by Lieutenant-Colonel J. M. Donahue, Fifth Infantry, N. G. C. Other prizes, 25, 15, 10 and 5 per cent. respectively, of net receipts. Entries unlimited. The prizes were won by:

C Meyer	44455—22	Kehrlein	34544—21
J A Hanly	44545—22	H Pendleton	54354—21
Kelly	45444—21		

The following made 70 per cent.: T. Flanders 20, F. M. Zeizing 20, Ratcman 19, Lieut. J. A. Flynn 18, Clark 18, J. McClosky 18.

The meeting concludes on next Sunday, when there will be shot the Dimond Team Match, Dunphy Team Match, and Centennial Team Match and pool shooting.

Nov. 2.—The second day was not nearly so well attended as was the first. The first contest was for the Dimond team trophy, open to teams of six from any military company, field and staff, board of officers, police department or rifle club, with Springfield rifles at 200 and 500yds., seven rounds each, trophy to become the property of the team winning it three times. November 16, 1884, the Police Team won the trophy by a score of 365. The National's Shooting Club won it from the police on the 14th of last June by a score of 360. To-day there were but two competitors for the trophy—the Police Team and the Nationals. Following is the score:

Police Team.			National's Team.		
	200yds.	500yds.		200yds.	500yds.
Sgt C Nash	31	33—64	F Cummings	30	33—63
D Geary	30	32—62	Capt J E Klein	32	30—62
A T Fields	28	32—60	C L Lods	29	31—60
N T Fields	30	30—60	A Johnson	28	29—57
H Hook	29	30—59	G S Simpson	30	27—57
A Bixby	30	29—59	T E Carson	29	26—55
		364			354

The second match was the Dunphy trophy match, open to teams of 6 from any military company, field or staff, board of officers, police department or rifle club, with any military rifle under the rules, at 200 and 500yds., 7 rounds, to become the property of the team winning it three times. Nov. 16, 1884, the trophy was won for the first time by the Police team by a score of 370 points. The next time it was won on June 14, 1885, when the Police team No. 1 won it by a score of 372. To-day there were only two competitors, the Police team and the Nationals, the former again won by a score of 361. Appended is the individual score:

Police Team.			National Team.		
	200yds.	500yds.		200yds.	500yds.
C C Wells	30	33—63	T E Carson	31	34—64
D Geary	32	31—63	Capt J E Klein	28	33—61
J P McCarty	33	30—63	F Cummings	30	31—61
H Hook	31	31—62	G S Simpson	27	29—56
Lieut S Flemming	28	32—60	A Johnson	30	33—53
W Boughton	31	19—50	C L Lods	23	25—48
		361			348

The match for the Centennial Trophy closed the regular programme. The trophy, which is a beautiful silver one, was presented by this city to the Association in 1876, to become the property of the regiment or battalion winning it five times at regular meetings of the Association, commencing in 1882 For the six years commencing in 1876 it was won by the First Infantry. They returned it to be shot for as stated above. The conditions under which the trophy may be shot for are: Open to all teams of ten representatives from any regiment or battalion, N. G. C., 200 and 500 yards; seven rounds at each, with Springfield rifles. On Oct. 23, 1882, the First Infantry won the trophy by a score of 860 (10 shots). The same regiment won the trophy on Oct. 23, 1883, by a score of 587. On Nov. 16, 1884, the same regiment won it, with 597 points. Once more the regiment won the trophy yesterday, by a score of 587. There really was no competitor, but the Second Artillery managed to get together a team of members and ex-members which shot for the sake of shooting. Following is the score of the winning team, the grand total figuring up 587:

	200yds.	500yds.		200yds.	500yds.
A Johnson	32	34—66	T E Carson	28	31—59
F Cummings	33	32—65	G S Simpson	24	33—58
Julius Klein	29	33—62	P M Diers	29	25—54
Capt J E Klein	30	30—62	P E Robertson	26	26—52
A P Raye	30	30—60	A J Ruddock	27	22—49

The third match, and the one in which all interest was centered, was the contest for the California Powder Works medal, open to all members of the association, National Guard of California, army and navy; distance 200 and 500yds., 7 shots at each distance with any military rifle under the rules; all competitors for this trophy to use powder manufactured by the California Powder Works. The medal is destined to become the property of the marksman winning it three times at regular meetings of the association. It was first won on Oct. 23, 1883, by Private G. C. Thaxter, of the Carson City Guard of Nevada, by a score of 64. On May 11, 1884, Officer P. D. Linville won it with a score of 65. On Nov. 23 of the same Sergt. C. Nash carried it off with the splendid score of 68. On June 14 last Lieut. S. I. Kellogg, Jr., won it by a score of 64. To-day there were a large number of competitors. F. Cummings, of Company C, First Infantry, N. G. C., won the medal, as will be seen by the appended four highest scores:

	200yds.	500yds.		200yds.	500yds.
F Cummings	31	34—65	G L Gano	30	34—64
A C Bixby	33	32—65	Chas Nash	31	33—64

In the match for the Directors' Medal the following scores were made at 200yds.:

Sert C Nash	4454445—30	Major E G Sprowl	4335545—29
Capt H T Sime	4444445—29	Major A F Klose	4444444—28
Lieut G H Strong	3444554—29	Lieut R P Hammond	3353234—24

CLUB SCORES.—*Correspondents who favor us with scores are requested to send them in as soon as possible after the matches described. We go to press Wednesdays; and it is necessary that matter for publication should be in hand by Monday, or Tuesday at the latest.*

GARDNER, Mass., Nov. 5.—At a recent meet at Hackmatack Range of the Gardner Rifle Club, there was a team match with the Leominster Rifle Club. The American decimal target was used, and three strings were shot with the following result:

Gardner.				Leominster.			
G F Ellsworth	85	88	92—265	B M Pitts	77	75	75—227
C A Hinds	74	83	84—241	G W Foster	78	74	74—226
I N Dodge	73	85	81—239	H A Rugg	68	75	75—218
A Mathews	75	76	85—236	J W Elwell	80	68	68—216
G C Goodale	62	85	85—232	E M Rockwell	70	68	69—207
H C Knowlton	70	79	78—227	J Simonds	63	62	62—187
W C Loveland	77	74	75—226	F A Whitney	68	59	59—186
F E Nichols	86	70	60—226	C C Foster	53	66	66—185
F H Knowlton	75	62	62—199	H S Lawrence	53	55	55—163
G Warfield	58	58	59—175	C A Joslin	39	59	60—158
			1,973				1,016

The members of the Gardner Rifle Club have shot twice for the three gold medal prizes offered by the *Turf, Field and Farm*. The Massachusetts target is used, distance 200yds., shooting off-hand, with a possible 130. The results of two shoots is as follows:

I N Dodge	110	109	H C Knowlton	102	...
A Mathews	108	107	W C Loveland	101	102
G C Goodale	108	99	F H Knowlton	94	...
G F Ellsworth	105	106	C D Bent	94	...
Chester Hinds	102	102	F E Nichols	92	...

BRIDGEPORT RIFLE CLUB.—Nov. 5, 200yds. off-hand:

D E Marsh	11 11 10 12 9 10 11 11 12 10 10 9 11 12 10—159
George Quitmeyre	11 11 10 10 11 11 8 9 11 11 11 12 10 11 11—158
W H Beardsley	11 9 11 12 10 9 10 10 10 10 10 10 9 10 12—153
E Nothnagle	10 7 11 10 9 11 12 10 12 10 11 12 8 9 11—153
S H Hubbard	12 11 9 7 11 11 10 10 9 11 10 12 11 9 8—151
R S Bassett	12 6 12 9 6 9 8 9 11 10 10 12 9 11 8—142—916

New York Club.

T P White	11 11 8 11 10 12 11 9 10 9 9 9 11 10 11—152
J Duane	10 10 11 9 10 8 11 11 10 11 9 10 11 9 9—149
C E Taynton	11 11 11 8 9 9 10 8 12 11 10 9 9 11 10—149
M Herrington	9 9 12 11 7 11 11 9 9 12 12 9 9 9—148
F H Holton	10 8 9 10 12 10 7 10 11 9 12 8 9 11 10—146
J S Case	10 8 11 7 8 11 9 12 9 10 11 9 10 7 11—143—887

The New Yorks shot at Creedmoor on Tuesday, Nov. 3; the weather was cold and blustering. The Bridgeports shot on their range at Readmoor on Thursday, Nov. 5. The weather was mild, with a fresh wind blowing down the range, and a bad light. It will be seen by the scores that the Bridgeports won by 29 points. It was agreed that the scores should be held back until Saturday morning, and then sent by mail. The target used was the Massachusetts.—R. S. BASSETT, Secretary B. R. C.

CREEDMOOR, Nov. 7.—The annual competition for the championship of the State took place to-day. The weather was cloudy, with rain at intervals, and the wind, though not strong, was tricky at times. The match was one of the most closely contested and interesting ever shot on the range, each competitor taking the same number of entries, and the final bullseye, made by Sergt. Dolan when it was almost dark, decided the winner. Klein's score of 49 is is the best ever made at these ranges with the .50 cal. Remington in any match of the Association. The highest scores were as follows:

	200yds.	500yds.	
T J Dolan, 12th Regt	22 23—45	25 24—49—94	
J F Klein, 17th Sep. Co	24 22—46	25 23—48—94	
J S Shepherd, 23d Regt	23 24—47	24 22—46—93	

COL. BLUNT.—Col. Stanhope E. Blunt has been honored by Gen. Sheridan with the appointment as aide-de camp on the personal staff at the Headquarters of the Army. Col. Blunt has been serving for more than a year as inspector of rifle practice at Headquarters, the duties of which position he will continue to discharge in addition to those of aide-de camp. He is the author of the "Manual of Rifle Firing" adopted last year for the use of the Regular Army.

CLUB SCORES.—*Correspondents who favor us with scores are requested to send them in as soon as possible after the matches described. We go to press Wednesdays; and it is necessary that matter for publication should be in hand by Monday, or Tuesday at the latest.*

BOSTON, Nov. 5.—The attendance at Walnut Hill to-day was small. The weather conditions were not very good, and a "7 o'clock" wind of varying strength, and a very bright light, made the judgment of elevations difficult. Toward night the conditions improved. The decimal match C, rest match F and the time match B will close Thanksgiving day. Following are the best scores:

S. Wilder.		N. Washburn.

Nov. 7.—The weather was very poor for shooting at Walnut Hill today and but few riflemen were present. A dense fog prevented shooting until the middle of the day, when for about three hours it lifted so that the target could be seen. At 3 o'clock it again closed in and put a stop to all practice. The Arlington Heights Club sent a team to shoot the proposed team match, but as they did not arrive until after 3 o'clock, they were unable to shoot and the match is postponed indefinitely. The range will be open Thanksgiving Day, and the current matches will close with that day's shooting. Following are the best of the finished scores made to-day:

Decimal Match.

THOMASTON, Conn., Oct. 31.—Empire Rifle Club weekly badge shoot. Very bright light, strong four o'clock wind:

E Thomas	10	12	12	12	8	11	11	11	10	10—107
G A Lemmon	9	11	11	10	8	11	10	10	8	11— 99
Fred A Perkins	11	10	10	10	11	11	10	9	7	10— 99
C F Williams	11	9	8	12	10	10	11	10	9	7— 97

On Oct. 28, by invitation, the Empires visited the Bridgeport Rifle Club, Readmoor Range, near Stratford. Other clubs had been invited, but as none but the Empire's put in an appearance a match was shot with the following result. Conditions, 200yds. off-hand, Massachusetts ring target, 15 shots per man: Empire team—G. C. Canfield 154, G. C. Gilbert 149, E. Thomas 147, G. A. Lemmon 147, W. H. Dunbar 143, F. A. Perkins 143, G. P. North 133, C. F. Williams 121, total 1,137. Bridgeport team—Marsh 156, Beardsley 144, Rice 142, Nothnagle 139, Betts 135, Bassett 134, Beers 133, Botsford 118, total 1,101. After the match a shore dinner was partaken of at the Ross House, followed by short speeches from several members of both clubs.—32 CAL.

THE TRAP.

Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

RYAN VS. TOWNSEND.—A pigeon match that has occasioned considerable excitement among the Jersey trap shooters for the past few weeks between John Ryan, of Montclair, and Chas. Townsend, of the Jersey City Heights Gun Club, both veterans of the trigger, came off on the 7th inst. on the grounds of the Englewood Gun Club, Jerry Maher was chosen judge for Townsend, and that don't know anything much about pigeons and traps, the venerable Miles Johnson for Ryan, John Richards, referee, Geo. B. Eaton, official scorer. It was a trap and handle match, Al Heritage ("Old South Paw") furnishing the birds for Ryan to bag if he could, and Miles Johnson the same for Townsend, and they were a daisy lot, only one incomer and no grass pickers, but all decidedly abrupt in their exit. Some of the shots of each man were loudly applauded, but Ryan was unfortunate in having four of his birds fall dead just out of bounds to Townsend's two, which might have made the match a tie. Ryan shot Miles's Scott gun, 11½lbs., Townsend a Parker, 9lbs. Both were strong shooters, as only one bird was missed outright, and that was the incomer for Townsend. Charley with his close choke is not good on incomers. Ryan's last bird was gathered neatly by Johnson, but as from all appearances the bird had been out of bounds it was decided a lost bird. The match was 40 birds each, 21yds. rise, 80yds. boundary, one barrel, trap and handle, otherwise old Rhode Island rules to govern. Among the 300 spectators were a good delegation from the J. C. H. G. C., and the friends of Ryan were on hand and at first quite confident and yet believe that another contest would reverse things. The following is the score:

Ryan	1111100111110010100110111000111011110110—26
Townsend	0111111011011101100111111000011101101111—28

Another match was made immediately after the above between Miles Johnes and J. Henry Outwater, a member of the Jersey City H. C. C., to be shot at Erb's grounds, Bloomfield road, N. J., on the 23d inst., at 1 P. M., 25 birds each, 25yds rise, one barrel. $100 a side. It will bring out many of the old sports, as everybody knows old Miles, the pigeon-shooter and handler for the two hundred years before Jack Taylor died and since, and the Jersey Boys are ready with their money on John Henry. It will be worth seeing.—JACOBSTAFF.

TIES.—Hartford, Conn. The following scores were made at the last Hammerless Gun Club shoot, E. C. Howe at 21yds., the rest at 18yds., clay-pigeons:

M White, 18yds.	0011110100011001—8
J Melrose, 18yds.	0110011110100100—8
J Howe, 18yds.	1011100100011101—8
J Cook, 18yds	1101100100011001—8
E C Howe, 21yds.	0101100100111110—8

Ties at 21yds. (E. C. Howe 24yds.): M. White 101, J. Melrose 110, J. Howe 110, J. Cook 101, E. C. Howe 00—. J. Howe finally won.

CLUB SCORES.—*Correspondents who favor us with scores are requested to send them in as soon as possible after the matches described. We go to press Wednesdays; and it is necessary that matter for publication should be in hand by Monday, or Tuesday at the latest*

SACRAMENTO, Oct. 25.—The Pacific Sportsmen's Club held its closing medal shoot of the season at Agricultural Park this morning, and had a good time. The following scores were made in the main match:

Parrott, 26yds	111111001111—10	Chapman, 21yds	001011110111—8
C Flohr, 26yds	010110110111— 8	Stair, 21yds	111111101100—8
Graves, 21yds	001111100000— 5	Pedlar, 21yds	111011101011—9
Bronner, 21yds	111111011010—10	R Flohr, 21yds	101110011111—9
Kunz, 21yds	111001100110—7		

In the shoot-off, at double birds, between Parrott and Bronner, the former killed 5 and the latter 2. R. Flohr, of the ties on 9, won the silver medal.

WELLINGTON, Mass., Nov. 7.—The Malden Gun Club held its regular weekly shoot at Wellington to-day, and although the weather was unfavorable for good shooting, there was more than an average attendance. Following is a result of the several sweeps: 1. 5 blackbirds—Shumway first. 2. 10 clay-pigeons—Shumway first. 3. 5 blackbirds—Sanborn first. 4. 3 pairs blackbirds—Lawson first. 5. 5 clay-pigeons—Shumway, Lawson and Sanborn divided first. 6. 5 blackbirds, straightaway—Adams and Sanborn divided first. 7. 5 blackbirds—Schaefer first. 8. 10 clay-pigeons, medal match—Lawson and Schaefer divided first, Sanborn second, Wardwell and Stanton divided third. Lawson won the first medal with 9, Sanborn the second with 8, and Wardwell the third with 7 out of 10 birds. 9. 5 blackbirds—Shumway and Schaefer divided first. 10. 3 pairs clay-pigeons—Shumway first. 11. 5 clay-pigeons—Swift first. 12. 5 blackbirds—Wardwell first.

NATIONAL GUN ASSOCIATION TOURNAMENTS.—Special Notice.—Members desirous of organizing tournaments in their vicinity, under the auspices of the Association, are requested to notify the undersigned. All the expenses of the same will be paid by us. Make your arrangements for 1886. We propose to establish a circuit of tournaments annually. Claim your dates now. General office and headquarters, Macon, Ga.—MATT R. FREEMAN, Vice-President and General Manager; F. C. ETHRIDGE, Secretary, Macon, Ga. Send 10 cents for hand book containing rules, constitution, etc. "Fairly started and its future depends entirely upon the manner in which the sportsmen throughout the country respond."—C. M. STARK, April 18, 1885.—*Adv.*

A SHORT CRUISE IN THE BONITA.

THIS season the four "boys" were again scattered, and our hopes of last year to again meet for another frolic were doomed to disappointment. The Horse Marine had amused himself and had put in many a monotonous winter day in having a boat built for sailing and cruising purposes, hoping and intending to unite with the other boys in many a sail and perhaps in a cruise during the summer months, and the Lawyer and Engineer had viewed the work and pronounced it good; but just the last thing the Engineer was called away to South America and the Wanderer was laid up with malaria, as well as tied up with other engagements, so when the time came only the Lawyer and the Horse Marine could muster on deck.

The boat in which we were to sail and cruise was finished early in the spring, and given her trial trip and many other trips before the time for the cruise came around. She is an 18-foot, yawl-rigged boat, that is, 18ft. waterline and 22ft. over all on deck, with 7ft. beam and 3ft. dratt, including her keel of 1iin. With 600 pounds of lead in her keel and about 1,500 pounds of lead low down inside, she is as stiff as a church, as had been proved in many a dusting in and out of New London harbor; so the unknown quantities were reduced to the minimum before we sailed, having nothing in the way of anxiety over an untried boat to interfere with our pleasure.

Those who have been there will know with what pleasure we got our outfit ready, loaded and stowed the same, and saw that everything needful for comfort and pleasure was on board. We proposed to be not only safe but comfortable as well, and independent of shore for either food, drink or a place to sleep; and so we had provided everything needful and seen it all snugly stowed, and it was with only anticipation of pleasure, mingled with regret at the absence of the other boys, that we finally set sail.

The last of the land breeze one fine day sent us bowling along for Fisher's Island Sound. With topsail set and everything drawing, our canvas canoe trailing behind soon began to dance and cut around as do all light tenders when towing rapidly, and the foam from our bow went dancing merrily astern. It was a beautiful day, and one when it is simply a delight to live, and we could not fail to enjoy our present situation and our fine prospects. The sky was blue, the sun was warm, the wind was kind and the sea leaping and dancing in the sunlight, and our good boat was leaping and dancing too, kissed by the eager breeze and booming along further and further toward our destination.

In Fisher's Island Sound our wind hauled to the southwest, our true sea breeze, and nothing could have been better had it been made to order. As our course was eastward to Narragansett Bay, this gave us a fine wind just abaft the beam and down came our foresail and jib and up went our balloon jib in a twinkling. And how the sails did draw! And how we did boom along! What enjoyment to loll around and smoke and take comfort and "take it all in." Steering was really a sinecure, for the boat about steered herself, and after the sails were once trimmed neither tack nor sheet were disturbed for hours, leaving nothing to do but boom along, and for us to gaze our fill at the beauties of the deep, and breathe our fill of the delightful air.

Nor were we alone upon the waters. Here, there, and everywhere were the white and gleaming sails of yachts, fishermen and coasters, each on its course for its destined haven, some close by and with which the courtesies of yachting etiquette were exchanged, others far, far away upon the horizon's rim, their topsails only showing, but each and all lending vitality to the charming picture that surrounded us on every hand.

How different the aspect of the same place under different circumstances! One day last spring the Lawyer and the Horse Marine were in this same Fisher's Island Sound, in the same boat, but with rather more than the steady breeze that was now lifting us onward. Then we had all the wind we wanted, and rather more too, and after banging into a head wind and a short nasty sea for a while we were glad to go about and fill away for home, and had our hands full even then to steer and sail our boat, with jib down and peak dropped at that. Now we were riding almost on even keel, even though we had a good topsail breeze, our only motion being the gentle roll and easy dip as we slid along over the quartering sea, while pipe, song and story made the time pass as pleasantly to us as we were speedily gaining on our destination.

Soon we were by Watch Hill, and out from under the shelter of Fisher's Island, feeling the full force of ocean's breath. How steady it was, and, though fresher than when in the Sound, not too strong for all the sail we could pile upon our little ship. And it was all on too; our balloon jib was as big as the space for it would allow, set on the outer stay from topmast head to bowsprit end; our topsail had a 13ft. yard, carrying its peak away aloft of the truck, and except we had had a topsail for the mizzen, or a mizzen staysail, no more canvas could have been carried.

As before said there was meat and drink on board, in plenty too; and when lunch time came—time called by the erratic chronometer of our appetite—how we did eat and how good it was. Crackers and cheese and beer may not be very much in themselves, but when seasoned with salt air, pleasant surroundings and ravenous hunger then they become fit for the gods; not that our lunch was restricted to three simple viands from any necessity, but because they were handy, and on our first day out we cared not to bother with a more elaborate menu.

Lunch over, a try for bluefish was next in order, and the Lawyer tried his skill with his line trailing far astern. It is not often one gets so big a catch, but our only one was a whole smack full of fish, said smack crossing our lines and hooking herself as we swept by each other in passing. We did not bring our catch on board, as neither line nor hooks were up to the strain, so the Lawyer had to haul in and repair damages, leaving his hooks and squid to ornament the smacks keel.

We found out later that the rough water around Point Judith is all that its reputation calls for; but on this particular day we weathered the Point with no more sea than we had had all day, the long easy rollers of the ground swell, roughened by the summer breeze, and with wind astern we rapidly left the point behind us.

Our canoe, though a very light one, had still bothered us somewhat during the day, and as a matter of course had held us back. With wind and sea both dead astern it bothered us more, and a happy thought struck the Horse Marine, who felt like kicking himself when it was successfully put into execution at not having thought of it before. Though our canoe was one of the folding kind, we did not want the trouble of packing and unpacking it, so had concluded to tow it. Now, however, at the Horse Marine's suggestion, it was hauled up alongside, hoisted up and stem and stern were lashed to main and mizzen rigging in lieu of davits, and there we were, an 18ft. boat with a 12ft. quarter boat, and everything snug as could be. How it looked we did not know, neither did we care; we had solved that problem to our own satisfaction, and were rid of the nuisance of the tow. Nor was it any trouble but once; sometimes we hoisted it up and lashed it before getting under way, and sometimes after being under way for a while, and that was when we came near losing it. We were beating down through Bristol Channel with a fresh breeze, with the canoe in tow and towing all right, and through oversight had not hauled it up. As we filled away on our course after

weathering the shoal south of Hog Island we shot ahead so fast with the strong free wind that before the Horse Marine could cast off the painter and haul it alongside the canoe was pulled under, filled, and partially capsized, nearly losing the oars which were on board. Perhaps it wasn't a job then to haul her up! It took all the beef we both had to get her alongside and keep her there, keeping on our course the meanwhile, and then to hoist her up, tipping out the water as we did so. After that she was hoisted up and lashed before we made sail to avoid any further chance of such trouble.

Without our 12ft. quarter boat we boomed along much faster, and the shadow of night, with the falling of the sea breeze, closed in around us between Point Judith and Beaver Tail light. A head tide was also met, and so we rolled around for a while, making no headway. Our side lights were up, however, and though in the track of the New York steamers we had no fear. And soon, too, we had the land breeze, which, though a head wind, was better than none, and so it was down with balloon jib and up with our double head sails, and, close-hauled, we began a tedious beat against wind and tide.

Ahead of us gleamed the lights on Whale Rock, at Dutch Island, and Beaver Tail, and the twin lights on the Bartlett Reef lightship swayed and rolled on our starboard bow as we made our leg toward the West channel, while close aboard on our port bow were the lights of Narragansett Pier. Our long beat was greatly enlivened, too, by a most brilliant display of fireworks from the latter place. Red fire, candles, firepots, rockets and bombs all played their part, and long after we had passed the place were the rockets to be seen rising in the distance.

Though the day had been pleasant and full of variety, still nature must be restored by sleep on occasions, and one hand on deck being all the boat needed, the Lawyer turned in, he having found his neck in danger of dislocation from the many and severe jerks it had sustained in trying to keep awake, and the Horse Marine, with pipe in mouth, coiled himself up alongside the tiller, with night glass close at hand, and his weather eye open, to take his trick at the wheel. And we sailed, and we sailed, and we sailed; it seemed as though we never would pass the Beavertail. Now on one tack, now on the other. We gained slowly and surely of course, but night sailing, particularly by the wind, is so deceptive that we were by the light before we really thought we had reached it.

Once by the light and into the channel of the eastern passage, we caught a slant of wind from the eastward that freshened quickly, and with lee rail awash we went booming along, and the Horse Marine was no longer coiled up alongside the tiller, but standing up and holding her to it, hoping that the topsail halliard would not part or the wind get any fresher for awhile, as it was just a good topsail breeze, and he wanted to get on and not have to call all hands to shorten sail. But it soon came too strong, and in heavy squalls, so there was nothing to do but call the Lawyer and strike the topsail.

With topsail struck we made better weather and fully as much speed, as we could hold our course no matter how hard the puffs came, instead of shaking the puff out of the topsail by luffing, as had been the case before. It was yet early in the evening, and, though our intention had been to run into Newport harbor for the night, we concluded to hold on for our final destination, Mount Hope Bay.

Could we have held our wind, a couple of hours more would have found us at anchor at the Narrows; but though we went booming rapidly along, leaving a silver wake of foam and phosphorescence behind us until past Rose Island Light and up to Gould Island, the wind gradually left us, and by the time we were near Sand Point Light on Prudence Island we were becalmed, and stayed becalmed until late the next morning.

In the mean time the Horse Marine took his watch below, leaving the Lawyer to the solitude of the night and to keep a lookout for the incoming New York steamer to Fall River, concluding not to anchor, as we were still slowly making up with the tide, and so gradually gaining ground. Besides, it was not good anchorage ground, and an anchor watch would have been needed even had we anchored; so it was just as well to keep our anchor on board and gain all we could.

All things have an end and so did the sleep of the Horse Marine at early daylight, and soon it was all hands on deck, as with topsail set we caught the first breath of the morning breeze, a wind from the southwest that sent us hurrying through Bristol Channel and running up Mount Hope Bay. It was a breeze and no mistake. It freshened every moment, so that we finally gave up the idea of cooking on our oil stove, concluding to breakfast after coming to anchor at the Narrows.

Our colors had been run down at sunset, and now they were bent on again to let the Wanderer know who we were, and not take us for pirates, for we expected to find said Wanderer at the Narrows and give him a call. Soon we had the Narrows ahead, and the glass brought to bear on the shore, and sure enough there he was with glass to his eyes trying to make us out.

Although he never had seen the boat he still knew the rig, and said afterward he was only bothered by that quarter boat, for he could not make out how we could have got that up on davits on our boat. But we soon drew near enough for a clear view with naked eye, and then off he came in his skiff to meet us and find us a safe anchorage.

Soon our anchor was down, and our craft riding and pitching with head to wind in the fast freshening breeze, while we were off for shore in our canoe. It was quite rough, as an ugly sea gets up in Mount Hope Bay with even a little wind, and it was now blowing quite half a gale. But our litte canoe rode it like a cork, short and ugly as the sea was, and we were welcomed on shore and soon were seated to a hot breakfast.

Besides the Wanderer, we found some of his family at the Narrows, and after our all night sail and drift we found it very pleasant to be so warmly welcomed and so hospitably treated. Nothing would do but that we stay to make a visit, and right glad we were to loaf around and lie in hammocks, and smoke and read and talk away the time.

In the afternoon we went on board, and under reefed canvas took the Wanderer for a sail around the Bay. By this time it was a regular blow, with the Bay white with foam, but our little craft behaved herself nicely and was as dry as a chip and fairly flew through the water, even though we had a heavy sharpie in tow, our canoe having been left on shore.

Returning from our sail we put up the boat in the cove above the Narrows for a safe and quiet harbor for the night. And here let me caution strangers about coming into the said Narrows, if they want to keep from going aground.

A broad bar makes out from the Narrows and the deep water is close in shore and close to the western side of the entrance to the Narrows. Many a man who has been in and out frequently gets hung up on the bar from a falling tide from keeping too far out, and when we went in it looked as though we must ground from being so near shore. But we ran in without a scrape and found plenty of water, land-locked on all sides, for our night's anchorage.

Here at the Narrows we stayed for three days. The Lawyer fished, while the Horse Marine lay and groaned under the agony of sickness resulting from too many good things to eat; besides, we had no wind, and so perforce were laid up anyway, the blow of the day of our arrival having apparently blown all the wind away for a while.

But finally a breeze came and we were up and away for Providence. A dead beat down the Bristol Channel and a free run to Providence were our experience, and that it blew some may be inferred when I say we made about fifteen miles in less than two hours. Everything in the catboat line was under reefed canvas, while we had only our topsail struck and stood up under the puffs and gusts as stiff as you please. It was a lively run, particularly through the squalls by Field's Point, a very squally place at best, and we were not sorry to finally tie up to some piles in Providence Harbor and again take a rest.

But we were destined to work first before we could rest. First our anchor dragged, for we anchored first on coming into harbor, and a lively time we had to make our anchorage ground again among the passing steamers and vessels, with only mizzen and jib, for we had the mainsail stowed before we dragged, and did not want to again uncover and set it. Then our anchor began to drag again in the beastly slimy mud of the harbor's bottom, when we began to put up our deck tent and so expose some surface of canvas to the heavy wind blowing, and so we had to get out a warp and warp up to some spiles and tie up. By this time a heavy thunder shower was at hand, and we had to work lively to get everything snug and our tent deck secure before it burst upon us.

And how it did rain! It came down in sheets, but we were snug and dry before this in our cosy tent, and busy with our grub, and so concluded we were pretty well off, and let it rain and be blessed, while we cooked our dinner and took comfort in knowing that the rain could not reach us.

And then after dinner we loafed and smoked and looked out upon the face of the deep, and verily it looked something like the deluge. Nothing to be seen but water, the air was thick with rain, and there appeared as much water over us as under us, but we were in out of the wet anyway, and could take it easy and rather enjoy the war of the elements, as with pipe and yarn we sped the hours. And when bed time came why to bed we went. We had the whole cockpit to sleep in, so arranged as to give a long wide bed for us under the tent, and it was not long before we were both in the land of dreams, with mind free from all anxiety as to wind or weather as we lay snugly moored out of all harm's way.

As this was the Lawyer's home, as well as the residence of the Horse Marine's parents, of course we could do no less than make them a visit, so the next day, after breakfast on board, we landed and made our way, through the still heavy rain, homeward. It rained all day and we were made so comfortable at home that we left our boat to her own devices for that day and night, and passed it with the Lawyer's family.

The next day dawned clear and bright, however, with a fresh N. E. wind, just what we wanted for our run out, and we were speedily under way again, dusting down the harbor under all lower sail, while accompanying catboats had single reefs turned in. It came up breezy and strong, but we bowled along rapidly and easily, and made the run to Bristol Harbor, our destination, in short order.

Rounding into the harbor we met the wind ahead, and a regular white squall came booming down on us. But by sailing her close, just on the edge of a shake, we wallowed through as dry as a bone, without taking in any reefs, and were soon tied up to a vacant mooring near the Herreshoffs' establishment, and after making all snug, ashore we went in our canoe to greet our friends and look around a bit.

Through the courtesy of one of the attachés of the establishment we were shown all over the Herreshoffs', and looked our fill at the Stiletto, both inside and out, through the shops where other boats were in process of construction, and over the dock where others were lying up, passing a most agreeable and instructive afternoon; and our evening was also delightfully passed with our friends under their own vine and fig tree.

In the morning we filled away to Wickford, having at the start a heavy blow from the northward, to change and change during the day until the wind had boxed the compass completely. Now it was a single reef breeze and we reefed, now it was a cat's paw and we shook the reefs out, and with the baffling wind and heavy tide flow it seemed as though we never would get there.

But get there we finally did, just in time to do up the boat, don our store togs and catch the last train for New London, where we finally, just at the last, concluded to go to attend a German to be given that night. What was our disgust, however, to learn on our arrival that the German had been put off. So we had our journey for nothing, except the pleasure of being at the Horse Marine's home for the evening.

Going back by the morning train we found no wind, and so put in our time in visits to friends who were here spending the summer, and late in the afternoon, as the wind came up, we filled away for Dutch Island Harbor, making so quick a run, however, when we once got started, that we concluded to try it on and make around Point Judith, and again try an all-night sail for home. We had a fair wind down till we passed Dutch Island, and then it hauled to the southward and began to pipe up fresh, so down came our topsail and we began to beat down, hoping to get by the Point in good season and then have a beam wind westward on our course. But the tide was against us, too, and soon the wind was howling and shrieking through our rigging and we were banging our bowsprit under at every dip we made, and after almost making it we finally concluded that discretion was the better part of valor, so we wore around and made for the shelter of Dutch Island.

With wind and tide how we did go! We fairly leaped along from wave to wave, and in just three-quarters of an hour were safely anchored and snugged down in the harbor.

Coming into the harbor one of three things happened which so frequently bring about disaster, but luckily did not in our case. We were sailing free and saw a big catboat beating out of the harbor, which catboat, of course, had the right of way; but instead of keeping her course the catboat dodged about, now bearing off as though to clear us, and again luffing up on to her course again, leaving us uncertain what to do; and when we finally bore off to get out of her way, she bore off too to keep out of ours, hailing us at the same time with no

very polite inquiry as to why we did not give her her right. It was quite as close a shave as one would want as we luffed to let her pass across our bows, and would have been entirely obviated had the catboat kept on her course; for then our bearing away would have placed us where we belonged, away on her lee, and she could have kept on clear of everything. By her bearing off she went through our lee, and we had to luff up sharp to let her do it, and a little less room would have brought us in collision.

The morning dawned cold and raw, with ragged gray sky and the wind N. E., just the breeze we wanted for our run westward, and the only question was how much we were going to have of it. But we finally concluded to try it, and were soon dancing merrily along, holding a good wind until away around the point, and well started for Watch Hill, and then the wind left us and we lay and rolled and tossed and whistled for a breeze until the sea breeze caught us and we filled away again. With the sea breeze the clouds rolled away and the sun came out bright and warm; the wind came strong but steady, so up went topsail and balloon jib, and we thought ourselves lucky in again finding so good a breeze to waft us home. So far our living had been mostly on shore, and we had therefore not run short of meat and drink, and as the time flew by we found it convenient and expedient to strengthen the inner man quite frequently with the good things we had both to eat and drink. Our powers of absorption were equal to the occasion, but as we grew stronger than beer was drunk, our ideas were still unbefogged, and we could still lay our course. The shades of evening saw us running up New London harbor with the wind now about gone, and our main dependence, the tide; but we finally made our moorings, and were again safe and sound at home.

And here at home were we becalmed for several days. It had been our intention to make a run to the west, and perhaps be present at the Cup races, but the light winds, or no wind at all, forced the idea to be abandoned; and we could only possess our souls in as much patience as possible until a wind did come. But beyond a sail to Norwich and back again we were finally obliged to give up all idea of further sailing. The Lawyer's time was running short, preventing his staying much longer away from home, and on our return from Norwich he reluctantly had to pack his traps and leave, thus ending all sailing or cruising for the season, as the Horse Marine also left soon after to be away for some time.

And now a word as to our cruise, should any one read this and feel inclined to follow in our footsteps. It is simply don't go unless you have a good boat, and are ready to face heavy and squally weather. Don't go Providence unless you are willing to put your boat in the foulest water to be found in any harbor—water that will foul any paint in a very few days, and with a bottom so soft and slimy that nothing but the heaviest of anchors will hold you.

The waters of Narragansett Bay are beautiful to look upon. The shores are lined with pleasant places to stop, and everything is fair and fine except the wind. That is not to be depended upon; even with a staunch boat it is disagreeable to be sailing in a flawy wind, and I have found that I had rather be outside than within the bay.

I think it may be said our boat was a great success. Her rig was handy—she about steered herself—she was stiff and able, and yet not jerky or too quick in her motions for safety and comfort, and she rode lightly and easily on her low and heavy ballast. We could and did carry sail in all winds we met, never reefing but twice, and then more for comfort than because of absolute necessity. And for a first cruise, so was our trip itself a success. We went where we had intended to go, had all we wanted and more too for comfort, health and safety aboard our little craft, and met with no serious mishap on the whole cruise. We learned a good deal and laid up stores of experience for future cruises and put in a pleasant ten days, free from all care or worry, our only drawback being the flawy winds before mentioned and the unavoidable absence of the Engineer and Wanderer. But another year may see us all together again and our staunch little boat pointing her nose for some distant port, bound out again for a summer's cruise.

ONE OF THE BOYS.

"WHOSE WATERLOO?"

Editor Forest and Stream:

Mr. Kunhardt's remarks about landsmen and reporters do not apply to me, although that does not make them seem in any better taste in my estimation. Seven-eighths of Mr. Kunhardt's article require no answer, as indiscriminate abuse of all who differ with him in opinion is not argument. I shall not take up your time with my own or any one else's opinions; I will only state such facts as I happen to be in possession of, and let Mr. Kunhardt draw any inference from them that he may see fit, as even he cannot prove black to be white, unless he starts with false premises. I am delighted to be able to agree with him that the sailor element in the yachting world was pleased with the Puritan-Genesta matches, but I think it will be a surprise to many of them to hear that they are all known as "cutter men." Pleasant surprise of course.

As to the first race, a good start is not a matter of luck, it is purely management. If by making a better start than your opponent you force him under your lee and get the favorable flaws before he does, there is no luck about it, but although I watched closely and am not blinded by prejudice, I failed to see a single puff which the Genesta did not get as well as the Puritan, although the Puritan of course got them first. The day was very streaky, but as fair for one boat as the other. This talk about flukes and luck is only baby talk. The steamers bothered one boat as much as the other. If the Puritan did sail into such shoal water that the Genesta could not follow it shows one advantage of the centerboard for our waters. How much should the Puritan, a new boat with a dozen captains and a comparatively green crew, beat a cutter like the Genesta to satisfy Mr. K? Allowing 30 minutes for flukes, five minutes for light air at finish and two minutes for the shoal spot, which I think is allowing enough for any one, there is still plenty of time left to make a handsome victory for the Puritan.

In all the articles contributed by Mr. K, most of which I have read, I fail to remember an instance where, according to him, a cutter has been fairly defeated by a sloop. Cutters win on their merits, sloops by "vulgar fluking," whatever that may be, such bigotry as he shows does the cutter cause, which he has so much at heart and has worked so hard for, more harm than good. It is bad policy to belittle an opponent, especially when he is liable to get the best of you.

At the start in the second race the Puritan broke out her balloon-jibtopsail before she broke out her spinnaker, which was error number one for her captains. About four miles from the start the Puritan led the Genesta, although the latter got off about her time a mile ahead. (I quote from memory, being too lazy to look up figures.) Genesta jibed over, Puritan, although only her spinnaker was drawing and Capt. Crocker had hard work to keep the boom on the port side, even with the boom tackle hauled out, failed to follow suit—error No. 2. Error because the wind was on her port quarter. Genesta, with everything drawing, then went by the Puritan like a scalded cat. Just before reaching the stakeboat, Genesta handed her large gaff topsail and sent up her sprit topsail. Puritan imitated her as to her club topsail, and found out that one of her too numerous captains had seen fit to haul down her working topsail, which was hoisted and brailed alongside the topmast all ready to sheet home—error No. 3. Puritan with no topsail set handed her spinnaker nearly ten minutes before she need—error No. 4. Puritan rounded stakeboat with topmast aloft and nothing set on it, and sailed that way some time while her captains held a palaver about it—error No. 5. Some time after hauling her wind the Puritan obtained the lead again. At the time of the shift of wind made so much of by Mr. K. both yachts were on the port tack with the Puritan ahead, and although at first the change was favorable to the Puritan yet as she was unwilling to come about until the Genesta did, and they both held the port tack until the Lightship bore so that they could run for it with started sheets, it is evident that every second the Puritan remained on the port tack after she could fetch the lightship it was against her. After the Genesta came about the Puritan stood on for a good half mile further, being unable to get about owing to the large number of little bowlines on her forestaysail and jib, which had to be shifted over—error No. 6. Puritan nearly half mile astern of Genesta, although well to windward of her wake, had to pass her again, which she did handsomely for the third time in the same race (her captains having finally got up a bit of her board), coming in a winner by more than a minute in spite of six gross errors of judgment, any one of which, except perhaps the first and fifth, would be enough to lose her a closely contested match. The only mistake made by Genesta during the race was in carrying her jibheader to windward, and I am not sure that she did not gain enough by it between puffs to more than make up for what she may have lost by its lighting.

I have given a plain, unvarnished statement of the principal occurrences of the two races in as few words as I can, and I shall not attempt to draw any inference. I have stated the facts, and every one can draw his own inference and be happy, even if his happiness is dependant upon self-deception. The Puritan has never since her launch been heeled over within a row of apple trees of the vanishing point of her stability; she was no wetter than the Genesta (neither was very dry), and during the squall in the second race Capt. Crocker did not favor her a hair more than Capt. Carter favored the Genesta, but kept her romping right along. The yacht of Puritan's size that can be forced to windward in a good breeze and a short, sloppy sea without spitting is yet to be built. Mr. Kunhardt misleads his readers when he tries to make them believe that the island of Great Britain is the center of an everlasting and resistless cyclone, got up especially for the joy and delight of the "true yachtsman," who paces the deck of his little cutter smoking his briarwood and defying the raging elements. Pacing the quarterdeck of a little cutter in a gale must be very much like trying to keep your balance on top of a spar buoy under the same circumstances—easier said than done. Yachting is sailing for pleasure, and there is no pleasure in sailing in a gale of wind, as every one knows who has ever been there.

CAPE COD

Editor Forest and Stream:

In your issue of the 29th inst. Mr. Kunhardt, replying to my letter of the preceding issue, says that I ("Reader") furnish my own answer to the slight criticism I made on his comparison of the Genesta with the Puritan, although the Gracie. But the only answer I furnished was an intentional statement which should make the case most favorable for him. The error in the original assertion remains. Mr. Kunhardt's present interpretation of his language, which I took exception to, is not permissible—can not be got out of what he said. He declared that in the triangular race the Genesta beat the Gracie worse than the Puritan had ever been able to do, which can only mean that in all the races in which the Puritan and the Gracie took part the Puritan never beat the latter as badly as did Genesta. I took exception to this, and showed that over the same course the Puritan had beaten the Gracie five minutes and better, more than Genesta had done; that in another race, to windward and return, she had beaten Gracie fifteen minutes more; and in a third, the Goelet Cup race, had beaten her so bad that the Gracie withdrew. These facts being so, the point of my criticism will best be shown by quoting the exact statement of Mr. Kunhardt, as follows: "In one race only, in the triangular match outside for the Vice-Commodore's Cup, offered to single stickers, did the bold and wholesome cutter catch the old-style American sloop as an entry, and then she gave that sloop a drubbing which will never be forgotten, for the Genesta wiped out the sloop Gracie far more effectively than ever Puritan accomplished," which I submit is incorrect, and very much so.

It would be of no consequence, except that in the article in question Mr. Kunhardt appeared to try to show by the Genesta-Gracie race the superiority of the Genesta to all American sloops and crosses, including the Puritan, in the matter of speed. This appeared to be the meaning of that first article. In the later articles Mr. Kunhardt has taken a more modest tone. Is it not true, in fact, that the Genesta-Gracie race proved nothing at all? because the disparity in size made Gracie's defeat certain. If any importance is attached to that race, then we must go further and arrive at the curious result that if Genesta's defeat of Gracie by 21min. 56sec. proves the cutter superior to the sloop, much more does Puritan's defeat of Bedouin by 38min. (or by one hour in the Goelet cup race) demonstrate the superiority of the Puritan type to all cutters, and still more does Puritan's defeat of Bedouin by 43min. prove the same thing; the fact being that none of the races prove anything.

As to *Science*, Mr. Kunhardt clearly is not acquainted with that journal and has not seen the article I quoted. The journal is one of the leading, if not the leading journal of science in America, maintained by the highest order of ability this side of the Atlantic can produce. As for the article, it is not an "item," but a column description of the Puritan, with midship section, etc. It is not in any sense a discussion of the sloop-cutter question, but simply a statement of facts concerning the trial of the Puritan and the races she had sailed up to the time of writing—long before the Cup races took place. The one hour's defeat of the Bedouin is simply one of the facts.

Mr. Kunhardt (issue of Oct. 29) speaks of the advantage of "size," not clearly stating whether he uses the term loosely, as meaning length, or strictly in its common acceptation of bigness. I assume the latter, simply because it leads up to my question. If size, *per se*, is an element of ability and speed, then should we not expect that the Genesta should be decidedly the faster vessel, as she is very nearly 43 per cent. larger than the Puritan, her displacement being 145 tons, the Puritan's 105 tons? Is it unreasonable to suppose that she ought to be faster on those lines? Other things being equal, and is it unfair to assume that Genesta cannot be called speedy in comparison with the Puritan until she has met and vanquished a Puritan of 145 tons displacement? Finally, viewing the Puritan-Genesta races as a whole, is there sufficient ground for supposing that Genesta could sail at all with such a Puritan? I await your replies with interest. If the last question can be answered in the affirmative the cutter seems to me unquestionably the superior craft. But at present I cannot see why a true displacement is not the fairest basis of comparison between any two boats in the matter of tests of speed. The arrangement of the three dimensions to produce a given capacity are largely optional, and if one hull of a certain size (true displacement) with the sail power it will carry is driven through the water at a higher speed than another hull of equal size with the sail power it can carry, why is not the test as fair a one as can be devised, and its results for speed, as valuable?

READER.

Editor Forest and Stream:

For plain quibbling, Mr. Clapham bears away the palm. It is disingenuous to pretend now that there is no difference between cutter and sloop, and to believe that "cutters are in England sometimes called sloops." Puritan is cutter rigged; nothing can rule that fact out. It is not honest and straightforward to call her a sloop, for she is not one. Her victory is none the less splendid, none the less creditable to her designer and owners; but it is a victory for England, not for the United States, in so far as the rig and ballast plan at least are concerned. Magna est veritas et prevalebit.

BLUE ENSIGN.

Editor Forest and Stream:

I am surprised that there should be so much discussion on the sloop—cutter question. It is easily settled, and is a technical point of rig only, without regard to broad or narrow beam, deep or shallow draft, loose foot or raked foot, wide head or narrow head. And a cutter may be described as one-masted fore and aft rigged vessel with a running bowsprit. The double head sail follows as a matter of course, so does the position of the mast. As for the mainsail, that is not especially characteristic of a cutter, for sloops have used loose-footed mainsails in some parts of the world from times immemorial.

XIX.

Editor Forest and Stream:

I have just received my FOREST AND STREAM for Oct. 29, and note with a sign of regret the conclusion of Mr. Kunhardt's serial story, in which I had become deeply interested, and hoped to see continued until the arrival of the Galatea next season, when her victory (for, of course, that she must win is a foregone conclusion) would convince the few doubting readers who still survived. I have been a careful reader of Mr. Kunhardt's articles in the FOREST AND STREAM for the past two years, previous to which I was a strong sloop advocate. Gradually, however, have I been convinced of the error of my ways, passing by easy gradations through the various intermediate stages, from the narrow-minded idolatory of the broad beamed sloops to the fervent worship of the ultra-Kunhardtic cutter. My conversion took place about six months ago, at a time when I was "long" of "skimming-dishes," being then the unfortunate owner of two centerboard death-traps, one of which I succeeded in unloading on a benighted heathen at a sacrifice; the other is still in the market (charge regular advertising rates for last line).

A friend and fellow-yachtsman (an Anglophobiast) has just called. He says there is a rumor afloat (but I won't believe it—it is an invention of the enemy) "that Mr. Kunhardt has purchased the identical death-trap that I unloaded last spring, and contemplates a trip to Florida in her, via the inside route."

YANKEE DOODLE.

NEW YORK, Oct. 29.

NOT AN AMERICAN IDEA.

Editor Forest and Stream:

In the London *Field*, Oct. 24, appears a letter from New York signed "M.," and published as an American view of the Genesta's performance. It is evident that "M." echoes only the notions of a small class. He expresses surprise at what he conceives to be Genesta's poor qualities in a sea during the Brenton's Reef race. As the cutter of 80ft. loadline beat the Dauntless of 116ft. by some eleven hours, there are a few Americans left with discernment enough to concede superior efficiency in a sea to the Genesta. "M." writes purely "out of hand," for there was no opportunity of comparing Genesta's performance to that of a sloop, the Puritan and Priscilla both having shown the white feather. Had one of these sloops been alongside Genesta at the time, some comparison could have been drawn, and it is the belief of those best informed in America that Genesta would have made a perfect show of our sloops in the sea. Of course the cutter was wet and had a rough experience. So would a thousand-ton steamship in a young hurricane. But the sloops would in the light of all experience have fared much worse, and been left astern in company with the Dauntless.

As for buying a schooner to reach and run with Genesta, there are some Americans with sense enough to conclude from the way Genesta beat Dauntless, Fortuna and Grayling, and from the way that Puritan and Priscilla beat all the best schooners in America, that "M." is decidedly out of the way in his assumption. Just what kind of authority "M." really is can be seen from his notion that to meet Clara we would have been obliged to build "a really smart" sloop of 55ft., when in face of this Gracie and Genesta both made their time off Clara with ease in the triangular match outside Sandy Hook for the Vice-Commodore's Cup. And then again, what are Athlon and Daphne? Certainly the latest and best we have shown ourselves able to produce. Yet Clara thrashed them with consummate ease. "M." rehashes the stale, stupid stuff about centerboards being used in coasters and 40ft. smacks, "hence" the seaworthiness of centerboard yachts. This is the usual drivel which has been so often disposed of in your columns, that some Americans feel ashamed that any one pretending to speak for them should revamp the nonsense. No one ever pretended that centerboards could not *live* at sea, but that for turning to windward in rough water the shoal centerboard model is not as efficient as the deep-keel cutter. The recent international races proved nothing to the contrary. Finally, the statements of "M." concerning outside ballast and deep boats being customary or even familiar in American practice is a perversion of fact. Only through the "cutter agitation" of recent years have such innovations been introduced, and that in direct copy of English practice. If "M." keeps on he will soon be claiming the out and out cutter an American idea, because in recent years we have built such vessels from English lines and specifications in answer to the demand for more serviceable boats than such over-rigged, fair-weather machines as Penguin, Fanita, Athlon and their class have shown themselves to be time and again when put to the test. As for schooners, they are out of date in England and will in America go out of date as well, the modern steam cruiser displacing them, while the single-masted yachts will monopolize the racing. "M." is not a spokesman for Americans, but a representative of the decaying regime of smooth-water excursionists. Let the London *Field* make a note of this distinction and not parade the gammon of a landsman like "M." as the true feeling among the progressive and intelligent class of American yachtsmen. Am I wrong in presuming "M." to be the highly esteemed secretary of the N. Y. Y. C., whose genial personality is only exceeded by his lack of accurate yachting knowledge, and which has recently so often graced the *Herald's* editorial columns with the stock-in trade rubbish about the "centerboard's superiority"?

VINDEX.

KNICKERBOCKER Y. C.—The yachts at Port Morris are nearly all hauled out. The club rehaid their ways, running them further out, so as to enable the large keel sloops to haul into the cradle. It is customary for the members to assemble every week and assist each other in the work of berthing the fleet for winter. After hauling up the cradle by clapping on to the fall of a large purchase, the yachts were slid off on improvised skids and stored in tiers about the club house. The smaller craft were hove out on a set of rollers with a crab. Many improvements and alterations are to be undertaken this winter. Cabin houses will be fitted to some of the open catboats and the centerboard is to give way to the keel in several yachts. Mr. Mathews's Culprit Fay is one of the large sloops which is to be changed to a keel boat. A nice little cruiser on the yawl Windward's lines is now planked and decked in Coughtry's shop. She is 18ft. waterline, 6ft. beam, with head room below. Eight persons collected recently in her cabin without crowding. This boat is a notably nice job throughout and should she prove a fair sailer is likely to be the forerunner of others of the same kind. The owner, Mr. C. Coughtry, is building her himself. The cutter Surf has left her moorings to lay up in Manning's basin. The keel sloop Nyssa, Mr. Quinn, is still in commission and off for occasional cruising. Capt. Munson, the efficient shipkeeper of the club, has had general charge of berthing the yachts and has been busy lifting their moorings. This was accomplished by slinging weights to the after end of a large scow and then making fast to the moorings by the forward end at low water. With the rise of the tide the moorings come up, the scow being kept in trim by the weights aft. The destructive gale of October, which drove the Nyssa high and dry on the rocks, afforded a chance for the display of considerable ingenuity and dexterity in getting her afloat. This was successfully brought about by Mr. John Coughtry, to whose judgment it is largely due that the Nyssa came off with her paint scarcely scratched. The Knickerbocker Y. C. has also rebuilt the staging leading to the boat landing. As a Corinthian club in the practical meaning of that term the Knickerbockers take first rank. The membership contains many experts, and among the younger element the making of fine sailormen and enthusiastic supporters of yachting life in its most deserving aspects.

AMERICAN Y. C.

THE Regatta Committee's annual report, presented at a late meeting of the American Y. C., gives the following data of the July regatta:

The course for all classes was from off Larchmont to lighthouse off Stratford, passing it to the southward, thence to the light vessel off Bartlett's Reef, passing it to southward, thence to buoy on Sarah's Ledge, passing it to southward and eastward, terminating off Pequot House pier, New London. Length of course, 80 knots. On the day of the race it was high water at Sand's Point, opposite Larchmont, at 1:22 P. M. The course to Bartlett's Reef Lightship is E. ⅝ N. This course from the starting point off Larchmont passes about half mile south of Stratford Shoal Lighthouse. During the race the wind was variable. Calm to light breeze. Nine cups were offered, of which number six were competed for; one was presented by F. S. Kinney, Esq., for the winner under his time allowance, another by Commodore A. de Cordova for the shortest time over the course without reference to allowance of time, and two cups were received from Rear Commodore W. E. Connor. At 8:35 A. M. the smaller yachts were started from the flagship Promise, at 10:40 all the other competing yachts from the committee's steamer, Cygnus, excepting the Atalanta and No. 246, which were started from the flagship of the Larchmont Y. C. by Commodore Augustin Monroe, of that club, at 11:20 A. M. All yachts started within the ten minutes allowed after the respective signals, excepting the Marion, which was handicapped 1hr. 35m., and the Aida, 1min. 40sec.

The table given shows the results under the respective time allowances, as adopted for this year's regatta and, for comparison, also contains the time allowance under Haswell's formula, which was used last year. A supplementary table of dimensions, etc., is appended; with the other tables, contains all the data required under the different formulæ.

Subsequently to the regatta of the 16th and within ten days thereafter four protests were made, resulting under one of the protests in ruling out the Stiletto for not having run the course. The sworn testimony given by the following parties in this case is herewith presented.

Evidence against Stiletto—Charles Atwell, pilot of steamer Sunshine; Charles F. Ferguson, master of sloop yacht Ferguson; William C. Ferguson, mate of sloop yacht Ferguson; Dudley C. Perkins, master of sloop yacht Sylph; Charles L. Ockford, one of the proprietors of Osprey Beach; Capt. H. H. Bosworth, of New London; William Oliver, clerk at Osprey Beach; James Darrow, master of steamer Gypsy; L. W. Rowland, master of tug T. A. Scott, Jr.; Capt. Samuel Coit, of New London; Henry Pasco, wreck agent; T. A. Scott, owner of tug Scott. Evidence in favor of Stiletto—Darwin Almy, acting captain of steam yacht Stiletto; A. Stanton Chesebro, nephew of J. B. Herreshoff; Benjamin H. Wood, deck-hand on Stiletto; Joseph P. Harris, for twenty years a cook or steward on fishing boats.

Your committee award the prizes for the regatta as follows: Commodore's cup, Atalanta; Kinney cup, No. 246; cup under Emery time allowance for second class, Rival; cup under Emery time allowance for third class, Viola; cup under Isherwood time allowance, No. 246; cup under Lundborg time allowance, Utowana.

There was but one entry in the first class under the Emery time allowance, and therefore no race, as the rules require two or more yachts to compete. The run this year was not as fast as last, owing to more of a head tide; as, for instance, the time of the Atalanta in the previous regatta to Pequot House dock was 4h. 42m. 52s., while this year it took her 10m. 53s. longer to cover the same distance.

The record for fastest time over the course is as follows: 1884, Larchmont to Pequot House, 4h. 42m. 57s.; 1884, Larchmont to Fort Trumbull, 4h. 48m. 45s.; 1885, Larchmont to Pequot House, 4h. 53m. 50s.

Small Boat Race, Deering Harbor, July 17, 1885—Arrangements were made for three races, one each for gigs, cutters and dingys. The contesting boats were the usual working ones of the yachts and manned by the regular crews. Eight gold badges were provided for the winners. In addition, Mr. A. E. Bateman of the Skylark, presented a challenge cup for the cutter race, to become the property of the owner of the yacht if his cutter crew succeeds in winning it for three successive seasons. By special invitation, Capt. C. A. Abbey, of the U. S. revenue cutter Grant, sent a crew to compete for the badges in the gig race. Length of course, one mile. Cutters—Rival first, Utowana second, Promise third, Lagonda fourth. Gigs—Utowana first, Tillie second, Atalanta third, U. S. cutter Grant fourth. Dingys—Sentinel first, Promise second, Utowana third. Award—Two badges to Rival cutter men, five badges to Utowana gig men, one badge to Sentinel dingy man, challenge cup to J. A. Baker, owner of Rival.

The iron steamboat Cygnus, chartered by your committee, went to Larchmont, and after starting the yachts at 10:30, proceeded to New London, passing nearly all the competing yachts, thus affording the members, guests and press a most satisfactory view over an 80 knot course of the best steam yacht race ever recorded.

The thanks of the club are due to the officers and members of the Larchmont Y. C. for aid rendered the regatta committee and for courtesies extended. Your committee call attention to the fact that in this, the second regatta of the club, sixty per cent. more yachts started than in the first, and at the rendezvous at Deering Harbor there was the largest number of steam yachts ever congregated in one place. In conclusion, your committee announce that the total expense of the regatta has been met by private subscription, excepting a charge against the club for cups, and respectfully presents its report.

GEO W. HALL,
THOMAS MANNING,
J. P. LOCKWOOD.

SUMMARY OF AMERICAN Y. C. REGATTA, JULY 16, 1885.

SYSTEMS OF TIME ALLOWANCE USED BY THE AMERICAN Y. C.

The qualifications for yachts to enter for the Kinney cup were, to have the necessary accommodations and outfits for cruising; also must carry masts, sails and usual equipment of boats and use steam only from tubular boilers.

TIME ALLOWANCE FOR STEAM YACHTS, ARRANGED ACCORDING TO SPEEDS ACTUALLY ATTAINED. SUGGESTED BY F. S. KINNEY, ESQ

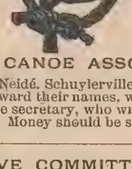
Time allowance is to be estimated by calculating the mean between two nearest figures given in table. Ties to be decided in favor of smaller boat.

The yachts racing under time allowance proposed by C. E. Emery, Ph. D., were divided into three classes, and only such yachts were eligible as were fitted with boilers allowed by Government inspection to carry a working pressure not to exceed one hundred and twenty-five pounds per square inch. This time allowance is based on the rule that the speed of a yachts in knots per hour should equal two and seven-tenths times the cube root of the length of the yacht, in feet, on the waterline.

Under the time allowance proposed by Chief-Engineer B. F. Isherwood, U. S. N., all yachts were eligible with any type of boiler, and not limited as to pressure of steam, and all yachts raced in one class. The rule being "The speed in knots per hour divided by the cube root of the length on the waterline of the yachts respectively, the quotients represent relatively the merits of the different yachts.

The race under the formula devised by Capt. C. G. Lundborg was open to all yachts irrespective of size or type of boiler. One class.



Formula of yachts of ordinary type $F = \frac{s(AP^2+A'P'^2+A''P'')}{(p\,L\,(0.5448\,B+1.7308\,D)} \cdot \frac{3}{\sqrt{\frac{GC}{T^2\delta}}}$ =V., The Lundborg formula is based upon the results obtained from experiments with models according to Froude's system, F in the formula being the actual resistance per square foot of the immersed surface. (A table calculated from the mathematical deductions derived from experiments gives the value of F for speeds of every quarter knot from 8 to 22 knots.) $AA'A'$ represent the area of the different cylinders of the engine; $PP'P'$ the mean pressure of steam during the stroke in those cylinders; s the length of stroke in feet; p the mean pitch of the propeller; L, the length of the vessel on the waterline when in racing trim; B the greatest breadth on the waterline (or below in case the vessel is wider below the load waterline); D the mean draft of water when in racing trim. The rule for determination and governing of time allowance of steam yachts in a competitive trial, submitted by Mr. Chas. H. Haswell, and adopted for the regatta held last year is $\sqrt[3]{\frac{GC}{T^2\delta}}$ =V., or, in other words, the velocity of a vessel is assumed as the cube root of the quotient of the product of the area of her grate surface and the constant due to the character of combustion, divided by the cube root of the square of her gross tonnage. The constants being for natural draft, 1; jet, 1.25; blast and exhaust, 1.6.

Canoeing.

Address all communications to the Forest and Stream Publishing Co.

CANOEISTS *are invited to send us notes and full reports of cruises, club meets, information about canoeable waters, and other communications of interest.*

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signals, etc., of their clubs, and also notices in advance of meetings and races, and reports of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

SECRETARY—Dr. C. A. Neidé. Schuylerville, N. Y. Candidates for membership must forward their names, with $3 for initiation fee and first year's dues, to the secretary, who will present names to the the executive committee. Money should be sent by *registered letter* or money order.

THE EXECUTIVE COMMITTEE MEETING.

WITH its members scattered over a wide territory and meeting but once a year, only a part of them being present then, it is a rather difficult matter for an association to make laws that shall be fair to all alike, and to satisfy all sections, especially as some make no effort to express their views or to be represented at the meetings. This difficulty has been felt by the American Canoe Association, and every effort has been made to give a full representation to all localities on the board of officers. The nominating committee at the meet is composed of representatives of all sections, and the ticket is made up by them. This year a special effort was made to secure the presence of some Western men at the meeting, and the selection of a Western man among the officers, but none were present or showed any desire for a representation. In view of the main question of the year—the extension of the Western membership of the A. C. A.—it was desired to select a Western member as Commodore or Vice-Commodore; but the lack of coöperation on the part of the Western canoeists made this impossible. The officers for the first year included one each from New York, Cincinnati and Jersey City, representing the clubs actively interested in the formation of the Association. In 1881 they were chosen from Cincinnati, Canada and New York; in 1882, Canada, Cincinnati and New York; in 1883, the first year that the East showed any decided interest in the Association, the officers were from Springfield, Mass.; New York, and Peterboro, Canada. In 1884 they were from Albany, Deseronto, Can., and Rochester; and in 1885 they are: Commodore, P. S. Rathbun, Deseronto, Can.; Vice-Commodore, E. J. Wilkin, Brooklyn, N. Y.; Rear Commodore, Dr. G. H. Parmele, Hartford, Conn. The Secretary and Treasurer has been chosen in different years from Lake George, Boston, and of late years from "all over" in the person of Dr. Neidé, who represents no section. Similarly the Executive Committee represents this year Peterboro, Brockville and Albany, the members being Messrs. G. H. Rogers, B. W. Richards and W. B. Wackerhagen; while the Regatta Committee, Messrs. McMurrich, of Oswego; Fairlough, of Kingston, Can., and R. W. Bailey, of Pittsburgh, is similarly distributed. While New York and Canada appear each year, the former represents three large clubs and the latter a considerable part of the membership of the Association.

It will be seen from the above summary that the government has not been sectional, but fairly distributed, the absence of the West in the last three years being due to the non-appearance of Western men at the meets and a lack of interest on their part in the affairs of the Association. This state of affairs has been the subject of careful discussion among the leading men of the A. C. A. for some time, as it has always been the object to make the organization a national affair, and not to limit it to the Atlantic coast. Realizing that all could not visit a meet at one point however central, an effort has been made to increase the Western membership and to establish a second annual meet at some central point in the West, to be held by the A. C. A on the same terms as its Eastern meet, and several schemes to effect this end have been proposed in the FOREST AND STREAM. Last season a portion of the Western canoeists made a start of their own in the same direction, but independent of the A. C. A., and a meet was held at Ballast Island, in Lake Erie, under the organization of the Cleveland C. C., at which a Western American Canoe Association was formed. Officers were elected and the following resolution was passed and forwarded to the A. C. A. then in camp at Grindstone Island:

"WESTERN A. C. A., Camp Gardner, Ballast Island, Lake Erie, July 24, 1885.—The following was duly adopted at a meeting held this day:

"*Whereas*, The Western A. C. A. has been duly organized on the 24th day of July, A. D. 1885, at Ballast Island, Lake Erie; and,

"*Whereas*, The said association is desirous of encouraging canoeing in this country, and organizing rules, regulations, etc., that may govern the canoers throughout North America; therefore, be it

"*Resolved*, That a representative be elected from this Association with instructions to present the action taken at this meeting to the A. C. A. at its meeting at Grindstone Island, and that the said representative express to the said A. C. A. our willingness to reorganize the said A. C. A. on a basis which will place this Association on an equal footing with such an organization as may be formed by Eastern and Canadian canoers. (Signed) W. H. ECKMAN, Sec'y W. A. C. A."

The terms on which the new organization would consent to union with the A. C. A., as expressed by the secretary of the former, were that the A. C. A. as originally established, should disband entirely, in which case the W. A. C. A. would be willing to unite with the former members of the A. C. A. in the organization of a new body.

The proposition was considered by the Executive Committee at the meet, and when it was found that the meeting at Ballast Island only numbered about thirty, some five of them being A. C. A. men, they decided that it was not advisable to accept them as representing the one hundred A. C. A. men in the West, as well as other Western canoeists, unless their action was in some way indorsed by the others. Several protests were received from members in the West against any division of the Association. Recognizing the importance of some action in regard to the meet, the Executive Committee presented a draft of a new constitution, providing for the establishment of a Western Division, which could go into effect at any time. Lately the circular printed in the FOREST AND STREAM of Oct. 29 was sent out, in order to ascertain the sentiments of Western canoeists.

The date fixed for the annual meeting was Nov. 7, the place being Oswego, N. Y., as convenient to all of the committee. On Friday last most of the members arrived and took up their quarters at the Doolittle House, the others coming in on Saturday morning. All of the officers were present, but Mr. Wackerhagen, of the Executive Committee, and Mr. Bailey, of the Regatta Committee, were absent. Messrs. Oliver and Gibson, of Albany, Andrews, of Rochester, Edwards, of Peterboro, Earle, of Syracuse, Wilson, of Watertown, Rushton, of Canton, Ruggles, of Charlotte, W. P. Stephens, of the FOREST AND STREAM, and C. B. Vaux, of the *American Canoeist*, both of New York, were also present, with some members of the Oswego C. C. and Col. Cotton, a new member from Kingston.

At 10:30 A. M. the Secretary called the roll, after which the minutes of the previous meeting were read and accepted. The report of the Secretary-Treasurer was then read and accepted. Objection was made to the Delanys' bills for last summer as excessive, and the matter was left to the Secretary to settle. The following list of applicants for membership were then read, and all of them were elected. J. O. Shiras, Cin., O.; J. E. Bowles, Springfield, Mass.; A. S. and E. A. Pennington, Paterson, N. J.; W. A. Stephens, Rondout; Zollman Nickerson, Rondout; E. W. Master, Albany; F. R. Kimball, Boston; Myron L. Smith, Albany; Frank Brewster, Cleveland, O.; F. D. Shiras, Dubuque, Iowa; Geo. W. Andrews, Painesville, Ohio; R. Griff Glover, St. Louis, Mo.; C. W. Cotton, Kingston, Ont.; C. H. Low, Brockville, Ont.; J. T. Mott, Oswego. The resignations of the following gentlemen were also read and accepted: E. A. Bradford, Rev. Dr. Buel, G. T. Carter, Chas. Decker, R. M. Fitzsimmons, G. H. Kemater, T. Southworth. A letter from Mr. E. B. Tredwen, Royal C. C., was also read, requesting the proposal of his name as an active member, but it was resolved to elect him an honorary member of the Association. A letter of resignation from Mr. Bishop was also read and laid on the table. On motion of Vice-Com. Wilkin the following resolution was passed:

Resolved, That it is with feelings of deep regret the Executive Committee of the A. C. A. have learned of the decease of Mrs. E. J. Toker, whose presence at the annual camps of 1884-85 has so largely contributed to the enjoyment of the same; and,

Resolved, That an entry of the above resolution be made in the minutes of the meeting; and that the Secretary be instructed to forward a copy of the same to Mr. Toker as an expresssion of the sympathy of the Committee, at this time of his bereavement.

A motion was also made to place on the roll of honorary members the names of Mrs. Edwards, Mrs. Rushton, Mrs. Sussmilch and the Misses Hall, which was carried. A motion was also made and carried to revise the roll of honorary members and to drop some of the names. A letter from Mr. Wm. Whitlock, inclosing one from Mr. E. B. Tredwen, R. C. C., asking for information in regard to the meet of 1886, was then read and referred to the chairman of the regatta committee for reply. On motion of Vice-Com. Wilkin, seconded by Mr. Rogers, the following resolution was passed:

In view of the approaching visit of the English canoeists, be it

Resolved, That a trophy be offered for competition at the next A. C. A. meet under A. C. A. rules, open to all A. C. A. men and members of any recognized foreign canoe club, the trophy to be the property of the winner, and

Resolved, That the said trophy be purchased from voluntary subscriptions not exceeding one dollar each, and

Resolved, That the purchase and all the arrangements connected with the above competition be in the hands of a committee of three, and

Resolved. That the said committee be as follows: Messrs. Wm. Whitlock, W. B. Wackerhagen and Rear-Com. Parmele.

A motion was made by Dr. Neidé to adopt Mr. Gibson's suggestion of a motto for the Association, "*Entente Cordiale*," passed. On motion of the vice-commodore, the date for the next meet was fixed as Aug. 15 to 29, 1886. A motion was made by Mr. Richards and carried that the secretary be instructed to send letters of invitation to foreign canoeists, and that copies be sent to the London *Field*, *Le Yacht* and other foreign papers.

The next question taken up was that of a camp site next year. While most of the committee favored Grindstone Island, there has been some feeling developed in favor of a new place, and the subject was thoroughly discussed, the desire being to comply with the wishes of the majority. Gen. Oliver mentioned Lake Champlain, the choice of the Mohican C. C., and exhibited maps of the proposed locality. It was considered desirable, if possible, to select a site that would be convenient for Eastern canoeists, but the discussion brought out the fact that the expenses would be much less at Grindstone than in any new place, and considering the finances of the Association, it was decided to return there in 1886. As the Commodore, on whom much of the work of the meet devolves, is a resident of the vicinity, it was considered best on his account to try Eel Bay again. Dr. Neidé made a motion that the meet of 1886 be held at Grindstone Island, which was carried, only Rear Com. Parmele voting in the negative, and the vote was afterward made unanimous. The date was also changed to Aug. 13 to 27. The meeting adjourned at 2:30 to meet again at 9:30 P. M.

After dinner the entire party were taken for a trip on Lake Ontario on a steam yacht, returning at dark. At 6 P. M. all crossed the river to a large malt house, in the clean dry basement of which two tables were spread. Near by were the four furnaces of the malt kilns, each a glowing mass of coal. Attendants were ready with a barrel of oysters and huge gridirons, and soon the appetizing odors began to rise, as one gridiron after another was pushed into the furnaces and withdrawn with its steaming load. At the risk of burnt fingers and scorched mouths the warfare was carried on for some time, until even the hungriest were satisfied, after which followed songs and stories for a couple of hours.

The Committee left the table early and resumed their sitting at the hotel. The new constitution was taken up in detail and carefully considered, many minor changes being made, but the general plan being adhered to, after which it was finally adopted. The Regatta Committee made a short report, recommending an extension of the limit of depth of keel, but as it was not apparent that any member desired a greater depth or that there was any general sentiment in favor of it, the matter was dropped. The Committee also advised that as the matter of a senior class had been brought up at too late a date for a thorough discussion it will be left to another year. Commodore Rathbun and Vice-Commodore Wilkin were appointed a committee to confer with the Western canoeists in regard to the extension of the Association under the new constitution. The full text of the latter is as follows:

CONSTITUTION.

ARTICLE 1. This Association shall be called the American Canoe

Association, and be comprised in such geographical divisions as may be deemed advisable by the Executive Committee.

ART. 2. Its object shall be to unite all amateur canoeists for purposes of pleasure, health or explorations, by means of meetings for business, camping, paddling, sailing and racing, and by keeping logs of voyages, records of waterways and routes, details, drawings and dimensions of boats, and collections of maps, charts and books.

ART. 3. Any gentleman over the age of 18 years may become a member of this Association whose application for membership has been approved, but canoe owners in good standing only are active members, and are entitled to vote at any general meeting of the Association and at the meetings of their respective Divisions.

ART. 4. Honorary members may be elected by a unanimous vote of the Executive Committee. Not more than two shall be elected at any meeting. Practical canoeists only are eligible. The honorary membership list shall be revised every two years by the Executive Committee.

ART. 5. The officers of this Association shall be a Commodore and a Secretary-Treasurer, and for each division a Vice-Commodore, a Rear-Commodore, and a Purser.

The Commodore and Secretary-Treasurer shall be elected by the Executive Committee at their annual meeting. In the event of one or more of the Division officers being chosen to fill these positions, the vacancies so caused shall be filled by the members of the Executive Committee from the same Division to which the officers vacating the position belonged.

The Vice and Rear-Commodores and Pursers shall be elected by the members at the annual meetings of the respective Divisions.

All officers shall be elected by ballot and shall hold office until their successors are elected.

ART. 6. There shall be annually elected in each Division, at the meet thereof, one active member for every thirty (30) members in good standing present. The members so elected, together with the officers of the Association and of its several Divisions shall constitute the Executive Committee of the Association. They shall have the general government of the Association, and power to fill vacancies until the next annual meeting of the Divisions. They shall hold the annual meeting before Nov. 15, at such place and time as shall be specified by the Commodore.

ART. 7. It shall be the duty of the Commodore to preside at the meetings of the Association and Executive Committee, and to visit, if practicable, each of the Division meets during the year, to assume command of the same during said visit, and to see that all rules and regulations are properly enforced, to pass on qualification of names submitted for membership by the Secretary.

ART. 8. The Vice-Commodores shall organize and in the absence of the Commodore preside over the annual meetings of their respective Divisions, and perform all duties pertaining to the Commodore in his absence, and within thirty (30) days after their election appoint a Regatta Committee of three active members (3) for their Divisions. In the absence of the Vice-Commodores the Rear-Commodores will act in their stead.

ART. 9. It shall be duty of the Secretary-Treasurer to keep a record of the proceedings of the Association and of the Executive Committee; to keep a correct roll of members; to pass on the qualification of names submitted for membership two weeks after the same have been published in either of the official organs of the American Canoe Association; to notify each member of his election; to print each year the "Association Book" and a list of the cruises made by members; to receive all moneys due the Association; to pay all bills approved by the Commodore, and to make an annual report of finances; and to pay to the Pursers of each Division one dollar ($1) per annum for each member duly elected and assigned to his Division.

Pursers shall receive and expend for their Division meets and other necessary expenses, subject to the approval of the Vice-Commodores of their Divisions, the money received from the Secretary-Treasurer. They shall also forward to him at least two weeks before the annual meeting of the Executive Committee in each year a record of the canoes in their Division and a list of the cruises made by the Division members, and shall make an annual report to the Executive Committee.

ART. 10. A quorum for the transaction of business at the annual meets of the Divisions shall consist of twenty (20) members.

ART. 11. This constitution may be amended at any meeting of the Executive Committee, provided the amendment be recommended by at least two-thirds of said committee.

BY-LAWS.

ART. 1. Application for membership shall be made to the Secretary-Treasurer and shall be accompanied by the recommendation of an active member and by the sum of $3, one dollar as entrance fee, and two dollars as dues for the current year, to be refunded in case of the non-election of the applicant. The dues of members elected after Sept. 1 of any year shall be credited from the following January. Each subsequent annual payment shall be $2, and shall be payable before April 1. If not paid within two months thereafter, the Secretary shall notify the members in arrears, and if, at the end of one month more, the dues are still unpaid, the membership shall be forfeited and the member's name stricken from the roll, except in the case of absence from the country, or other sufficient reason.

ART. 2. No assessment shall be levied for any purpose whatever.

ART. 3. Meetings for business, camping and racing shall be held in each Division annually, the date and places to be fixed by the Executive Committee of the Association.

ART. 4. The Association signal shall be a pointed burgee, the breadth being two-thirds the length, the size for canoes being 12in.x 18in., the field red with a longitudinal white stripe one-fifth the width, bearing the letters A. C. A. in red.

ART. 5. The officers' flags shall be swallow-tailed pennants 12in.x 18in. That of the Commodore shall be of blue, on which shall be displayed in white a pair of crossed paddles, with the letters A. C. A. in the upper three corners and a star in the lower one; that of the Vice-Commodore to be of red with the same device in white; that of the Rear-Commodore to be of white with the same device in red; that of the Secretary-Treasurer to be of white with the letters A. C. A. supported by a quill in blue; that of the Purser's to be of white with the same device in red.

ART. 6. Each canoe many carry a distinguishing signal, rectangular in shape, 12x18in. The Association signal shall be carried at the peak of the mainsail, the officer's or private signal immediately below it; national and club signals at discretion. (See note).

ART. 7. The Secretary shall publish, after each annual meeting of the Executive Committee, "The Association Book," containing the Constitution, By-Laws and Sailing Regulations, lists of officers, members, their canoes and cruises, and shall send a copy to each member.

ART. 8. When the same name has been given to two or more canoes, the one first entered on the list of the Association shall be regarded as the original owner. The others shall be designated by bracketed numbers, [1], [2], etc., in the order of entry. Cases of doubt as to priority of entry shall be decided by the Secretary.

ART. 9. It shall be the duty of the Regatta Committee of each Division to prepare and publish not later than June 1 an order of races for the annual regatta of their respective Divisions; to superintend the laying out and buoying of courses; to provide the prizes; to appoint judges, starters and timekeepers, and to decide all protests. They shall post the course and conditions of each race in some prominent place, at least one hour before the race is called; shall furnish to the Purser of their Division a record of the same, and shall have entire control of the races of their respective Divisions.

ART. 10. The uniform of the officers of the A. C. A. shall be of blue with the letters A. C. A. embroidered in gold on the collar. The Commodore shall wear three rows of gold lace on each sleeve, the Vice-Commodore two, the Rear-Commodore one.

ART. 11. Each member will send to the Purser of his Division a list of such cruises as he may have made upon completion of the cruises, noting especially the condition of such water as he may have cruised on, rapids, dams, shoals, good and bad camp grounds, and all items of value to other canoeists.

ART. 12. Any member who is guilty of ungentlemanly conduct, or of racing for money, shall be liable and may be expelled by a unanimous vote of the Executive Committee at any of its meetings, but fourteen days' notice shall have been given to the person it is proposed to expel. Any canoeist who shall after this date, Nov. 7, 1885, race for money, shall be considered a professional, and shall be ineligible for membership in the A. C. A.

ART. 13. No changes shall be made in the classification, measurements or sailing regulations unless sanctioned by the Executive Committee.

ART. 14. The By-Laws may be amended by the vote of a majority of the Executive Committee of the Association, except Art. 2, which can only be altered by a unanimous vote of all the Divisions of the Association.

EXPLANATORY NOTE.

Note to Art. 4. This arrangement is adopted to secure uniformity, at least in regard to Association signal. Lugs and gaff-rigged sails are the only ones which have an available masthead, but every rig has a peak to the mainsail, and this was selected as the most conspicuous practicable point.

By this constitution all is prepared for the formation of a Western Division, all that is needed being the co-operation of the Western men, either in recommending for Division officers those elected at Ballast Island, or naming others if they are not satisfactory, the contrary to which is evidently the case. The matter may now be easily arranged in a way that would be satisfactory to all.

The visitors spent Sunday in Oswego, under the guidance of the members of the Oswego yacht and canoe clubs, most of them leaving by the night train. Throughout their stay the gentlemen of Oswego spared no pains to make their visit a most pleasant one, and the fame of Oswego hospitality will spread wherever canoemen meet.

CUSTOMS REGULATIONS AND VISITING CANOES.

THE committee on a challenge cup lately appointed by the New York C. C., Com. Munroe, Mr. C. J. Stevens and Mr. Chesebrough, have received the following reply to a letter of inquiry as to the entry of visiting canoes not to be retained in the United States. Canoes can be shipped to New York, where they will be cared for by the committee of the N. Y. C. C., and forwarded to the meet if desired. Favorable arrangements for transportation will also be made for any canoeists who may visit New York and wish to attend the A. C. A. meet also:

TREASURY DEPARTMENT, OFFICE OF THE SECRETARY, WASHINGTON, D. C., Nov. 6, 1885.

Mr. Chas. J. Stevens, 7 Bowling Green, New York:

SIR—In reply to your letter of the 31st ultimo, inquiring as to whether duties will be assessed upon three noted English racing canoes which it is proposed to bring over to this country next summer for racing purposes, in connection with American canoe clubs, and offering to give proper bonds for their return, I have to state that as it is understood that the canoes in question are similar in many respects to small yachts, and that they belong to the Royal C. C. of Great Britain, and will be brought over exclusively for racing purposes, they will be exempt from duty, in accordance with Department's decision of Aug. 18, 1881 (S. 4,060), not being considered an importation within the meaning of the tariff laws.

Very respectfully, C. S. FAIRCHILD, Assistant Secretary.

THE DOCKRATS' CLAM BAKE.

THE gentle, modest, unassuming Dockrats have, during the season now so nearly ended, disported themselves quietly, passively, enjoyably. No records of extended cruises are to be found on the pages of their log-book, but day after day, the season through, "blow high, blow low," they have launched their little craft and extracted pleasure from the quiet paddle, the lazy drift, the exhilarating sail, or the fierce tussle against a head wind and a strong tide. Home waters, however, have not wholly confined their powers. Individual "rats" had found their way to Grindstone. Others sing the praises of Northern Champlain, while still others remember kindly Long Island's eastern shores. So the summer season passed, but too quickly to the water-loving, sailing loving "rats." The days began to shorten, and to each and all it looked as if their long-enjoyed sport would have an abrupt ending. Then a reprieve, "and suddenly the clouds break and the yellow sun comes out like a bridegroom rejoicing, and warms up again the dull earth and the hearts of man; and the blue vapor is seen again in the heart of the shadowy woods," and the sky and river seem as if they never could be so blue, and a thin haze hangs in the air, and the nights are cool with frosty stars, and the days humid and hazy, and, in short, Indian summer had come and the "rats" took a new lease of life and each succeeding day found them drinking to the full of the enjoyment and pleasure offered them by smiling nature. Ah! why could not such perfect days last longer? The big "rats", the medium "rats", the little "rats", all seemed full of an irrepressible something. The Commodore smiled, the Captain sang, the Purser whistled, the Squaw danced, the Vice was given to poetry—sometimes original, sometimes otherwise, always startling. And this it was that led to the crowning event of the Dockrats' home life. He did not dream the effect such a simple thing would have, as he muttered to himself: "The soul of music slumbers in the shell." In the stillness, however, his brother "rats" distinctly heard the words. Surprise held them mute until the "practical" man quietly whispered—clams! It broke the spell, and as a result Wednesday, Oct. 28, A.D. 1885, stands forth in the Dockrat annals as a red-letter day of a very vermillion hue.

At high noon on that day "rats" young and old could be seen wending their several ways to the "retreat," and at 1 P. M. eleven craft with sixteen chuckling "rats" were ready for the start. Once ready, soon off, and away they went bound for well-remembered Plum Point; but alas, "the best laid plans o' rats and men gang aft aglee," and so it was in this case. A strong flood tide and a southeast wind proved too plainly, after a short effort, that the old camp ground could not be reached within a reasonable time, so under orders they headed in a go-as-you-please manner for Dennings's Point, a lovely camp spot, about two miles from their "retreat," on the opposite side of the river. The Purser led off under sail, hoping by making a run across the river to be able to work down along the flats. Like all wise men he soon saw the error of his ways, took in his canvas, felt very flat, and had a long, stubborn paddle as a reward for wisdom. The Commodore followed his lead, and with his large boat carrying mainsail, jib and dandy, played the trick the Purser failed to do. The others, trusting to an "ash breeze," were soon straggling all over the bay. The Squaw in the Wenonah, with his usual contempt for hard paddling, made fast to a passing tow, and was serenely carried to within a short distance of the proposed landing. The Captain, in his large boat Mabel, was the first to run on the sandy beach; then followed Day Dream, the Purser, the Vice, Fred, the captain's son, in the Pixie, the Squaw and others, and last the Commodore, but not least, as he carried the essentials of such occasions, viz., the grub.

The various craft were quickly hauled upon the beach, the lockers gave forth their contents, the Vice as chef fondly laid the hard-shells in appropriate concentric circles on the sand, busy hands gathered drift, and soon two blazing fires gave hopes that the "rats" would shortly be able to see for themselves that which "slumbers in the shell." They had not long to wait. Oh! Van, what music was in thy voice when you announced "Gentlemen, we are ready now." Seon seated round the many improvised tables the colony of assembled "rats" attended strictly to the business in hand. The sun, partly obscured by gathering clouds, just overcomes the nipping of the fresh breeze, now and then shines full upon the feasters. The strike of steel upon the shells is accompanied by the rustling of ripening and falling leaves overhead, and the tinkle and play of the small surflets at their feet. Laughter and jest, story and song; thus passes the time, and a wish is often expressed that the absent ones were there, and the names of Domine, Parson, Doctor and the Kyd are repeatedly heard. Like everything else, a good time has its end. The last leathery bivalve is consumed, the cry of some insatiable for more is treated with scorn. The gathering clouds and fast approaching twilight call for prompt action. The Commodore orders a departure. Soon everything is packed. The craft are launched. The breeze offers a free run home. Lamps lit, sails hoisted, and they are away. Van, the Vice-Commodore, takes the lead, followed by the Captain, Purser, Commodore and—"Hallo! there goes the Captain's halliards," and his mainsail flies around on his bow; a quick luff and around he comes serenely. "All right," he says, and away the others go. The wind freshens. Van gets a long lead. The Commodore is overhauling the Purser in fine style when a stiff flaw catches the latter and away he goes after the leader. Then the Commodore comes on again, all the others bunched close behind, and so on to the end, Van in front by a distance, the balance bunched more or less together. The little craft are soon housed and everything made snug and shipshape. Poetical fancies still linger in the soul of the Vice, for he is heard to say:

> "Blest be those feasts with simple plenty crown'd,
> Where all the ruddy family around
> Laugh at the jests or pranks that never fail,
> Or sigh with pity at some mournful tale."

And then one of those quiet "rats" next door breaks in on the silence. "Well, we just had a right jolly good old time," and the practical man responds, "You can just bet we did;" and then all of the gentle, modest, unassuming "Dockrats" lifted up their voices in the general chorus, "Right you are!" C. SHELL.

P. S.—(To the Editor)—You may do well to take no heed of the rumor that there have been some Indian shell mounds discovered on the banks of the Hudson not far from West Point. It is simply a malicious story circulated for the purpose of injuring indirectly the reputations of certain of my friends. C. S.

MOHICAN C, C.—The monthly meeting was held at the rooms of the Secretary. The only important business transacted was a motion by Com. Oliver, unanimously adopted, to the effect that the Mohican C. C. favor "Bow and Arrows," on or near South Hero Island, Lake Champlain, as the place for the meet of the A. C. A. in 1886. After adjournment and during a movement upon a small battery of refreshments Mr. Gibson's proposition, as published in the FOREST AND STREAM lately, was discussed, the general principle finding favor among the Mohicans present in large numbers. Com. Oliver has disposed of all his canoes—Marion B. to Mr. H. R. Pierson; Marion to Mr. Guy E. Baker and Puck to his son. He is now deliberating on the lines of his next venture.—FERNOW.

THE SNAKE FOR SALE.—Mr. Gibson has lately been at work on a design for a new canoe which he proposes to build this winter, and his old craft, the famous Snake, is offered for sale. Since the meet she has been newly decked and refitted and is now in perfect condition. She is advertised in another column.

CANOE COMPLICATIONS.

Editor Forest and Stream:

I think your correspondent "Spike" voices the complaint of a large number when he objects to the amount of brasswork and nickel plate on the modern canoe, and I am sorry for him and them, but they have only themselves to blame. His proposed reforms would not help the matter, and his suggestions only go to show that he has not attended the A. C. A. meets, and does not understand the questions at issue. The picture he draws of canoes greatly over-canvassed monopolizing all the prizes, while others, the honest cruisers, have no chance, are all very pretty, but did "Spike" ever see such a thing at any Association meet? Last year there were five sailing races into which a Class B canoe could enter; one unlimited, one with a limit of sail area, one with a limit of ballast, one sailing and paddling, and one novices. The first allowed as much sail as the canoeist desired, in the second the sail was limited to 75ft., surely little enough, the third, with limited ballast, was consequently limited in sail; the sailing and paddling had no limit, but a heavy load of ballast would handicap a man of itself; the novices race was unlimited. In these races the odds were in favor of the snugly rigged canoe, and most of the winners were conspicuous for small sail areas. The men who stay away from the meets waiting for a limit to be set on all sail are just the ones who, when present, back out because Mr. A. or ex-Com. B. are entered, who are scared off by a name. The man to win the best prizes at the meet next year must be a good all around canoeist in a Class A or Class B boat, well equipped, and he must go into every race open to him with a determination to do his best and trust to the chances, sure of the sport of a good race, even though not successful. Such a man will not stay ashore because some one else has a bigger sail, or because he is afraid that "So and So" may beat him. All the rules of the Association favor smaller boats and rigs, and the cruising man, and the tendency to-day is toward lighter canoes and smaller sails. Already several of the leading sailors have agreed among themselves to limit their total sail area, main and mizzen, to 85ft. for racing.

If only this reason keeps "Spike" away let him come next year and enter the limited sail race and beat some one in that, then he can think of the unlimited. It seems to me that he contradicts himself when he says "It is only constant practice with such large areas that gives the necessary confidence and skill to the present leaders of the fleet"; and then continues: "It requires as good seamanship to sail with a small area as with a large one."

There is some justice in his complaint that the canoe is overdone, but who has overdone it? Not the leaders, not the racers, but "Spike" himself in his own case. As a matter of fact, which are weighted down with nickel plate and useless gimcracks, as so many are, belong to the novices who are not content to adopt a thing on its merits or to consider whether they need it or no, but rush into useless extravagance over nickeled drop rudders, clutch tillers, carved deck seats, etc., simply because others use them. I would like to show "Spike" three canoes that have all won prizes in club and A. C. A. races—one a double board canoe, with balance lugs and reefing gear—and let him point out the unnecessary complication. Each is fitted up plainly and strongly for its work, the owner has simply used his judgment as to what was needed, instead of doing what "Spike" has done—putting on a whole builder's catalogue of stuff, for no good reason. A canoe may have many fittings and attachments, but all so arranged as to be readily worked by one man, and when so fitted she is a most complete boat. Simplicity generally means inefficiency; we do want to sail and not to crab to leeward, and to do it our boats must be properly rigged, beginning with little in the case of the novice, and adding with experience. The modern complete canoe, ordered carte blanche from the builder by a novice, is indeed a complicated affair, but that does not prove that its various parts are not good in their place. We do not want to go back to the days of MacGregor or Bishop—we would not be satisfied with their boats; but we need not abuse the boats we have, for they are better than their predecessors.

Again, "Spike" complains that his Class B boat is useless in rapids. The fault is not the boat's, but his in choosing her. A good Class B canoe should be capable of river cruising and a fairly good boat for it; but she is intended for another purpose, sailing and paddling on wider waters, and of course cannot do both equally well. If "Spike" is to do most of his work on small, narrow streams, with carries, let him choose a smaller and more suitable boat. If only a small part of his cruising is of this description, let him get a well-built 15×30 canoe (Class B), she need not weigh over 80 pounds, without board, and she will do for this work at times and for heavier work and racing as well. Because many canoes are too heavy, it is no argument against the class. No sneakbox would help him on his carries, nor sail area rule would make his boat better in rapids. What is needed is to select a boat for the waters he will generally cruise in, with reference also to occasional work of another kind if it is contemplated, then to build a strong, light hull, which can be done, and to fit it up sensibly and properly, avoiding useless gimcracks. With such a canoe he can do a variety of racing and cruising that would not be possible with a little navy of sneakboxes, catboats, dugouts and rowing boats at his command, he will have a boat capable of entering the Association races and making a good record, and then of cruising from Grindstone Island to New York city, by way of the St. Lawrence, in better fashion than in any boat or sneakbox. The old hands, those who write as well as race, do not advise or countenance such rigs as "Spike" complains of; they do not find that their boats are too unwieldy or too complicated. The complaint arises mainly from the newer canoeists, who must have novelty at any cost, and after wasting a deal of money only find that they are disappointed in their canoe. Let them begin differently with a plain, light hull, two good sails of moderate area and simply rigged, for instance, a Mohican mainsail with triangular mizzen, or two moderate balance lugs; a strong foot gear, a plain oak rudder with wooden deck tiller, and a few brass cleats on deck. When they can handle such a boat they will be competent to judge of the value of extra fittings. They can begin with a good reefing gear, rigging it themselves, then going into deck seats, patent tillers, drop rudders and other like fittings if they find them necessary. By this course a man will save at least 25 per cent. on his first outlay, he will have a boat well within his power to manaage successfully, and he will not be ready to give up canoeing in disgust after one season.

BRASS CLEAT.

"SENECA'S" SNEAKBOX.—*Editor Forest and Stream:* Some time ago I was very much interested in an article entitled "A Day in the Sneak," by "Seneca." I wish he'd write us of some of the other days of that fortnight's cruise. In his article he speaks of the sneak as a 14x4. Now, I want "Seneca" to give me some points. The only place I have to keep a boat is at the head of a creek some eight miles from my house, which creek I reach by horse and buggy. The boat that I have now is something like the famed western boats, you can run it over a good dew. Does the sneakbox draw much water? That she is safe I can see. Would a 14x4 be large enough for my chum and me to cruise and sleep in? Could a 14x4 be run by oars in the small creeks and still be large enough to cruise with two persons, dogs and guns? If the 14x4 is too small for two to go in comfortably would a 16ft. boat be too big to row easily? About how much stuff would be required to make such a boat as "Seneca" speaks of? That is how much wood of each sort and how much rivets and such? I have sail, mast, etc., that I can use, already. If "Seneca" can oblige me to that degree I am sure from the way he writes that he's justlike man to know such things, I shall be greatly indebted.—ELK. [We shall shortly publish the lines of "Seneca's" boat, with sail plan.]

A NEW CANOE CLUB.—Cincinnati, Oct. 30.—*Editor Forest and Stream:* The organization of the Miami C. C., of Cincinnati, was completed yesterday by the adoption of a constitution and election of officers. The officers elected were: Hon. S. N. Maxwell, Commodore; Dr. A. E. Heighway, Jr., Vice-Commodore; Dr. H. S. Groesbeck, Secretary and Treasurer. Members of the executive committee, J. O. Shiras and Thomas McConn. Eight charter members were enrolled. By spring it is expected the membership will reach twenty-five. The club will probably apply for admission to both the A. C. A. and the W. A. C. A. Some of the club are already members of both associations, and several additional ones will apply. It is hoped that the future meets of both associations will in no way interfere with each other, and that both may be under one management.—MIAMI.

THE LONG LAKE BOAT.—Ann Arbor, Mich., Oct. 28.—*Editor Forest and Stream:* Can some of your readers tell me where I can obtain working plans and models or patterns for a boat known as the "Long Lake skiff?" The boats are used in the Adirondack lakes, are very easy rowing, buoyant and light, weighing from 40 to 60 pounds with oars and thwarts. Information on this subject will be thankfully received by—SYNTAX. [Perhaps some of our readers who spend the summer in the Adirondacks can furnish us with the lines of these boats. They are built by the guides themselves, but are very strong, light and of fine model.]

PUBLISHER'S DEPARTMENT.

MR. FRANK WHITE, the representative of Messrs. A. G. Spalding & Bros.' New York establishment, sailed for Europe Oct. 24. Mr. White while absent will combine business with pleasure by making an extended inquiry into the status of all European outdoor sports.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

J. C. F., Philadelphia.—We expect to publish the lines shortly.

H. F. S., Brooklyn.—Sailing for ducks is permitted on Long Island Sound, N. Y.

SUBSCRIBER, Canada, is advised that we do not print anonymous communications.

C. N. W., Middletown:—Any one of the three guns named is a first-class arm, and you may select the one you fancy most.

MAX.—You can procure the powder from any of the New York houses. See their addresses in our advertising columns.

G. B.—We do not answer questions to decide bets. The question you ask was replied to (to another correspondent) in our last issue.

W. H.W., Cedar Springs, Mich.—An owl brought into town to-day weighed 3lbs. 12oz., spread of wings. 5ft.; snow white with small dark brown spots all over the body and wings; legs and claws covered with coarse white hair. What was it? Ans. The bird was a snowy or Arctic owl (*Nyctea nivea*), a species which is not very uncommon in winter.

K. Q.—1. For Elcho record write to Dr. Wm. Jarvis, Claremont, N. H. 2. The next litter might be affected.

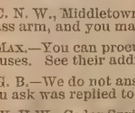
J. S. M., South Coventry, Conn.—The only firm we know of is Parell & Douglas, Waukeegan, Wis. They make a small hand propeller.

SPORTSMAN, Philadelphia, Pa.—Can a person non-resident of New Jersey gun in any part of that State without a license, without being liable to fine? Ans. No.

W. B. P., West Winsted, Conn.—What is pedigree of bitch Kate II.? Ans. You do not mention whether the bitch is a rough-coated St. Bernard, a Great Dane, or a Prince Charles spaniel.

G. C. P., Philadelphia.—I have a number of shells that have been loaded for about three years. Will you be kind enough to inform me whether you think they are good for anything? Ans. Why certainly.

E. A. M.—What can I do to break an Irish setter, one year old, of rolling in filth? He has no fleas, and is all right every way that I can see. Ans. It is natural for a dog to do this. You cannot cure him of the habit.



C. S. D.—I have often wondered why, in folding the paper for mailing, you always fold the side with date and volume on the inside. At the end of each year I get the volume bound, but during the year I lay them away, one on the other. If they were folded just opposite from the way they come I could lift up the right corner and very easily find the date wanted. As it is each paper has to be pulled out, opened and looked at. Ans. Keep your current numbers in a file binder; and have the good of them as you go along.

C. L. H.—A setter dog, although a good worker and well broken, will on all possible occasions chase and kill hens. What is the best means of curing him of this habit, and yet not hurt his hunting qualities? Ans. Tie a dead hen (killed by him) to his neck, and make him wear it until he is disgusted.

A. C. McK., Montreal.—I notice in your last number that large numbers of red and gray squirrels were killed in hunting matches, etc. Would you please let me know through the correspondence column of your next number what these squirrels are killed for? Are the skins preserved, or what is the use of the squirrels? Ans. The squirrels are killed primarily for count.

A. M. H., North Springfield, Mo.—A friend of mine has a fine Llewellin setter with pedigree, etc., but which has never been registered. Will you be so kind as to state the steps necessary to be taken in order to have the registering properly done? Ans. Send to the *American Kennel Register*, P. O. Box 2832, N. Y., a stamped and addressed envelope for registration blank according to directions accompanying it and return it to the *Register*.

F. A. ALLEN'S SPECIALTIES.

MONMOUTH, ILL.

ALLEN'S DUCK CALL—Improved, Nickel Plated; the most natural-toned, easiest-blowing, smallest and only Metal Duck Call ever invented and the only one that perfectly imitates the *wild* duck. Sent by mail on receipt of $1.

ALLEN'S BOW-FACING OARS—Can be attached to any boat in five minutes, shipped instantly in the roughest water; work much easier than the common oar. In duck shooting they are invaluable; you see the bird the instant it leaves the water. Sent by express on receipt of $8.

ALLEN'S SHELL SWAGE—Will reduce brass shells to their original size in one-half minute, making them as smooth and solid as when new. On ordering mention gauge wanted. Sent by express for $1; by mail $1.30.

ALLEN'S DECOY DUCK FRAME—Is a simple device for holding the dead duck in a natural position in the water. Price $4 per doz. **SEND FOR CATALOGUE FREE.**

AIR GUNS

PRICES: $6, $9, $10, $12, $15, $18 and $20.

FOR PROFIT AND PLEASURE.

The gun shown above is our **NEW COMBINATION AIR GUN.** This is the most complete arrangement ever offered. It combines two pieces in one (a perfect Rifle to shoot a regular .22-100 cartridge, and a superior Air Gun to shoot darts, slugs and shot). It can be instantly changed from one to the other, and has a steel barrel rifled. All the parts extra heavy, and so constructed of best material to stand continuous service, making the most durable gun manufactured, and by far the most practical long-range Air Gun ever made for gallery or field. WE MANUFACTURE A FULL ASSORTMENT OF AIR GUNS SUITED TO MEET THE TASTES AND WANTS OF EVERY ONE. The quality of our goods has established them in all the principal markets of the world, and their superiority has induced the United States Navy to place them, with success, on their school ships. ☞ Illustrated price lists sent upon application. CANOE HANDLING.

By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners: and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

PIEPER

Nos. 586, 588, 589 and DIANA.

There is Nothing Else in the World Like Them for the Money.

Mr. W. K. Haynie, Chappell Hill, Texas, writes under the date of Aug. 21, 1885:

"I have given the Pieper Diana gun you sent me a thorough trial, and I endorse it in the strongest language. I am satisfied I have the best gun I ever shot, and I have used many of leading fine makes both English and American. I have broken glass balls at 87 yards, and killed ducks with No. 6 shot at 75 to 80 yards. It shoots buckshot equally well; I brought down two deer, one with the right and other with the left barrel. There is no possible shot the gun won't make. The finish is equal to the shooting. I am recommending the Pieper to all my friends."

For Sale by all First-Class Dealers in Arms.

IF YOUR DEALER HAS NONE, DON'T BUY TILL YOU INSPECT THE PIEPER. SEND FOR PIEPER CATALOGUE TO

SCHOVERLING, DALY & GALES, Sole Agents.

The NEW MARLIN .32 and .38 Rifles, 7½lbs., kill twice as far as any other of same calibers. The DALY HAMMERLESS captured the Illinois Diamond Badge again this year.

SMALL YACHTS.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice.

By C. P. KUNHARDT.

THE FOREST AND STREAM PUBLISHING COMPANY takes pleasure in announcing the publication of a magnificent quarto volume, bearing the above title. This book covers the field of Small Yachts, with special regard to their design, construction, equipment and keep. The opening chapters are devoted to a consideration of the model and the draft, their relations to one another, and the purposes which they subserve. Full directions are given for producing the plans of a yacht with reference to the chief points in design, and the method of taking off the lines of a boat already built is likewise described in detail.

All elements entering into design, such as Resistance, Stability, Balance of Rig, Handiness, Displacement, etc., are dealt with in separate chapters. The rules necessary for the mathematical computations, and a review of theory and practice close the first division of the book.

The second portion comprises the description of the Plates, covering the whole range of type in small yachts, from the shoal catboat and American centerboard sloop to examples f the narrowest and deepest British cutter yet built. These yachts have their lines, build and fittings depicted in the Plates, which are drawn to scale. With their aid and the specifications presented, the reader is placed in possession of accurate information concerning the mould, accommodations, rig and characteristics of all styles of yachts which have received avorable recognition. Sporting boats, combination row and sailboats, and various examples of special form are introduced.

The third division offers a comprehensive review of single-hand sailing, to which small yachts are especially adapted. Directions are given as a guide in selection of type and sail plan, and subsequent equipment and proper management.

The iron work of yachts, their gear, yawls, stearing apparatus, boat building and much other closely related matter is entered upon. The new International Rules of the Road, Signal Service, and a bibliography appear in the Appendix.

The work is profusely and handsomely illustrated with 150 illustrations inserted in the text, besides the sixty-three plates as follows:

LIST OF PLATES.

I. The Sloop Yacht Schemer.

New York: FOREST AND STREAM PUBLISHING CO., 39 Park Row. London: SAMSON, LOW, MARSTON & CO., 188 Fleet Street.

"FOREST AND STREAM SERIES."

DEER HUNTING.

BY JUDGE JOHN DEAN CATON.

BY and by it will be time to hunt antelope and deer. It is always time to read about them. Judge Caton's book on the antelope, elk, deer, moose and caribou of America discusses in a readable way the life history of these animals and the methods of their capture. It is the work of an enthusiastic sportsman who has had a wide experience and has devoted the leisure of years to studying these interesting game animals. The volume is very fully illustrated, and is a perfect storehouse of information and entertainment. The first edition was sold by the Boston publishers at $4. Price $2.50.

WOODCRAFT.

BY "NESSMUK."

A COMPACT pocket handbook of condensed, boiled-down, concise, clear, comprehensive, sensible, practical camp gumption. "Nessmuk" has been "in the woods" in Michigan, New York, Pennsylvania, and South America, and this is a book for outers, wherever they kindle their camp-fire. The author believes in "smoothing it." He has learned how; now he tells others. It is much easier to learn from "Nessmuk" than from Dame Experience. We should not be surprised if "Woodcraft" completely revolutionized the methods of camping out. If you are going to the woods, read "Woodcraft" before you go. It may add to your trip a hundred fold. Price $1.00.

DOG TRAINING.

BY S. T. HAMMOND.

HE was a promising puppy, and when you turned him over to the breaker to be educated, you thought he was bound to make "the best dog in the world." And you'll not soon forget how disappointed and disgusted you were when the dog, the breaker and the big bill—all three turned up together, and you saw that the animal's spirit was broken and it would take a steam calliope to make him mind. Now, this could not have happened if you had been wise enough to buy a copy of Hammond's book, and in your odd leisure moments *train* the dog yourself instead of having him *broken* by some one else. We are selling edition after edition of this book, and it is revolutionizing the system of preparing dogs for work in the field. Price $1.00.

SHORE BIRDS.

A PAMPHLET for those who "gun" along the shore. Tells of: I. Haunts and Habits—Where the bay birds live and what they do at home. II. Range and Migration—Where they go to breed and where to spend the winter. III. A Morning Without the Birds—An episode of shore shooting. IV. Nomenclature—A list of our American species of *Limicolæ*, with a description of each species. V. Localities—Where to go to shoot them. VI. Blinds and Decoys—How to shoot them after you have reached the grounds. 45 pp., paper. Price 15 cents.

ANGLING TALKS.

BY GEORGE DAWSON.

AS a political writer of conceded power, Mr. Dawson wielded a trenchant pen; when he terned from the conflict of parties to the praise of the favorite pastime of "simple wise men," his essays, limpid as the crystal streams, are aglow with the soft summer sunlight and melodious with the songs of birds. When angling was the theme, he wrote from a full heart and in closest sympathy with the scenes and pursuits described. These "Talks" are brimful of manly, wholesome sentiment; there is in them all not a particle of cant. Their sincerity and overflowing spirit at once win the reader, and he perforce shares the author's enthusiasm. The effect is magical, like that of the mimic players in Xenophon's *Memorabilia:* he who reads, if he be an angler, must go a-fishing; and if he be not, straightway then must he become one.—*Extract from Publishers' Preface.* Cloth, price 50 cents.

CANOE "AURORA."

BY DR. C. A. NEIDÉ.

A CHARMINGLY written and always entertaining account of a canoe cruise from Lake George, New York, down the Ohio and Mississippi Rivers to the Gulf of Mexico, by the Secretary of the American Canoe Association. To read the cruise of the "Aurora" is the next best thing to having made it; and the reading is decidedly more pleasant than would have been participation in some of the misadventures related. 316 pp., cloth. Price $1.00.

A FAMILIAR TALK.

With the approach of a new year it is not necessary to announce any change in our manner of conducting this journal. Just what the FOREST AND STREAM has been in 1885 we hope to make it in 1886. It will be run on the same old principles, tested by experience and approved by prosperity. It will be just as entertaining, just as instructive, just as frank and outspoken, and just as helpful.

We are sometimes asked to explain the reason of the FOREST AND STREAM'S constantly widening influence and prosperity. Well, there is no

Trade-Secret

about it, and we do not mind telling you. It is this: We have not expended our energies in preposterous spread-eagle proclamations of tremendous attractions in the dim and distant future, but have pinned our faith to present performance, each week, and fifty-two weeks in the year. This in the kind of journalism that is bound to succeed. Nothing very occult about it, you see.

Another element of strength is the jealousy with which we have maintained the inherent dignity and entire respectability of the pastimes discussed in these pages, and the extreme care we have taken to keep the tone of the columns such as renders the paper fit for any man to receive into his family. We are assured by men, whose good opinion we value, that they do not think it necessary to make

A Weekly Scrutiny

of the contents of the FOREST AND STREAM before venturing to lay it on the family table. We determined, years ago, that a clean paper must win its way among sportsmen (not "sporting men"). The fact that it has done so is now cited, not that we may boast of our own prescience, but as a most gratifying evidence of the high standing of the field-sports to which this journal is devoted.

In other words, the reason why the "Forest and Stream" is liked by sportsmen is that the "Forest and Stream" is the kind of paper that sportsmen like.

This, as we have said before, is complimentary all around. A third element of the paper's popularity is this: It has some hundreds of correspondents and contributors, who write for it because they have something to say. You have heard the story of the German professor who was assigned to prepare a thesis on the elephant. Now, he had never seen an elephant, so he evolved one out of his inner consciousness. Though we never read his essay, we have not the slightest doubt it was a very dry one. But if the German professor had ever come across

A Real Live Elephant

in an African jungle, he could have written a thesis on the beast that would have had some animation in it. That is just the secret of the interest of the FOREST AND STREAM'S contributions. They come from men who have seen or done or heard something to write about. Nothing dry in their notes and sketches and letters. They put it on paper just as entertainingly as they would talk when gathered in camp after the hunt, or sitting about the fire and comparing notes of the day's shoot. These stories and sketches come to us from sportsmen who represent every phase of life—all the professions and trades and occupations, from which busy men now and then turn aside for a bit of fun by the stream or in the stubble.

Of course the great bulk of matter appearing in this paper has related to the game and fish of our own country, for that, after all, is what FOREST AND STREAM readers are most interested in. And what a variety there has been! Squirrel shooting in the woods back of the barn, antelope on the distant plains, quail in the wheat stubble, and "chickens" on the prairie; ruffed grouse on the wing and "partridge" on a limb; elk on the "hogbacks," moose in the timber, deer in the brush, caribou on the barrens and coon in the hollow. All sorts of game by all sorts of methods, and in all sorts of places, and by all sorts of people.

Give Cuvier a Bone.

and the great naturalist could construct from it (or he pretended he could) the whole of the animal, living or fossil, to which it must have belonged. Give a man (say 500 years hence) the file of the FOREST AND STREAM for 1885, and he will not need to be a naturalist to reconstruct from its pages the animals and birds and fishes of this country (and he'll find in it a vast deal of curious and instructive information about the "true sportsman," too).

So, you see, the FOREST AND STREAM is a journal of recreation. We do not mean alone that it treats of recreation, but in its columns *is* recreation. This is the practical nineteenth century realization of the old story of

The Magician's Carpet,

on which one sat cross-legged and wished himself in a lovely garden a thousand miles away. With the FOREST AND STREAM in hand you do not need to be a magician to transport yourself in a second to the hemlock browse and the trout pools, the quail cover or the "chicken grounds." Perhaps, after all, we should have named this first, when we began to tell you the secret of FOREST AND STREAM'S success as a sportsman's paper.

The weekly issues of the FOREST AND STREAM form two volumes each year of twenty-six numbers, or 500 pages each, and the file constitutes a library of permanent worth. Twenty-four volumes have already been published. We furnish handsome file binders (price $1.50) which hold twenty-six numbers.

Subscriptions may begin at any time. Per year, $4; $2 for six months. Remit by post-office money order, draft or registered letter. Give name, town, county and State. Address

FOREST AND STREAM PUB. CO., 39 Park Row, N. Y.

The Forest and Stream Publishing Co. will send post paid any book published on receipt of publisher's price.

Sportsman's Library.

J. N. DODGE,
276 & 278 Division Street,
Detroit, Mich.

Manufacturer of Cedar Decoy Ducks of all kinds. First quality, $9 per doz.; second quality, $7 per doz.; third quality, $5 per doz. Also Geese, Brant, Swan, Coot and Snipe Decoys. Duck and Turkey Calls. Decoys made like any pattern furnished without extra charge.

St. Clair Flats Pattern, much larger than the bird; less than one-third the weight of solid decoys. The exact position of a duck on water at rest and unalarmed. The lightest and best decoys made. Heads in different positions; glass eyes, hollow and flat bottom. Do not require weighting to keep them upright. Painted the exact imitation of the natural bird. $15 per doz. Sold by all gun dealers, to whom I give a large discount. If your dealer does not keep them I will send, freight paid, on receipt of price. Illustrated price list free. I also make solid decoys after the Monroe Marsh Pattern, semi-flat bottom; price $11 per doz.

Oil-Tanned Moccasins.

For Hunting, Fishing, Canoeing, &c. They are easy to the feet, and very durable. Made to order in a variety of styles and warranted the genuine article. Send for price list. MARTIN S. HUTCHINGS, Dover, N. H., P. O. Box 368.

The Kennel.

GREYHOUNDS.

Mr. H. W. Smith, having decided to give up exhibiting and breeding greyhounds, offers for sale his celebrated kennel of prize winners.

CHAMPION MEMNON (E.K.C.S.B. 13,609), white and black, the acknowledged champion of England and America, and winner of more 1st. prizes than any other greyhound living. Winnings: Runner-up for the Waterloo purse, winner of the Anglesea Cup, Burton-on-Trent stake, Ellesmere stakes, and many other prizes in the field. Champion cups, 1st prizes and specials at the Crystal Palace twice, Birmingham twice, Hull twice, Warwick, Sheffield and thirty other shows in England. In America: New York, Boston, Philadelphia twice, Toronto and Cincinnati. Memnon is a sure stock getter, "and there is nothing in the stud better bred to get winning merit."—*Bell's Life.*

MOTHER DEMDIKE (E.K.C.S.B. 14,593), black and white, champion bitch of America and considered by judges to be the most perfect greyhound living. The following is a cutting from the English *Kennel Review:* "Mother Demdike has gone to America. She is a wonderfully made one, having the greatest loins and thighs I ever saw, and yet not coarse. There have been no bitches out this year to approach her." The above is said in comparing her with Acalia, Lancashire Witch, Bonny Lass and others. Winner, 1st, champion cups and specials at Warwick, Farnworth, Clitheroe, Lancaster, Skipton, Boston, New York twice, and Philadelphia. At Pembroke she beat the champion setter of America, Rockingham, the champion bulldog of America, Robinson Crusoe, the champion English fox-terriers Raby Nailer and Richmond Patchwork.

SKIPPING ROPE, a black and white dog, whelped May 29, by Memnon ex Mother Demdike; a very promising youngster, valuable for the stud. Price $40.

STEALING AWAY, brindle and white bitch, age 3½ yrs., very large and a splendid mother. Winner, 1st and special, Attleboro and Phila. Price $50.

STRAY SHOT, fawn bitch, age 2 yrs., now mother to ten pups, all sold, by champion Memnon. Price $20.

MEMNON EX CHAMPION FAN.—Four bitch and two dog puppies, the above whelped July 15, in perfect health, color black and white. Price for dog pups $25; bitches $20.

All the above must be sold at once, and satisfaction is guaranteed with any sale. For pedigrees and particulars apply to H. W. SMITH, Box 876, Worcester, Mass. nov5,3t

English Setters

AT $10.00 EACH.

I have always on hand a number of well-bred English setters, 6 to 12 mos. old, warranted not gun shy and to make good field dogs, at $10 each.

BEAGLE HOUNDS,
6 to 12 mos. old. $10 each.

FOXHOUNDS,
From 6 to 12 mos. old. $15 each.
Also other dogs cheap.

EDMUND MAURER,
464 North Ninth street, Philadelphia, Pa.

For Sale—Hornell Spaniel Puppies.

The best in the world; 142 prizes in two years proves it. From 3 to 10 mos. old. No culls or $5 pups ever sold.

In the Stud—Black cocker champion Hornell Silk. Fee $20. Address J. OTIS FELLOWS, Sec., Hornellsville, N. Y., or G. W. LEAVITT, Pres., 32 Hamilton street, Boston, Mass.

High-Bred Collie Pups For Sale.

Three black, tan and white females, by Kilmarnock Bruce (A.K.R. 1422) ex Lady of the Lake (A.K.R. 1423, litter sister to champion Ben Nevis, and winner of 1st prize, N. Y. bench show, 1884); whelped July 11; as handsome as you ever saw. J. D. SHOTWELL, Rahway, N. J. nov5,2t

SETTERS AT $10.

We have a lot of setters, both dogs and bitches, from 6 to 18mos. old, that are fine looking and guaranteed not gun shy, and with a fair nose. They have no pedigree. We will close them out at $10 each. They are a wonderful bargain. ASSOCIATED FANCIERS, 237 South Eighth street, Philadelphia. sept17,tf

Claire-Reeta Kennels.

For Sale—Three very fine Irish setter puppies, whelped June 18, 1885, by champion Glencho ex champion Reeta (A.K.R. 1303). Also two black and tan setter puppies, whelped June 5, 1885, by champion Argus ex Dora (A.K.R. 1183). Address CLAIRE-REETA KENNELS, Pawling avenue, Troy, N. Y. aug27,tf

WM. GRAHAM, NEWTOWNBREDA, BELFAST, Ireland, is prepared to purchase and ship dogs for importers. Dogs purchased from him had the following prizes awarded to them: At New York and Chicago, 1883, sixteen firsts, nine special, three second and one third. At New York, 1884, seven firsts, six specials and one third.

FOR SALE, A NUMBER OF WELL BRED AND well broken pointers and setters, also dogs boarded and broken, satisfaction guaranteed. Address H. B. RICHMOND, Lakeville, Mass. Sept23,tf

K 9 Breaking Kennels.

Pointers and setters thoroughly broken for field trials or private use. Reference given. W. G. SMITH, Field Trial Trainer, Templeville, Md.

Rory O'More Kennels.

For Sale—Thoroughbred red Irish setter stock, full pedigreed Address with stamp,
W. N. CALLENDER, Albany, N. Y.

FOR SALE.—GORDON SETTER DOG, 1 YR. old, just right to hunt this fall; will make a good field dog; kind to children. Gordon setter bitch, 1 yr. old, color black and tan, kind and obedient; will make a good one. A Gordon setter dog, 8 mos. old, color black and tan. Address H. B. VONDERSMITH, Lancaster, Pa. oct29,3t

Mill-Brook Kennels

Thoroughbred St. Bernards.
Thoroughbred Scotch Collies.

In the Stud—Champ. **Verone,** smooth St. Bernard, 2 yrs. old, winner 14 prizes. Fee $50. Young stock for sale. Address with stamp, MONTGOMERY & HASBROUCK, Bergenfields, N. J.

FOR SALE.—ONE BROKEN POINTER DOG, 3 yrs. old, drops to wing and shot and retrieves from land or water. Also one broken setter dog, 6 yrs. old, works close and slow. Will show them on game. GEO. W. LOVELL, Middleboro, Mass. nov12,2t

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, NOVEMBER 19, 1885.

VOL. XXV.—No. 17. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices $1.00 per line. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by the Saturday previous to issue in which they are to be inserted.

Transient advertisements must invariably be accompanied by the money or they will not be inserted.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. Newsdealers in the United Kingdom may order through Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, $5 per year; $2.50 for six months.

Address all communications,

Forest and Stream Publishing Co.

ANSWERS TO CORRESPONDENTS.

TEACH THEM ON THE RESERVATION.

SOME of the good people of the East appear to think that they have found a remedy for all the troubles of the Indian. They imagine that they have discovered a process for transforming him by a stroke of the pen into a good citizen and a self-supporting agriculturist. These excellent people recommend that the tribal relations of the Indians be broken up and that a portion of their lands be allotted to each family, and made inalienable for a term of years. Just how this change of the government of the tribes is going to transform the lazy and generally worthless Indian of to-day into the horny-handed and prosperous farmer of, say, ten years hence is not explained to the satisfaction of any one who is familiar with Indian character.

Curiously enough, the recommendation of the good people of the East is echoed by a very large proportion of the people of the West. These people of the West we should be sorry to call bad, but it is very certain that their motives are entirely different from those which actuate their Eastern allies. The latter know the Indian only in type, and are struggling according to their lights in favor of a sentiment. They imagine that the Indian can be legislated into fitness for citizenship; that an act of Congress can protect him from all the evils that threaten him.

The Western people who are working with them are striving after the valuable lands now held by the Indians. One set of men desire solely to benefit the Indians. The other have little regard for them, but are keenly anxious to benefit themselves. And yet, with these wholly opposite motives, the same course is urged by both.

To break up the present tribal relationship, to make the Indian a citizen, allot to each family his plot of ground and tell him to support himself, would mean nothing less than annihilation to the wild Indian tribes of the West.

The Indian is not fit for citizenship, nor is he fit to take his quarter section and farm it. He does not know, in the first place, how to perform the simplest work, still less does he know how to undertake all the various labors of the farmer. We wonder how many of the Eastern people who desire to see the Indian lands allotted in severalty have any idea of the amount and variety of work which must be done by the settler who takes up a homestead of wild land in the West. It is simply beyond the comprehension of any one who has not himself been through it. Indefatigable industry, unfailing ingenuity, indomitable pluck, these are some of the qualities required in the settler, the man who without capital and with only a few horses or cattle and a small outfit of implements, undertakes to make for himself a home in the Far West. It can be done by him who has the requisite qualifications; but no sluggard, no man unaccustomed to work can do it.

Has the Indian these qualifications? At present he has none of them. He is not used to work; let the squaws dig in the fields. He knows nothing of tools or machinery; to him these things are "medicine." If he can be induced to work, he wants to see some result of his toil at once; and after laboring in a desultory fashion for a little while he becomes discouraged and thinks that it is of no use. If his farm were given him outright he would sell it the next day, if possible, for a little sugar, coffee, tobacco and red cloth. It is proposed that his land shall be inalienable for a period of years, so he could not sell that; but he would sell his crops, if he raised any, and his tools, whenever he happened to want anything. His cows he would kill for beef as often as he was hungry. There would remain his farm and his horses. The first he could not sell, the latter he would not. His land could be made inalienable, his personal property could not. But of what use would the land be to him without the means of cultivating it?

It is vain to hope to elevate the Indian by any such project as this one, which has several times recently been recommended by conventions of well-meaning friends of the Indians. No mere series of resolutions or act of legislature will at once make any radical change in his nature. The civilizing of these people must of necessity be a gradual process, and to be successful it must be carried on intelligently, and by those who know something of their nature and their needs.

What the Indian requires is education, and by education we mean more than mere book learning. The education of the plow and the reaper, of the hammer and the forge, of the axe and the sawmill, are worth to him far more at the present moment than to know how to read and to write. These last are important, but only to the children. They must be brought up in the white man's way, and before they have strength to labor must be taught self-control, concentration and a knowledge of their own powers. And by as much as they are thoroughly taught these things, by so much will the task of teaching them to earn their bread be made more easy.

Teach the adult Indian, then, to labor with his hands. Make him understand that the white man has to work in order to get food for his family, wagons to cart his wood in, horses to draw his load, money to buy sugar, coffee, tobacco and red cloth, and that to have all these good things the Indian must work too. Show him his boys and girls in the schoolroom, and let him see that they are learning to read and write like white people, and that they have discarded their blankets and wear the white man's clothes. He will grumble, will say that once his people owned all the country, and that to work is fit only for a squaw; but little by little he will come to see that he must work, and—he will take hold. At first he will learn slowly, will for a long time need help and encouragement, will have to be shown over and over again how to do the same thing; but in the end he will conquer and will become a successful worker, as so many of his civilized brothers have done before him. To be successful his education must be conducted under the present system, or under something nearly like it. With good agents and a very considerable increase in the force of industrial teachers the Indians can be taught more effectively and more inexpensively on the agency than elsewhere. Let him remain in his present condition of tutelage until he is able to take care of himself, and then it will be time enough to talk of breaking up the tribal relations.

A REPORT is in circulation that twenty bison were killed recently by a party of Englishmen in the Yellowstone National Park. We are unable to trace this statement to any authentic source, and on its face it bears the stamp of unprobability. If it is true, a great outrage has been committed, for which the perpetrators should be made to suffer the most severe penalties. If it is true it only emphasizes the great need of a larger force of assistant superintendents in the Park, and of assistant superintendents who have some idea of their duties. The number of bison existing in North America at the present time is probably not over seven hundred, all told, and may be much smaller. At all events there are so few of them left that no means should be left untried to protect and cherish those that still survive.

THE FISH COMMISSION.

FOR some weeks there have been vague rumors in the air that Congress was about to appoint a committee at its next meeting to investigate the management of the United States Fish Commission, and that the First Auditor of the Treasury had some grave complaints to make against Prof. Baird. These rumors came in the newspapers in the form of hints without specifications, and were therefore not in a shape to comment upon. It now appears that the First Auditor does not approve of the scientific investigations, nor of fishculture in general. He has declined to audit a bill for plumbing at Wood's Holl, on the ground that it was not necessary for fishculture, and has imputed unlawful expenditure to Prof. Baird in erecting a "residence building" at that place.

The facts seem to be that in order to facilitate the work at Wood's Holl a building was necessary for the workers, especially as there was no hotel near, and that Congress authorized the erection of a suitable structure. So far the First Auditor's criticisms were upon the wisdom of Congress and not upon the head of the Fish Commission. But the plumbing bill caught his eye. Was it necessary to have lead pipes, brass cocks and wash basins? Might not fish be hatched without the two former, and by men with dirty hands? It certainly seems so to the gentleman who, dressed in a little brief authority, felt it necessary that he should do something to spread his name broadcast through the land as a strict economist and a guard upon the Treasury, and whose sleepless eye unceasingly searched for unauthorized lead pipe.

There is not the least doubt that Prof. Baird would be glad to have his methods and expenditures investigated by a committee of men who knew something of the value of scientific work or of practical fishculture, on which all civilized governments expend more or less money. The First Auditor exposes his ignorance of fishculture by speaking of it as producing a "few pails full of minnows." A perusal of the reports of the United States Commission and those of the different State Commissions, or the volumes of FOREST AND STREAM, would theoretically qualify him to judge how many "minnows" those pails held, what becomes of them, and how the people in the vicinity of their place of deposit regard them. He would then be more capable of expressing an opinion concerning work which is appreciated by intelligent people at home and abroad.

It may not be known to the First Auditor that a large part of the very valuable work done every summer at Wood's Holl is volunteer labor by students in the different colleges, who do it for love of it, and without a roof over their heads and a wash basin they would not find it possible to live on the rocks of Buzzard's Bay.

It is quite possible that the employees of the Commission might hatch some fish at Wood's Holl without wash bowls, yet it is not probable that any reasonable being would ask them to do so, but it is not possible to keep many forms of marine animals alive without running water, and it is only when they are living that their habits can be observed. This, however, is a matter that the First Auditor does not seem able to comprehend, or else he is trying to build up a personal reputation by slurring scientific work and questioning the wisdom of Congress in making appropriations.

THE CHALLENGE OF THE ARROW.

THE challenge which we print this week on behalf of the famous old Arrow should give a new impetus to the international competition which has been by far the main feature in the year's yachting. Abroad the season has been anything but brilliant, and at home it has been even worse in the regular races, the only enlivening feature of the year being the contests for the America Cup, which have stirred up designers, builders and yachtsmen here, and have created almost as much excitement abroad. It is too early yet to conjecture the condition of yacht racing in 1886, but leaving out the Cup races, we would have little grounds on which to prophesy a brilliant season here or abroad, judging from this year or the previous one. On both sides entries have been few among the leading races, and the large fleets of long ago seem to have left the field to a chosen and select few—Irex, Marjorie, Genesta, Wendur, Lorna; and here Bedouin, Gracie, Mischief, Grayling, Montauk and Fortuna. Abroad the nearly created B and C classes promise a revival of sport; but here there is no similar influence at work.

The international races, however, put a different aspect on the matter; here they have revived a general interest in yachting, and Puritan's success has resulted in an increased enthusiasm on all hands. Abroad they are little likely to rest for fifteen years before another trial. A defeat like this

season's, even though by a small margin, must be wiped out, if possible; and we may confidently expect to see Irex, Galatea or Marjorie over here next season. It is too late now to say that English yachtsmen do not care for the Cup, that more sport and better prizes can be had at home, and that they cannot lose a season's racing for a few races here. The late contests have shown that they will be accorded fair play, and also that they will meet with antagonists fully worthy of their steel. The supremacy still rests on the western shore of the Atlantic, and their reputation as a yachting nation depends on a continual effort to retake the emblem lost in 1851. On the other hand, we are confronted with three direct challenges from the British yacht fleet, two from our own cups, taken from us with hardly an effort even to defend them, and whose continued stay on the other side must aggravate the reproach that rests on our fleet as a body for its absence from the open races this fall. The third challenge comes direct from a boat that differs greatly from the prevailing type of British yachts, while at the same time as different from our favorite type. The owner of the Arrow throws down the glove in earnest; let us see who will be first to take it up and bring a real Queen's Cup to America. Neither side can afford to rest on its laurels; each has much to gain before it can claim complete supremacy. It looks now as though next season would witness some hot battles afloat on both sides of the water; and the results of which, whatever they may be, cannot fail to advance the growth of yachting.

SAIL AREA AND CANOE RACING.

THE natural tendency of competitive sailing, unless restricted by some rules or limits, is to encourage an abnormal sail spread that can only be handled, and then not always safely, by experts. The greatest evils that might result from this, in canoeing, are that the large rigs, with their sails, spars and ballast, are unhandy to transport; and as the tendency is to sacrifice cruising qualities to mere speed, the cruisers and their boats are virtually barred from racing in favor of a few expert gymnasts in racing machines. The former evil has been felt in previous years, where a load of one or two hundred pounds of shot and heavy centerboards, with spars sixteen feet long, had to be transported for a long distance; but practically the other evil, the presence of racing men and boats at the meet, has really amounted to little. It has, however, been magnified by the weak-kneed sailors and paddlers into a good and sufficient reason for holding back from the races. Each year new men, with no reputation or special practice, have come in and taken fair prizes, as witness Mr. Gibson in 1883, and Messrs. Stanton and Nimick in 1885, all of whom came in as novices and yet did work that entitled them to have their names added to the list of invincibles next year, against whom no ordinary man should enter.

That there is really little foundation for this complaint is shown by the fact that the novice and junior races, held since the second meet, often fail to fill well. Each year the restrictions on the development of racing machines have increased, one of the most important being the adoption of the average system last year, with the "one man, one canoe" rule, until the racing machine has been entirely eliminated.

The best evidence of the healthy tendencies of the present canoeing is found in the late agreement which the two leading racing men have entered into, to voluntarily limit their sail area to eighty-five square feet, not including spinnakers, which latter neither of them now use. Their example must be followed by most of the other racers, in which case the last grounds for such complaints as sometimes appear in our columns, as well as the excuse so often given for not racing must disappear together.

Further than this, these two canoeists have also repudiated the general abuse of fittings and gear that so many suffer from and both of their boats are rigged and fitted solely for use. If beginners and novices would copy such examples as these, we should hear no more about the many shortcomings of the canoe, except from those whose sole ground for criticism is an utter ignorance of the subject.

THE PROPAGATION OF SHAD.—To all who are interested in fishculture we cannot too highly recommend a perusal of Col. McDonald's remarks on the culture of shad, in another column. If there are still any who have doubts about the benefits of shad culture, we advise them to read it. Col. McDonald is too well known as a practical man in fishculture to need any introduction here. The statistics which the Colonel brings are better than pages of theory, and carry conviction with them. In the front rank of the world's fishculturists, he has not been content with hatching fish and planting them, but has spent much time in observing the habits of fish, even to tracing the effect of ocean temperatures and currents upon their migration. The present paper is a sequel to the valuable ones read by him before the Fishcultural Association on the movements of shad at sea, which attracted great attention both at home and abroad.

POINTERS AND SETTERS.—November is the month of field trials. The list this year is larger than ever before. This is an excellent indication that the bench show is not likely to outweigh the field trial in its influence upon the sporting dogs of the day. One notable characteristic of this year's trials is the large number of pointers run and the interest taken in their performances.

[From a Special Correspondent.]

WESTERN GAME AND HUNTING.

IN the old days, say ten or fifteen years ago, large game could be found pretty much everywhere in the Rocky Mountains. Of course, the hunter to be successful had to know something about the habits of the animals he was in search of, was obliged to look for them intelligently, and sometimes to undergo some risk from hostile Indians, but, if he were persevering, he was almost sure to meet with fair success. Now, hunting is quite a different matter. After they fairly got among them, the skin-hunters killed off the buffalo in a very short time, and in most regions they have also destroyed the elk and the mule deer.

Up to the time when the Northern Pacific Railroad crossed the Little Missouri, the valley of that stream was a great country for game. It was one of the best antelope countries that I have ever been in; the breaks along the river were the favorite resort of the mule deer; elk were plenty, and there were sheep in the Bad Lands and buffalo on the prairie. Up to this time it had been a favorite hunting ground for the Sioux, one of whose reservations is on the Missouri River not far away, as well as for the Berthold Indians, and a man who was going to spend any time there had need to keep his eyes well open, and his horses close to camp at all times. So the game was preserved. As soon as the railroad came, a concerted attack was made on all the large game. Now there was a market for meat and hides. As a result of this attack the larger game animals are now pretty nearly all gone. Mr. Theodore Roosevelt's charming book, entitled, "Hunting Trips of a Ranchman," tells the story of the game that is at present to be found on this stream, and those who were familiar with the region before the railroad made it accessible, will be surprised at the almost entire absence of the larger *feræ natura*. A few deer and still fewer antelope seem to be all that there is left in the country. Birds—sharptail grouse and waterfowl—still abound, and will continue to be plenty as long as the farmers and small settlers keep out of the country, but the big game has disappeared, never to return.

The same story can be told of many a region in the West, and year by year the question as to where we can go for big game becomes more and more difficult to answer.

I look forward to a time in the not very distant future when those of us who wish to hunt will have to do it without our rifles. If the good intentions of the Government with regard to the Yellowstone Park are carried out, we shall be able to go there and start out on our hunting expeditions. We will look as carefully as on former days for our game, and will climb and creep as laboriously as when we were bent on slaughter. Then, when we have found our game, and have approached as near to it as possible, we will lie and watch it until our curiosity is satisfied, and then, showing ourselves and clapping our hands or throwing rocks at it, will see the graceful creatures trot or gallop briskly off, just as they used to do in the olden days when we carried our true rifles. But in these coming days there will be left, after the band has passed out of sight, no brown carcase lying on the hillside, half hidden by the gray sage brush; no more will we have the labor of butchering, the fight with the pony to make him carry the dripping load, and the long walk to camp, leading the well-packed beast. No; we will watch the game out of sight, sigh regretfully, and tell each other how in old times we could have killed that elk, or deer, or sheep, or buffalo; just where we would have hit him, and what similar shots we had made in those happier days before the game had all disappeared from the free hunting grounds.

It is not yet quite so bad as that, however. There are still a number of places now easily accessible by means of the railroad, where there is still some game. No buffalo are left. But there are still a few regions where elk, deer and antelope are fairly plenty, and somewhere there are a few mountain sheep. I confess, however, that when my friends ask me where they can go to get good hunting, I am somewhat at a loss to direct them. The Bighorn and Powder River Mountains used to be a great game country, but since so many cattle have been brought into them, the wild creatures that once fed there have to a great extent been killed or driven off from the valleys and the more open country. The cattle have had almost as much to do with this disappearance as has man. The little parks and the hillsides, where the grass grows sweet and tender, have been invaded by the herds, and the game has been crowded out. You may ride along carefully through what appears a fine hunting country, seeing neither game nor cattle, though the sign of the latter will be abundant, and as you pass near some ravine, green with the trembling foliage of the aspen, you will hear a sudden rush and snapping of sticks that will start your blood to moving more rapidly and make you fancy for a moment that a band of elk is afoot. Then from out the brush will dash half a dozen cows, steers and calves with heads and tails in the air, and you feel in your disappointment like taking a shot or two at them. So it is in the cattle country. The domestic animals have usurped not only the feeding grounds of the game, but their resting and hiding places as well. The spots to which cattle resort are truly remarkable to one who knows only the apparently dull and placid animal of the Eastern farmyard. Often a little bunch of range cattle will be found in places where, were the country not occupied by man, one would look only for mountain sheep. In fact the cattle adapt themselves to their surroundings and live much as the buffalo used to, and in a mountain country they show some disposition to assume the habits of the mountain buffalo.

A country which is now said to contain a good deal of game is the Crazy Woman's Mountains. These lie north of the railroad, and may easily be reached from either Livingston or Bozeman. The latter, as being the larger town of the two, is perhaps the better to fit out from. I have been informed within a few months that deer, elk, and bear of two species are abundant in these mountains. The country is beautiful and admirably adapted for camping.

Another locality from which good hunting grounds are said to be easily accessible is Ft. Logan. This town is on the site of old Camp Baker. It is surrounded by lofty mountains, and from personal experience I can say that years ago it was a grand hunting ground. Splendid fishing may be had near to it in Deep Creek or Smith's River, both for trout and grayling. I should not like to say how large the latter grow for fear you might accuse me of exaggerating, but I can say that I have seldom seen trout anywhere as large as some of the grayling I have taken near this spot. A daily stage leaves Townsend for Ft. Logan, which is only twenty miles from the road.

No doubt there are still many places between the Powder River Range on the east and the Bighorn River on the west, where plenty of game may be found. It is a wide stretch of country, much of it mountain and timber-covered. Probably through these mountains and in this timber the elk and deer still hold their own, if the skin-hunters have not penetrated there. From Miles City or Billing's, stages run into the hills, but a hunting party would have to fit out at one of these points and go with their own wagon and saddle horses into the mountains.

West of the range, in Idaho and eastern Washington, there is said to be some game, but the country is for the most part heavily timbered and not so easy to hunt in as where it is more open. The Sawtooth Range is reported to still contain some few white goats and mountain sheep as well as blacktail deer, and perhaps elk.

I have spoken hitherto principally of large game, because most of my hunting is done with a rifle. With the shotgun one can of course have plenty of sport, and it is delightful to watch a good dog work, but after all when I can get a chance to hunt big game I let the scatter-gun rest in its case. The country west of St. Paul still presents every attraction in the way of game birds. In Minnesota there are three species of grouse, the pinnated, sharptailed and ruffed, and we are all familiar with the accounts of the multitudes of ducks and geese that in spring and autumn stop to feed on its wild rice ponds, its wheat fields and lakelets. Further west, in Dakota, grouse and waterfowl are very abundant, and when you reach the sage plains you find the largest of all American grouse. Sage chickens, as they are commonly but incorrectly called, are easily killed early in the season, for they make a tremendously large mark, and are usually very tame, but they must be well hit, for they will carry away a great deal of lead. Later in the season, when the weather has become cold, the birds collect in great packs, and are then wild and very difficult of approach. On reaching the mountains we find ourselves in the home of the dusky grouse. This species, variously called dusky, mountain, blue or pine grouse, is exceeded in size only by the sage grouse, and attains a weight often of four pounds. To my mind it is, except the wild turkey, the noblest game bird of America. In many of its habits it resembles the ruffed grouse, but it is not so exclusively an inhabitant of the timber as is that species, the young broods often frequenting open valleys, parks and prairies during the late summer. The flesh of the blue grouse is delicious in quality and flavor, and the bird is quick on the wing, and in its flight and methods—in fact in almost all respects except size and plumage—resembles the ruffed grouse. In thick timber or underbrush it is quite as difficult to kill as that species. In the country frequented by the blue grouse the ruffed is also usually found, though the latter appears to be much more local in its habits than that species, and will thus perhaps be confined to one or a number of limited areas, while its larger relative is more or less abundant everywhere throughout the region. The dusky, ruffed and sharptail grouse are splendid birds, and wherever they are found in any abundance, furnish excellent sport.

The best time to visit the Western country is in August and September. The crops are then falling before the reaper, the cattle are fat, and one has at this time a good opportunity to form some idea of the agricultural wealth of the region. These two months are also the best in which to visit the National Park, though perhaps August is the better of the two for this trip. In September it is often very cold in the Park, and occasionally there are one or two snowstorms during that month, but the snow does not remain long on the ground. In August the days are very warm and delightful, and yet the nights so cool that one requires two or three blankets over him; the roads are then good and hard, and the flies are no longer very troublesome. The weather is usually fine and little interference with travel is had from storms.

No one should ever cross the Missouri River at this time of the year without making a visit to the Park.

I have no intention of attempting a description of the wonders of this region. Excellent accounts of it have been published and are accessible to every one who desires to inform himself on the subject. It is universally acknowledged that nowhere in the world is there such a combination of

natural wonders and beautiful scenery as here. And it is now so easily accessible that the trouble of reaching it is not worth considering. In fact it presents no more difficulties than did a journey through the White Mountains a few years ago. The railroad from Livingston transports the traveler to within six miles of the hotel, and the remainder of the trip must be made by stage or in the saddle. But the roads are quite good and the journey to the Geyser Basins, the Lake and the Falls is an easy one. People are much too apt to try to "do" the Park in a hurry, and so rush along, day after day, only half seeing things and becoming so exhausted by the rapidity of their progress that they lose all appreciation of the beauties and wonders of the Park. The trip ought to be made deliberately, and it will be all the more enjoyable if one has time to take his own outfit and travel on horseback, not only over the beaten routes of travel, but through the byways of the Park as well. If this plan be followed the traveler will see a vast deal that is at present out of the reach of the ordinary tourist, and will bring back from his trip many delightful memories of these out-of-the-way spots. Such a trip the sportsman should take, and then after he has spent a few weeks in the Park—where besides the beautiful scenery he will have phenomenal fishing—he can devote a portion of September and October to hunting in the mountains.

There should be no difficulty in procuring good guides at any of the places that I have mentioned. This is one of the most important matters in connection with a hunting trip, and almost the whole pleasure of the excursion depends on your men. Of course people who are used to traveling in the West can start out without guides, and by means of maps and such directions as they can obtain from the residents of the place of departure, can find their way about through the mountains comfortably enough; but those who are new to the mountains should provide themselves with good men who have hunted through the country to which they are bound. The first men who are likely to offer their services will be the long haired braggarts, of which a few still survive in the West. I am not fond of these, and if a man insists on airing his wonderful shots and his success in hunting before me I usually set him down as a liar. I like best the quiet men, who tell you what they have to say in a few words, and are quite willing that you should do the talking. I have usually found that such men come out strong when the time arrives for acting.

Starting out on such a trip as I speak of in the early days of September, one can scarcely fail to find pleasure in the mountains. A shotgun and some fishing tackle should be taken along to insure variety and abundance of the food supply, for there may be several days together when it will be impossible to kill big game, but birds are almost always plenty, and most streams, except those tributary to the North Platte and Powder Rivers, abound with fish. It is not a bad idea to take along a few traps, for many of the streams have still a few beaver in them, and half a dozen beaver pelts of your own trapping make a very nice addition to the list of the trophies you will bring back.

In old times one could have good success by taking wagons and camping at the foot of the outlying spurs of the mountains, or by following the valleys up until the streams became too narrow for wagon travel. Then camping, they could hunt within ten or fifteen miles of the camp and usually be successful. Now, however, the game has been so much harrassed that it has in a great measure retreated into the wildest, roughest country, and it is much better to provide oneself with pack animals so that you can get far back into the mountains, and out of the range of the cattle and the men who hunt for the market. If the point of departure is not too far from the country where game is to be looked for, the start may be made with a pack train. But it must be remembered that with packs one must travel light, and so, if a long journey is to be made before the game country is reached, it is better to start with wagons, driving the extra animals for packing and carrying their rigging in the wagons. When the country becomes so rough that these last must be left, they can be cached in the brush or given in charge of a neighboring ranchman, and the remainder of the trip can be made with the packs alone.

I advise people who are traveling with a pack train always to carry tents. When the poles are jointed there is no difficulty about transporting them on mule back, and there are likely to be rainy and snowy days when the tents will add greatly to one's comfort. Plenty of bedding and plenty of provisions are two essentials to comfort in the mountains. In September, or indeed in any month when you get up into the high mountains, it is likely to be very cold at night, and nothing is so wretched as to shiver half awake during the two or three hours before daylight. A liberal allowance in the commissary department is very important. There may be delays, a mule may fall down in a stream and wet its load, or a dozen other things may occur to make you run short of provisions if you have calculated too closely, and it is extremely annoying to be forced to cut short a trip on account of some mishap of this kind. A little extra "grub" does not cost much, and by carrying it you may often save yourself some anxiety and perhaps some little suffering.

Those who propose such a trip as I have outlined, if unacquainted with the mountains, should always take advice from some old hand who knows what is required for such a trip. Then, if they have good men, good animals and a proper equipment, they may start out with the sure hope of having a most delightful trip.

The Sportsman Tourist.

A CHATEAUGAY EXPERIENCE.

THE regular session of Directors was over. The confidential chat and unofficial conference, which generally follow official work, were also nearly ended, when my friend looked over to me and said, "B., will you take two weeks with me for lake fishing, to start at a moment's notice, presumably ten days from now?"

Before replying two things flashed through my mind, that I could take the time as well as not and that I knew less than nothing about fishing. These two considerations, by no means a close match, fixed my answer, and choosing the classic reply of Dido to Æneas, I responded, "I'm your hairpin."

I was as yet decidedly uncertain as to the length and breadth of that which I had committed myself to, save that there was one constitutent part of water, and that I was to show a certain readiness. If the rest of the combination was as well ordered, however, I had great confidence in the satisfying success of the combination. I delayed my departure from the bank to determine this, and settling into two arm chairs, the unfolding of the programme revealed to me a mixture which I epitomize as follows:

THE ADIRONDACKS—In their bosom; a lake (frozen over at present); on the lake, a comfortable home belonging to my friend; otherwise, nearly absolute solitude.

HOUSE—Comfortably furnished, but larder unstocked. All supplies to be taken with us, and which could be arranged to mix with the other ingredients, and as completely as our own sweet will suggested.

GUIDES—Ready, and instructed to telegraph immediately, when the ice had left the lake.

SPORT—Positively, salmon trout fishing in its prime; possibly, if warm weather should come early, some fly-fishing before we left for home.

Men have had visions of beauty and delight, rapturous enough, but fanciful and unreal. Here I had a picture, a representation of fact and possibility, equally entrancing and doubly satisfactory.

I comprehended with increasing clearness that the other ingredients than water were all right, and that I had made no mistake in my committal. Whether my friend had, in making his proposal to one who could not tell a grizzly king from a minnow gang, or a scarlet ibis from a spoon, was his business, not mine.

"Presumably ten days from now" gave ample time for preparation, but under my friend's direction and advice I set about getting together that which I lacked and knew nothing about, viz., the fishing gear. Although rods and the whole business connected with the sport were a part of the furniture of "the house," still I desired a "kit" which I could later set before my own eyes and live over again with the same delight the experiences to which I now looked forward. For the rest of personal outfit I was amply supplied. Hunting had stocked my gun-room closets, and rubber coats and blankets, sou'wester, jerseys, boots, heavy and warm woolens, etc., etc., were waiting to be thrown into the trunk, as many a time before. The only other "note of preparation" to be sounded was that of "supplies and sundries," and this we decided to leave until the expected telegram really came to hand.

While this ten days had yet a week to run, my friend came to my house one evening anything but a typical fisherman. "Spike-tailed coat" and white necktie are the antipodes of rubber boots and flannel shirt, and I found in them nothing suggestive of "roughing it" in the wilderness. An unusual light in his eye and a wealth of pleasure which beamed in every feature seemed to prove that here at home amid fair women and brave men, real enjoyment for him was to be found, and I was not surprised to note that he evidently was seeking me out thus to express himself. His mood was contagious, and as I advanced to meet him, expecting him to utter some fulsome line of some flattering song in praise of beauty and chivalry, he glowed as he said, "The telegram came to-night. The ice went out this morning. We start at 8 o'clock to-morrow night!"

* * * * *

The Montreal express drew out of the station the next evening with the sleeper attached as usual. My friend and myself were the sole occupants of this car. This fact, together with another, that we were free to do for the next two weeks absolutely as whim or fancy should suggest, gave us a sense of proprietorship or ownership in regard to this car and train which was exceedingly comfortable.

It is true we permitted the conductor to "punch with care" our tickets, but we patronized him and made very light of such little "runs" as his—we sat in several seats at the same time (so far as possible), we smoked when and where we pleased, we swelled, the feeling grew that we were accustomed to take exactly these trips, every season and every day—we—but enough.

It was the exhilaration which comes of a light-heartedness that follows, rest from responsibility, relief from strain and change from daily routine. As the car began to move, so all these were being left behind, and that pleasurable expansion which gave evidence of still youthful elasticity of spirit began immediately to show itself as described above.

God pity the poor soul whose temper of spirit is lost and who cannot know again the boyish delights which are sworn foes to dignity and stiffness.

We breakfasted in the morning in the restaurant connected with the railroad station, and a comforable breakfast, too, all but the coffee. "Better coffee and less calf-ee" was our verdict as the white-headed old chief bottle-washer continually called out: "Plentee of time, plentee of time; take your time, gentlemen, no hurry, plentee of time."

At half-past six o'clock we were drawing out of St. Albans on the "Chicago express"—so the time table stated it—the morning of a delightful day. This remarkable "express" established its claim to this title by running at a most moderate speed, stopping at every hamlet of log houses—or sawmill—and finally winding up (so far as the detailed statement of the time table showed) at Ogdensburg! I wonder the railroad officials did not call it "The great through China limited accommodation"! It brought us, however, to our journey's end, so far as railways were concerned; and without delay or accident, for which we were grateful.

Up to this point I had been co-equal with my friend. Was I not as much at home in traveling as he? Were not "the cars" as tediously familiar for me as for him?

But here—as we left the great "express" at Chateaugay station, I watched our luggage with all "supplies" being piled in its own solitary heap on the platform, and as the train rolled away toward Ogdensburg via Chicago—I took up my proper instrument—my violin secundas—and no more ventured on equality, much less leadership, with the true "head and front" of this expedition.

You observe that all I have had to say to you thus far is in a sense preliminary and anticipatory, and perhaps you think it—as it may be—too long drawn out.

But who does not know that delight and enjoyment of preparation, which constitutes a famous chapter in every sportsman's experience? The whole pleasure is not concentrated in the shot that kills. The entire satisfaction is not in the strike that captures and finally lands the fish. But every fresh trip, to be complete and perfect, must furnish a series of three lively chapters—of anticipation, of active experience, and (longest of all) retrospection or "living it over again."

Here we are then, dear FOREST AND STREAM, disembarked at Chateaugay; not yet arrived at our destination, but on the borders of the kingdom, with civilization marks growing less and less broad, and nature's wildness and wonderful ways showing less and less scars from its hand.

The discovery some years since of valuable beds of iron ore in the hills to the south of our lake has established a road from this station, duly planked, which makes our ride of ten miles to the mouth of Lower Lake Chateaugay one of comfort and enjoyment. Stowed away on our load of luggage, stores and traps, which were now piled in McGaully's wagon, and driven by this prince of U. S. mail agents himself, we refilled our pipes, clutched tight Uncle Sam's mail-bag, heard the crack of the whip and the welcome shout "Git up!" and were off, leaving iron rails behind us.

Away to the south, a blue line of hills formed the horizon, with bold and rugged outline. To the north, hills again constituted the barrier to further sight; but further away, and between which and ourselves lay the winding silver-thread of the river St. Lawrence.

The sun was bright, with here and there clouds throwing their dark shadows on hilltop and valley, and the scene was replete with beauty and freshness. No green showed on the budding trees as yet, and the birds were not in full chorus as at home, not having trooped thus far north so early, but they were on the wing—coming.

As we drew nearer to the southerly hills the smoke of immense charcoal kilns filled the valley before us, and I learned that these were at "the Forge," and that there we should "take the steamer." This did not sound like the wilderness I had looked forward to, and my barometer of anticipation marked a change in a slight fall. But arrived here, it proved but a small hamlet, composed of the forge itself, the log houses of its workers, the company's store, and a few places of more modern air.

Adding to our stores a crate of Bermuda onions, we unloaded from wagon to steamer—The Adirondacks. This steamer was all right, small, perhaps fifty feet long, comfortable and jolly, and would prove a valuable link between us and civilization in the following days, and assure to us our daily mail. So my barometer now marked another change—a decided rise.

It was cooler up here among these grand old hills. The wind frolicking about the margin of the lower lake, would dart out across the water in visible puffs, like swallows chasing and swooping in happy flight. I pulled on my dog-skin jacket and refilled my pipe as the little steamer swung off from the rude pier and pointed her sharp little nose out into the lake, and settled into the bow with my friend as "courier de place," to point out features of especial interest.

This Lower Lake Chateaugay must formerly have been of charming beauty, captivating in its seclusion and quiet placidity. To-day, with almost every tree cut from the surrounding hills and bordered by uneven country bristling with stumps, it is not attractive. It suggests a chained convict with shaved head, all beauty, grace and virtue long since departed. No wonder all birds and game and even fish have fled its confines before the blight of these first attacks of civilization.

Sailing through this lake and entering the "Narrows" we now had some two miles of changing view. The river which connects the upper and lower lakes winds and twists its tortuous course, and brings us near to wooded hills and primitive forests. With every turn the assurance grows that beyond really lies the picture which has hung before us since we started. At length, when it appears that we have entered a veritable *cul de sac*, and that further progress is absolutely shut out by the sides of the rugged hill which lies directly before us, we make a sharp turn to the left, and presently swinging around Bluff Point, we have fairly entered upon the ruffled bosom of Upper Lake Chateaugay. Oh! for a poet's pen, for an artist's pencil, to depict the beauties of this glorious spot.

The long and ever rising hills of the Ellenburgh chain—around a spur of which we have wound our way into the lake—shuts it in to the north. On the east higher and grander mountains which culminate in Mount Lyon and Mount Averill, nearly 5,000 feet high, stand eternal and ever faithful guards. To the south and west the Lookout Range complete the girdle, and here, nestled in safe seclusion, lies this queen of Adirondack waters. She is a fitful beauty, however, and her aspect changes with every changing mood. Restful and peaceful she reflects from her quiet bosom all the loveliness of her charming borders, and the added glory of a perfect sky. Or, responding to the spirit of the other elements, she lashes herself into a foam of mimic fury, as the clouds lower and blasts of angry wind sweep down from the snow-clad summits above her. She is delightful in her changes, and wonderful in the quickness with which she exhibits them. Except a few houses scattered around the margin (and one scar near the head of the lake where the ruthless axe began its devastation, inflicting the wound which may soon heal, as its further use has been interdicted by a better sense), here it is as always. A road winds its hidden and unsuspected way up into the eastern hills toward Dannemora, but aside from that the only highways open are the broad bosom of the lake itself and the trails which lead away still further into this glorious wilderness.

But about midway up the lake, on the western shore, my attention is caught by the sight of an appropriate house, just at the water's edge, in the clearing of which floats the old flag from its lofty staff. Blue smoke curls from its chimneys—another signal of hospitable welcome. Our steamer's prow is turned toward this inviting spot, and standing across Smooth-rock Bay and by Poplar Point, we approached near enough to observe the figures of one guide sitting on the steps of the house, while the other stands, waiting our arrival, by the side of the boats drawn up on the sandy beach. It jars on my ears as the vicious little steamer, with a long-drawn screech, signals our people that this, her first

appearance this season, is for them. The echoes come answering back from every sentinel hilltop; and in fancy I see the startled deer throw up their heads in quick alarm; I see the waterfowl dive with lightning flash or take to wing to reach the hidden recesses of some protecting swamp; I see even the sluggish bear raise himself upon his haunches to peer through some opening in the woods over the waters of the lake, in anxious doubt as to the meaning of this unearthly cry—and I curse the steamer's whistle.

We have arrived, however, and attention is restricted for the moment to our disembarking. As the dock has not as yet been floated into its place from its winter anchorage, Stephen puts off in his boat to take us ashore. The traps and supplies proving a boatload, Tyler shoves off to us also, and we enter his boat after instructing Captain Sheppard to call each day to deliver and take our letters and bring us fresh milk, etc.

So here we are! Landing at the pier, we walk up the green slope to the house and enter from its broad piazza immediately into the main room of the house. Large, comfortable, and with a roaring wood fire blazing away in the capacious fire-place. We began to unpack our traps and settle at once. Guns and rifles (more for play than use) are put together and in their appropriate place. Trunks opened, rooms selected and appropriated, rod cases and tackle laid in place for rigging somewhat later, and we feel that we are "at home" and order dinner. While dinner is preparing, let us look off on to the lake and within at our household. The lake lies before us, with the eastern hills beyond rearing their white heads cloud high. A delightful scene. Half way across the lake—some two miles wide—lies Mead Island, a rugged rock, with few trees and shrubs, and just large enough to accommodate the lodge of some wealthy capitalist, who has proved the value of money in securing this wild and isolated spot for such time at recreation as he may find. We cannot see the entire five miles of the length of the lake, as Bowditch's and Pine points shut out the upper end; but it is a glorious lookout and captivating to the last degree.

Stephen, the chief guide, with a quiet mien but a twinkle in his eye, has endeavored to provide a "salmon" for our dinner, but our advent was so prompt he had failed. No fault of his, however. He is not a man of failures, and his sturdy muscles and well balanced judgment laugh at a suspicion of baldness and gray hairs which will not be denied.

Tyler, the second guide, and who is to be my faithful Achates, is a younger man, of sturdy frame and well-knit muscles which show power and capacity for endurance. His restless and keen eye betokens quick observation and trained faculties, and his general appearance proclaims the ready and trusty guide. He and I passed many hours together subsequently, and he proved himself worthy of all confidence and friendship.

* * * * * * *

Life on this lake possesses its own charm. Here I desire to hang up one or two pen-pictures of life as we enjoyed it, before which I must say that Dick Shutts, who occupies Indian Point, a little further up the lake, is also known to fame as a character and attraction and a most worthy host for all true sportsmen. He knows the country thoroughly, and whether it be to still-hunt or night-hunt—whether it be four bears in a day or eight holes through a deer's hide to a single rifle shot—Dick is the man, and let sportsmen make a note of it.

* * * * * * *

Tyler is rowing me up the eastern shore. Our gear is well ordered, and the spoons play well as we troll, gliding along not too fast nor yet too slowly. No strike as yet this morning. Water too smooth, though the wind now begins to ruffle the surface of the water with some promise. Away beyond the head of the lake, sweeping down the gorge in Lookout Range, black clouds have gathered, the advance of a mightier and darker host, which hangs about and beyond the high hills. Over us the bright sun tempers the chilly air, and bathes the lake and lower borders in rich and glorious light. The contrast is most wonderful, and my interest is absorbed until it occurs to me to call Tyler's attention to it. "Sharp squall coming and snow" is his only response, and I draw on my rubber coat and lay my rubber blanket at hand.

Other boats have put in at Thomas's or turned back to Ralph's. I wonder where Stephen and my friend are, and then decide to leave our lines out and keep at work independent of what more timid souls may do. It grows blacker, and quickly with swift approach, the blinding snow and sleet has filled the upper end of the lake. A sudden roar of suppressed fury fills the air, while shrieks and moans come down the wind, which has now excited Chateaugay herself, until she tosses and dashes her waters into a sea of whitecaps. A sharp blast, charged with needle-pointed sleet and hail which sting and burn like nettles, demonstrates the fact that the squall has arrived.

The wind blows as though old Boreas's cheeks would burst, and a nasty sea for a small boat is the result. Blinded by the sleet, chilled by the cold blast, and noticing the tremendous effort required to simply keep our boat head on, I reel in the lines and direct Tyler if possible to make Thomas's point and we will land. The suddenness with the fury of the squall is the wonder. Like a Titan, laboring and pulling at his oars, Tyler proves the value of stout arms and good ash, and presently we land. My friend comes running over the point at the same moment, having heard from another boat that we were "down the shore somewhere." They had been toward the head of the lake and when the squall struck them they drove before it until they landed on the other side of the same point bow-on. In twenty minutes the squall was a thing of the past—the sun was out in full glory, all nature smiled—the waters had smoothed their "wrinkled front" and a veritable steam, like thanksgiving incense from an altar, slowly wreathed its ascending way heavenward.

* * * * * * *

Toward evening, just above Dick's and off Rocky Brook, Tyler, of course, regulating our speed, and the two trusty bamboos well hung. At noon of this day, just before the two boats in company pulled in shore for dinner, my friend landed a four and a half pounder, which brought his number even with mine, and exceeded me in gross weight. So, now, they were down the lake and we were up. To insure success Tyler had changed one of our drags, substituting a minnow gang for a spoon. Not a strike as yet! The sun sank lower. A fair wind gave ruffled surface to the lake. The warmer weather of these days made evening's approach delightful. The hour was heavenly. Swallows darting here and there, skimmed the surface of the water on equal wing, or chased each other in happy flight up into the blue overhead. The mud hen's cry was wafted to us from the swamps of South Inlet, while the indescribable plum-pudden of the solitary stake-driver answered back from the far-away Owlcout. The occasional flight of a pair of wild ducks seemed to indicate that almost everything was moving but the salmon. No strike as yet. I had filled my pipe anew, and after talks with Tyler respecting a tramp of six miles over to Ragged Lake, had resigned myself to lazy enjoyment of the scene, lying well back in my comfortably rigged seat. Tyler's even stroke was taking us across the mouth of Rocky Brook, and as his restless eye swept the shores of the lake and the water itself, he hummed the refrain of some Canadian boat song with constant repetition.

Buzz, zip-p, whirr! shrieked my reel No. 2. Like a lightning flash from a clear sky, it was startling in its unexpected run. I darted for my rod, while Tyler's warning came equally quick, "Have a care; that's a big fish!" The line sped away as though on a race, as the supple rod bent beneath the pull of the strain which was all I dared put upon it. Tyler dropped his oars and reeled in the other line with nervous energy. Should the lines tangle, it might mean the loss of the largest salmon struck this season. "Be careful; don't hurry him. Let him fight," tempered my own effort, as with a swirl and churn he darted away toward the deeper water. Then following in toward the boat I reeled to keep the prescribed curve on the rod. A sudden slackening of the line gave me fear he had shaken himself free. But the reel presently caught him, when the shriek came again, and the rod shook, as with savage speed he turned and darted away in his fight for life. The steady strain had its effect, however, and he again turned to follow the boat.

The other crew were not in sight and we hoped to capture this fellow before they should round the point.

My wrist tired somewhat in this continual getting the line, and now I had to give way again as the fish went steadily and slowly down in a veritable sulk, boring deep down as only the larger fish do.

But he began to tire also, and the steady, heavy strain drew him nearer the boat than he had ventured before. A whirl and a turn and a splash gave me new fright; but the hook held, and he began to yield again. In came more and more line, the strain was lighter, the line was quite short now, and I could stop his brief rushes with ease. Once or twice I had him near the boat, but he would sheer away at sight of me, as though he dreaded the net and knew that Tyler was ready to play his part with it.

I led him toward the bow, and saying to Tyler, "Be ready," I gave him the butt. A swift dip and recover, and the beauty was in the boat and the fight was over.

And he was a beauty! The scales marked nine pounds as he came from the lake, and we had to double him up as we packed him in the clean straw of our box.

I took off my hat and wiped my brow, for it had been a long and earnest fight.

Warm day had succeeded warm day until we determined to try the fly. One beautiful morning found both boats gliding toward the South Inlet, with trolling rods in place, whose quivering tips told of the free play of perfect spoons forty or fifty yards astern.

In each boat, however, lay the fly-rod, which was to fill this morning's delight, with carfully-selected leaders and the long-discussed choice of flies duly bent in place. We drew up the lake side by side, skirting the line of shore, save when we crossed the mouth of some deeper bay than we cared to wind around. All along the lake little fish continually broke with their little splash and ripple, while a gentle breeze ruffled the surface of the water in a most promising way.

Though we were early, that prince of fishermen, Dr. Bethune—who had been at the lake now for a few days—was earlier, and as we reeled in the trolling lines while crossing Lookout Bay we saw his erect figure and watched the play of his rod as it took on the poetry of motion under the inspiration of his trained hand and wrist.

My constant practice from the wharf in casting had enabled me to strike with some accuracy a desired spot, but with no success in gentleness and delicacy; my flies descended upon the water more like a charge of cavalry than the gentle fall of a lost fly, and I was conscious that Tyler had his thoughts.

My friend struck beauty after beauty, and, lost in admiration at his skill and success, I hooked on to stump and brush without effort, and even caught Tyler's hat, as the swish of the line brought the hook dangerously near his eyes.

Greater care and effort, and an eye single now to catching one single trout, if it might be, improved my casts and gave Tyler great relief. As my leader touched the water a sudden swirl and rush proclaimed its seductiveness, but my "twitch" was absurd, and I heard the voice, "You must strike quicker, Mr. B., if you want a fish; watch the fly and strike on the instant; don't twitch it back." Another careful cast; a rush, a strike; and what power had seized my rig? A rush down, a fluke here away, a wild and angry struggle, and with rod bending in graceful sweep from butt to tip I reeled in slowly with steady strain. As another rush and dive made the reel sing again, my faithful monitor cautioned me to be careful of the rod as I checked him. More line came in this time, and the steady strain was telling. He came nearer the boat, and his graceful form was easily seen as he followed reluctantly the persistent pull of the rod. One or two more darts and dives and he gave up and consented to be led nearer the fatal net. At last, while Tyler waited, I gave him the butt, the net dipped, and I had landed my first speckled trout—a pound's weight. All the morning we fished, casting until my wrist cried for mercy and my arm ached as seldom before.

A splendid string for my friend—a few for me—completed the morning's fly-fishing, and the wind rising to quite a blow, we reeled in our fly lines, laid aside the light rods, and setting again the trolling gear, we rowed down the lake for dinner.

* * * * * * *

I might extend the list of pictures—a tramp to Ragged Lake over six miles of trail, a visit to the Big Pine, other delightful experiences on the water and the story of "In Camp"—but your space is too valuable. Already I have trespassed, and tired you too, perhaps, but if this may inspire some plodder to improve the opportunity—if one ever presents itself to him—to drop for a while monotonous and routine work, and to study nature and delight in her gifts away in the wild corners of the backwoods, this trespass and weariness may be pardoned. B.

PENNSYLVANIA.—Scranton, Pa., Nov. 13.—As I was going to the Water Gap last week a gentleman from Mt. Bethel got on the train at Oakland Station with a string of 23 pheasants, the result of two days' sport. He reported them very plenty.—W. B. L.

CAMPING IN FLORIDA.

WHEN, in the FOREST AND STREAM of Oct. 8, I offered to answer inquiries regarding camping and sporting facilities, I did not realize what an amount of business I was getting myself into. I have kept the faith so far; but, like the cows that were always tumbling down the settler's dug-out chimney, it is getting monotonous. To write half the day and then sit up till 3 o'clock the next morning answering the same questions over and over by the light of the camp-fire, all the time conscious that I brought it on myself, is something that has a touch of grim humor about it which may tickle the other fellow hugely, but doesn't induce any great amount of hilarity on this side of the shanty.

Taking yesterday's mail, for example, and the questions, repeated almost verbatim in letter after letter, run about like the following:

First—"Where is Tarpon Springs, and how do you get there? I cannot find the place on any map, and a friend writes me that the steamer—when you are lucky enough to catch one—leaves you on a pile-head two miles out to sea, to be taken off by a barge—if the wind be fair and the bargeman sober."

Second—"What of the boating, shooting and fishing in your location? And is it true that the river is so crooked that a snake will tie himself in a knot trying to swim down it, with the coon oyster bars so plenty and prominent as to make it difficult getting up and down the river, even at high tide?"

Third—"What can good board be had for by the week or month, or, if I camp, what are the facilities for camping out? And would you advise bringing a tent? Can good boats be hired at the Springs, or had I better bring a sneak-box? And what sort of boat do you consider best for cruising on the Gulf coast, inside the keys mainly?"

Fourth—"I am an invalid, but not very green when it comes to an outing. Can still take care of myself and am a fair cook. My doctor advises a winter in Florida. With your experience and from your standpoint, briefly tell me just the sort of life you would advise me to lead there, the objects desired being health, as much sport with rod and gun as will suffice to give exercise and keep off ennui, and as close economy as is consistent with generous but plain living." (That inquirer talks business-like).

Fifth—"I am an ardent lover of fishing and hunting, and propose to spend a part of the coming winter in Florida. I am rather disposed to try your locality, but am told that many left there last winter to seek other places where the fishing and hunting was better. Is that so? Tell me just how it is, etc."

The above comprises the list of questions I am called on to answer, sometimes a dozen times a day. And most of them are already answered, either in FOREST AND STREAM, Oct. 8, or in the little book "Woodcraft," if people would read carefully and remember. However, I will answer briefly, and I trust, succinctly:

First—Tarpon Springs is on the Gulf coast, in latitude 28° 10' north. The town is built on high, dry, oak and pine land, on a large bayou of the Anclote River, three miles (by the channel) from the mouth of the river. It is exceptionally healthy. It is easily reached either from Tampa or Cedar Keys by the steamer Governor Safford, which makes regular trips between the two places. The new steamer Mary Disston was only put on the route this week. She is light draft, and was built expressly to run inside and transfer passengers and freight from the Safford. Passengers are now landed on the wharf within two minutes' walk of three good hotels without the least bother or delay. You will hardly find Tarpon Springs on any map. The maps are older than the town, which had its birth two years ago last March. Considering its age, and that it is a semi-tropical town, it makes a very respectable showing.

Second—Boating and canoeing, by sail, oar or paddle, I consider of the best. There is unlimited inside cruising for hundreds of miles for light-draft boats; and those who like salt spray and a breezy thrash to windward can get there in an hour from the Springs. The channel is crooked, but is well marked and buoyed, and boys of a dozen years often beat out of the river in an hour with a head wind. The coon are there, but a little knowledge of the river enables one to avoid them at low tide, while at high tide a boat glides over them. Shooting for shore birds on the flats, inside or outside the keys, is fine, the birds being numerous and in great variety. Duck shooting on the river fair to middling. You can always kill as many as you can use. Quail plenty, but the winter boarders keep them thinned out near the hotels. Fishing good, both salt and fresh-water fish being abundant. Fair deer and turkey hunting may be had by going from five to ten miles.

Third—Good board can be had at the Tarpon House at $40 to $50 per month; Tropical House, $30 to $40; Fernald House, $1 per day, two in one room $6 per week. The facilities for camping out are as good as I have ever seen. If you prefer a tent, bring one. They are all engaged here. I prefer a board shanty with lean-to roof, (see "Woodcraft"). Good skiffs are kept for hire at $1 per day, $3 per week. I consider the Barnegat sneakbox the very best boat built for this coast. And if I had one I wouldn't mind making it my home for the winter, keeping the little Rushton in tow for exploring out-of-the-way rivers, lakes, bayous, etc.

Fourth—For an invalid suffering from difficulties of the respiratory organs, I know of no land offering better promise of a cure than this same Gulf coast. That is why I am here. And I advise just the sort of life I am living: loafing, puttering around camp, keeping up pleasant fires in front of the open shanty, especially in damp weather; hunting, fishing, canoeing, tramping about the woods, and always contriving to put in a full day on something that interests and amuses. You can build a board camp for less than $10, and it will be worth something when you are done with it; and you can live in camp like a pugnacious rooster for $2 per week with help from the rod and gun.

Fifth—An "ardent lover of fishing and hunting" might not find this country up to his notions of sport. These ardent lovers have thinned out the game in Florida to some extent, and it is not so promising in the way of promiscuous slaughter as when Hallock wrote in the "Gazetteer." There is game enough for those who know where and how to find and kill it. Yesterday morning a cracker cart passed within two yards of my back-logs with venison to sell. And while I have been writing this morning another comes along the same path with deer and wild turkey for sale.

"Killed 'em up the river about three mile," he says. "Why don't you come out and hunt with us as you 'lowed?" he adds. "We can give you a shot any day."

I have not been "out" because it does not need. I can buy a piece of juicy venison almost every day from a cracker. I had venison on a forked stick for breakfast and dinner yesterday, broiled to a turn, with a splendid bit of sirloin

roast for supper, which "Tarpon" and I demolished between us. There is no need that I go tiring myself tramping through hamaks about the headwaters of the Anclote or the Cootie, though I have invitations to live with and hunt with my cracker acquaintances that would fill out the winter. When the weather gets a little cooler I shall make some hunting visits; also carry out the programme of "hunting cahoots with Geo. Gause." When we succeed in shooting a cahoot will mount the skin and forward it to the office of FOREST AND STREAM for the inspection of the supernally witty naturalists who have taken such lively and intelligent interest in the cahoot question. NESSMUK.

Several correspondents ask "What has become of the cruise of the sharpie?" It was partly written out two months ago. But there were some points connected with summer cruising among the shoals and keys of the Gulf coast that it struck me had never been just rightly elucidated by any previous writer, and I thought best to hold my luff until I had fairly weathered the heat and the black mosquito of the keys, by all odds the worst of his kind. The weather has grown fine and cool. But a trip to the keys last Sunday proved that the black mosquito still lived. He is like the poor. N——K.

AMONG THE GULF KEYS.

WE have just returned from a successful whaling voyage. Three days ago "Nessmuk" and myself started out with the Honest John for a trial trip. We were afloat early and worked our way to the mouth of the river, where we stopped for a chat with friends. Meanwhile along comes the crack boat of the river. Now is our chance for a race; as we are confident of winning we give the crack a good start and then after him. The crack starts out close-hauled for the keys, and Honest John with flat sheets prepared to follow. By the way, Honest John is not a cutter. We soon pick up the little fellow and lap on to his weather quarter. He tries to outpoint, but it can't be done, and nicely blanketing him we pass on.

We reach the keys at 11 A. M., "Nessmuk" starts a fire for dinner, I start for beach birds. As I walk along the beach a porpoise, also after his dinner, runs himself hard and fast on the sand. The whaling instinct, so long dormant, is roused and with my pocket knife for a lance I go for the prize, and I soon have the porpoise. Dragging him into deep water I tow him back to the landing.

Did you ever try porpoise steak? It is good, all the same. Dinner cooked and eaten, we take an early start to explore the key. Palmetto, pine, niangrove and bayonet; beach birds, coons and fiddlers; miles of white beach, acres of blue water, millions of little white caps, a bright sun, a crisp salt breeze and all outdoors to enjoy it in. What a sight. Two old graybeards running around in the surf barefoot, lying on the sand, picking up shells, chasing soldier crabs. Who wouldn't when he could? At night each rolls himself in his blanket and lies down under the stars.

Twelve o'clock comes and with it a norther. Whew! how it does blow. "Nessmuk" doubles up like a grub, while I start for shelter. Only a few steps away is a thicket of mangroves. In a trice the remains of our fire are carried into the dense part of it. Then the camp ax comes into play. Bushes are cut, a wind break made, a tarpaulin stretched for the threatened rain, and in a short half hour we are comfortable again.

In the morning the wind had dropped somewhat, but was still quite heavy. The tryworks were now organized and our whale is stripped of his jacket. The fact is we want some oil for our guns, etc.; besides we want the fun of playing at whaling. "Nessmuk" goes to sleep while I mince blubber, tend fire, manufacture impromptu boilers, strainers, etc.; and imagine I am doing a huge business—with one porpoise and a three-pint kettle. By working patiently and carefully, we manage to get a quart of fine oil, and we vote whaling a good business.

On one of the keys we find a well made by the sponge fishermen. On another are the ruins of a house, and an old clearing said to have been made by some men who did not care to fight in the Confederate army, and so came here and fought mosquitoes. There are legends concerning buried treasure here. We did not find any. Some of the old Spanish purchase money is said to have been hidden here. If so it was hidden effectually.

But the chief charm of the keys are the grand stretches of white beach on the gulf side. They are white and even, from twelve to twenty yards in width, and backed by a fringe of cabbage palms. Back of these is usually a shell ridge, then a grassy savanna, ending in a dense growth of mangroves on the shore side. Bird life is well represented here—curlew, snipe, heron, plover, pelicans, cormorant, now and then an ibis, the roseate spoonbill or pink curlew, as it is called here. Of mammals the coon is the sole representative, so far as I have seen. On some of the keys further south there are deer and sometimes bear. Fish can be caught easily and in almost any quantity. There are redfish or channel bass, grouper, drum, sheepshead, snapper, sea trout, cavalle, etc.

Taking them all round, the keys are a pleasant place for a day or a week's outing. We found them so at all events. When we finally swung the Honest John's bowsprit toward the river mouth, it was with a feeling that our time had been well spent. The norther had blown itself out, and we found boats out in force for an afternoon's sail, and although, as I remarked before, Honest John is not a cutter, we had no trouble to keep up with the procession. We sped along, over the bar, into the river, past the little town, past the mills, and as we rounded up to the wharf at home, the stars were twinkling cheerily and our eyes were winking wearily.

TARPON.

TARPON SPRINGS, Fla., Nov. 2.

POINTS WORTH CONSIDERING.

1. Because of the compact style of its typography the FOREST AND STREAM actually contains, weekly, more reading matter pertaining to its chosen field than is found in any similar publication in the world.

2. In general excellence the reading columns of the FOREST AND STREAM are of a higher grade than those of any similar publication in the world.

3. Taking into account the amount and the character of weekly reading given, the FOREST AND STREAM is away ahead of any similar publication in the world.

4. If a sportsman wishes a sportsman's paper, he will be better suited by the FOREST AND STREAM than by any similar publication in the world.

THE WHITE GOAT.

Editor Forest and Stream:

"Did I say the horse was sixteen feet high?" "Yes, you did." "Then, by heavens, I will stick to it." Such appears to be the manner in which Mr. W. A. Baillie-Grohman acts in reference to his recent articles on the white goat.

After my first letter appeared in the FOREST AND STREAM reviewing his which appeared in the *Century* of last year, others appeared from gentlemen, whose knowledge on these matters deserved the highest consideration, corroborating in the most substantial manner my statements and views on the subject, and Mr. G. bowed in all humility to their dictum, at the same time stating that he did not consider mine worth noticing—not in so many words, but practically to the same effect. Later Messrs. Fannin and Griffin undertook to give similar testimony, the result of their experiences. Mr. G. has sought to demolish us with one fell swoop in one letter to your paper, after the plan of the Roman emperor who wished that all his subjects had but one head so that they might all be decapitated with one blow.

What has been written by me was done with the best possible intention of correcting, so far as I knew, errors of a grave description relating to matters of natural history; and if in so doing the sensitive nerves of Mr. G. were wounded, who was to blame? On this issue I am willing to discuss the subject and on no other. When Mr. G. shirks the point and becomes obscured in a Puget Sound smoke of his own raising, he must take the consequences.

It is to be very much regretted that a person who has crossed the Atlantic thirteen times and visited the Puget Sound country five times should not be able to give information of an interesting and valuable character, instead of that which is faulty and worthless. The book which would contain all that Mr. W. A. Baillie-Grohman does not know about the white goat would be an exceedingly large volume.

J. C. HUGHES.

NEW WESTMINSTER, B. C., Nov. 3.

Editor Forest and Stream:

From that portion of British Columbia which is the border land between civilization and the domain of the savage—where the yet untamed Siwash stalks forth, blanket-clad, in quest of his daily ration of roots and grasshoppers, Mr. W. A. Baillie-Grohman pokes his head out of his fur sack and once more shouts "Antelope Goat!" I can imagine him—on the banks of the tranquil Kootenay, beneath the lee of some granite boulder, ensconced in his fur bag, and, like the Esquimaux, "dreaming the happy hours away" until rudely awakened by the uncultivated growl from the fog-shrouded shores of Burrard Inlet. With what a burst of descriptive eloquence he commences his letter in your issue of Oct. 15! But before he reaches the sixth line of the first paragraph he begins to blunder. It will be news to the people of Burrard Inlet that the Cascade Mountains form the background of their harbor. But Mr. W. A. Baillie-Grohman's knowledge of the geography of British Columbia and his acquaintance with the habits and distribution of the white goat seem about equal to each other. Only one thing is proved by this last letter of his, and that one thing is, that Mr. W. A. Baillie-Grohman was a very angry man when he wrote it.

And no doubt it was a piece of great presumption on my part to question the conclusions arrived at by Mr. Baillie-Grohman. The poor, bald fact of my twenty odd years' experience of the habits of the white goat, in widely separated districts—during which time I have probably killed more of them than Mr. W. A. Baillie-Grohman ever saw—cannot, of course, weigh for a moment against his boast that he has crossed the ocean thirteen times to try to kill something. As Mr. W. A. Baillie-Grohman would say, the true *"raison d'etre"* of his "hereditary scorn" is divulged in this. And, indeed, when one comes to consider it calmly, it is quite too utterly absurd, you know, that one who lives in such an out-of-the-world corner as this, one who actually has to work for a livelihood, should poke his head out of his "Siwash-built" cabin, to question the opinions of Mr. W. A. Baillie-Grohman. The trouble with Mr. W. A. Baillie-Grohman's account of the white goat is just this: Shooting a few goats in a locality where they are rare and difficult of access, he builds on his limited experience a theory as to the habits of the animal, which a wider acquaintance therewith would have corrected. Had he returned and related his exploits, and been content with that, no one would have objected to a little of that long-bow practice common with young hunters, but when he sets up for an authority, lays down the law as to the only proper or possible method of hunting the animal, and chalks out the limit of its southern range, he goes a little too far. Doubtless he would have defined its distribution northward also, had not that wonderful Puget Sound smoke choked him off.

When his statements are questioned by an officer of the U. S. Army, he graciously bows submission; but when an obscure hunter ventures to hint that there may yet be a few things which he does not know about goats, his fur sack gets too warm for him, and he pokes out his head and shows his teeth.

Mr. W. A. Baillie-Grohman persists in saying that only three museums in the world possess specimens of the white goat, although this statement has been shown to be erroneous by so high an authority as the Natural History editor of the FOREST AND STREAM.

The skin of the white goat is practically of no commercial value here. An Indian—or a white man for that matter—might hawk a dozen of them around for a week, and not succeed in disposing of them for one dollar apiece, Mr. W. A. Baillie-Grohman's assertion that they find a ready market in Victoria, to the contrary notwithstanding. In fact I am at a loss to know to what use they could be put. A few are purchased for mats, but no matter how well they are tanned the hair comes out and they become a nuisance and are kicked out of doors. So small is the demand for them that an Indian very rarely shoots a goat with a view of disposing of the skin to the whites; on the contrary, as soon as the skin is removed from the animal it is cut full of slits from three to ten inches long. All but two of thirty or forty skins which I saw last spring in the Moodyocks ranche were mutilated in this way—why, I have not been able to ascertain.

A Hudson's Bay musket, on this coast at least, is not a rifle; and Mr. W. A. Baillie-Grohman's announcement that he has seen Sharps and Winchesters badly beaten by these old flint-locks must be a crushing blow to the promoter of the FOREST AND STREAM trajectory test; they must "fees tired" when they realize that they have been spending time and money on arms that must now take a back seat in the presence of the iron tubes and "flash pans" of a bygone age. Verily, the world is moving—backward, and Mr. W. A. Baillie-Grohman is the Atlas who packs it on his shoulders!

What I stated in that paragraph of my former letter in which I discussed the relation of the white goat to the antelope—a paragraph from which Mr. W. A. Baillie-Grohman quotes only a few carefully selected words—was that there was nothing of the latter animal in the appearance or actions of the white goat as I have seen it. I did not discuss the "affinities" of the "skull and other bones"—such matters I leave to naturalists.

Mr. W. A. Baillie-Grohman's hint about our disinterested invitation to Eastern sportsmen is not, in one sense, far from the mark. We do expect that the Province, at least, will derive benefit from their visits; and, personally, we do not anticipate—for those of them whom we have met were gentlemen—that any one of them will, in a state of absent-mindedness, bid farewell to our camp-fire, leaving us poorer than he found us. If Mr. W. A. Baillie-Grohman wishes me to notice him further he must in discussing the habits, etc., of the white goat, confine himself to his own experiences, and he must also keep his temper or abstain from using language more befitting a "poker sharp" than a sportsman. Whether or not my domicile is of the primitive style of architecture which he mentions, is a matter of no interest to the readers of FOREST AND STREAM. Log cabin or stately mansion play but a very small part indeed in moulding the characters of those who dwell within them, and it no more follows that he of the former may not be a gentleman than that a gilded fraud could not graduate from the latter.

HASTINGS, B. C., Oct. 30, 1885. R. GRIFFIN.

HABITS OF THE GILA MONSTER.

THE following letter, received by Dr. H. C. Yarrow, Curator of Reptilia in the National Museum, is interesting. So little is known about *Heloderma suspectum* that any facts about it are eagerly read:

DEAR SIR—In conversation with Dr. Stephen Bowen a few evenings since the subject of the Gila monster (*Heloderma suspectum*) was brought up, and the Doctor stated that you claimed that the reptile was not poisonous. I have a fine specimen of the *Heloderma suspectum*, which I have been investigating for the last four months with a view of learning its habits the more correctly; but have not attempted to demonstrate its venomous qualities, and have thought that you might probably be interested in the results that I have reached. I have been told that the animal is very poisonous; in fact if half what has been told me is true there cannot be any doubt but the Gila monster is very poisonous.

The information that I have obtained respecting this point, together with some correspondence with persons who live in Arizona, I will forward to you in a short time. The animal I have was sent me four months ago from Arizona—near Phœnix. For more than a month I was unable to find anything in the shape of food that it would eat, when one portion concluded to try a fresh chicken's egg. Breaking the shell, so that the white of the egg ran out, and placing the egg near its nose, I had the satisfaction, [illegible] of seeing it lap up the contents of the egg-shell somewhat as a kitten does milk. Since this time I have given it an egg per day, and it is doing finely on this diet.

The animal has some very interesting habits; its mode of drinking water is peculiar. Putting its head under the water up to its eyes it then laps out its tongue for a few moments taking in water until its mouth seems full to distention. Then it raises it head and body almost straight up, and, by a movement similar to that of a snake swallowing a toad, it contracts the anal portion of the abdomen first, then the entire muscles of the abdomen contract and seem to crawl forward until the water passes into its stomach. After going through this interesting process three or four times it starts off, stopping frequently as though listening for the approach of some enemy. I have discovered that it is very susceptible to sound, especially the voice. I may pound on the box in which it is confined without disturbing it, but if I speak sharply it will rise up, listen for a moment, and then hurry away to some other portion of the box.

As to what is called its breath I am not satisfied whether the belief that the natives have of it being venomous is true or not. If I place a clean window pane in front of its mouth and then touch its tail to make it blow and continue the experiment a few moments I observe that it deposits a sort of light colored mildew dust on the glass. I first discovered this peculiar feature by placing it in a shallow box with a clean glass over the top for the purpose of exhibiting it at our county fair; but so heavy was this mould-like dust deposited on the glass that shortly I was unable to see it through the glass, and I had to resort to a deep box without a glass. This dust is not a mist.

The animal is very lively, and I know that it recognizes me, as I can do almost anything with it alone, but when any one comes up it immediately begins to show signs of fear and tries to get back into its box.

I am unable to discover any fangs and believe it has none. When approached by any object resembling a skunk or squirrel in shape and size, by fastening it on the end of a stick and pushing it up to the monster, it attempts to defend itself by biting at the object, but does so by a lateral motion of the head and body, but never—although placed right in front—does it attempt to jump or strike forward, but will immediately turn sidewise and then strike the object as a wild boar does when attacked. It always blows in connection with its strike.

I would forward the reptile to you if you desire to make further investigations, but I presume you have done so to your perfect satisfaction.

The correspondence with the parties written to in Arizona will be forwarded as soon as I get it in shape, together with the affidavits. Yours very truly, DR. S. P. GUIBERSON.

SANTA PAULA, Ventura County, Cal., Aug. 25, 1885.

COLLECTING BIRD SPECIMENS.—Nov. 7.—*Editor Forest and Stream:* Some of your readers may remember that a few months ago I made a rather earnest protest, to put it mildly, against the wholesale collecting of birds for scientific purposes, especially as concerned a report by Mr. Wm. Brewster of the collecting of specimens of Swainson's warbler. I thought then that I was quite justified in denouncing it as wanton butchery; but in a recent private letter Mr. Brewster makes an explanation which convinces me that I was quite wrong. And now, as an act of justice to him and his co-laborer Mr. Wayne, I wish to acknowledge

that I wrote in a heat of temper that was caused greatly by my ignorance of the variety of the bird, and of the little that was known of him. I am no ornithologist, as the editor of FOREST AND STREAM can testify from my frequent inquiries about birds that are well enough known to even novices in the science, and I did not know but Swainson's warblers were as common as orioles were before birds in hats came in fashion. And so it seemed to me there had been an unwarrantable slaughter of them. As to the necessity of killing nesting birds, opinions may honestly differ; and I have really no right to sit in judgment, for I once shot half a dozen robins (the only ones I ever shot) in May for a friend who was in the last stages of consumption, and whose failing and capricious appetite nothing but robins would satisfy. Poor fellow, a fortnight later robins were hopping over his grave. I never could be quite sure whether my act would be forgiven when all our acts must finally be accounted for, nor whether I could quite forgive myself for it. I will finish eating my bit of humble pie with the confession that I am now glad Mr. Wayne was not wasted by malaria nor bitten by moccasins—"considerin'."—V.

CRAYFISH.—*Editor Forest and Stream:* Cold Spring Harbor, N. Y.—I notice that Mr. Clapham has put out some crayfish in his stream, and that he asks if they are likely to thrive. Undoubtedly they will, as all nuisances do. In Western New York they were the worst enemies I had to contend with in my trout ponds. They burrowed around the flumes and kept the pond leaking, and also caught young trout. The best thing I found to protect dams against their tunnels was spent tan-bark, in which they would not dig. I have often rejoiced that they were not natives of Long Island, and hope that they will not get over to the State hatchery while it is under my charge. We are some twelve or fifteen miles east of Mr. Clapham, but if they increase with him there are a dozen ways in which they may spread to other waters. I have spent so much labor in repairing their damages that I dread them. Of what possible use they are I do not know. As bait there are other things as good, while their slow growth and mischievous habits overbalance any benefit to be derived from their use as food. There are several species, but all of them burrow. The one that troubled my ponds did not build chimneys of mud around its hole, as do the Western kinds, but was often found under stones in the streams and burrowed through dams. I understand that the crayfish has often done great damage to the levees along the Mississippi River, causing thousands of dollars worth of damage.—FRED MATHER.

Game Bag and Gun.

SOME OLD-TIME RIFLES.

Editor Forest and Stream:

The choice and quality of guns, which seems to be so freely discussed in your columns, amounts only to a matter of opinion. But the proposed trajectory test, perhaps, may prove some facts heretofore unlearned. In this day and age of improvements there are scores of gunmakers who can and do make guns perfect enough to satisfy any reasonable man who knows how to use a gun. I remember many old hunters who had their favorite guns, and however old and dilapidated they were, there were always some hidden virtues about them that nobody else knew of.

My earliest experience in woods lore was in camping out with an old big-footed Dutchman, before I was ten years old. He was an inveterate coon hunter, and also hunted and killed several deer every season with an old flintlock musket, and, for lack of moulds, used hammered balls; never knew him to load with buckshot. Now, that old German verily believed that he had the best gun that could be made, simply because he had never used any other. That gun had no sights except a small iron block near the muzzle which once held the bayonet. I was amused even then when the old man informed me that in shooting twenty-five or thirty rods he believed that it carried a few inches to the right—or left. I have forgotten which. My sincere respect to his memory.

As soon as I was old enough (by almost superhuman efforts) to shoulder and carry a gun I succeeded in purchasing a Lancaster rifle, a flint lock of course, the possession of which made me feel immensely rich beyond computation. Subsequently I had it altered to pill-percussion, and I felt positively certain that I had one of the best rifles out, from the fact that there were no better made at that early day. The caliber of the Lancaster rifle ranged from forty to seventy round balls to the pound, and the barrels thirty-six to forty-four inches in length, most of them with curl maple stocks and usually silver mounted. I speak more particularly of the Lancaster because it once had a greater and wider spread notoriety than any other make.

In process of time I began to use rifles of other make, notably Buchannon & Co., of Pittsburgh, Pa., who manufactured rifles through one decade. Their guns were made somewhat after the Lancaster pattern, but varied more in the size of bore, say from sixty to two hundred, and the average length of barrels was even greater than the Lancaster, which I think was decidedly unnecessary. But their rifles were handsomely stocked, fine sighted, had good locks and were close shooters—stocks heavily silver mounted as usual. At the same time (fifty years ago) Haberstro, of Buffalo, N. Y., was making rifles. Bore about sixty round balls, barrels twenty-six to thirty inches, which were then considered very short guns. They were rather plain stocked but proved to be very effective hunting rifles.

It was about this time that the pill-percussion priming came into use, which was thought to be a great invention, and it certainly was a long stride in the line of improvements. There were two grades, one of which was precisely the size and color of red mustard seed, and the other, coarser kernel, nearly the size and color of black onion seed. The invention of caps was but a little improvement on the pellets, and in some respects not any. The pellets were sure fire, and a little cold tallow applied made the priming as sure waterproof as the best caps. There was no cone to get clogged with dirt, burned powder and broken pieces of caps, etc. There were also at that time several one-horse gun shops (so-called) which were scattered through the western part of New York, where the best target rifles were made, and for a few years long-range target practice was made a specialty by a numerous class of sportsmen. Those target rifles were 28 to 32-inch barrels, weight 11 to 14 pounds, bore 60 to 80 round, though conical bullets were commonly used. From 300 to 450 yards was then considered long range.

I once had a target rifle made to order, 28-inch barrel, weight 10 pound, caliber something over 100, or what would be in modern breechloaders .38 or .40, and I used conical bullets. That gun averaged better scores up to 300 yards than any other in that whole region. The barrel was no better than hundreds of others. But the grand secret was, first, in the hair trigger that threw off by a light pressure of the finger without creep or crawl; second, in the nicely and correctly adjusted globe and peep sights, a requisite which I consider essentially as important as anything pertaining to a gun, whether open sights or otherwise.

I never presumed to claim any superior skill in target practice. My best hold was using the hunting rifle and off-hand shooting.

I am not so well posted on breechloaders as I have been on muzzleloaders, but I have used several breechloaders of different make and could pick up a good hunting rifle among the Marlins, Maynards, or the Bullards or Remingtons. I am rather in favor of the magazine repeating rifle for hunting large game. ANTLER.

GRAND VIEW, TENN.

SHOOTING RESORTS NEAR NEW YORK.

Editor Forest and Stream:

I have just returned from my first trial of partridge shooting, and being delighted with its result I write you for the benefit of the many who desire to give it a trial, but knowing the difficulty attached to obtaining a good bag, desist because they do not know where to go, or whom to get for a guide.

I spent five days with "Uncle John" Waldorf, at Woodbourne Hotel, Woodburne, Sullivan county, N. Y., which is about four miles from Fallsburg station on the N. Y., O. & W. R. R. "Uncle John" met me at the depot with a conveyance, as I had notified him previously. During the three days' shooting I bagged twenty-one partridges, and could have had as many partridges as I wished; they are plentiful, but I do not think they should be shot until the ground is frozen.

Ely Garrett was my guide, and with him and his dogs any ordinary shot can at any time be sure of a good bag. On the fourth day I told Ely that I wanted a fish; he objected, as the weather was cold and luck would be poor. I insisted, however, and after a drive of five miles we obtained a boat on Brown's Pond. The wind blew, our teeth chattered, but within fifteen minutes my float was gone and in five minutes more I had landed a splendid pickerel weighing 2¼ pounds. We remained fishing for two hours, and caught ten pickerel weighing 14¼ pounds and nine perch weighing 6¼ pounds. We were stiff from the cold by that time, and were about to start for home when four ducks sailed up the pond, and we went after them; we shot three of them, and they were the finest teal I ever tasted. The partridges were fat and juicy.

Any amateur would have good sport with Ely Garrett, as he is careful to advise what and how to do, and can regulate the day's work so as to please either the rapid or the slow-moving hunter, and will, in proper seasons, guarantee good shooting or fishing. I have always obtained good sport when he told me it could be had by visiting him. At this season good fox hunting can be had every day; and then there are winter fishing for pickerel and trout fishing in the spring. SHORT TRIPS.

DAYS WITH THE WILDFOWL.

LEAVING Phiadelphia at 12:05 P. M. on Wednesday last with a friend we arrived at Perryville at 2 P. M., where we were met by two others, making the proper number for shooting from a double sinkbox, as it is necessary for comfort to change off every hour and a half or two hours. We landed on the Havre de Grace side, where we were met by Captain Burroughs and crew of the J. L. Williams, who soon took us with our traps aboard. In a short time we started under double reef, down toward the battery, intending to take position inside the line on the west shore, as on Monday, the first day of the open season, the best boats had been made there, but we saw so few ducks on the way down that we concluded to go on to Spesutia Island. We saw many ducking crafts lying along shore, ready to cross the line early the next morning. There seemed to be a double purpose in the run for positions on the west shore, first to secure the best chances for ducks, and second to find cover from the wind, which was holding very steadily and strong and looked "like it was goin' to stay," as our colored steward said. We hove to under shelter of Spesutia Island, just below Locust Point, where we lay quite comfortably during the night. We turned in in a comfortable cabin about 10 P. M. with many forebodings of the weather for the morrow as at that time there was no let up to the blow.

During the night one or another of the party could be heard quietly slipping out to take an observation of the weather. Whether this had anything to do with it or not, by 5 o'clock A. M.—the time for crossing the line—the blow was over, and we had just what we wanted—cloudy weather and wind enough to keep the decoys in motion. We ran well over to the eastern shore and put out some two miles above Turkey Point light. The men worked with a will, the box was put overboard, decoys set, shooters put in and our scow run to her anchorage, about a mile away; but before the anchor dropped several ducks had fallen to our amateurs, who, as it proved, worked like old stagers all day, doing some very good execution. The wind held steady, at no time getting too rough for the shooting. The flight to our box was not heavy, but very steady all day, and very fairly taken care of, resulting in a boat of eighty-three ducks, mostly redheads. No canvasbacks darted to our box during the day, and we had concluded that none were on yet, but during the afternoon many thousands came up off of the bay, very few alighting on the flats. A little cold weather will surely bring first-class canvasback shooting.

On Monday, the first day's shooting, the high boat was reported at 316, many others running 150 to 200. It was estimated that four to five thousand ducks had been boated; the second day from three to four thousand, and on Friday boats of from 50 to 125 were made. This is the finest shooting made there for some years, and I think is mainly attributable to the spring shooting having been an entire failure, because of the ice remaining up to the close season (April 1). This was followed by the heaviest growth of wild celery known for some time. I have heard it said that a first-class day among the ducks was like drawing a prize in a lottery; if this is so, there were certainly three prizes drawn this week. Three of my friends are going to Virginia on Monday next for quail shooting; if anything of interest occurs will drop you a line. D. B.

PHILADELPHIA, Nov. 7.

ONTARIO GAME.

DUCKS have been very plentiful this year, but the shooting has been poor, owing to the constant harassing of the birds, which have been shot at every day, Sundays included, and at night on their feeding grounds. The principal marshes are in the county of Prince Edward, and as the County Judge of that county, R. P. Gellett, Esq., is an old and ardent sportsman and an occasional contributor to your columns, I trust that he will endeavor to put the law in motion against the numerous and persistent violations of its provisions. If this is not done, duck shooting in this part of the country will soon be numbered with the sports that were. Some two years ago an effort was made to preserve the Prince Edward marshes, which can be done at a small expense under the laws of the Province of Ontario by all the owners of the land bordering on the marsh consenting to the formation of a preserve and petitioning the government to that effect, when a charter is issued. The sportsmen of this city proposed to pay the expense of procuring the charter, some $50, and to appoint a watcher or gamekeeper, on condition of being allowed membership in the incorporation, leaving the control, however, in the hands of the farmers; but the latter, after signing the petition, listened to evil counsel and abandoned the project. They now wish to form the preserve on the terms which were rejected, but it is too late.

Partridge (ruffed grouse) have been more plentiful in this district than for many years past, and several large bags have been made. Woodcock were also numerous during the season, but they have migrated. Snipe were very scarce in their usual haunts owing to the heavy rainfall during August and September.

Deer hunters in the northern townships have had excellent sport, but it is getting to be dangerous to go into the woods in pursuit of this noble game, some four or five persons having been shot by over-anxious hunters in mistake for deer in the forests of central Ontario since the opening of the season.

A strong effort will be made at the next session of the Legislature of Ontario to secure the passage of a law prohibiting the spring shooting of ducks. That the effort may prove successful is the earnest wish of R. S. B.

BELLEVILLE, Ont., Nov. 10.

FORTY YEARS AT BARNEGAT.

IN your issue of Oct. 29, "John" thinks that "Uncle John" is a wonderful old man, to be able at the age of seventy to shoot so well, and so he is; but I can tell him of two old gunners who can shoot as well now as ever, and their ages, taken together, are over one hundred and fifty years. Forty years ago "Uncle Josie" Field, James Cooper, and John Bergan, talking over the gunning of that spring and the number of ducks killed on the Shrewsbury River, spoke of the number of ducks and geese said to be on Barnegat Bay, and how they would like a trip in the fall. It was ever a topic which they loved to discuss. The long looked-for morning at length arrived, clear and cold for the season, and about 3 A. M. the start was made from Red Bank. Sunrise saw the sportsmen well on their way, through Long Branch, then only a hamlet, through what is now Asbury Park, Ocean Beach and Sea Girt, then only a wild country of catbriers, pines and cedars, the roads the worst possible, being of a white, loose sand six inches deep. There were no bridges to speak of in those days, and so they had to ford some rivers and drive around others too deep to ford. Finally they arrived at Point Pleasant, about noon. Here Charley Stout, with his six feet of good nature and two hundred pounds of duck shooting qualities, met them to show the way to "Maxon's," seven miles down the beach, where Jim Loveland, one of the best duck shots of his day, and who always helped "Uncle Josie" to kill his game, and Charlie Lawrence, who knew every marsh, every spear of sedge and every muskrat hole in the upper bay, and who was the champion of Bergen, would meet them. Then there was Charlie Stout, whom every duck shooter who goes to Barnegat knows, and to his credit, too, for he is a famous hunter. He always took Cooper to the best point and loved to see the old man shoot. Here at Maxon's they would sit and talk duck till the canvasbacks, mallards and broadbills would stop to listen as the "quack! quack!" would float up through the chimney, then quack back their defiance as they winged their way to the tempting feeding grounds—the finest duck ground in America.

Early in the morning would find each party ready for the game, and almost always they brought in good bags. Thus for thirty years they went spring and fall, until the railroads made the trip shorter and the increase of shooting drove the ducks down the bay to the inlet, or even south of it. Then they began to go separately, and finally Uncle Josie gave it up on the plea of want of time, and though now ninety-four, he is as well and hale as at sixty.

This year Cooper, who is now eighty-one years old, went to Barnegat on the N. J. S. R. R., where Captain Mathews, who owns one of the best points and the best sailboat on the bay, met him to take him down to the shooting grounds. Cooper uses a 10 bore, shoots 4 drams powder and 1⅛ ounces shot, and says that he can kill better than by using more of a charge. He can kill as well now as at forty, and feels as much like it as ever; in fact, his trip this year makes him feel more like thirty than over eighty. On Oct. 28 he had nineteen single wing-shoots, and killed fifteen of them, using second barrel only four times. He is yet, as he always has been, considered one of the best every-day shots who comes to the bay.

Dr. Warner, of patent medicine fame, also employs Captain Mathews; and when Mathews told the Doctor of the old gunner who had shot over every inch of the bay and related that he was this year eighty-one, "Captain," said the Doctor, "give the old gentleman my stateroom and let him use my new box. I hope he will kill the first duck from it." And he did. Mathews and Cooper raised their guns together, but the old man was too quick and brought down the game before his younger gunner could pull trigger.

Bergan also went to Barnegat the same day. He had only fair shooting, as the weather was too warm and the wind did not blow enough to move the stools; the ducks that did come he cut down as well as ever, and secured fifteen or eighteen.

For two such old men to go off alone shooting (which means that one must be out at daylight), and kill ducks as they did, is rather more of a feat for old men than John's "Uncle John" killing a squirrel at thirty paces or hitting an acorn at twenty, resting the rifle on a fence.

If the readers of FOREST AND STREAM could hear these two old men talk duck they would go crazy, or else move at

once for some good duck ground. Cooper and Bergan have killed every kind of waterfowl from the little dipper to the beautiful swan, and they love now to sit and talk over their many trips; for after forty or fifty years of duck shooting they can tell some yarns that would make even the Ancient Mariner open his eyes. They can tell of whole flocks of broadbills being cut down, or of one single one killed at a distance that your readers would not believe if I should tell it; and how once a black duck came sailing over, only to fall plump in a muskrat hole and to be lost. And so year after year they go, only once now, in the fall, to take one more trip, which is all the pleasure they care for. They talk of the trip for eleven months of the year. Some fall will find their places filled by younger gunners, who will hear of the wonderful old men who could stand all day and shoot as well as the best young men. WAD.

RED BANK, N. J.

DEER IN THE ADIRONDACKS.

Editor Forest and Stream:

It is now time that the effects of the non-bounding law in New York began to show themselves, and I think that many would be interested to read reports from various sections of the Adirondacks. For myself I would be especially glad to hear from the Saranac and St. Regis localities and also from the Raquette River country. Such questions as the following may bring out answers, in which all those who have the welfare of the North Woods at heart, would be greatly interested: Has hounding been generally practiced since the passage of the law in the above mentioned localities? If so have the wardens or their deputies been conversant with the fact? Have any complaints been made and any indictments been found against any sportsmen for the violation of the non-hounding law? If so have the persons indicted been acquitted or convicted? What is the sentiment of those sportsmen who frequent these places as regards the advantages and disadvantages of the law as it now stands? What is the feeling among the guides regarding it? By guides I do not mean one or two, but the general sentiment among the guides as a class through these sections. We have read in your paper articles from the extreme western part of the Adirondacks and a few short notes from Mr. A. R. Fuller, of Meacham, but nothing definite has yet met my eye concerning the large tract of country embraced in the sections above mentioned. As a very large number of people—sportsmen, invalids, tourists, and others—annually visit this section, it seems to me that some account of the working of the law, whether for good or bad, ought to be given to the readers of FOREST AND STREAM.

AMPERSAND.

REYNARD'S WILES.—Fair Haven, Vt., Nov. 13.—Reading an account of foxes climbing trees in FOREST AND STREAM, reminds me of a little incident that happened here some years since. A friend of mine who is quite a fox hunter started out one cool, clear morning in mid-winter with two hounds. They had no been out very long before they started a fox from his lodge under a shelving rock. The hounds gave him a warm run for three or four hours up and down the ridge. A little after noon they came near a sawmill and here the scent was lost. My friend hearing the hounds continually in one spot, crossed over to them and found a medium-sized pine tree partly blown over and no sign of the fox beyond the foot of the tree. After looking the tree over for some time he spied the fox up in the very top of it, taking his midday nap in the bright sun. He brought it to the ground with a charge of buckshot. On another occasion two hounds had been running a large fox one morning on a range of hills. About noon the fox suddenly took a turn straight down the hill to the road (the hounds about thirty rods behind) until very near the bottom, when he wheeled and took a line straight north, going within six feet of a large stone, some three feet high and about four feet square on top. After he had gone some four or six rods he suddenly wheeled and came back in his tracks to the large stone, jumped on top of it and down close to in on the other side. When the hounds came by Mr. Fox jumped back into his old tracks and back up over the hill. It was some moments before the hounds saw through the trick which had been so cleverly played on them.—NED.

VELVET SCOTERS IN MICHIGAN.—Three weeks ago a flock of wild ducks, seven in number and of a variety never seen in the vicinity before, fluttered down upon Pine Lake. They seemed confused and bewildered, but were keen and wary enough to laugh to scorn the wiles of the local sportsmen. They resolutely refused to leave the pond, evidently enchanted by the picturesque scenic effects produced by the wrecks of picnic straw hats, which still float on the water out there, and on Friday three of them fell victims to the combined skill of A. H. Whitehead and S. L. Smith, of this city. A careful examination of them revealed the fact that they are of the variety known as "velvet scoters," a salt water bird that very rarely frequents inland lakes. They are of a uniform dark brown color, large size, and with soft velvety feathers. But one bird of the kind has ever been shot in the State before, and this flock was probably blown in by some heavy gale while on their way to salt water. One of the three killed was presented to C. J. Davis and will be "taxidermed" by that gentleman in the highest style of the art and added to his collection.—*Lansing, Mich., Republican, Nov.* 11.

HE HAS ALREADY DONE IT.—Mr. Coster, while shooting with me last year, said Mr. Hammond (referring, I believe to your kennel editor) is nearly crazy to kill a big gobbler. If such is the case and Mr. Hammond should ever happen out this way, I will undertake to have him kill a patriarchial turkey; one that has to run cross-legged to keep from stepping on his beard. I will not promise to go with him, however, but will put him in charge of one of my negro hunting servants who is an excellent turkey hunter. Turkey hunting requires patience and a greater fondness for the use of one's legs than I possess.—STARR. [In last week's issue we gave Mr. Hammond's report of a Tennessee turkey gobbler he had brought down.]

A SAVAGE MOOSE.—Jerry McGowen, of Portage Lake; Charles McConkey and George Sutherland were in the woods not long ago, and while tramping they suddenly heard a noise as if some large animal was breaking his way through the brush. Looking to see the cause they were intensely surprised. They saw a large bull moose making tracks for them. They had barely time to climb trees to save themselves from being trampled under foot by the vicious beast, and the old forest king kept them treed for about three hours. —*Aroostook Herald.*

CONNECTICUT.—Hartford.—Very poor shooting in this State. Quite often one of those "phenomenal shots" reports big bags, but as good shots as we have do not report more than three to six birds a day, and these men are workers. The largest score that I have any knowledge of is from a market-shooter—eleven grouse and two woodcock for one day. This ought to satisfy even a market-shooter. Quail shooting is far from good; the young birds are not more than half-grown. The market-hunters are doing more than their share of killing the game birds. Over 1,500 grouse, quail and woodcock were shipped from one country town on the N. Y. & N. E. R. R. last season. It is not strange that game is scarce in that section this year. Connecticut can boast of as many market-hunters who shoot out of season as any State in the Union, in proportion to the population. The law is not off on woodcock until Oct. 1, but the birds are killed from July 1, and when a person goes out in October the bag of woodcock is not filled to any extent noticeable. If it was not for the flight birds the sportsman would seldom ever see a woodcock.—FLICK FLICK.

WHO TAKES THE DEER?—Millville, N. J., Nov. 10.—*Editor Forest and Stream:* In reply to your inquiry: We have killed a great many deer this fall. They are very plentiful. We hunt with hounds, as the underbrush prevents still-hunting. If one party's dogs trail and start the deer and run it out of their drive, and another party kill it, they claim the skin and horns and half of the meat. This rule has been the custom for years in Cumberland county; and I never have heard of one party quarreling with another when a deer has been killed in this way. Quail and rabbits here are more plentiful than for three years past.—J. E. W.

HAVRE DE GRACE DUCK SHOOTING fell off during the past week, no doubt owing to the saluting the fowl have been getting since the season opened. The ducks are now beginning to get very wild and do not decoy well at all. Canvasbacks are scarce, but they are a hard-weather duck and are not looked for until the temperature is lower. Point shooting has been good during the past week, and the stormy days we have had made the flights good in some localities. —HOMO (Nov. 14).

DUCKING PROPERTY FOR SALE.—The attention of those interested in fowl shooting is called to the advertisement of an interest in the Monkey Island Club of Currituck Sound, offered for sale in another column. Duck shooting is proverbially uncertain, but if one can hit the right weather there is no place where he can have more sport than in old Currituck.

SNOW GEESE have arrived on Delaware Bay. Their location is a safe one and they occupy the same feeding grounds. —HOMO (Nov. 14).

HORACE SMITH.

THE readers of the FOREST AND STREAM will be pained to learn of the death of Horace Smith, at Philadelphia, last Thursday, Nov. 12. 'Squire Smith, as he was familiarly and affectionately called by his friends, was one of the oldest and best known sportsmen in the country.

He was born at Trenton, N. J., in 1805. In early manhood, when a justice of the peace of his native town, where he legitimately earned the title by which he was ever after known, Mr. Smith suffered from a pulmonary complaint which the physicians pronounced incurable, unless by a bare chance relief could be found in an out-door life. In late years the 'Squire was fond of telling how faithfully he followed the injunctions of the physicians to live as much as possible in the open air. With dog and gun he made long tramps for game, undergoing an amount of fatigue, from which stronger men might well have shrunk. To these shooting excursions the 'Squire always attributed his health and life.

Among his early shooting companions were William Henry Herbert ("Frank Forester"), Henry Toler and W. Rolfe. He lived to see a new generation of sportsmen, and to witness a wonderful change in the hunting grounds of East and West. In late years he did an extensive business as an agent for the sale of sporting dogs, a large number of which were exported by him to Havana. He was a correspondent of the old *Spirit of the Times*, and when the FOREST AND STREAM was established he served it for a time in the capacity of kennel editor.

Never in robust health, the 'Squire was always cheery and light-hearted. His companionship was valued by a host of friends. His name was a synonym for integrity and fair dealing.

Camp Fire Flickerings.

"That reminds me."

174.

"That reminds me." Item No. 173 in Camp-fire Flickerings column of FOREST AND STREAM, dated Nov. 12, recalls a very similar witty repartee made by an old friend of mine.

Several years since (I think it was '58) a party of Boston gentlemen were enjoying their autumn vacation at "The Old Shanty," Scarborough, Me. On the day of the reception of H.R.H. the Prince of Wales, who sailed from Portland (in four or five English war ships), Cale Loring, the host, and all his guests, excepting Billy C——y, went into Portland to witness the show attending his R. H.'s departure from his "lost colonies," and Billy was left in charge of the shanty. He was not a gunner, but was a devoted follower of Izaak Walton, and for years had taken his outings and rest in a fortnight's fishing, each spring and fall, at Scarborough, and from young flood to low ebb of tide, would patiently haul in smelts, flounders, tomcods, eels or sculpins, with the patience and perfect enjoyment of the true fisherman.

The rest of the party left for Portland in the morning, and Billy, anchoring his punt in his favorite place, caught fish to his heart's content until the receding tide withdrew his finny prey. Then, laying aside his rod and line, he seized a "Scarboro" clam hoe and unearthed a bushel or so of "the best clams in the world," came back to the shanty, cooked and ate a hearty dinner, and lay off on the front piazza to smoke and pity the rest of the crowd in town. As he was finishing his first pipe a flock of blue-winged teal, fresh from the north, pitched into a pond-hole across the river. Now, Billy was no gunner, but was a good cook, and the party, when leaving, had charged him to have something for them to eat when they got back. So thinking to surprise them, he took one of Cale's guns and plenty of ammunition, paddled across the river and "went for" the teal. Walked up and blazed away at them; they had never heard a gun before but jumped up and flew to the next pond-hole, a few hundred yards away. He loaded up, followed them and blazed away again. (In parenthesis I must explain that although an expert fisherman, he had not "shot a gun" since his Fourth-of-Julyhood. He grew interested in the chase, and followed the teal from one pond-hole to another, loading and firing, but without injuring a bird. At last he became convinced that he was not a gunner, and turned back for the shanty.

Cale and the whole party had meanwhile arrived at the shanty, and when he looked up from the opposite river bank he saw them all seated on the piazza waiting for him. The party had said, "Cale, we won't say anything, but you must open up on Billy when he gets across" "All right," says Cale, "I'll ask him what he has been fishing above high water mark for." As Billy landed and came up to the party there was a dead silence until Billy handed Cale a gun and said, "Caleb, there's a nice flock of teal over in that pond hole there, go over and get some for supper. I have tamed them so that they are not afraid of a gun." The laugh was turned at once and Billy came out with flying colors. "All right," says Cale, "how many are there of them?" "Twenty," replied Billy; "I have been counting them all the afternoon, so as not to miss any." Cale said no more and took his third gun, crossed the river, crawled through the thatch with two guns in one hand, one in the other, shot the six barrels into the flock and in about twenty minutes was back with nineteen teal, and apologized for losing the other one, saying "he was not very fat."

I have put "that reminds me" at the top of this letter, because those who never saw Cale shoot could not be convinced of its truth by a thousand affidavits, but those who knew him and his marvellous skill with the gun would not doubt the truth of it, and I am not the only living witness left, although most have gone over to the majority. MAC.

WOODFORD'S, ME., Nov. 13, 1885.

Sea and River Fishing.

Address all communications to the Forest and Stream Publishing Co.

THE LAKES OF NORTHERN MINNESOTA.

SITUATED within the bow of the Red River of the north, and bounded on the east by the heavily timbered portion of the State, and on the west by prairie extending to the Rocky Mountains, and dotted with lakes varying in size from the tiniest pond to the more pretentious inland sea miles in circumference. The country contiguous to Detroit, Minn., presents more attractions to the outer than any other with which I am acquainted. Detroit Lake itself presents many facilities for pleasure. The Northern Pacific Railroad will set the tourist down at the club house of the St. Louis and Detroit Lake Boating Club, a couple of miles east of town, or first-class accommodations can be found at several of the hotels in town, where one is still only half a mile from the lake. At the foot of Lake avenue, south of town, is a boat house well supplied with everything necessary, where a boat can be hired for any length of time one may require, from one hour to the full season, and if you wish to extend your rambles, ample facilities for doing so are at hand.

The first fishing I did here was in Detroit Lake. With two young friends I procured a boat at the foot of Lake avenue. The day was windy and the waves were running too high for fishing except along a narrow strip next the western shore, where the woods furnished a protection from the wind. Our success was all we could ask, and considering the state of the weather, better than we had reason to expect. The afternoon was delightfully spent and we came to shore with twenty-seven fish, one of which was a black bass weighing 4½ pounds and one a pickerel of 3½ pounds. The rest were bass, wall-eyed pike and perch. On other days I have fished in this lake and others in the vicinity, when the fish were so plentiful that one could procure more than he knew what to do with. I have seen men fish for half a day at a time and save everything they caught, only to let them die and be wasted. But I am happy to say that this is the exception and not the rule. There is no excuse for keeping undersized fish here, for there are enough large ones to satisfy any angler, unless number be the only object.

When one tires of this lake and its scenes, there are many others which can be reached. One Monday morning my friend B. and myself left Detroit for a trip down the Pelican River to the lakes beyond. We crossed Detroit Lake to the outlet on the south side and went down the stream, passing through several small ponds, until six miles from Detroit Lake the stream enters Pelican Lake at the eastern end. This lake is about ten miles long from east to west, and from one to three miles wide from north to south. The river leaves it again at the end of a bay at its southeast point. We had loitered along during the day examining points of interest and exploring each nook and crook of pond and river, and stopping to fish at favorable places, so that night overtook us soon after we entered Pelican Lake. We went into camp an hour before sunset, and cutting spruce boughs and some forks and poles, soon had a comfortable shelter over us and a fragrant bed under us. We spread our blankets, and, after eating a supper of fish rolled in flour and fried, bread and tea, we lay down and slept the sound sleep which a day in the open air gives. The next day was spent in exploring the bays and inlets of this lake; and we camped the next night at its western end, near where the outlet of Cormorant Lake empties into Pelican. The next morning we ascended into Cormorant Lake and spent two days upon its shores and waters.

This is a beautiful sheet of water, about nine miles long and from two to five miles wide, with a very irregular outline, its contour abounding in bays and points and secluded nooks. One might spend much more time here than we did and still not see all its beauties. Friday morning we turned the bow of our boat down the stream into Pelican Lake

again. Business engagements prevented our extending the trip further, but we had enjoyed ourselves so well so far that we decided to seize the first opportunity to go further down the river—perhaps as far as its confluence with the Red.

We had been favored with pleasant weather most of the time. The fishing was all that could be desired; besides, there was the added excitement of a chase after a loon and seeing how long it would stay under water and how far it would swim before coming to the surface again; or we would cover our boat with green boughs until it looked like a miniature island and see how near we could drift to a solitary pelican or gull as he floated on the waves, or the long-legged herons standing motionless in the shallows waiting for the luckless frog or minnow that might venture near.

Game is fairly plentiful, and in the open season yields plenty of sport to the hunter. I often saw deer during the summer, and ducks and geese are plentiful in the early fall and late spring, and ducks sometimes remain all summer.

LEW WILLOW.

A SALMON EXPERIENCE.

I CAME home one day and the first thing Jim, my chum, said to me was, "The salmon are taking the fly, and you and I want to get a salmon rig at once, and try them." We had only two nine-foot splice trout rods. They did look a little light to tackle full grown salmon with, but we were bound to try nevertheless, even if we lost our whole rigs. We had no flies and could find none in the city. Nothing daunted, we got some hen feathers and an old feather duster and tied two flies. Such looking things you never saw. They looked so bad we nearly gave the trip up, but finally determined to give them a trial now that we had got so far. Bright and early Monday morning we were on the river bank. At the second or third cast Jim struck a salmon, but the fish got away. I went up above here about a hundred yards and began to send that hen feather fly through the air. I hooked a fish; and now comes one part of my story that seems almost impossible. In striking him I pulled the rod too hard and snapped it where the splice was, so the top splice only hung by the string it was spliced with. Away he went at a 2:10 clip. Out of water he came, three feet in the air. Down he went. As quickly as I could, I jumped into a boat. My chum handled the paddle. We followed the salmon down stream, until he came to a halt behind a large rock in dead water; and funny as it seems he lay there, line loose, until my chum unfastened my rod and mended it over as best he could. I then put the strain on the fish again, and the way he came out of that hole and struck for deep water I can assure you was highly exciting. First one place, then another. Out of the water again and again. For an hour and more the fight for life was kept up. But at last I got him back into dead water, when after a few more gamy struggles he came to gaff; and my chum landed the largest fish I ever caught with a nine ounce rod. He weighed nine pounds and ten ounces.

A number of salmon were caught that day with salmon rods and reels, but I shall always feel proud of taking such a fish with such a fly and such a rod. My chum and I walked into town that morning feeling about as large as any of our best citizens. Rod and salmon were carried in hand for display.

INDIAN ROCK.

CALAIS, Maine.

HOW TO CATCH CARP.

WE take the following letter, written by Mr. Robert A. Martin, of Petersburg, Va., to Mr. C. W. Smiley, from the Bulletin of the U. S. Fish Commission:

"The way to catch carp with a hook and line is just this: Let a person having a pond in which they are kept feed them with bread at a particular place, and when the fish have learned to come for such bread, let him get some good strong genuine Limerick hooks (not the American imitation of them), and tie them on strong oiled silk lines, on which lines there are corks, and bait with bread (bakers' bread, or any kind of bread that after pressing in the hand he can make stay on the hook), and throw out some two or three lines tied to good strong poles, one line on each pole, and very quickly he will have about the number of bites that he throws out baited lines. After hooking all the fish, he might hand all the poles except one to some person to hold, until he had worried down one carp; and after getting that one out, he might then work one by one on the remainder.

"Three carp weighing from three to five pounds each ought to be enough for one day's sport and eating. They are very sharp and shy after one has been caught and played long enough to scare the others, and will stop biting for some hours afterward. It takes a very good line and the best sort of a hook to hold them, and of course a good pole is also necessary. The genuine Limerick hook is, I think, hand-made. But little, if any, sinker is required, as the weight of the hook will sink the bait.

"After being fed with bread (especially bakers', or what is called light bread, which will float on the water), it is best to fish shallow, say about one foot or one and a half feet. If they have been scared, then it will be necessary to fish deeper, say in two and a half or three feet. They bite best, of course, in the spring and fall months. They are the gamiest and best-winded fish I ever saw; and the only trouble is, that after catching some two or three the remainder will be scared off. This, however, could be partially overcome in a good-sized pond by the owner having some three or four places where he baited them, so that after they were scared at one place he could go to others, provided he was fishing both for sport and profit (in the latter case, catching them to sell).

"As a pan fish they do not compare with our millpond chub or speckled perch, but they are good pullers. They bite quickly like a chub, and not like round fish (a sort of mullet or sucker. The bread or bait of course should cover well the barb of the hook. For carp weighing from one to two pounds smaller hooks of the kind named would be better. I wonder that more of our country people do not make ponds and raise the German carp. Properly cooked they are very fair eating; but to one who loves a good, square, long-winded, honest pull by a fish, I do not know anything to equal them. If they are once hooked, one is sure to get them, provided he knows how to handle a fish and has good tackle."

AMERICAN CASTING REELS.—The extraordinary casting done from the reel at the late tournament has excited so much surprise in England that the *Fishing Gazette* says: "There must be something very good in this American multiplying reel to permit such casts being made from it, and with a view to making its merits known we shall offer a five-guinea prize for the best cast made with it at our tournament next year." We have seen the best reels in use in England for casting, but never saw one that compared with those of our best makers'. Here is a chance for American manufacturers to compete for the trade of England in multiplying reels. We think that our best reels are more expensive than English anglers have been used to buying.

Fishculture.

THE CULTURE OF SHAD.

AT a recent meeting of the Biological Society of Washington in the National Museum the members listened to a talk by Col. Marshall McDonald, of the Fish Commission, upon the necessity of the work of fish propagation, in order to maintain the shad fisheries. He undertook to demonstrate that the shad fishing had to depend more upon artificial than natural production for its maintenance. This he thought was shown by a comparison of the statistics of the shad fishery for the years 1880 and 1885, and a consideration of the attending conditions. The figures for 1880 are taken from the census reports; those for 1885 were gathered by experts, in some instances by the same persons who made the census reports. On the Hudson the figures were obtained by Mr. E. G. Blackford. In the Delaware and Chesapeake waters the figures are based on careful estimates made by experts who traversed the whole field. He had, in order to present the matter fairly, brought together, in an aggregate, the catch of all the rivers of the Atlantic slope, as the catch in any one river fluctuates under local conditions. It was not true that shad spawned in certain rivers necessarily returned to the river where they were spawned. They remained in the hydrographical area in which they were spawnd, but might seek any fresh water within that area. It was only by taking the statistics of the rivers of the entire area that it could be determined whether there had been an actual increase or decrease. Col. McDonald placed upon the blackboard the following table, giving "Comparative statistics of the shad fisheries of the Atlantic rivers:"

	No. of Shad Taken.		Per ct. of Inc.	Per ct. of Dec.
	1880.	1885.		
Connecticut	368,608	190,000	..	29
Hudson	781,628	1,174,000	33	..
Delaware River and Bay	935,300	1,148,490	36	..
Chesapeake and Tributaries	2,048,600	1,632,800	..	21
Aggregate	3,870,136	4,145,290	7 p. ct. increase.	

The table gives catch from Cape Henry to Cape Cod. Increase of 1885 over 1880, in quantity, 965,229 lbs., in value $67,580.

While the commercial value of the increase, $67,586, was not large compared with the whole, that sum was ten times as great as the yearly sum spent by the Fish Commission upon the work of shad propagation.

It was a physiological necessity, he said, that shad should enter fresh water to spawn. Shad eggs might be impregnated in salt water, but would not develop up to the point of hatching. The shad must reach fresh water in numbers sufficient to supply by propagation the annual loss. Originally shad had free access to the water of the country. Then man began to reduce the spawning area; dams were extended down the river; so the productive capacity of the river by means of natural propagation was not one-half as great as it had been. Then factories have been erected on the rivers, the spawning beds have been destroyed by sediment or deleterious matter, and the water rendered unsuitable for propagation. Last of all, man had come with improved appliances, and pushed his fisheries out of fresh water into the salt water. So now sixty-three per cent of the shad caught are caught in salt water. Counting, then, the catch in the rivers, after the shad reached fresh water, it was doubtful whether one per cent.—certainly not five per cent.—survived to reproduce the species. Upon that small percentage they depended to keep up the supply of shad in the rivers. Under such conditions the spawning area, being limited, and the shad excluded from fresh water, without artificial propagation, they would not only not be able to keep up the supply, but the shad would soon be exterminated or there would be such a reduction as to render the fisheries unprofitable. They were fast approaching such a crisis in 1879, when the Fish Commission began the work of shad propagation. The work of artificial propagation had not only held the balance even, but resulted in a positive increase.

Col. McDonald deprecated the methods employed in shad fishing, especially in the use of pound nets. In the Connecticut river, where pound nets are used, a large part of the catch is taken in salt water. In the Hudson, as the laws of New York do not permit fishing with pound nets, the river is not obstructed to the same extent as the Connecticut is. In the Delaware, where an increase was shown, there were no pound nets In the case of the Chesapeake and its tributaries, showing a decrease of 21 per cent, 713,000 of the shad caught this year, or more than one half of the whole catch, were caught in the salt water of the bay. The pound nets began at the capes and extended to the mouth of the Potomac. Prior to 1871 the shad were taken entirely in fresh water, but now over one-half were caught in salt water. After entering the Potomac nearly one-half of the catch in that river is made in water where the fish cannot spawn. In the Rappahannock one-half the catch is on the oyster grounds, or in brackish water. In the York river the catch is practically below Gloucester point. In the James river there are no pound nets and in that river we find an increase in the catch. While the fisheries in the Chesapeake bay and its tributaries, as a whole, have fallen off 21 per cent, the increase in the catch in certain rivers is much greater. The catch in the Susquehanna in 1880 was 614,000, against 212,000 in 1885; and in the Potomac, 552,857 in 1880 against 157,697 in 1885. The reason of this, Col. McDonald thought, is obvious. In 1871 there were no pound nets in Chesapeake bay, and no shad were taken until they entered fresh water. Gilling was not prosecuted so low down the river as now. In 1880 he found in Chesapeake bay 180 pound nets set in the track followed by the shad along the western shore, and through these the shad had to run a gauntlet up to the mouths of the rivers. Now there were 1,000 pound nets occupying the western shores of the bay, and excluding the fish from fresh water. The effect of the salt water catch is to diminish natural reproduction and to invoke artificial propagation as a necessary aid to the fisheries. If all shad were excluded from our rivers for three or four years, without artificial propagation, the species would be exterminated. Taking all the facts into consideration, and the inadequacy of natural reproduction to supply the annual loss, we must credit artificial reproduction with having maintained the fisheries where they were, but more than with an increase which would pay ten times the cost of the work of shad propagation.

The paper was discussed by several members of the society. Mr. Smiley suggested that if brought up an interesitng point in political economy, and that was whether it was advisable for any state to stock its own rivers since the fish did not necessarily return to the river where it was spawned. He thought the facts shown presented a strong argument for having the whole work of shad propagations done by the national government.

Col. McDonald said that the results of the work should be determined in aggregate. While the Hudson and the Delaware enjoyed the increase this year, it did not follow that it would be the same next year. It was remarkable that when there is a large catch in the Delaware there is a diminished catch in the Chesapeake, and vice versa. When the spring is cold the shad avoid the long rivers coming from the mountains and seek the warmer waters of the small rivers draining tidal areas. He thought it was more profitable and economical to have the work of propagation done by the United States. It would suit the people as a whole, much better if the work were all done under the directions of the general government.

Mr. Goode, the president of the society, remarked that this paper was without exception the most important paper on the fish question ever presented before the society. Hitherto the fish question has been largely theoretical, and the papers have been largely prophetic. There were no periods of statistical records. At last they were getting where it was possible to make comparative statements of facts and could see where they stood. The facts presented were not only important to their economic aspect, but from various scientific points of view. They were getting a knowledge of what was passing beneath the sea. America was taking the lead in all these matters pertaining to fisheries, and the world was looking with amazement upon what we are accomplishing. The whole matter was coming to be better understood. The broad policy upon which Prof. Baird established the Fish Commission fifteen years ago that in order to undersaand the practical bearings of the fish question it was necessary first to understand all the conditions of marine life. It was the legitimate fruit of such a policy, that at last fishculture and the knowledge of marine life should be something more than theory.

FIXTURES.

BENCH SHOWS.

Dec. 15, 16, 17 and 18.—First Annual Dog Show of the Western Connecticut Poultry, Pigeon and Pet Stock Association. Frank D. Hallett, Superintendent, Winsted, Conn. Entries close Dec. 5.

March 16, 17, 18 and 19, 1886.—Western Pennsylvania Poultry Society's Dog Show, at Pittsburgh, Pa. C. B. Elben, Secretary.

April 6, 7, 8 and 9, 1886.—Second Annual Dog Show of the New England Kennel Club. Jean Grosvenor, Secretary, Boston, Mass.

FIELD TRIALS.

Nov. 17, 18 and 19.—Second Annual Field Trials of the Philadelphia Kennel Club at Rio Grande, N. J., for members only. Entries close Nov. 1.

Dec. 7.—Seventh Annual Field Trials of the National Field Trials Club, Grand Junction, Tenn. Entries for Derby close April 1. B. M. Stephenson, La Grange, Tenn., Secretary.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **2908.**

THE PHILADELPHIA TRIALS.

[From a Special Correspondent.]

RIO GRANDE, N. J., Nov. 16.—The second annual field trials of the Philadelphia Kennel Club began here this morning.

The weather is clear and everything favorable for good running. The drawing for the Derby Stake resulted as follows:

FAIRY GLEN (E. Jester), blue belton setter bitch (Glen Rock—Blue Belle),

against

BUCKINGHAM (G. DeHavens), lemon belton English setter dog (Dude—Dudeen).

VICTORIA (C. J. Thompson), red Irish setter bitch (Berkley—Nora),

against

LEIGH DOONE II. (W. H. Child), red Irish setter bitch (Chief—Leigh Doone).

Shot and Jessamine withdrawn.

The All-Aged Stake drawing resulted as follows:

LEIGH DOONE (W. H. Child), red Irish setter bitch (Elcho—Rose),

against

CASSINO GLADSTONE (E. Comfort), blue belton English setter bitch (Gladstone—Countess Druid).

KNOB (G. Schrieber), orange and white English setter dog (Grouse—Flora),

against

BRUCE (I. H. Roberts), red Irish setter dog (Elcho—Noreen).

GROUSE (M. Richardson), orange and white setter dog (Grouse—Leda),

against

JESSIE (I. H. Roberts), red Irish setter bitch (Elcho—Rose).

CREOLE (Major Wibert) red Irish setter bitch (Grafton—Meg),

against

LEIGH DOONE II. (see above).

LEDA (Col. Ridgeway), orange and white setter bitch (Calabar—Nell),

against

WRAGG (G. Emlen), Gordon setter (Grouse—Maud).

LITTLE NELL (I. H. Roberts), red Irish setter bitch (Elcho—Rose),

against

PRINCE CASTLE, blue belton English setter (Prince—Dashing Belle).

VICTORIA (C. T. Thompson), red Irish setter bitch (Berkley—Nora), a bye.

Nov. 17.—*Special to Forest and Stream:* In the first heat Fairy Glen beat Buckingham.

PLINLIMMON PUPS.—Steamship Roman, on her last trip, brought two rough-coated St. Bernard pups for the Chequasset Kennels, well worth seeing. They are brother and sister, a little more than four months old, and promise to make huge animals at maturity. Duke, the dog pup, is almost a facsimile of his grandsire, Rector, in markings, but his head encourages us to hope that it may be of a finer type when fully developed. Lady Hanley is rich orange, slightly brindled, with white blaze, incomplete collar, white chest, feet and tip. Their bone is extraordinary, and we hope they will do credit to their parentage. Plinlimmon, their sire, is thus far without a rival in sire and proportion; and Lady Burghley, their dam, a daughter of Rector, stands thirty-two inches at the shoulder and is one of the largest bitches living, of most amiable temper and gentle as a lamb.

THE EASTERN FIELD TRIALS.

THE seventh annual meeting of the Eastern Field Trials Club commenced at High Point, N. C., on Thursday, the 12th inst., with the Members' Stake. There were ten starters—five less than last year. Six of the ten ran last year, including the winner, he being the runner up this year. Mr. J. O. Donner, the President of the club, and Mr. Charles Heath, of Newark, N. J., acted as judges and gave entire satisfaction to all by the intelligent manner in which they performed their duties. The weather conditions were favorable and some very excellent work was done. The birds were not found quite so plentiful as last year, but there were no long intervals between the finds, and the probabilities are that birds enough will be found to run out the other stakes expeditiously. One serious drawback to success in this stake is that many of the dogs entered have not been handled by their owners to any extent, and consequently are seriously handicapped. We would like to see this stake contested by dogs that have been trained, or at least sufficiently handled by their owners. When this is done by the members who own good dogs the stake will take its proper place as the most important event of the meeting. The dogs were drawn and run as follows for the

MEMBERS' STAKE.

DASHING NOBLE (J. R. Henricks, Pittsburgh, Pa.), black, white and tan English setter dog 2yrs. (Count Noble—Dashing Novice),

against

BELLE OF PIEDMONT (Edward Dexter, Boston, Mass.), black white and tan English setter bitch, 2yrs. (Dashing Rover—Ranée).

BUCKELLEW (W. A. Coster, Flatbush, L. I.), orange and white English setter dog, 7yrs. (Druid—Ruby),

against

CORINNE (Geo. T. Leach, New York), red Irish setter bitch, (Peter—Countess).

VISION (F. R. Hitchcock, New York), liver and white pointer bitch, 4½yrs. (Croxteth—Vinnie),

against

FOREMAN (C. Fred. Crawford, Pawtucket, R. I.), black, white and tan English setter dog, 5yrs. (Dashing Monarch—Fairy III.).

LUCIA (D. S. Gregory, Jr. 2d, New York), liver and white pointer bitch, 4yrs. (Croxteth—Belle),

against

BRIMSTONE (W. A. Coster, Flatbush, L. I.), white and lemon English setter bitch, 3yrs. (Gladstone—Swaze).

BROCK (Geo. T. Leach, New York), red Irish setter dog, (Bosco—My Duchess),

against

FLASH R. (D. S. Gregory, Jr. 2d, New York), liver and white pointer bitch, 2¾ yrs. Ranger—White Lilly).

The description of the running is simply a record of the work of the dogs as seen by us, except that when they were too far apart for us to see the judges very kindly gave us the desired information.

First Series.

DASHING NOBLE AND BELLE OF PIEDMONT.

The first brace were cast off in the woods, just east of the town, at 8:50. Dashing Noble is a fairly well-formed dog of medium size, with a fair turn of speed. He was not accustomed to his handler, and did not appear to be doing nearly so well as he might. Belle has improved since last year, and ran a very good race. She was superior in style and speed to her opponent, and had the best of it in other respects. After a turn in the woods without result, we beat up along a branch when Dash challenged, but went on and soon after he half pointed where birds had probably been, as Belle challenged when she came up, but nothing could be made of it. We then went to a small piece of stubble, where Belle took the lead and made a stylish point to a bevy which was some distance from here. Dash, brought up to back, did not see her, but went about half way between her and the birds and caught the scent and also pointed very nicely. The birds were flushed to order, but were not shot at, both dogs dropping to order. This was a very pretty beginning and gave promise of a good heat. The birds flew over the spectators and settled along a fence in some sedge and brush, where Belle found first and made a gamy point to three or four that Mr. Dexter to order flushed. Some of them went over Dash, and, as he was going in the same direction, he quickened his pace a trifle, but upon the whole he behaved very well. Belle then got in a nice point, which Dash did not honor. Mr. Dexter to order put up a bird, but Belle still held her point, and two more were flushed in front of her. We then worked back, and Dash made a nice point, which Belle honored at sight. Mr. Henricks put up the bird and missed it. Belle soon had another one fast. Dash refused to back, and went ahead, but failed to smell them. Two birds were flushed to her point, Col. Leach killing one very neatly. Belle, sent to retrieve, swung back and pinned another one, which Mr. Dexter to order put up but failed to stop. Dash retrieved the killed bird in good style. They were then ordered up and Belle was declared the winner of the heat. Down thirty-three minutes.

BUCKELLEW AND CORINNE.

Both of these dogs are well-known to our readers, having run in previous stakes. Buckellew has had but little work, and was not up to his usual good form, although he ran a good race. Corinne went better than we remember to have seen her, and gave Old Reliable about all he wanted. They were cast off at 9:36 in a cornfield, which was drawn blank. We then beat across a knoll of sedge and through woods, when Buck, in a thicket, pointed a single, which Mr. Coster flushed as he went to him. We then beat over considerable ground without result until we came to a fence, when a large bevy flushed and settled in an alder thicket a short distance up the fence, where Mr. Coster again flushed them. They settled in some sedge grass on top of a knoll among some scattered pines. Working toward them Buck pointed a lark and was nicely backed by Corinne. Buck then went on and scored a flush on a single that he should have pointed, and dropped to wing. Corinne then made a nice crouching point to a single, that Col. Leach, to order, flushed and missed. Both dogs were steady while several birds got up all around us. Corinne soon got in another nice point to a single, Buck backing to order. Col. Leach was successful this time, and grassed his bird in fine style, Corinne retrieving well. We then worked over considerable ground without result, except that Buck came very near scoring a false point, but he went on, we thought, in time to escape the penalty. We then crossed to the lower end of Mr. Snow's farm, where birds were reported plenty; but we beat out many likely-looking places where in former years we have found numerous bevies, but found nothing until finally Corinne nailed a bevy in some sedge, and Buck backed her nicely. Col. Leach to order put up the birds, which settled in the thicket where London made his sensational pose three to four years ago. Buck probably had that picture in remembrance, for he twisted into a capital point as soon as he entered the thicket. Corinne, called up to back, struck the scent of another before she saw him, and also pointed. Mr. Coster to order put up the bird in front of Buck, when the one in front of Corinne went also. Buck then sat down to a single, that Mr. Coster flushed and missed. Corinne appeared to be backing, but when ordered on she refused to stir, and after considerable kicking among the leaves a bird was flushed in front of her. We then worked down a branch, when Buck half pointed, went on, and after considerable roading and some excellent work, he located five or six birds and pointed them nicely. Corinne picked up the trail of a single, and roaded it out and pointed at about the same time. Both handlers flushed; Mr. Coster killed his bird but Col. Leach did not get on. Buck retrieved well and then swung out up the hill and pinned a single, which flushed itself a few seconds after. They were then ordered up and the heat was awarded to Buckellew. Down two hours and seven minutes.

VISION AND FOREMAN.

These dogs are also well known. Vision was not at her best, and did not let out at all. Foreman had not been handled by his owner, and was not under good command, although he was all right when on game. They were cast off near where the last brace was taken up, and considerable ground worked over without result, except that Vision scored a false point, which Foreman backed in good style. Birds had evidently been there as both roaded some distance. They were then taken up and we went to the Model Farm, where Foreman worked out a large cornfield in fine style, ranging fast and wide. Vision went into some tall weeds and found a bevy, which she pointed for a long time, and until Foreman was brought up to back, which he did in fine style. Mr. Hitchcock then put up the birds and scored a miss with both barrels. The birds settled on some rough ground where Vision made an excusable flush, and Foreman got in a good point and was nicely backed by Vision. Mr. Crawford, to order, put up the bird, which was shot at by Mr. Hitchcock and missed. Vision then put up one that she should have pointed, as she had the wind. Foreman then flushed one, and soon after pointed a single that got up a moment later. Mr. Crawford cut loose at it, but it went on, and a moment later Mr. Hitchcock let go at one flushed by the judges, with the same result. We then crossed to some woods where Foreman made a stylish point to a single and Vision backed him nicely. Mr. Crawford, to order, put up the bird and the heat was ended with Foreman the winner. Down fifty-two minutes. Just after the heat was decided Vision pointed at a small brush heap and both handlers claimed that they had crippled a bird and that she had found it, and commenced kicking over the brush heap to find it, but a cloud of yellow jackets put a stop to further search and it remained unsettled as to whether there was a bird there or Vision had played a joke on them. We then went to lunch which was spread for us in the large barn at the Model Farm. After a very pleasant hour we again took the field.

LUCIA AND BRIMSTONE.

These dogs both ran here last year. Lucia had not recovered from a recent abscess and was hardly fit to run, although she showed good speed and style and did some good work. Brimstone was in better form than last year and had the legs of her competitor. They were put down in a stubble field near the house and beat it out in fine style. When near the far corner, a bevy flushed wild in the edge of the woods and settled in an old field, thickly grown up to briers and weeds. The dogs were taken round to get the wind, Brimstone getting it first and making a stylish point. Lucia was brought round to back, but did not see her and catching the scent also pointed and then took a step or two and located them nicely. Brim drew on a few steps and then made a cast and came round and caught sight of Lu and backed her nicely. Mr. Gregory, to order put up the bevy and missed one, but caught on to the next one and Lu retrieved it very well. We then swung round into a valley, where Brim made a nice point to a single and was handsomely backed by Lu. Mr. Coster flushed the bird to order and grassed it neatly and Brim was ordered to retrieve, but Lu was too quick for her and took it from under her nose and brought it in. We then turned back among some briers, where Lu half pointed, but roaded on and scored a flush; this was partly down wind, but not entirely excusable. We then crossed a ditch and worked up a ravine, where Mr. Boggs and his horse had a heap of fun with a colony of yellow jackets, and for a few minutes there was quite a lively time; no damage was done, however, and, after a vote of thanks for the entertainment, we moved on up to some woods where a woodcock that we had previously flushed had settled. The bird was again flushed and marked down in a thicket, and Mr. Coster went for it. Bets of two to one were freely offered both on the bird and gun, but the woodcock flew so far after being fired at that the challenge for shot marks could not be decided. Meantime Brim pointed a single that was flushed by some boys, but the judges decided that the point could not count until the woodcock came back. We then went back to the stubble field near the house, where a bevy had run in, and Brim dropped to them nicely and Lu backed her in good style. Mr. Coster to order put up the birds, and, as his practice at the woodcock had got him in trim, he brought one of them to grief and Brim retrieved it nicely. Lu started for it, but dropped to order. We then followed them into the briers, where Lu made a point, and a few seconds later Brim also pointed; but the birds were running and Lu roaded too fast and flushed two, and a little later she put up another one, and lost the race. They were ordered up at half-past 3 and the heat was awarded to Brimstone. Down one hour and twenty-six minutes.

BROCK AND FLASH R.

These dogs are also well known. Brock holds his own, and as usual when he runs, some of the knowing ones get badly left. Flash started off in excellent form and apparently had an easy win, but she was not much acquainted with her handler, and after a while she let up in speed, and did not do nearly so well. They were put down in a cornfield east of the house and worked over a large area where in former years we have found birds in abundance, but we failed to find any, although bevies had been found there frequently. Finally we went across the brook to a large field of tall weeds and Flash made a nice point, and drew on a few steps and located a bevy in fine style. They were flushed to order and settled in a dense thicket, where both dogs got a point almost simultaneously. Brock was a little ahead, and some thought that Flash was backing, but she could not see him, and we had no doubt that the points were independent. Col. Leach flushed the bird to order and scored a kill. One or two more then got up, both dogs remaining steady. Brock, ordered to retrieve, pinned another one, that Col. Leach put up and missed. Brock then half pointed and commenced roading, but a hare jumped up ahead of him, and he was called off. We then went into a cornfield, and Flash half pointed just as a bird rose. She then located another one, that Mr. Gregory flushed to order and missed. We then took a long turn without a find, but as we were working back along the edge of some woods a large bevy flushed close by Col. Leach, who was so surprised that Brock had failed to find them that he did not shoot. We left our horses and followed them into a dense pine thicket, where one got up near Flash, and she stopped to wing, and then drew toward another one, that flushed wild before she could locate it. Brock meantime got a point, but the bird went with the others, and Mr. Gregory scored two misses. A little further on Brock pointed and Flash backed to order, but soon drew alongside and also pointed, but nothing was found. These birds were wild and cunning and would not lie for the dogs to get near them. Flash then flushed one, and pointed and drew a short distance, evidently from caution. We then came out in a cornfield, when Brock got in a good point, which Flash backed an instant, and then drew up beside him, but nothing was found, although a hare was started near them. We then returned to the large field of woods, and as a single got up near Col. Leach he cut loose and grassed it in good style and Brock retrieved it. Brock then challenged, but before he had time to locate the birds a bevy was flushed by the horses. Then several scattered birds got up, and Mr. Gregory scored a miss at one of them. Col. Leach soon after did the same on a single that got up near him. When at the edge of a thicket Flash made a stylish point to a single, which was flushed to order. Brock, meantime, had established a point, which went at the same time. The dogs were then worked across the brook, and Flash half pointed, and drew on and the bird flushed, and she was a trifle unsteady. Brock then made a good point, which Flash backed indifferently to order. Col. Leach put up the bird, but failed to stop it. They were then ordered up and the heat was awarded to Brock. Down one hour and three-quarters. This ended the first series at night on Thursday, with the following result:

First Series.

Belle of Piedmont beat Dashing Noble.
Buckellew beat Corinne.
Foreman beat Vision.
Brimstone beat Lucia.
Brock beat Flash R.

Second Series.

BELLE OF PIEDMONT AND BUCKELLEW.

On Friday morning we left the hotel at 8:25 and drove about two and one-half miles northeast of the town. There had been a slight sprinkle of rain, and more was threatened, but the weather was favorable for the dogs, and excellent work was shown. They were put down in an old field on Mr. Holden's farm, where in former years birds have been found in abundance. Belle started off at a clipping gait and was soon out of sight; she was soon brought back, but appeared to want to hunt on her own account, and was not under good control. Buck meanwhile went a short distance and made a point, and as his handler came up, drew on a few steps and located a bevy in good style. Mr. Coster, to order, put them up, and killed a brace at one shot, and Buck retrieved them nicely. Belle had now put in an appearance, and the dogs were worked toward the birds, which had settled in open woods. Buck struck them first and whirled on point, and a second or two later Belle also located one in fine style. Mr. Dexter, to order, flushed the bird in front of Belle, and scored a miss. Mr. Coster then put up the one in front of Buck, but did not shoot. Buck soon had another one fast, which was flushed to order. Belle then got in a stylish point to a bird on bare ground, which Mr. Dexter flushed to order. Up to this point both dogs had been perfectly steady and their work was of the best, but as this bird rose Belle was a trifle unsteady, but dropped to order. Buck then made an excusable flush. Belle made a wide cast and was lost, but soon found on point to a single, which Mr. Dexter flushed to order. We then turned back to join Buck, and Belle made a good point to a single, which Mr. Dexter put up, but as the dogs were not under judgment this did not count. Buck meantime also got in a point that did not count, making them even in this respect. We then worked over considerable ground to a piece of stubble, where Buck made a capital point, which Belle instantly honored. Buck drew on a few steps as his handler came up, and located them in fine style. The bevy was flushed to order by Mr. Coster, and missed. Both dogs were steady to shot and wing. This was a capital piece of work. The birds settled along a branch thickly grown up to alders, Buck caught the scent first and pointed a few seconds, and Belle backed him, and he soon roaded on a short distance and half pointed, and as his handler came up, two birds flushed ahead of him. Belle then pointed but went on in season to escape penalty for a false point. Both dogs then pointed very nicely some little distance apart. Mr. Coster to order put up the bird in front of Buck and several more flushed, among them the one that Belle was pointing. This was very well done; both then pointed the same bird, which was flushed to order. Buck then made a nice point to a single, which Mr. Coster to order put up and missed. Belle then pointed and as her handler came up, she drew on a short distance and located her bird in good style. Mr. Dexter to order put up the bird and grassed it neatly. Meantime Buck and his handler almost identically followed suit. Both dogs retrieved their birds in capital form. The judges then ordered the dogs up and compared notes, but could not find enough difference to render a decision While they were consulting Belle made a false point, and was nicely backed by Buck, but as they were not under judgment no account could be taken of it. We then turned back across the hill, and along some woods to a cornfield where the spectators flushed a bevy, and the dogs were worked to where they settled. As Buck jumped a fence a bird got up near him and he stopped to wing, and then pointed and roaded a short distance and lost it. Belle then came up and roaded and pointed but the birds had gone. We then crossed the road to an old field, where Belle made a good point where some larks had been, and Buck sat down knowing that he had a good thing of it. Belle held her point too long and staunchly for her own good, as nothing was found, and the judges ordered them up and the heat was awarded to Buckellew. Down one hour and a quarter. This was a rattling good heat, and the quality of the work was of a very high order.

FOREMAN AND BRIMSTONE.

This brace were put down in an old field a few minutes past 11, and worked along the edge of some sprouts. Foreman swung into the brush and was lost, but soon found on point to a woodcock, which flushed as we came up and settled a short distance away. Mr. Heath borrowed a gun and went for it, with a look of determination in his eye that boded ill for the bird. All of us stood anxiously awaiting the result of the heat, each one conning over a neat little speech of thanks for the gift of the toothsome bird, when with a soul-stirring whistle he sprung into full view. Just as Mr. Heath pulled trigger it flashed upon his mind that the trials were on quail, and that woodcock did not count, so he just saluted the bird with both barrels and let it go unharmed. We then went to a field of sedge, where Foreman dropped on point to a lark, but soon went on and swung down into a hollow, where he made a capital point to a bevy, that flushed as Brim worked too close to them from the opposite direction. Following them up Brim pointed a single, which flushed as Mr. Coster came up. Brim at once whirled and pinned another that flushed a second after, and was neatly stopped by Mr. Coster. Brim, sent to retrieve, worked a long time and finally found the bird, which was only winged. She tried her best to catch it but did not succeed, and Mr. Coster took a hand, and after some very pretty work, including an exceedingly neat somersault, he made a successful grab and secured the meat. This fracas rattled Brim, and when ordered on she started off with one ear cocked, evidently bent on having some fun. Working over a knoll we turned down a ravine, with Foreman in some pines, where he made a point to a bevy that was somewhat scattered. As the judges went toward him one portion flushed. Foreman roaded out the others and again pointed. Meantime Brim had swung round there, and, catching sight of Foreman, started for him and ran up a single and turned for it, when another one got up, but was at once out of her sight in the thick pines. She then turned for Foreman, went on ahead and flushed the birds, and kept on in their direction and did not come back for some time. We then beat down to a brook and turned up the valley to some pine woods, where Foreman swung in and was lost. He had been going at a much better pace, but was not under good control, although he was perfectly steady when on game. After some search he was found at the upper edge staunchly pointing a large bevy, and judges were signaled, but they ordered the dog brought round to them and Mr. Crawford put up the birds and went down to the valley. Meantime Brim had found and pointed a bevy which was flushed and marked down on top of a knoll. We then swung round to get the wind, but went the wrong side of a fence and birds flushed near each dog, but they were excusable as they did not have the wind. We then crossed to the upper edge of the pines, where the bevy flushed by Foreman had settled. He appeared to have marked them down, and was soon on a point. Brim

refused to back but went ahead and stole the point and then moved on and scored a flush and was unsteady to wing. They were then ordered up and the heat was awarded to Foreman. Down one hour and a quarter. It was now nearly half past twelve and we went to lunch, which was spread by the side of the brook near Mr. Holden's house. Shortly after our arrival it commenced raining heavily and we adjourned to the barn. This heat finished the second series, Brock having a bye. Following is the result:

Second Series.

Buckellew beat Belle of Piedmont.
Foreman beat Brimstone.
Brock a bye.

Third Series.

BUCKELLEW AND BROCK.

After lunch it stopped raining and we made a start, but after a half hour's work the rain drove us back and we started for home, but it again cleared up and it was decided to resume work, and the dogs were cast off in an orchard where birds were reported to be, but we worked over considerable good-looking ground without result except that Buck made a point and was backed by Brock. Nothing was found, however. Working down to a branch Brock scored a flush on a bevy that settled in the woods. As we came up one got up near Buck, and a second later he pointed some little distance ahead. Col. Leach flushed the bird to order and scored a miss. A little further on both pointed, but Brock moved on and made a bad flush. We then went to a stubble field, where Brock made a point to a bevy and was backed by Buck. Col. Leach flushed the birds to order and let go both barrels and got one, which Brook retrieved in good form. Following them up Buck found first and pointed a single, and Brock backed him. Mr. Coster flushed to order and scored a miss. Brock then scored a flush, and a little later he pointed a single that flushed as his handler came up, and then several more got up wild. They were then ordered up and the heat was awarded to Buckellew. Down altogether fifty minutes. This finished the third series, Foreman having a bye. Following is the result:

Third Series.

Buckellew beat Brock.
Foreman a bye.

Final Tie.

BUCKELLEW AND FOREMAN.

This was the final heat, as there was no second prize this year. Buckellew's chances looked very fair for a win, for he was under good control and has lots of hunting sense; while Foreman, while performing excellently when on game, was not used to his handler and hunted pretty much his own way; but during the heat Mr. Crawford had him well in hand and he did his work in a masterly manner. Buckellew had had hard work during the day, and as he had had no previous work of any account he was in no condition to compete with a flyer. They were put down a few minutes past four in the woods near where the last brace had finished. Foreman soon had a high-headed point to a single that flushed itself a moment later. He then made a capital point and Buck backed him nicely; the birds flushed as the judges came up. He then swung out by a fence and pinned a brace that Mr. Crawford to order flushed. They were then worked through a strip of corn, and as Foreman was passing a small patch of brush he whirled on a nice point to a brace that were flushed to order, and very cleverly missed by both handlers. All of his work through the heat was of a very brilliant character, and at a quarter past four they were ordered up and Foreman was declared the winner of the heat and race. Following is a complete summary:

First Series.

Belle of Piedmont beat Dashing Noble.
Buckellow beat Corrine.
Foreman beat Vision.
Brimstone beat Lucia.
Crock beat Flash R.

Second Series.

Buckellew beat Belle of Piedmont.
Foreman beat Brimstone.
Brock a bye.

Third Series.

Buckellew beat Brock.
Foreman a bye.

Final Tie.

Foreman beat Buckellew and won the cup.

THE ALL-AGED SETTER STAKE.

The drawing for the All-Aged Setter Stake was made at 10 o'clock P. M., Nov. 15. Twenty of the twenty-three nominations completed their entry and were drawn to run as follows:

Brandon against Gladstone's Boy.
Countess against Blarney.
Sportsman against St. Elmo IV.
Clifford against Belle of Piedmont.
Nelly II. against Gus Bondhu.
Windemere against Dashing Noble.
Princess Helen against Slocum.
Pendenis against Elcho, Jr.
Plantagenet against Rose of Killarney.
Gath's Mark against Queen Alice.

None of the judges selected could be present, as they were detained by important business, and Messrs. B. F. Wilson, of Pittsburgh, Pa., F. R. Hitchcock, of New York, and W. A. Coster, of Flatbush, L. I., were selected to fill the position.

[*Special Dispatch to Forest and Stream.*]

HIGH POINT, N. C., Nov. 16.—The All-Aged Setter Stake commenced to-day. There was fair attendance. Weather delightful. Six heats were decided. Brandon beat Gladstone's Boy. Blarney beat Countess. Sportsman beat St. Elmo IV. None of these heats were brilliant. Belle of Piedmont ran well and beat Clifford. Nellie II. beat Gus Bondhu. This was a good heat. Dashing Noble beat Windemere, who did some good work but was not steady. Princess Helen and Slocum ran a short time and will finish in the morning. Birds are only fairly plenty.

[*Special Dispatch to Forest and Stream.*]

HIGH POINT, N. C., Nov. 17, 8 P. M.—The weather to-day has been perfect, although a little too warm for the dogs. The first series of heats was finished and two heats of the second series, six in all. Princess Helen beat Slocum, and Pendennis beat Elcho, Jr. Both heats were good. Plantagenet just managed to beat Rose of Killarney in a very poor heat. Gath's Mark beat Queen Alice in a good heat. This finished the first series.

In the second series Brandon beat Blarney in a very tiresome beat of an hour and twenty minutes. This was more than an hour too much. We then had something to compensate for this in witnessing the very brilliant heat between Belle of Piedmont and Sportsman. The work was of the highest order and the honors were nearly even, but Belle fixally won. This was the best heat so far and will long be remembered by those who saw it. Birds were fairly plenty, but not so numerous as in previous year. Some hunters found a quail's nest yesterday with twelve fresh eggs and one to-day with fifteen.

AMERICAN KENNEL CLUB.—*Editor Forest and Stream:* A meeting of the American Kennel Club will be held at the Hoffman House, New York city, Dec. 16, at 4 P. M.—G. E. OSBOT, Sec.

FISHER'S ISLAND CLUB TRIALS.

[From a Special Correspondent.]

THE second annual field trials of the Fisher's Island Club were run on the club's grounds Nov. 9. The entries and drawings were as follows:

Doc B. (Robt. Betty), orange and white setter dog (Jersey Duke—Topsy),

against

FRANK (Ph. Phœnix), liver pointer dog (Duke—Swan).

NED (Ph. Phœnix), orange belton setter dog (Jove—Rodman's Fanny),

against

JERSEY BEAUTY (Max Wenzel), red Irish setter bitch (Chief—Doe).

LADY ESSEX (W. H. Schieffelin), black, white and tan setter bitch (Ted Llewellin—Juno),

against

YOUBE (Max Wenzel), red Irish setter bitch (Elcho—Rose).

CHIEF (Max Wenzel), red Irish setter dog (Berkley—Duck),

against

MEG (C. J. Stewart), red Irish setter bitch (Chief—Beesy).

COUNT RANGER (Henry Pape), blue belton setter dog (Count Noble—Gertrude),

against

DORA (Max Wenzel), red Irish setter bitch (Chief—Doe).

ROCK (W. H. Schieffelin), black and white setter dog (Nostrand's Duke—Biddy),

against

FRANCISCO (H. Reiche), black and tan setter dog.

SAILOR (C. J. Stewart), black, white and tan setter (Jock II.—Gipsey), a bye.

Messrs. C. P. Lewis and Wm. Leavitt acted as judges. The heats opened in rainy weather with a high wind, which made good work very difficult. The running was as follows:

DOC B. AND FRANK.

Doc B., a large, handsome orange and white setter dog, handled by J. T. Miller, and Frank, a fine, large, all liver colored pointer dog, were cast off by their handlers east of the ice house pond. Doc B., the fastez dog of the two, soon struck scent and shortly after established a fine point. The pointer, handled by J. M. Lawrence, failed to back, though he stopped alongside the setter a moment. He then pushed ahead, unsteadying the setter, and flushed the birds, which were not shot at. Both dogs dropped to wing. Going on up the hills Frank made a stylish point, but the birds got up wild and flew across the lake. Along the east side of the lake both dogs made game, and roaded some running birds very cleverly. Frank scored another fine point, and Doc B., coming down the steep hillside, backed him in a very strained attitude from the top of a rock; a very handsome picture. The pointer moving on flushed his bird. Both dogs were steady to wing. Circling around the north end of the lake, no more birds being found, the first brace was ordered up, as the rule demanding that each brace must be on game for an hour had been complied with.

During this heat a number of a species of hare or rabbit were found inhabiting the dense brier thickets of the rocky hillside. These hares are different from the European hare which the club had imported, as they are never found in the open fields like the imported hare, but have about the same tendency to stay in the brush that our American wild rabbit or hare displays; but the very great difference in size makes the Fisher's Island hare-rabbit very much superior to this last, for they will reach a weight of eight or nine pounds. They are bred by Mr. Wenzel, the secretary of the club, and all the young stock is turned out to grow up wild. Four different sizes were seen, all the breeding of this season.

JERSEY BEAUTY AND NED.

The next brace, Jersey Beauty and Ned, were called. Beauty handled by J. Miller, and Ned by Lawrence, were cast off over the brickyard flat, Beauty, the red Irish setter bitch, going at a tremendous pace, with beautiful style, while Ned, the orange belton setter, seemed to be off in nose, although good work by him had been seen before the trials. Beauty covered the entire flat in her quartering, and when going across the wind she stopped short, and, throwing her nose high up and going up wind on a half point fifty to sixty yards, made a beautiful point, head high up and stern straight as an arrow. The wind was blowing almost a gale and this work was duly appreciated by all.

Three or four meadowlarks rose in front of the little red bitch, and to the right and left of her, but she stood like a veteran, staunchly. The handler, going up to her, found a fine bevy about twenty yards ahead of her and flushed them. They were not shot at, but marked at the bank of the lake. Going to leeward of them, the dogs were worked toward the bank, and again Beauty scored a beautiful point. The bird was flushed by Miller but not shot at. Going on, the bitch pointed again. Ned, called on to back, failed to do so, and was charged by Lawrence behind her. The bird was flushed and killed by Miller, and fell twenty yards out into the lake, in full sight of the bitch, who broke shot, plunged in and fetched the bird, with great satisfaction to herself; but Miller looked savagely at her and seemed disposed to use the blacksnake. They were then sent on, when shortly she again pointed, a long distance from the bird, which was down near the water's edge, while the dogs were on top of the bank. Ned in the meantime took a refreshing bath within ten yards of the bird, which flushed at the dog's shaking himself, and was not shot at. Beauty steady to wing. Time being up, the dogs were ordered up. Beauty was reserved for a back.

CHIEF AND MEG.

Chief and Meg, both red Irish, were the next brace. Chief, handled by his owner, is sufficiently well known as a chronic field trial dog. Meg, his daughter, handled by Lawrence, is a handsome small red bitch, with nice style, and is quite fast, but out of condition for running, as she is nursing puppies.

Both dogs, being swung back over the flat, were quartering the brush and sedge grass of the bay, but no game was found. Turning toward the hill, Meg began a fine piece of roading up and down hill for a long distance. Chief, sent up over the hill by his handler, turned scarcely in time to back Meg, who had nailed her bevy on top of the hill. Both dogs being out of sight of their handlers. Lawrence flushed the bevy but did not shoot. Both dogs were steady to wing. The thicket near the old wind mill was now entered and Chief came to a point, Meg backing. The birds were flushed by the handlers and missed by both in regular field trial style. Both dogs dropped to shot. The low brush proved blank and on reaching the road all hands were invited to lunch. After half an hour had been well spent at this work the two red setters were again put down. A bevy of quail were flushed by one of the judges but were not followed. Chief quartering the open, again pointed. A meadow lark was flushed, killed by the handler, Chief dropping to shot and retrieving the bird tenderly. Thrown out for Meg, she also retrieved well. Time up.

LADY ESSEX AND YOUBE.

Lady Essex, a blue belton bitch, was handled by Lawrence, and Yoube by her owner. The English setter was much the faster of the two, and promised to make a good one. Her age is but fourteen months.

The west plain of the brickyard woods was drawn blank, and the two bitches were ordered down into the wilderness, the stronghold of the club for birds. Lady going at top speed near the edge of it found a bevy, and made a stylish and short point. Yoube, called up by her handler, backed in good style. On the birds being flushed the handlers both fired and one bird was killed and retrieved by Yoube. It was thrown out for Lady, but she failed to obey. The opposite bank was reached after some hard and tedious work, and Yoube pointed on the hillside in a green brier thicket. The birds were flushed, three being killed by her handler and Mr. Leavitt, the judge. Both dogs dropped to shot. The dogs were ordered up.

COUNT RANGER AND DORA.

Count Ranger, a white, black and ticked Llewellin setter, handled by his owner, and Dora, a red Irish setter bitch, handled by Miller, were ordered into the wilderness. This was poor judgment, as it is almost impossible to penetrate certain portions of it, extending for half a mile from east to west. The bank was followed for some time, the red setter roading through the marshy thicket, but the birds evidently had run in, as was subsequently proved. Count Ranger and his handler were separated from the party and were lost for a long time; they crossed, however, to the other side, while the party returned to the nearest edge.

The white setter was at last seen climbing the hill in the distance in search of his master and after a while, Mr. Pape looking for his dog, who in the meantime had come across a fine bevy on top of the hill and had a fine point, in full sight, though half a mile away from the judges and spectators. At last the handler reached the top, saw his dog, and in graceful hurry flushed the bird, missing with both barrels. As the birds were in the thicket again the dogs were ordered up for the day.

The next morning, Tuesday, Nov. 10, they were again cast off on the Fox farm at the west end of the island. One or two brier patches were drawn blank, but in the next, both dogs were roading a bevy, which rose wild at the opposite edge. They were followed into more and worse briers, and the English setter began to flinch them. The previous day's work, as well as his long journey from Kansas, where he had been hunted hard, were telling on him. The red bitch had worked through the thicket, and established a point at the foot of the hill. Count, called up, refused to back, passed her and flushed the bird. Both dogs steady to wing; up hill again, the plucky red setter followed the birds into the worst briers, now pointing and again roading, a very creditable piece of work indeed, and thankless, as the judge could not see her half the time. Her handler kept up as well as he could, having been ordered to kill, which he finally succeeded in doing. The Llewellin setter was bleeding and was withdrawn by his handler. The bird thrown for Dora she retrieved in good style.

ROCK AND SAILOR.

Rock and Sailor, both handled by Lawrence, were now cast off, and both soon began roading. A bird was put up between the three, Lawrence claiming the credit. The two dogs could not establish a point, but did good work on the running birds, Rock finally pointing, and a dead bird was found by his handler. Sailor, the faster dog of the brace, was a trifle wild, and neither of them could be induced to retrieve, and the judges ordered them up, Rock to run with Francisco, the black and tan setter, who, however, was not in condition to compete and was, therefore, withdrawn by Mr. Reiche.

Second Series.

The judges, according to the rules of the club, selected the four dogs showing the highest scores.

CHIEF AND DOC B.

Chief was put down with Doc B. to decide for first place. Chief, handled by his owner, and Doc B. by Miller, were cast off south of the triangular road, and both went at it with a will. As the wind was blowing quite strong, the handlers felt a little shaky as to results, for, under the circumstances, it was very easy for the dogs to flush birds. However, during this entire heat neither of the dogs made one single mistake. A brier piece was gone through, and Chief and Doc B. both roaded toward the middle of it, where Chief, getting body scent, tossed up his head, and, going directly up wind toward the outer edge, drawing beautifully all the while, stopping once or twice, he finally came to a halt, and with head up and tail straight in line with his back, fore foot up, pointed. He was instantly backed by Doc B. who swung in to his left behind Chief. It was the event of the meeting. Doc B. was roading in grand style previous to his back, and it was indeed only a matter of a few moments which of the dogs would get his point first. A large bevy was put up, and three birds were killed by the handler of Chief and the judge; both dogs dropping to shot instantly. Chief, ordered to retrieve, did so, and Doc B., sent for the remaining bird, brought it, both dogs sitting up and delivering the birds into the hands of their handlers. This work all through was simply perfection itself. The birds were followed and soon found, Doc B. being the first to point. Chief was called up and backed in crouching position. The score was filled for both dogs and they were ordered up.

YOUBE AND MEG.

The brace next highest in scale, Yoube, handled by her owner, and Meg, handled by Lawrence, were put into the brier thicket where the winning brace had finished their work, and notwithstanding that both bitches had puppies six and seven weeks old at home, they plunged into those green briers with the courage of bulldogs.

The Irish blood was up and there were birds ahead, but they were running and flushed wild and could not be reached by the gun. To the foot of the ridge both dogs went and Yoube pointed, and a wounded bird was picked up by her handler, which she was ordered to retrieve, doing so at command, having been taught to retrieve when five years old. Meg kept roading back into the briers and the handler asked for mercy on the dogs and the judges ordered them into the open. Soon birds were found in an old pond hole and were flushed by Yoube, Lawrence killing one bird, which Meg retrieved in good style. They were ordered up.

DOC B. AND MEG.

Doc B. and Meg were swung south to decide the second prize winner. A bird was found, flushed and killed by Lawrence, his dog breaking shot (the gravest offense possible in the eye of one of the judges), which lost her all chances for second place, and Doc B.'s previous score and superior work secured him second place without any further work. The score made by the winners is as follows: Chief 87, Doc B. 83, Meg 81, Yoube 79.

CHIEF, therefore, was awarded first prize, the President's silver cup, gold lined.

DOC. B., second prize, silver cup.

MEG, third prize, a silver drinking flask.

YOUBE, fourth prize, a cash premium.

BEAGLE PEDIGREE.—Wilkesbarre, Pa., Nov. 7, 1885.—*Editor Forest and Stream:* In reply to inquiry of "H. F. S." for pedigree of beagle Louise I offer some heresay evidence for what it may be worth. Some three years ago, in a correspondence with Mr. Colin Cameron, he wrote me, among other things, that Lee was the grandsire of his very promising young dog Racket. This, if correct, completes the pedigree of Louise. "H. F. S.'s" Trailer has occupied considerable of your space lately, and I should like to ask the owner why he advertises Trailer as Rowett stram, there being not a drop of Rowett blood on the dam's side, and further, why he claims that John Knight's Pet and Beauty, sire and dam respectively of Satterthwaite's Fly, were imported. This claim was presumably unknown to Mr. Satterthwaite when he registered Fly, and it is news to those who knew these dogs in John Knight's kennel.—F. W. WHEATON.

WESTERN FIELD TRIALS.

[From a Special Correspondent.]

THE first annual meeting of the Western Field Trials Association commenced at Abilene, Kan., Monday morning, Nov. 9, at 10 o'clock, and terminated on Friday afternoon at 5 P. M. This, though not the shortest time that trials with even more dogs have been run, surely was the most satisfactory one all the way through. All dogs were given ample time to display their good or bad qualities, each heat lasting from one to four hours. None of the handlers nor owners complained of their dogs not getting time enough. A precedent was established by the judges right at the start that no p judgment would be taken.

The grounds selected were new to everybody except the local sportsmen, and they had not tried them this season. Most of the trial has been run in the corn or heavy cover, and yet there were plenty of open places found to try a dog's speed. The weather during the week was warm and very pleasant for the men, but did not give the dogs a fair show. The large number of flushes will convince any sportsman that something was wrong, and it was the dry ground and grass. A time a little later in the season would be much better for the dogs, and yet not so pleasant for judges and spectators.

On the evening before the start it was found necessary to get substitutes for two judges, Messrs. Bergundthal and Col. Hughes. After consulting all parties interested it was agreed that J. W. Munson of St. Louis and W. B. Stafford of Trenton, Tenn., should act. They each had dogs entered in the Free-For-All, but Munson's bitch Vanity coming in heat could not run and Stafford withdrew his dog. These gentlemen performed their duties to the satisfaction of all during the whole of the prolonged Free-For-All race. When that was concluded Messrs. Munson and Stafford were relieved, as Mr. Stafford had to handle two dogs and Mr. Munson owned one puppy that was to run in the Derby. Messrs. E. E. Pray, of Denver, and R. C. Van Horn, of Kansas City, were selected, Mr. Pray having a bitch withdrawn that he had some interest in. Mr. E. C. Sterling put in the time continually, and to his long experience and the excellence of all the judges we are indebted for the prompt manner in which all fine points were settled. We don't know of any one more capable of acting the presiding judge than Mr. Sterling.

FREE-FOR-ALL STAKE.

In the Free-For-All there were ten starters, and a good lot of dogs they proved to be. They came from North, South and West, some of them having met previously on the field. Following is the order in which they were drawn to run:

Trinket's Bang against Joe.
Count Rapier against Patsey.
American Dan against Cato.
Richmond against Queen Bess.
Lillian against Bridgeport.

A number of these dogs have run in former field trials, East and West, and their performances in previous years have been fully given in FOREST AND STREAM.

Trinket's Bang is a pointer (Croxteth—Trinket), Joe a red Irish setter (Irish Ranger—Lady Trumble, Count Rapier a Llewellyn setter (Druid—Magnolia), Patsey, Irish setter (Lord Dufferin—Queen Bess), Cato a red Irish setter (Keno—Maud), Richmond, lemon and white pointer (Vandevort's Don—Beulah), Queen Bess (Gladstone—Donna J.), Bridgeport (Dashing Monarch—Vannette), Lillian (Gladstone—Sue). The first place was won by the pointer, Trinket's Bang, large liver and white dog. He is not an extremely handsome dog, and might not win at a bench show; but the longer he runs at a field trial the better he seems to be. He did his finest work at the very close of his last heat. He is very fast and staunch, and very stylish on points and backing. Trinket's Bang ran last year at Grand Junction, and was there beaten by Lillian, but your able correspondent and many of the spectators claimed that Bang won the heat that the judges gave to Lillian. He is owned by William Titterington, of Wyanet, Illinois. The second place was divided between Lillian and Patsey. Lillian was not equal to the red dog, Patsey, as she was sick, and Mr. Van Horn very cleverly proposed to divide second with her. The third prize was divided between five dogs, but no record was given them, as time did not permit the heats to be run off. Those getting a share were Cato, Count Rapier, Queen Bess, Richmond and Bridgeport. The first prize Derby was won by J. W. Munson's pointer bitch Malite, and the second prize by A. A. Whipple's Belle. Third prize, divided between the setters Blitz B. and White Cloud. This brings the pointer dog to the front with as much prominence as the setter has been heretofore in the Southern or National field trials.

The field was reached at about 9:30, a full complement of the members of the association being in attendance, as well as a large crowd of local lovers of the sport.

TRINKET'S BANG AND JOE.

The first brace included the pointer dog, Trinket's Bang, handled by Nesbitt, and the red setter dog Joe (Irish Ranger—Lady Trumbull), handled by Allen. The run commenced at 9:40, in open grass field, Bang to the right, Joe going slow. One-quarter mile drawn, no birds. In the corn the pointer led, Joe keeping close to Allen. They brought up to a point, but moved on through the corn, Joe drew but did not stop.

One half mile through the corn and no game, when the dogs were ordered up to charge. They were then sent on in a pasture field, Joe to the left Bang to the right. A half mile made and no birds, both dogs making game on grass, but nothing found. By this time the hunt had wound around from the cornfield and pasture alongside the river bank. Point for Joe, back for Bang, both having made game. Birds flushed, both dogs steady. Joe made a point, but no birds found; search for covey in brush. Bang pointed and moved on and bird flushed. Joe backed and was pointing when bird flushed in thick cover. The dogs called and ordered on up the river bank. Both dogs and handlers came to covey, when they flushed birds, which scattered in the corn. Nesbit claimed a point for Bang. Birds flushed, shot at and missed, Bang steady to shot. Joe not near enough to back. Trainer Allen flushed a bird and Joe started to wing. Nesbit next flushed a bird, Bang making a point and Joe ordered to back, which he did. Bang got another point and another flush; was sent to find dead bird. Joe found bird and retrieved in good style. Bird thrown out for Bang, who with some difficulty, found and retrieved it. Dogs cast off; flush for Bang in the corn. Dogs taken up while going to new ground. Heat given to Bang.

COUNT RAPIER AND PATSEY.

Count Rapier was handled by H. B. Short, who found that the cover and ground here were not such as he has been used to in the South. Patsey was handled by A. J. Gleason, of Alma, Kansas.

When the dogs were ordered on Patsey came to a staunch point before he had gone ten steps. Gleason was ordered to flush and kill the bird. He ordered the dog to flush, shot and missed. Both dogs were steady to shot. Dogs were ordered on, when a large covey flushed and settled in heavy cover. Some of the birds went down in a hog lot, and dogs were sent in but could not do anything for want of cover. Judge Stafford flushed a bird and a black, ugly pig another, when it was suggested to try for a new covey. Coming back into grass, where a single bird had been marked down, Patsey made a flush, though it was scarcely chargeable to him on account of cover and dry grass. A change was then made, and the dogs were taken up to the garden of a farmer. Patsey ran up to the fence and got a fine point, Count R. backing. Gleason was ordered to kill the bird, which he did. Patsey made another point without moving, as the grass was full of birds. Both dogs were then called back that the birds might be flushed, which was done.

They were then ordered on, and Patsey again pointed. Bird was ordered killed, and Gleason told Patsey to flush and he killed. Patsey retrieved in good style. Soon after Patsey made a point, but no birds were found. Moving to the front yard, Count R. made a point and Patsey at once backed. Short was ordered to flush and shoot, and the bird was flushed and Short missed. Moving into some corn, Count R. made a point, and the bird flushed to his left. Patsey pointed a rabbit and Count R. soon did the same. Dogs were ordered up, and put down again on a covey that had been marked down. Soon both dogs pointed out of sight of each other. The birds flushed and settled a short distance away in the grass. Dogs sent on, and Patsey got two points to Count R.'s one. Then Patsey, going a short distance, pointed, and Gleason ordered to flush for Short to shoot. Short shot and bird fell in the river where the bank was forty feet high and could not be retrieved. Judges now stopped for consultation and declared the heat ended and Patsey the winner. Both dogs did fine work and their heat was the feature of the day. Both were fast and stylish. Time down, one hour and forty-five minutes.

AMERICAN DAN AND CATO.

Third and last brace for the day were put down after lunch. American Dan, handled by Short, was turned loose against Cato, a young Irish setter. The latter had a sore foot and was expected to flinch. Both dogs moved off at a rattling gait through a millet field, but no birds were found. Next the borders of a cornfield were tried. Dan went into corn and was soon lost to trainer and spectators. After ten minutes spent by Short whistling for him, judges and spectators went through the corn and after flushing a large bevy of chickens found him. A hedge was now tried and birds found running. Both dogs roaded but the birds flushed before a point could be established. Some time was spent trying for birds without success, when the trainers called for time to get water for dogs. When sent on birds were found along a hedge, but they flushed before the dogs got a point. They flew into sunflowers higher than the head of a mounted man, in which Dan got a point and Short wounded. Dan tried for some time to retrieve, and failing, was called off, and Cato found the bird afterward. Swinging round to a hedge, Gleason flushed a bird, and one hundred yards further on Short flushed one. Going on further a covey was flushed ahead of Dan. We then crossed over to a hedge where birds were found and partly flushed. Both dogs roaded, and Cato crossing the hedge got a fine point, standing for about ten minutes while Short was getting Dan up to back, which he did after being spoken to by Short. Bird was flushed but not shot at. We next tried the cornfield, and Dan made a point. The bird was flushed, dog remaining steady. The handlers flushed a covey near a hedge, and they settled in corn. The dogs were sent in and Cato got two points and Dan one. They were then taken up to go to better ground. After getting water they were put into a cornfield and here Dan pointed, and birds flushed before Short got up. Dan promptly dropped to wing. Cato next made a fine point, and flushed bird to order. It flew toward the judges so that Gleason could not shoot. Sent on here Dan got a whipping by Short for disobedience. Soon after Cato made a fine point. Gleason was ordered to shoot, the bird was flushed and Gleason missed. Cato now made another point, but failed to locate the bird after roading through corn where there was no cover. Going into grass Cato flushed, and further on Dan flushed a bird which Short killed and Dan retrieved fairly.

We now crossed a field, and went into corn, and a bevy was flushed. They were followed and Cato made a point, and Gleason was ordered to kill, which he did in good style. Gleason was then ordered to keep Cato in until Dan should point and he have a chance to back. Soon a point was made and Cato being turned loose backed in very good style. Cato is somewhat unsteady in backing, because Dan in pointing usually drops flat on the ground. It being now past sundown dogs were ordered up and the heat decided in favor of Cato. The time, three hours and twenty minutes, was necessarily long, as birds were in such bad cover. This ended the first day of the trial.

RICHMOND AND QUEEN BESS.

At 8 o'clock Tuesday morning the marshalls, judges, handlers and their dogs started for the grounds. The experience of the previous day had caused new grounds to be chosen, and the trial was had on lands four miles north of the city, where, if birds were no more plentiful than on the day previous, there was better chance to find them after they had been flushed, and the spectators could see to better advantage the working of the dogs. The morning was fine, and when the first brace of dogs were put down the grass was wet and in fine condition. The first brace were cast off at 9:10 A. M. They were the lemon and white pointer dog Richmond, handled by Short, and the black, white and tan bitch Queen Bess, handled by Nesbitt.

The dogs were started in a meadow to show their speed, quartering and style of ranging. They both went at such a gait that one unaccustomed to fast dogs would say they would run over all the birds and get no points, Richmond going the fastest of the two. Dogs sent up the slough, but no birds found, for they were in the corn at that time of the day. Crossing the road, the brush along the creek was tried, but no birds were found. Both dogs worked finely in speed and style, and general work. The judges then made for a cornfield, where they would have found the birds sooner in the first place. Here the fun commenced. In about twenty minutes three coveys were raised and made for grass at edge of cover. Bess here made the first point. The bird running in plain sight was tempting to her and she was unsteady. A little further on Bess got another point and Nesbitt flushed, shot and missed. Bess moved up and stopped at command, showing she was under control. Passing then into a ravine both dogs got a flush. Crossing the hedge to a ravine, Bess made a flush and a little further on Short flushed one and killed, which Richmond retrieved, Bess unsteady. Bess then made two flushes and Richmond one. Across the creek dogs sent on and Richmond made a fine point; no bird found. Twenty minutes time spent hunting up a draw, and no birds found. But just here the rules were suspended and Mr. Sterling, one of the judges, flushed and shot a jack-snipe that had been marked down.

Another field was tried with better success, for birds were soon found along the bank at edge of corn. The dogs dropped in high grass. Bess made a point, which proved to be on a rabbit. Next Richmond made a fine point; Short flushed and killed, but bird not retrieved. Birds were flushed and marked by Marshall. Dogs taken to where they dropped, and here Bess got a point. Nesbitt ordered to flush and kill, and Bess retrieved handsomely. A large hawk came too near Short's double barrel, and he brought it to the ground. A covey was flushed by the wagons and dropped under the bank. Down in the ravine Short claimed a point for Richmond, but it was not allowed, as the judges did not see it. Moving up the bank both dogs roaded, pointed and roaded a running covey. Moving on, Richmond got a point; bird flushed, Richmond steady to wing. Going across the cornfield both dogs got points, and Short killed a bird. Dogs ordered up; the heat was awarded to Richmond. This was very close in points of merit, and had the Queen been steady to her points and wing she would not have been beaten. This, we are informed, is the fault of her owner and not of her trainer, the owner allowing her to run in at shot. Heat ended at 11:30. Down two hours and twenty minutes.

LILLIAN AND BRIDGEPORT.

Lillian was handled by Short, and Bridgeport by Mr. Pray from Denver. Both dogs started off at a good rate of speed, but Lillian was much the faster, well earning the title of whirlwind. Going down the edge of corn Port got a flush to start on. Going to the creek dogs were given water, and Lill in getting out into grass on opposite side flushed a large covey by jumping right into them. Moving on birds were soon found. Port got a fine point, Mr. Pray shot and killed a bird with each barrel. Port sent on to retrieve found it and brought in very clever shape. It was Lill's turn next, she got a point and bird flew. Port came to a halt, but moved on. Lill stopped. Short claimed a point but no bird found. Lill then made a handsome point and Short flushed and killed. Lill retrieved finely. Lill sent on flushed in high grass. Next a false point for Lill. Then came Port's time to show his nose and a fine point was made in the open. Lill called up to back did not do so at once, but kept moving until she was spoken to by Short. Bird flushed, shot at by Pray with both barrels. Port was a little unsteady and was trying to locate what he supposed to be two dead birds. He stopped instantly at command. Sent on, a point was made by Lill. Short flushed, shot and missed. Port also made a fine point; bird ran and was flushed. Into cover they were sent; there Lill made a fine point, Short killing the bird, which was retrieved by Port. A little further on Port pointed and Lill was brought up to back, which she did well. Judges here called a halt for lunch. After thirty minutes same dogs were put down and sent up a clear open swale to see them range. Both fast, but Lill getting away ahead. After trying a hedge, birds were found by one of the wagons in the open grass stubble. Dogs taken there. Lill made a very bad flush, running right into the birds up wind on open meadow. Going to the ground Lill made a grand point and Port called up made a back equally as fine. Short flushed, shot and missed, both dogs steady to wing and shot. Moved up bank, and Lill roaded and bird flew. Lill now made a fine point in grass, and bird was flushed by Short. Next a flush for Port, quickly followed by Lill in the same manner.

Moving on to grass, Port made a grand point. Lill, called up to back, did it in grand style. It was worth going across the continent to see these two dogs on a point. Bird ordered flushed, but being across the slough and down a bank, could not be flushed by Mr. Pray, so Port was ordered on to do it, which he did and was steady to wing. Port pointed again and a rabbit ran. The heat was here ended, and a fine one it was, for never in Kansas were seen two finer specimens of the Llewelleyn setter down together. The dogs were nearly equal in all but pace, Lill here having the advantage, but she did not know how and where to find birds as well as Port. Obedience and disposition were equal. The judges had to split hairs to decide the matter, giving the heat to Lillian.

Second Series.

PATSEY AND TRINKET'S BANG.

The first brace of the second series were Patsey, the Kansas City favorite Irish setter, handled by Gleason, and Bang, the Illinois pointer, handled by Nesbitt. They were put down at 2:35 P. M. on an open mowed ground to try pace ranging and quartering; Bang going rapidly, while Patsey was falling short of his usual speed. On top of the ridge three jack rabbits were started and Nesbitt shot one. In the corn Bang made a flush and Patsey a false point. Going on again into grass, Patsey makes a point, and Bang, called to back, does it in fine shape; but, unfortunately for Patsey, it is a false point. Again the grass was tried and both dogs roaded, and Patsey got a point. Bang had a false point scored to him. Patsey got a fine point on a covey. Birds rose in a thicket where Gleason could not shoot. Patsey immediately got a point and birds got up ahead. Put into the corn, Patsey pointed and roaded, and birds flushed. Gleason killed and Patsey retrieved in good shape. We credit Bang with a point at the same time. Patsey at once got another point and so did Bang. Nesbitt killed bird to Bang; and as the birds were running both dogs got a point at edge of corn.

Dogs were then taken to grass. Here another false point was scored for Patsey. Gleason flushed a bird. Bang got next point, Patsey being called up to back, which he did. Patsey then got a point, and Bang backed. Put into another cornfield, Patsey got another point and Bang two, after long roading. Coming to grass, both dogs pointed and were ordered up. The judges consulted and then put dogs down in grass. Gleason flushed a bird and Patsey two. Moving on. Bang and Patsey both got a point; Bang's was false, and Patsey moved up and flushed his bird, when Gleason came up and he got no credit for the point. Dogs ordered up; heat ended, and Bang declared the winner at 4:49. Patsey did not do as well as in the first heat, and Bang improved very perceptibly. Patsey's defeat is attributed more to his trainer and handler than to himself; at least that is the impression made on the minds of his admirers.

CATO AND RICHMOND.

Cato, red Irish, handled by Gleason, and Richmond, handled by Short. The dogs were sent away for speed on open, and Richmond, being the fastest pointer in this part of the country, it was a wonder to see little Cato, with a lame foot, keep up to him. Going into cover at last, birds were found. They were feeding, and there being no cover, they flushed wild and some went into grass. Here Richmond got a point and Short shot and wounded the bird, which fell in high grass, and as the hour was late the judges could not wait for the dog to retrieve it, Richmond was called off and Gleason called Cato with whistle, but he would not come. Gleason claimed a point and the dog was found pointing the crippled bird. Richmond got a point and Cato backed. Short flushed and killed and Richmond retrieved from hedge. Cato got one point and then pointed a rabbit. Going into the corn more birds were flushed and marked down. They were hard to find, and after that Richmond got another point. Darkness coming on and there being no need of further trial to decide the matter, Richmond won the heat.

Third Series.

TRINKET'S BANG AND LILLIAN.

Wednesday morning was cloudy, and fine for the dogs, as the scent was good. The dogs were ordered down at 9:40. Bang started off and found a covey in five minutes. Both dogs showed speed, but Bang was the faster of the two. A nice wind was blowing from the south. The birds from Bang's point were marked in a slough. The dogs being taken there, Lill went in and flushed the covey out, again a single, and afterward she got a point. Short shot the bird. As it was difficult to retrieve the judges said this was not necessary. Dogs next worked in thick willow and sumac, and the whistle was in constant use. Lill showed herself to be under the best control. Nesbitt had trouble to bring Bang to heel. Bang then ran near to a bird in the hedge, and it was flushed by the judges. Next tried a slough to the southwest. After half a mile no birds were found. Dogs sent off in grass.

Bang was very rank, but showed much the best pace and ranging. Bang roaded in fine style down the draw, but failed to locate and was ordered on by Nesbitt. Lill in the meantime having gone into the corn, found nothing. Dogs next sent up through the corn, where there was no possible chance of finding birds. Lill lagged in crossing the open prairie, and examination revealed the fact that her breast was enlarged, as though she was nursing, and that would of course make her feverish and out of condition. She was in much the same condition when she ran with Bridgeport yesterday, but getting worse did not sustain her reputation, for she had divided two third prizes last year in the National Field Trials. Bridgeport could easily have beaten her to-day. The spectators flushed a covey that settled in the grass directly in front of the judges, and with the dogs to wind they were sent on, and Lill found. Short shot and killed. Bang broke shot. He was not penalized, as Short shot without being ordered to do so by the judges.

The grass was very heavy and the birds hard to find. Handlers were here talked to by Judge Sterling. Moving on, a bird flushed. Bang dropped to wing. Dogs worked close

and handlers crowded on to them, not giving them time. Lill got a false point and Bang a flush. Next Lill got a fine point. Short flushed and killed bird, retrieved by Lill but rather slowly. Bang next made a point and an owl sprung from out the brush. Leaving the draw to try the hedge where birds had been marked, Short keeping Lill close in. In the corn Bang got the wind and made the finest draw of the whole trial, and then pointed. Lill got a point about the same time. Bang another point. Short kept Lill in and flushed a single bird. Dogs were then ordered up and the heat given to Bang. Time 10:45. Down one hour and thirty-five minutes. Bang's last point was enough to win anywhere, head high in air, mouth a little open, and body fixed like a marble statue, showing that though setters are more handsome they have not all the style to themselves.

Fourth Series.

BANG AND RICHMOND.

The final heat was now run between Bang and Richmond to decide which was entitled to first. Short objects to going into corn on account of sand burrs. Nesbitt does not complain and says his dogs can run on this ground. The brace was called at 11:30; Richmond handled by Short and Bang by Nesbitt. Both go off in fine style, but Bang has the best of it, Richmond appearing to have tender feet. But he soon warmed up and gained on Bang. They were next taken up a grass draw adjoining a wheat field. Bang here got a point and Richmond backed. Ordered to flush, Nesbitt shot and missed and Bang moved up and won a demerit for breaking shot. Nesbitt made a mistake in shooting at the bird when there was no occasion for it. Several ladies were present at this time and seemed to enjoy the sport.

The dogs both made a point along the hedge. Here a jack-rabbit with his tilting movements called Richmond's attention from the birds. Bang got a point. Nesbitt flushed and the dog was unsteady to wing. Bang soon got another point in the grass. Then by way of a diversion to show his speed, Bang chased a rabbit across a wheat field and would not stop at whistle. Nesbitt administered the proper discipline. Dogs ordered up to wait for a horse. Bang's chase does not necessarily penalize him for chasing, as nothing outside of quail counts. But he would be lowered for disobedience in not stopping at command and whistle.

Dogs ordered on, hunt a hedge to the grass and stubble. No birds found for some time. Both dogs draw in the brush but do not locate birds. Dogs ordered up at 12:15. Down 45 minutes. The final heat given to Bang, who thus wins the prize of $250 for the best dog in the all-aged class. This is a great victory for the pointer men, as the setters have heretofore captured nearly all the prizes in preceding trials in the United States. But of late pointers have come to the front in England, and now this victory adds to their popularity here. Bang is a large liver and white pointer and comes from one of the oldest and best strains of pointers in England, a line which includes a long list of winners both in the field and at bench shows. He is owned by William Titterington, of Wyanet, Ill.

After due consultation it was agreed by all interested to settle the second and third money by dividing as follows: Lillian and Patsey, second money, equally; Richmond, Bridgeport, Count Rapier, Queen Bess and Cato, third money.

THE DERBY STAKE

had twenty entries. Fourteen filled for the race, there being nine pointers and five setters. The judges were Messrs. Sterling, Pray and Van Horn.

First Series.

NORTIER AND CORNER STONE.

The first brace called was Nortier, a Llewellyn setter, handled by Short, his trainer, and Corner Stone, a pointer handled by Gleason, his trainer. They were cast off at 1:30 in corn, adjoining brush, and worked west, going into a draw. Nortier found and Corner Stone came to a point at the same time. Going ahead carefully Corner Stone found again in fine style and made a staunch point. Again going in high grass Corner Stone got a flush and about the same time Nortier made a point. Birds flushed and went to hedge, where Nortier stood and Corner Stone backed in fine style, but bird could not be flushed. The dogs were taken up for a breathing spell; the grass is very dry and weather warm. There has been no rain here for some time and the ground is dry, so dogs must not be charged with the flushes they make as a rule, though it looks like fearful work when it is read by those who did not witness the hunt. It is generally impossible for a dog to scent birds when they alight in high grass and have not moved.

Dogs sent on, several birds were flushed in edge of corn by handlers; but Nortier soon got a point, and the bird was flushed and killed by Short. Nortier retrieved, but retrieving don't count in the puppy class. Corner Stone now came to a fine point, with Nortier backing. The bird was flushed by Corner Stone at Gleason's order. Corner Stone soon had another point in the thick brush. Dogs called up and taken one-half mile to new ground. A light shower at 2:45 made the scenting better. Birds were flushed by Short and marked in corn and grass on hill. Dogs sent on to find. Nortier soon found and pointed. Corner Stone also pointed in excellent style. Nortier got another point, Corner Stone backing. Both go down at wing. Corner Stone roaded and got a point and stood it finely. Dogs taken up at 3:05 P. M. and the heat given to Nortier. It was a very handsome race for young dogs, and beat some of the older dogs run in the Free-For-All. It is supposed that Corner Stone lost this heat because he was slow and would not hunt out at Gleason's urging on the last birds. The ground was a smooth meadow and the pointer thought "No birds here," and thus lost the race by sulking.

METEORITE AND ROD.

The pointer Meteorite was handled by Short, and the pointer Rod was handled by Stafford. This brace are fine specimens of the pointer breed, and their handlers were old timers. The dogs were cast off in the grass where the other brace had been taken up. The pup going at a rattling pace through the corn, Stafford used whistle and voice very often. Soon Rod finds and points steady, Meteorite backing. Stafford flushes and kills, but the bird is not retrieved by the dog. Rod points and the judges go to see. Meteorite rushes in and flushes. Bird shot at by Stafford and missed. Both dogs drop to shot. Rod next flushed a bird at edge of grass. Both go fast but Rod far ahead. Meteorite roaded in swale. Pointed and flushed to Short. Both dogs hunting close, failed to find the birds, and they were flushed by judges. The dogs did poor work in not finding. Rod got the whip from Stafford. Dogs up at 4 P. M. and the heat given to Rod.

DICK AND BURGLAR

were next put down. Underwood's pointer Dick was handled by his trainer, Gleason, and the setter Burglar handled by Harnes, his trainer. At 4 P. M., both started slow and without much style, but soon Dick commenced improving and got much faster. Some grass was drawn blank, and after a little while Burglar flushed near the creek. Going on Dick pointed in the draw, Burglar pointed nicely. Bird flushed by Gleason and not shot at. Very soon Dick got another fine point and Burglar a back. The bird being on the creek bank, Gleason flushed the bird, shot and missed. Both dogs went down to shot. Burglar now found he had to do something, and he made a point which Dick backed. Bird was flushed and shot by Harnes. Dogs ordered up on account of darkness. After the judges met at the hotel they gave the heat to Dick.

With the third day's work everybody seemed satisfied. Birds were plenty and the ground all that could be desired. We heard it intimated that Abilene will be the point selected for the trials next year. We most heartily hope so.

On Thursday judges and handlers got a very late start, owing to the unfavorable weather. The snow ceasing to fall, teams were hastily procured and all started off in good spirits. The marshals of the day, selected from our local club, were Messrs C. Stevens and T. Mosher. They led the party to the grounds, which were selected on Mud Creek, five miles north of the city.

BELLE AND MALITE.

Belle handled by Gleason and Malite by Short, both liver and white pointers, were cast off at 10 o'clock in a grass draw, adjoining corn and grass. A bevy of birds was flushed by the spectators along the sides of the road and marked down along a hedge and in the corn. The dogs were sent on where birds were seen to alight. Belle found and stood staunch, Malite backing. The bird was flushed but judges did not see it, so gave the pup no credit for the point. Several birds being marked down in grass, dogs went on and Belle got a point handsomely backed by Malite. Gleason failed to raise any, although one of the judges—Mr. Pray—saw two birds run to the hedge.

Next came Malite's turn, for she got a point in road by the hedge. Bird flushed and missed to Short's gun. Judges ordered dogs into grass field next creek. Both dogs coming up carefully roaded to edge of bank and Belle was entitled to another point. Both dogs, or pups, as they are classed, were showing good pace, Belle getting the best of it, however. After a few moments' more trial the dogs were ordered up for a time, then again sent on up the creek. After going some distance Belle made a point. Then one was scored for Malite. But soon she flushed a covey, the birds going to corn. Here Malite got a point and Belle was a little unsteady and broke and flushed. But she seemingly redeemed herself and almost immediately got two points. Malite got two also and Short flushed and killed. Dogs steady to shot. Here the heat was declared ended and given to Malite. This heat must have bothered the judges, as many of the spectators thought sure that Belle would win the race.

BANG B. AND KRUPP.

Bang B., handled by Gleason, and Krupp, handled by Stafford, were put down at 11:25. They were another handsome liver and white pair of pointers. They got away at a rattling gait, Bang B. having the best of the race. Bang soon made a fine point in standing corn. The judges, being rather chilly and hungry, thought best to try their hand at lunch at 11:30. While at lunch a farmer comes up and protests against the judges and crowd going over his wheat, but that was soon settled amicably and pleasantly. The pups were again cast off at 12:10. Some birds were flushed after considerable time being spent, and the dogs were called up and the heat given to Krupp.

WHITE CLOUD AND NATALIE.

White Cloud, a large black, white and tan setter pup, handled by his owner, Mr. Campbell, of Clay Center, was put down against Mr. Nesbitt's bitch Natalie, handled by her owner. They were started at 1 P. M. Natalie going to a brook flushed and chased. White Cloud thinking to beat that record stood beautifully, and was steady to shot. White Cloud not satisfied with this roaded beautifully along in brush and stood a covey, which Campbell flushed, shot at and missed. White Cloud steady to shot. Natalie now was very wild and rank in her going, but she found a covey and made a nice point. Birds flushed and settled in standing corn. Both dogs here did some roading, but judges ordered dogs to another place on account of cover being too thick to see the dogs. They were soon cast away on the creek. White Cloud here got in another exhibition of his nose qualifications by pointing a bird. Natalie coming up backed in good style. Dogs ordered up at 1:20; heat given to White Cloud, it being evident that the little ten-months old pup, not weighing over twenty-five pounds, was no match for her competitor.

BOW AND BLITZ.

Bow, large lemon and white pointer, handled by Gleason, and Blitz, large black and white setter, handled by his trainer, Harnes, were put into the chase at 1:30 P. M. The start was made by hunting along the creek. Bow made a false point, and after several attempts by Gleason to get Bow to hunt he was withdrawn from the contest by Mr. Whipple, his owner, who was present. The actions of Bow were unaccountable, as he has heretofore shown good work in the field and has proved himself a superior dog on hot days. But being chained up in a barn for a week he got sick or out of condition. The heat was given to Blitz.

This ended the first part of the Derby race, the winners so far being Nortier, Rod, Dick, Malite, Krupp and Blitz.

Second Series.

NORTIER AND ROD

were put down at 2:10. Nortier handled by Short and Rod handled by Stafford. The pointer showed best pace and style. Though Nortier got the first point, he could not locate the bird. Rod, going up to the hedge, got a point, and shortly afterward Nortier made a flush. Rod now got another point. Nesbitt flushed and shot, and Rod went down at once to shot. Judges here ordered the dogs up and gave the heat to Rod.

DICK AND MALITE.

Dick, handled by Gleason, and Malite by Short, both liver and white pointers and litter sister and brother, were cast off at 3 P. M.. Malite seemed a little nervous and made away in good style for the grass. Malite found scent in the corn and stopped, but no birds were found. Dick got a flush on a single bird. Malite made a point, but did not locate her birds. She then made two more false points. Dick in the meantime was going slowly and was evidently greatly troubled by sand burrs. Judges gave the handlers a chance to get out burrs from the dogs' feet. The work was now in heavy grass and Malite soon got a false point. Here a farmer, Mr. Cooley, objected to shooting, but when it was explained to him that we were only trying the dogs, the farmer said all right go ahead. Malite, after having pointed a lark, got a point on a quail. The bird was flushed and killed by Short and retrieved in style by Malite. Dogs up and heat given to Malite.

KRUPP AND WHITE CLOUD.

Krupp, handled by Stafford, and White Cloud by Campbell, were put down at 3:07 P. M. Dogs sent over wheat field for a race, and in range Krupp showed to the best advantage. Both dogs got a point and Stofford flushed and killed. Krupp next got a flush and White Cloud a point, which Krupp backed, both dropping to wing. Soon White Cloud pointed, but no bird was found. Immediately afterward he got a point and dropped to wing, and soon another and then a third fine one. The bird was flushed by Campbell.

A point by Krupp followed, and White Cloud pointed the same bird. Krupp at once got a point, and White Cloud was unsteady in backing. Dogs were up at 5:45, as it was too dark to see, the heat being unfinished. The work performed by White Cloud was truly wonderful. He is very fast, stops to point with the greatest suddeness possible, and seemed to have all the good qualities of Druid and Princess Draco combined, as he was the last and only puppy in the litter.

At the Henry House that night the performance of White Cloud was discussed. Mr. Munson asked Campbell if he would sell, he said "Yess, for $500." And Mr. Pray said, "He is mine," and paid the money. Mr. Pray being a judge he was relieved, and Mr. Nesbit chosen in his place.

Friday morning opened up fine and frosty, but the sun came out warm and the day was fine for field sport except that the ground and grass were too dry for the scent to lie well and the dogs could not do good work in the high grass. The procession did not move from the city until a late hour, and the judges and handlers were not on the ground until 10 o'clock.

WHITE CLOUD AND KRUPP.

First in order was the completion of the unfinished heat between White Cloud and Krupp. Judges and handlers with dogs to heel started up the edge of the corn, and at once a covey of quail were flushed and partially marked down; but were not followed, as there were too many cattle there. When the hedge was searched the dogs were sent away, both going fast, but White Cloud leading all the while. The corn was tried, and none being found, the scattered birds flushed at the beginning of the day were looked for. Meantime judges and reporters were going it on foot. Going through high grass Krupp got a point and a rabbitt was seen to go away. The side of the creek bank was next tried, and Krupp, coming along the edge of the grass, got a point, as Stafford claimed, but he afterward moved on. Dogs going on, White Cloud had the fortune to come upon a covey first and got a fine point, and the dogs were ordered up and White Cloud awarded the heat.

ROD AND BLITZ B.

Rod, the winner of two previous heats, and Blitz B., the dog who had the bye, were next put down. Rod was handled by Stafford, and Blitz by Hairns. They were put down to work on same covey on which the other heat closed as the birds had been marked down along the bank of the creek. A running bird being seen near the creek bank, the dogs were put on the trail, but first Stafford had to give Rod a whipping to take some of the foolishness out of him. Both dogs went away well, and the setter gets a point and Rod standing in a few feet off refuses to back, and he moved up and the bird flushed. Rod was unsteady because the bird was standing in plain view of the dogs. The bank was tried still further but no birds found. And Rod preferring corn ran into it and stopped, but going on roaded a little and missed the birds as the reporters coming behind flushed them about ten steps from where the dog stood.

Meantime dogs, handlers and judges had gone in the corn out of sight. Away at the further side of the field, 100 yards ahead of the judges, Rod got a point, but the judges could not see him and he got no credit. The handlers were now told to return to the grass, where the birds had been located. Just at the edge Rod ran into a bird and it flushed. The dogs were now taken to windward and started on. Both dogs roaded and flushed together, but the setter was penalized for it. Rod getting down to business, soon found a bird, and it was flushed by Stafford. Next, Blitz began to redeem himself by getting a point. The bird was flushed.

Rod now merited a penalty by flushing, and then both dogs trailed and pointed for some distance, and then the birds were not located. They seemed to keep running all the time. The dogs got up to the edge of grass and Harnes flushed a bird, though Blitz was charged with it. Rod now drew and pointed along the edge of creek bank, but no bird could be flushed. The judges here called a halt, and after some consultation gave the heat to Blitz. Now Blitz did some fair work, but he won more through the poor work of Rod than through any fine work of his, as was proven by the heats he ran during the remainder of the day. This was the last brace of the third series.

Fourth Series.

WHITE CLOUD AND MALITE.

White Cloud, the phenomenon setter, and Malite, the gamy pointer, were called and put down, White Cloud being handled by Campbell, his former owner and trainer, and Malite by the Southern giant Short. They were started in a grass patch along the creek. No birds being found they were ordered to cross the creek and try that side. Both dogs were now going at a fine pace, White Cloud ahead. Going into a little draw Malite came suddenly upon a point, and bending in a circle and crouching on the steep hillside stood motionless, while White Cloud, coming up, would not back. Short flushed the bird and shot, but in the air.

White Cloud moved up and was unsteady, but the bitch was so near the ground he may not have seen her fairly. Next, after some fine ranging in grass, Malite came to a handsome point, but her handler could not find anything but a gopher hole. Again we went on and White Cloud kept getting faster. After going over a slight ridge into tall grass, and when White Cloud could not be seen, Campbell whistled and called his dog, when a bird was flushed by him and he was then apparently pointing. Cambell remarked that he called him when he was pointing, but did not see him until it was too late. The judges here called the dogs up and the heat was won by Malite.

MALITE AND BLITZ.

We then had the setter Blitz called up to settle who should be entitled to first prize. Being started off Malite gets a point in twenty paces, as her handler knew just where the birds had been located by another dog. The bird was flushed and shot, and retrieved by Malite, and was only winged and had to be killed by Short after he took it from the dog. In the meantime Blitz B. had gone and flushed a bird, though Harnes had been told to hold him back. Going up to a hedge Blitz made a point, and Harnes claimed it. Harnes ordered to flush, and going up said they were running on opposite side of hedge. Judge ordered it shot on the ground, and while Harnes was getting in a shell the bird disappeared, and Harnes trying, could not get through the hedge and so Blitz got no credit for the point. After going a little further Malite got a point and Short flushed and shot the bird. It was retrieved, and the dogs were called in and the judges had no hesitancy in giving the heat and race to Malite. First money $150.

Judges here announce lunch, and while a rest is had from tramping, we ponder over the fact that the pointer dogs are now to the front in both stakes. Lunch being over, the need of more birds is discussed, and they take to wagons and change ground to put down the dogs that are to compete for second money.

WHITE CLOUD AND BELLE.

The first brace being White Cloud, handled by Campbell and Belle by Gleason, were sent off down a swale at 1:30 P. M. Some distance was traveled before birds were found. And then the dogs both got into a covey at about the same time, and the birds flew. The dogs roaded for some distance, and White Cloud got a point, and then made a flush down wind. The handlers were directed to the spot where the birds were marked, and soon a flush is made in the light grass. White Cloud here made what proved to be a false point, and Belle was ordered up to back, but Campbell going up to his dog, Belle could not have a chance to back.

After repeated trials in attempting to get up the remainder of the covey it was decided to seek for a new one. They were soon flushed in some high weeds and marked down, and the dogs sent to where they went down. Belle now got a point and then moved up and flushed the bird. A large portion of the covey had been marked in corn, and the dogs were sent in there, but could not find them, for there was so little cover in the corn that the birds would run across the field and leave no scent for the dogs to follow. Going into grass Belle got a point, and White Cloud did not get up to back until the bird flushed. Again going into some thistles Belle made another point, and the bird flushed by Gleason. This ended the race, and Belle won at 3 P. M.

BELLE AND DICK.

Judges here called a halt and looked at the rules to see what to do about the next brace being run together by one handler, and they decided they must so run. Belle and Dick were sent off, both handled by Gleason. They are a fine brace of young pointers. Gleason was instructed not to call points but to let the judges decide on their merits. A covey was soon flushed in very high grass, and going up the dogs were found stand-

ing as though they had been pointing. Birds were marked near the spectators, in very high, thick grass. Dick ran in and flushed, and soon a flush was made by Belle, but Gleason spoke to them and made them more careful, and got a point and back, and then a flush or two. The grass was so thick that a man on horseback could not see a dog ten feet away. A cornfield was next tried and a covey found, and here the judges were saved further trouble by Mr. Underwood withdrawing his dog Dick, and the heat went to Belle.

BELLE AND BLITZ B.

The next and last heat was between Belle and Blitz. Going down wind a large covey was flushed by Belle, and, alighting across the slough in corn, were not followed. A little further on Blitz made a false point. They next tried a wheat stubble with much better success, and a point was made by both dogs and claimed. They roaded on, and soon Belle came to a point, and a bird jumped up and got down again within ten feet of the dog, which was very trying to a puppy. She charged to order. Judges went up and flushed the birds and they scattered in good shape. The dogs were swung around and brought up again, and Belle at once established a point.

While Blitz was getting around for a back she moved and the birds flew. Sent on again Blitz got a fine point, Belle backing nicely, but the birds could not be started; they were running, and being only about two-thirds grown they would not fly more than twenty steps. Blitz now made a flush, and then a false point, and then a point. Belle did the same. They were some distance apart. Both birds were flushed. The dogs ordered up, and the flag went up for Belle, who wins the second money, $100.

Belle is a very nervous bitch of the finest type. Her sire is Beaufort, second sire champion Bow, her dam Gertrude, and Gertrude out of Snapshot. Mr. Whipple has worked hard for the success of the meeting, and is deserving of having won a place with his bitch Belle. This puts the pointer one notch higher.

The third money was divided by the owner or handler of Blitz and White Cloud without running off the heat, much to the satisfaction of the judges, as they were getting very tired and it was nearly sundown and time to start for the city. This day's proceedings ends the first annual meeting of the Western Field Trials Association. Many representative sportsmen from different parts of the United States have been here and we trust they may all come again next year and have with them many other friends and many new dogs. The good people of Abilene have done nobly in the way of making their stay pleasant. Some of the gentlemen will remain over to-day and go out and have a few private tests with their dogs.

NEW JERSEY CLUB TRIALS.

[From a Special Correspondent.]

THE annual field trials of the New Jersey Kennel and Field Trials Club were held at Fisher's Island, Nov. 12, 1885, Mr. Justus von Lengerke, judge. The prizes were awarded as follows:

First—The club's cup, valued at $50, to Chief, red Irish setter dog, owned by Max Wenzel.

Second—The president's silver cup, donated by Chas. Heath, Esq., to Jimmie, liver colored pointer dog, owned by Chas. J. Peshall.

Third—The vice-president's cup, donated by Chas. J. Peshall, Esq., to Jersey Beauty, red Irish setter bitch, owned by Max Wenzel.

The work was tedious and slow. The birds kept in the thickets and were scarcely accessible, although three large bevies were found in one heat in the open. The handler of the pointer winning second place was involuntarily a source of great mirth by his frequent pleas and excuses to sit down while handling his dog. "Jimmie, poor Jimmie, old man, you are tired, are you?" The participants are looking for better success in attendance for the next field trials, and the winners will donate cups of equal quality to the winners of the trials in 1886. M.

CONCERNING "KICKING."—*Editor Forest and Stream:* "I never kicked at a judge's rulings yet, and I think it a poor business." If his rulings are his honest opinion, their honesty is entitled to respect; if he is utterly incapable the club that selected him should be kicked. If a judge renders a corrupt or predetermined opinion I cannot sufficiently express my scorn and contempt of him; his rulings sink into insignificance. If a club, or anybody connected with dog shows, does a wrong, I propose to "kick" and keep on "kicking." A "change of heart" in me or in anybody else is of too trivial interest to the doggy world to waste ink on; but in the defense of "the sacred right of kicking" I would spill an ocean of ink.—W. WADE (Hulton, Pa., Nov. 13).

WINSTED DOG SHOW.—In addition to the classes already announced; and at the request of breeders, the managers have made classes for deerhounds, dog or bitches, and Italian greyhounds. Mr. J. M. Tracy, who is to judge pointers and setters, states that he will adhere to the "Stonehenge" standard, as all of his observations of attempts to judge by "rule of thumb" have been unfavorable.

KENNEL NOTES have been deferred until next week.

FOXHOUND IMPORTATION.—At this port a day or two since a pair of English foxhounds arrived, consigned to Mr. Walter L. C. Biddle, of Radnor, Pa., for the use of the Gulf Mills Hunt, of Montgomery county, Pa. These fine animals are the gift of the Duke of Beaufort, and came from his kennel at Badminton, England. We fear these English foxhounds, like all others imported to this country by our Pennsylvania hunt clubs, will prove inferior to our own dogs for American fox hunting, as it differs so entirely from that practiced on the other side of the water. Our dogs may not have the speed but they have the nose to follow all day through swamps, over rocks and all kinds of country which the English dogs have proved they do not possess at least in America.—HOMO.

NOTA BENE.—The December number of the A. K. R. will close the volume for 1885. It is highly important to all concerned that the show and field trial records of all registered dogs, together with any corrections, should be brought up to date. Send in early. The Register numbers now reach up to 2908.

SALE OF GRAPHIC.—The celebrated pointer Graphic has been sold by Mr. James L. Anthony, of New York, to Mr. Charles Heath, of Newark, N. J., for $2,000 and service to three bitches. Mr. Heath will carry out all the engagements that Mr. Anthony has made regarding the dog.

BEAGLE MEASUREMENTS.—*Editor Forest and Stream:* As my letter regarding beagle measurements has not called forth any replies, I would respectfully like to ask some such practical beagle men as Mr. Pottinger Dorsey to express their views on the subject.—HERM. F. SCHELLHASS.

KENNEL MANAGEMENT.

☞ No Notice Taken of Anonymous Correspondents.

C. E., Gloversville, N. Y.—My hound bitch pup, four months old, has been sick for a week past. She is growing very thin and lean, but she is always feverish, and when lying under a warm stove will shiver. Her eyes are sunk in deeply, and as for appetite, she has none to talk of. I have given her physics, such as gunpowder and castor oil. She gets up a little, but shivers and goes back and lies under the stove. I give her some soup and warm milk. Can you give me any theory concerning her troubles and what I shall do for her relief? Ans. Your bitch has many symptoms of worms and the indigestion is dependent on this. Give strict diet for twenty hours of milk only, then give one dose of areca root, followed by purge in four hours. Then commence giving beef soups without fat, flour porridge and a little raw meat scraped and mixed with the white of an egg. Give lime water with the milk and a pill of the citrate of iron and strychnine, two grains, three times daily.

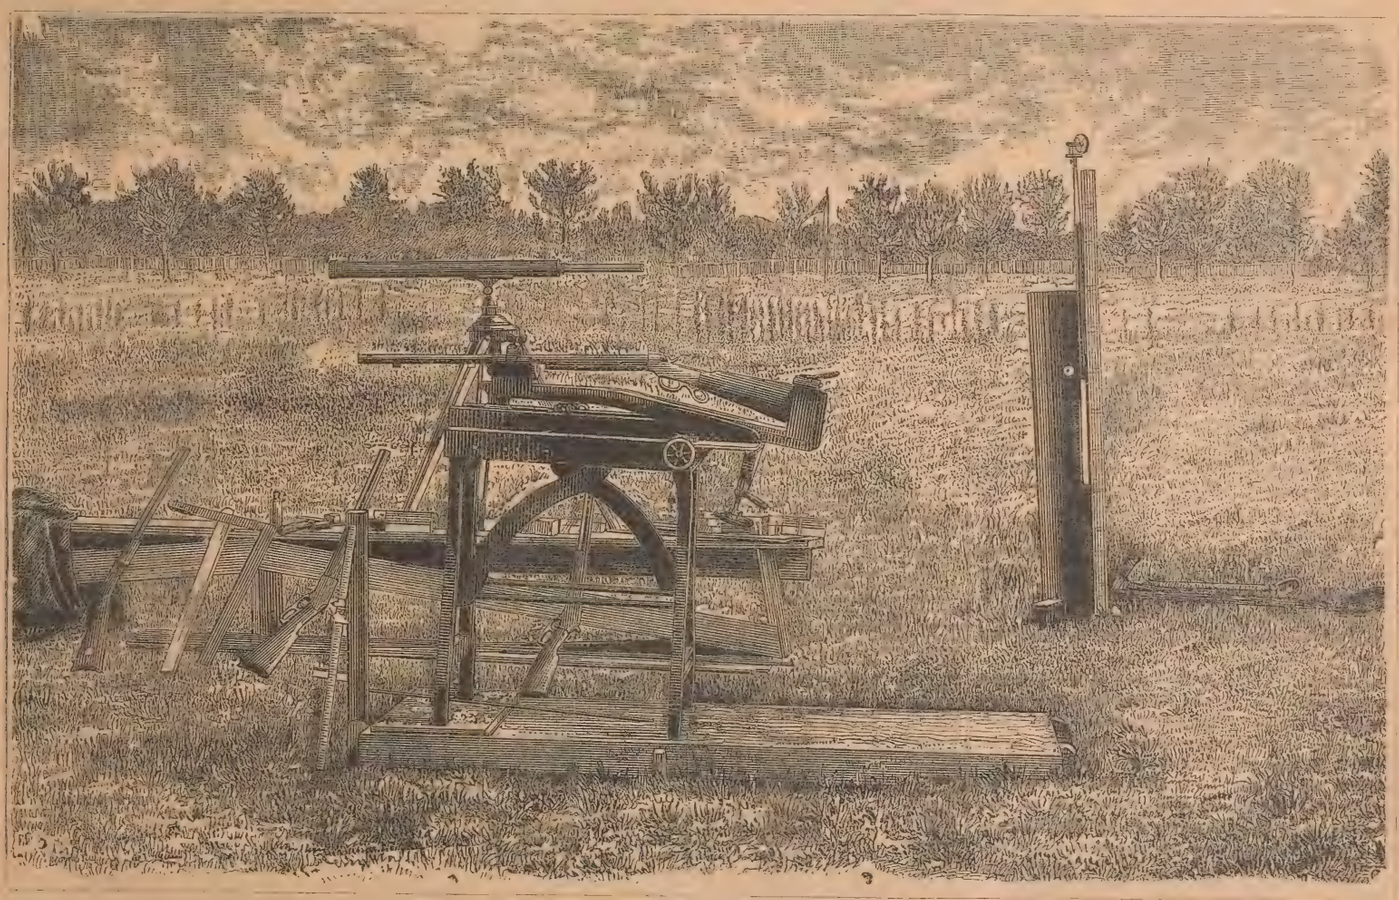

Fig. 2.—THE GUN REST, SHOWING RIFLE IN POSITION.

Rifle and Tray Shooting.

"Forest and Stream" Trajectory Test.

(*Continued from page* 312.)

THE work on the range began on Sept. 26, when by an early morning train a party consisting of Mr. Henry A. Sinclair, Mr. Charles H. Haswell, the rifle editor of the FOREST AND STREAM, and several assistants went down to Creedmoor. On the platform at Queen's were the numerous boxes containing the rifles, the several packages of screens, numerous pieces of lumber for supports, and generally all the paraphernalia of the trial. The inconvenient location of the National Rifle Association range was shown at once, and a long cross-country ride was necessary to reach the place where the firing was to be held. It was a warm genial day, and without delay the surveyor and his aides were busy getting the line over which the bullets were soon to be sent flying on their tell-tale errands. The veteran measurer who has been a sort of mathematical regulator and expert on figures and measurements since New York has taken form as a city, entered into his work with spirit and soon had a line of stakes standing in sentry line, from the face of the Running Deer screen 200 yards up the open lawn. This extreme led to a hollow and it became necessary to erect a stand about four feet high on which to mount the fixed shooting rest. This work was soon accomplished with the assistance of the workmen furnished by Supt. W. H. Brower and a few railroad ties as posts, with heavy plank atop made a platform firm and solid for the shooting at this range. At 100 yards it was not necessary to have any such construction and here the heavy plank base rested directly upon the ground, held in position by stakes. The instruments for the observation of the weather were provided for in shady positions under the platform at 200 yards, while at 100 yards a couple of planks set on end in the ground made a nook in which the thermometer with its double column of mercury and the wet and dry bulbs hung out of the direct sun's rays, while the small aneroid barometer hung beside it. These may be noted in the cut on this page, while above on the small stick is seen the anemometer catching the record of all the wind flying along at six or eight feet above the ground. The day was spent in getting all the machinery for the test into position, and when Monday morning came a rack full of rifles waited in the office building across the range; a shelf loaded down with many hundred rounds of ammunition was close by, and a score or more of screens, each neatly covered with a tightly drawn sheet of tissue paper, were ready for the bullet holes.

There was no special order or system in the tests. The rifles were taken up at random, fitted to the rest, and when the sight had been caught on the target the screens were put up and the trial shots fired.

Mr. Sinclair had in his charge the manipulation of the rifles in almost every case, and to his care was put the entire figuring and calculation of the test. Long years of drill in just this sort of work—more particularly in connection with heavy ordnance and the thousand and one forms of firearms used and tried at the United States Proving Ground at Sandy Hook—has given him a superior skill in calculations of just the sort needed in the trajectory tests. The FOREST

AND STREAM trial assumed in some respect the character of a Government test, though nominally it was in no wise official, and Mr. Sinclair left his official position as a Government measurer behind him when he left Sandy Hook, and brought along to Creedmoor only his technical knowledge of weapons and his ability as a mathematician. He fairly doted on decimals, and fancied fractions even in preference to a good dinner.

The first rifle placed in the rest on Sept. 28 was the Whitney .40-60, but this was rather to try the line of fire than to make a record, and the Bullard .40-70 became No. 1 in the capacious note-book which Mr. Sinclar had provided to enter his observations. It was then warm and pleasant, with a light six o'clock wind blowing. The Winchester .45-75 followed, and the first day closed with only two rifles recorded at one range. The rest was behaving well, and so far as could be observed was answering its purpose admirably.

On the morning of the 29th of September the .50 Bullard was brought out, but owing to weakness in the spring lifting the carrier block was laid aside for a time and the Bullard .45 placed on. This was followed by the Remington-Hepburn .40-65, and then came the Bullard .38. The snug little Colt was then given an opportunity to show its merit, and then Mr. J. G. Romer, of Peekskill, having reached the range with his small boy and load of rifles, the afternoon was given up to him. The Bland double-barrel rifle was put on first, and with its tip-up manner of opening the breech necessitated its unshifting from the rest after each shot and the most careful cross-leveling and muzzle measurement after each shot. The cartridges for this rifle had been brought by Mr. Romer and were used in the weapon. After the sighting shots and the five test shots from each barrel but one loaded cartridge was left; this was taken for weighing up. Mr. Romer then unwrapped his own muzzle-loader, and having duly put it in order for work, gave five shots and then left two of his charges ready for weighing up.

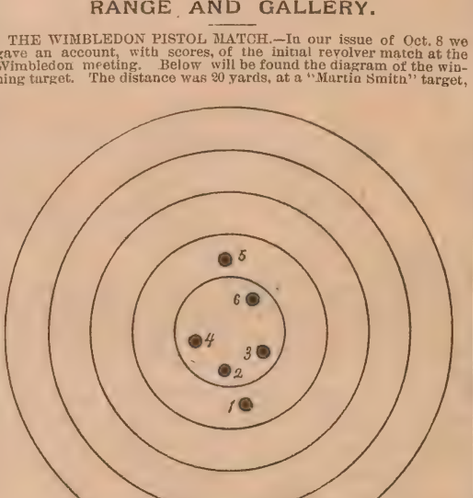
The next day was one of hard work, and the Marlin .40, Ballard .40-85, Bullard .50 express, and Remington-Hepburn .32-40 followed in quick order. Mr. Addis, from the Winchester Works, was an interested spectator and spent several days watching the test. Among other visitors from time to time were Superintendent Grover, from the Whitney Works; John Bodine, Mr. Weber, of the long-range teams; George Joiner, General Robbins, General Rifle Instructor of the N.G.S.N.Y.; while of soldiers from the several regiments down for practice there were visitors and spectators beyond count.

Continuing our narrative of the arms tested, there were put on in order the Remington-Hepburn .38, Bullard .32, the Marlin .38, the Frank Wesson .44, the Winchester .40-60, the Ballard .40-70, while the day ended with the Marlin .32. The day following, Oct. 1, the Maynard was the first tried, followed by the Remington State model military rifle, at the suggestion of General Robbins. The Stevens .32 was tried and then the Marlin .45, marked for a Government cartridge, but used instead with a lighter cartridge. The Whitney-Kennedy .40 rifle was followed in turn by the Remington .32 and a U. S. Springfield 3 groove army rifle This ended the work on Oct. 1 and for the present the 200-yard shooting.

On Oct. 5, when the work was resumed, the rest was at the 100-yard distance, and here the Winchester .50 was tried with both solid and express bullets. The Bullard .50 was put through the same test, and then in order came the Winchester .40, the Winchester .45, the Bullard .45 and the Bullard .40, and the Whitney .40. The Marlin .32 closed that day.

The Remington-Hepburn .40 followed on the following morning and several others were likewise tried, but a light rain at the time so dampened the screens that in drying they drew out of shape and the measurements were not considered accurate enough for our purposes. This wasted the day and threw the tests over to the 10th, when another fine day was had. The Ballard .40-70, the Stevens .32, the Marlin .40-60, the Remington-Hepburn .32 and the Whitney-Kennedy .50 with both solid and express bullets; the Ballard .40-85, the Marlin .45, the Colts, the Marlin .38, the Remington-Hepburn .40, the Sharps .45, the Winchester long .32 and the Remington .32 closed up the programme of a very good day's work.

On the 12th practice was renewed with the Stevens .22, and there followed in order the Maynard, the Bullard .32, Wesson, and then with the afternoon came the Bland, this time with an express bullet; at first with a clean gun after each shot, as marksman Romer insisted every patched bullet should be fired, and then without cleaning, as he thought every hunter's rifle ought to be fired. The following rifle was the Merrill muzzleloader, with its heavy charge and close accuracy. It is to be regretted that the same muzzle-loader was not brought down for both ranges, but we were more desirable of having the English Bland tried, and this was given a most exacting test at both ranges, with solid balls in one case and with hollow bullets in the other. The rifles following were the Stevens .38, the Hunter's Pet, the Remington-Hepburn .38, the Springfield .45, and, last at 100 yards, the State Model Remington .50-cal.



On Oct. 19 the 200-yard range work was resumed. There had been heavy rains on the intermediate days, and fearing that the stakes might have settled, a re-measurement was had, this time taken by the son of Gen. Meserole, of Brooklyn, an accomplished young surveyor. It was found that the stakes had been well and truly driven, and had not varied an appreciable fraction of an inch from the first. The order of shooting now was: Stevens .22, Winchester .22, Whitney-Kennedy .50, with solid and express bullet. The Winchester .50 in same manner. Then the Sharps .45; also the Bullard .50 with express bullet. Then the Hunter's Pet, and then the trials were over so far as the first step of the work in the field was concerned.

In all there were seventy-four sets of targets made, generally with three screens in each, but only in one instance less, as when at 100 yards one screen was taken down and then another, to see what the retarding effect of the tissue paper was. There were 296 punctured screens, and with five shots in each there were 1480 shot marks in all to find the exact center of and measure up to. In fixing these centers the screen papers were tacked down on a broad, smooth sheet of heavy paper, and with a pair of dividers each bullet hole was centered, a circle struck, and from the fine point made by the divider leg-point, the measure was taken. So on the target, and it may be mentioned to the merit of all the rifles tried that not a single key-hole shot mark was found. Every bullet had traveled dead on and hit with its point. With all those measurements to be made, nearly 2,000 in all, and the subsequent calculations to be made, will explain the delay which followed the completion of the work in the open. Of course it was necessary that all the figuring should be done by one hand, and as far as possible we desired to make the record so exact and so complete that no correction should be necessary at any future date. In our next issue the actual figures will be given, beginning with the 200-yard range.

[TO BE CONTINUED.]

RANGE AND GALLERY.

THE WIMBLEDON PISTOL MATCH.—In our issue of Oct. 8 we gave an account, with scores, of the initial revolver match at the Wimbledon meeting. Below will be found the diagram of the winning target. The distance was 20 yards, at a "Martin Smith" target,

the central bullseye 2in. in diameter and outer circle 12in., with equidistant rings, as shown, a bullseye counting 6 and the rings 5, 4, 3 and 2 respectively. Lieut. Percy Scott, of H. M. S. Excellent, the winner, used an Enfield revolver of 2lbs. weight.

CARSON CITY, Nev., Nov. 1.—Fully one hundred and fifty people including about twenty-five ladies, assembled at the Carson Guard shooting range to-day to witness the Carson Guard team of twenty beat 815 at the 200yd. range, Henry Rosenbrock wagering $50 with Captain Wright that the score could not be beaten. Captain Wright also had a bet of $20 that twenty-five men would score over 1,000 points. Despite the heavy wind, which was switching to all points of the compass, the team did remarkable shooting, and beat their own as well as all other records in the United States. The ten first class men who participated in the picnic matches this year scored 431, while the twenty who participated in the State Fair tournament made 829. The entire twenty five piled up 1,009 points. When the announcement was made by Mr. Wells Drury, the referee, the crowd gave three hearty cheers for the champions of the world. The detailed score is attached.

Slocomb	5554444554—45	Cagwin	3445444444—40
Parker	4444545455—44	Meder	4443543344—38
Thaxter	4544545445—44	Daugherty	3435445443—38
Laing	4545345554—44	Alley, Jr	4424344434—37
Cowing, Jr	5455435544—44	Colver	4354443324—36
Wright	5445154553—44		—
Saffell	4454454454—43	Total for twenty men	829
Hark	4545454444—43	Heritage	4334445445—40
Dormer	5444444454—42	Doyle	4434443445—39
Little	4444444544—42	Starling	0344354543—37
Richard	4444554444—42	Thaxter, Jr	4434424433—35
Cowing, Sr	4444454444—41	Gordon	0343433542—29
Maish	4445444444—41		—
Alley, Sr	4444444534—41		1009
Bicknell	4444314445—40		

A match was made between two teams of five men, and there was some lively and good natured betting on the result among the spectators. It resulted as follows: Team No. 1—Alley 47, Saffell 44, Cowing 43, Slocomb 41, Wright 41—216. Team No. 2—Little 45, Thaxter 44, Laing 43, Parker 42, Maish 39—213.

WALTHAM, Mass., Nov. 11.—A friendly match between the Hillside Rifle Club and the Press Rifle Association was shot at the range of the former club in Waltham this afternoon. The day was very favorable for good scores, the only drawback being a variable cross wind. The Hillsides made their largest average in a match, 42 2-9, and the Press boys also made their largest average, 39¾. The match was won by the Hillsides by 22¼ points. The summary is as follows (Edes, two points added for military rifle):

Hillside Rifle Club		Press Rifle Association.	
E A Emerson	4555554545—47	F E Rollins	5444445554—44
R B Edes	4444445554—45	H A Newman	4444544554—43
W A Stone	4544445455—44	F W Scott	4454444454—42
L O Dennison	4544443545—43	D B Farwell	4545444434—41

H L Whiting	4444434545—39	F H Buffum	4035344434—34
G Bassett	3444534534—39	One average score	39¾
	380		357¾

BOSTON, Nov. 12.—The attendance at the range at Walnut Hill to-day was large. In the forenoon the weather conditions were perfect. In the afternoon the wind increased and the light was very bright. The present series of matches will close on Thanksgiving Day (Nov. 26), and probably a special match for that day will be opened, in addition to the regular matches. The long range match will close in two weeks. New matches will be opened immediately after the close of those now running. The close of the long range will end the season at all but the 200yd. ranges. The militia match will continue through the winter. Lieut. W. B. Clark, Co. B, First Corps of Cadets, has won the bronze medal in the latter match. The records of the day stood, all at 200yds.:

Victory Medal Match.

Nov. 14.—There was a slim attendance at Walnut Hill to-day. The weather conditions were not very good. A fishtail wind from 12 o'clock, and changeable light, made high scores impossible. W. Charles made two 86s, which complete his necessary 10 to win the highest prize given by the M. R. A., the victory gold medal. Following are the scores:

GARDNER, Mass., Nov. 12.—The team of ten members of the Gardner Rifle Club yesterday went out to Hackmatack Range to shoot for the *Turf, Field and Farm* prize. The Massachusetts target was used, shooting off-hand, distance 200yds., 10 shots to each man, with a possible 120. The shoot yesterday was the third: A. Mosher 109, W. C. Lovewell 105, I. N. Dodge 104, James Newton 103, Chester Hinds 103, H. C. Knowlton 100, G. F. Ellsworth 99, F. E. Nichols 98, G. C. Goodell 95, F. H. Knowlton 95, a total of 1,011; while the total for the three trials is 2,946. At the second trial only six of the ten shot, which accounts for the aggregate being so small.

BERDAN RIFE CORPS.—The last shoot of the season for the Berdan trophy cup was shot at Bellevue Park range, East Milton, Mass., on Nov. 12, under the auspices of the Berdan Rifle Corps. The cup is held each year by the member making the highest score in the three trophy shoots, and the holding of it three successive years by a member entitles him to ownership. Mr. M. A. King, who held it last year, is the lucky man this year, having scored 90 points. Below is the score of the three trophy shoots:

M A King	30 32 28—90	J G Smith	31 28 27—86
D B Ernest	29 29 30—88	H A King	28 28 28—82

STRING SHOOTERS' CHALLENGE.—Four members of the New York, Pennsylvania and Ohio Union Rifle Club challenge any four men in the United States to a match. Distance 40 rods at a rest. String measure. Preliminaries will be made when this proposition is accepted.—H. V. PERRY, President N. Y., Pa. and O. U. R. C., Jamestown, N. Y.

THE TRAP.

WELLINGTON GUN CLUB.—The Wellington Gun Club, formerly the Malden Gun Club, held a successful tournament at Wellington on the 14th, when there was a large attendance of gunners to participate in the sport of breaking blackbirds and clay-pigeons. The principal event of the day was the team match between the Wellington Club and the Massachusetts Rifle Association, the former winning by 9 points. The teams were composed of five men each, and each man shot at 20 birds. They tied in the match, each team breaking 59 birds, but in the shoot-off the Wellingtons won, breaking 18 to the other team's 9. At noon the directors held a meeting and voted unanimously to change the name from the Malden Gun Club to the Wellington Gun Club. Following is the result of the team match:

WELLINGTON, Nov. 11.—Quite a number of the members of the Boston Gun Club turned out this afternoon at their range at Wellington to open the first of the winter prize shoots. The McCourkee flying target and bird had their first trial, and created considerable interest among those present. The winners for the day in the prize matches—the prizes consisting of valuable rifles and shooting material—were as follows: E. J. Wardwell and E. W. Lawson tied for first and second, and O. D. Ross and D. Kirkwood tied for third and fourth. S. Chester and C. M. Stark tied for fifth and sixth. B. A. Ward taking seventh. In the Visitors' Match, E. W. Buffington won first and J. Nichols second.

NATIONAL GUN ASSOCIATION TOURNAMENTS.—Special Notice.—Members desirous of organizing tournaments in their vicinity, under the auspices of the Association, are requested to notify the undersigned. All the expenses of the same will be paid by us. Make your arrangements for 1886. We propose to establish a circuit of tournaments annually. Claim your dates now. General office and headquarters, Macon, Ga.—MATT R. FREEMAN, Vice-President and General Manager; F. C. ETHRIDGE, Secretary, Macon, Ga. Send 10 cents for hand book containing rules, constitution, etc. "Fairly started and its future depends entirely upon the manner in which the sportsmen throughout the country respond."—C. M. STARK, April 18, 1885.—*Adv.*

PERENNIAL YOUTH.—Age evidently does not diminish the alert vitality or fossilize the perceptions of the renowned "Travelers," of Hartford. The more business it gets, and the more overwhelming its superiority to its contemporaries in its special field becomes, the more ready it is to make every possible concession, and widen its sphere of usefulness; instead of reasoning that it has a monopoly and can ignore the public, it uses its strength and resources to enable it to reduce rates, remove restrictions and extend privileges. Two concessions of the most notable kind have lately been announced: One, that all claims, life or accident, will hereafter be paid without discount, and immediately upon receipt of satisfactory proofs. The second, that all accident policies are non-forfeitable; that is, a policy-holder may change his occupation to one more hazardous, and still receive an equitable proportionate indemnity. It has recently also practically abolished its permit system, and allows yearly accident policy-holders to travel or live where they please within civilized limits, has greatly reduced its rates to traveling business men, and some classes even of railroad men, and rarely lets a season pass without some new and important concession. As this Company covers the whole continent, insuring over 100,000 men every year, and paying claims on over one-seventh of them, these are matters of more than public interest.—*Adv.*

Canoeing.

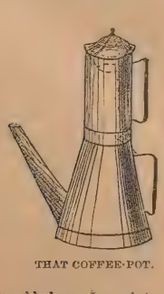
A CANOE YAWL IN SWEDEN.

THE canoe yawl Cassy, in which the following cruise was made, was illustrated in the FOREST AND STREAM of Nov. 6, 1884. She is a large canoe, 14ft. by 3ft. 4in., decked and fitted with a centerboard and rigged with a batten lug main about 60sq.ft., with no reef gear or topping lifts; sprit mizzen about 15sq.ft.; spinnaker 8ft. 6in. hoist, 7ft. on boom, both leaches same length, kept on deck. A stormsail, which has never been used, came in now and then as a dishcloth. No ballast—except centerplate, 70lbs.—was used. Sculls are 8ft. long, with straight blades 6in. wide.

As there was to be a public holiday in Hull on the 16th of July I thought I couldn't do better than spend the day in sailing the Cassy round to Hull, instead of taking her there by rail. Accordingly, at a few minutes to 5 A. M., A. woke me by throwing pebbles at my window, and I jumped up hastily and slipped into my clothes. Together we ran the boat down to the beach on her wheels and were afloat before 5:30 on the North Sea. The wind was light from the west, and for the first few miles we were accompanied by another canoe yawl. Every now and then the wind fell so light that we had to help the Cassy along with the sculls. When we arrived at Spurn Point, a low sandy headland at the southeast extremity of Yorkshire, we found the tide so low that the sandbanks were almost all dry and we had to get out and pull the boat over in the deepest channel we could find—only three or four inches. Arrived in the Humber, we waited ashore some time until the tide seemed almost done, and watched the vessels going out to sea and the big black clouds forming up. We expected a bigger storm than usual—we had had lots of rain coming along the canal—but fortunately our oilskins were not required again for rain, although they were useful for keeping out the spray. Presently a small sail of peculiar shape hove in sight. We launched and beat out to meet her, and soon were chatting with the two occupants of the canoe yawl Ægir, which had beaten the Alice (a sister boat to the Cassy) in the run down from Hull. Shortly after the Alice came up, and after the three crews had stretched their legs ashore for a short time the "Captain" of the Humber Yawl Club and his two "mates," each with a friend on board, formed into line and started for a scratch race of twenty miles up to Hull.

Ægir (14ft.×4ft., the Captain's craft), with a larger sail than either Alice or Cassy, went ahead of them. The wind was very light and the boats close-hauled, and although the sky was overcast dropped gradually lighter and lighter until there was a flat calm.

After some time in the doldrums Ægir was seen to have a little breeze dead ahead. By the time it reached the mates' two craft, she had considerably increased her lead. However, the wind freshened until at last the Captain had to reef his big sail; meanwhile the other two, with their smaller cruising sails were doing good work. Alice preferred working along the Yorkshire shore and made a long board in that direction, almost out of sight of the other two, Cassy decided to stick to Ægir and try to pass her, and all canoeists understand the excitement of the race when her skipper first made out he was gaining. The Humber is an estuary which is favored with a very rapid tide and when the wind meets the same it can get very rough, the waves being very short and steep. The skipper of the Cassy, at any rate, was very glad to have on his oilskin coat, as he sat on the weather deck with the deck tiller in one hand and the mainsheet in the other, while he laid his weight out as far to windward as possible. At last he was fully repaid, as his boat rushed past the Ægir and at the same time passed buoy No.—, well I don't remember the number, but I have a pretty vivid recollection of the way the water was boiling around it. It was in vain that the Captain shook out his reef and staggered along under full sail, and the boats arrived at Hull in the following order: Cassy, Ægir, Alice, 10 or 15 minutes separating the competitors. It was growing dark when we arrived, having traveled about 55 miles. The Cassy was hoisted on board the Orlando by the steam-



HOISTING ON BOARD.

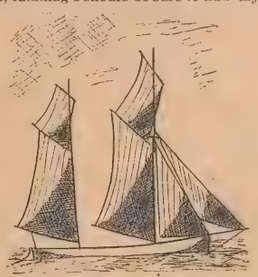
er's crane—fastened on to her own sling, a piece of stout rope some 18f. long, which is always carried in cruising for that purpose. You may be sure that the three skippers didn't lack appeiite when they sat down to supper together, and I know one of them, at any rate, who slept without dreaming.

On Saturday morning, July 18, the Orlando steamed out of the Humber, and on Monday morning I was landed in Gothenburg (Göteborg) in a pouring rain that "looked like lasting." Canoeists don't generally carry umbrellas with them when cruising, and I was no exception to the rule. So the good people of the city were treated to a sight of my long yellow oilskin. The provisions for the cruise had to be passed through the customs, and about 5s. was paid in "duty." Then an adjournment was made to a friend's house, and the voyager was comforted (?) by being told that it was the "Ladies' week," and that it was sure to rain every day during that week. Rather cheering, wasn't it? It certainly did rain that day, but I fancy it spent itself, as it was the worst day I had in Sweden. Gothenburg is a fine, clean looking city, but as I don't intend to describe it, I would refer any one of an inquiring mind to Baedeker.

On Tuesday after a short cruise on the river, the Cassy with all stores on board was hoisted on to the upper deck of the Matalastrom steamship, and at 10 P. M. the skipper and a friend went on board and steamed up the Gota River. We were on deck next morning by 3:30 A. M., and while the steamer passed through the eleven locks and canal at Trollhättan we walked round by the river, through the woods, and had splendid views of the rapids and falls. We met the steamer above the falls opposite the Trollhättan Hotel and went on about 6 A. M. Before leaving the steamer at Wenersborg we went over the course on the charts with the mate, and got our compass bearings marked on. We had breakfast at the large rambling hotel opposite the grass-grown market square, then pulled out past the breakwaters on to Lake Wenern. I was rather amused at first by the tiny light houses on the lakes, only some 7 or 8ft. high apparently. We had a head wind and not very much of it, so our progress was only slow. When at last the wind went round a little and allowed us to lay on our course, it soon died out and left us lifting gently on the glossy surface; so before commencing to row we cooked a meal. The first and only misfortune of the cruise, the loss of the coffee-pot lid overboard, happened then. However, as the coffee pot was one of those two-storied arrangements, its usefulness was not seriously impaired. If any brother canoeist is troubled—as I used to be—with grounds in his coffee, I should strongly recommend the investment of two shillings in one of these coffee-pots, as they are very good.

THAT COFFEE-POT.

We rowed in half-hour spells to a point called Wenersnas, where we landed and bathed. That part of the lake is by no means pleasant, being full of large reefs of rock, some of which just about come up to the surface. In rough weather it would be well to give it a wide berth. A consultation of the chart here revealed the fact that sixteen or eighteen miles was the distance to the nearest good sheltered harbor. As it was after 4 o'clock, a dead calm and very hot, this evidently meant work. So we settled down to the sculls in the old half-hour spells and steered partly by compass and partly by the land we were leaving, until we gradually raised the long, low headland, which we had to round before we could steer for our destination.



About sundown, as we were rounding the reef, a light breeze sprung up from the south and soon we were running along with spinnaker set and all sail drawing. As we went on the breeze freshened, and rather before 10 o'clock we got "on the marks" (a long white pole in the lake and a white rock ashore) and succeeded in running into the inlet—Marna Stang—without touching any of the unpleasant "grunds" on

CANOE YAWL CASSY (Humber Yawl Club).

which the seas were now beginning to break. Immediately after passing the white mark we were in smooth water, and, as the moon rose over the dark firs and shone on the placid waters and on our gently drifting boat, the picture was one of such peaceful beauty as will not soon fade from our memory. However, it was late and the unsentimental part of our nature called for something substantial. So my friend went ashore and by the help of his native language, Swedish, succeeded in getting eleven eggs and some milk from an honest farmer near by, who, not expecting visitors at that hour, was already fast asleep. Five of these, with other provisions and the never-failing coffee, made our supper, after which I parted with my companion, who, after a twelve or fourteen mile walk, took the early morning train from Linkoping to Gothenburg. The skipper of the Cassy hauled out his ground sheet and blanket bag, spread them on the floor of his boat, and in a short time was fast asleep. Truly, hunger is the best sauce and hard work makes one sleep better than a feather bed.

It was about 11 o'clock next morning before the crew turned out. An hour and a half saw breakfast dispatched, bedding rolled up and boat tent struck and stowed, and we started gaily along with a nice little breeze fairly well aft. A small trading vessel was loading wood opposite my night's halting place, and I called out to them to know if I was on the right course. Of course they didn't understand me, and I sailed past, thinking I should be sure to find my way through

LAKE SCHOONER.

the inlet to the other side of Kollandsö all right. After sailing on for a mile or two I came to the end of the lake, and instead of finding a passage through as I expected, was confronted with a wall of rocks. So I had to retrace my—steps, I was going to say—and it was after 2 o'clock before I again left the trading vessel, with a man in a boat, a curious built crank craft with high ends, to row ahead and show me the way. It only I had been able to speak Swedish I shouldn't have wasted—no, not wasted, surely, for it was a beautiful little lake—I shouldn't have spent all that time in finding the channel, which was quite at the beginning of the lake, hidden behind a bank of reeds. An ominous flap of the mainsail here warned me that my fair wind was at an end, and for the remaining six miles or so of lovely little lakes and streams its place was taken by one of equal strength dead ahead. I felt lazy and tacked a good part of the way, making only slow progress. When I arrived at the open lake again, at Ullersund, I found my friend, the dead calm, waiting for me. So I made some soup and otherwise refreshed the inner man, then had a couple of hours pulling until at sunset the sea breeze sprung up and carried me along satisfactorily until at 11 P. M. I cast anchor off Arnäs.

Next morning when I looked out of my tent I wondered how on earth I ever found my way in there between the reefs, on to which a heavy surf, impelled by a strong breeze, was breaking. As I felt lazy again—I notice I'm generally more lazy about cooking breakfast than about making my own dinner—I landed in the primitive little village and was duly stared at by about half the population. I had no Swedish and could not make them understand that I wanted to breakfast at a hotel. I don't believe there is one in the place. However, I was told I should find some one who spoke English at a house which was pointed out to me. So, as there wasn't a door bell or a knocker. I opened the door and went in. After stating my case I was told if I would wait a short time, breakfast would be brought. Such is Swedish hospitality. After breakfast the Cassy followed a local boat along an inside channel and then set off with two reefs down for a rough sail across the lake. The wind was well ahead, in fact I had a good deal of tacking before I was to windward of Mariestad. Just as I got the town under my lee a tremendous squall came on and I was very glad to run into the place under bare poles and take up a snug anchorage inside the river which falls into the lake there

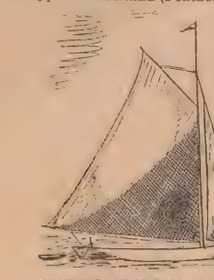
Next day, Saturday, being rough and rainy, I spent at Mariestad; also the Sunday. The Saturday's market in the town, which is the capital of the district, is well attended, and the country people come from the neighboring villages in carts, on foot, and in boats, I was especially interested in the latter class, and watched the embarkation of many boat loads, much admiring the sturdy way in which the women pulled, while the men steered or did nothing. On Sunday I went into the church, which is a large building with high clock tower, from which there is a fine view. Here, as at other places, I was very well received, and the fact that I was a stranger and an Englishman unable to speak Swedish, seemed to be a point in my favor rather than the reverse.

On Monday I rowed most of the ten miles or so to Sjotorp, where I left Lake Wenern and entered on the West Göta Kanal. The canal dues, which freed me through all the locks to the Baltic came to nine kröner, *i. e.*, ten shillings. That day I went through nineteen locks, all upward. After three or four miles of sailing I had to take to the sculls for the remaining distance to Toreboda, where I spent the night, moored head and stern. The canal water is very thick and dirty in consequence of the churning of the steamers' screws. The banks are low and stony; when you stand up in the boat you have occasionally a very good view, as the canal is sometimes high above the surrounding country. On Tuesday, July 28, I left about 10:30 with a fair wind and a companion on board. The gentleman in question was a schoolmaster, and seemed to appreciate the opportunity of airing his English, and I was very glad to have some one to talk to. At Wassbäcken, where he left me, I had to have my "papers" engrossed "Pass Wassbäcken, 28th July, 1 E. M. (efter middag)." The three or four miles from this place to Tatorp, where you pass through the last lock up to Lake Viken, are about the prettiest part of the canal. I folded in my port outrigger, sat on the after deck and paddled or pushed along with one sculi, admiring and enjoying the trees and the ferns, etc., on the banks.

For the first four miles on Sjön Viken I had a flat calm, and the blue spectacles and white helmet were very useful in the glaring sunlight. I had a fair wind after passing the bend in the lake, and set spinnaker. The clear water, rippled into wavelets by a nice breeze well aft, was a pleasant change from the flat, dead water in the canal and I fully appreciated the beauty of wooded islets and blue hills as I threaded my way down the lower end of the lake. According to my custom I hailed a Koster boat which I had overhauled and was rather surprised to get an answer in English from her owner, an old American sailor, who was selling his cargo of salt fish at the various villages along his course. The wind became lighter and lighter as I drifted down the narrows, making my coffee and eating my provisions. At the southern end there are one or two very narrow artificial passages, cut out of the solid rock. I was thankful not to meet a steamer in them, as I don't know how I should have passed her. When I arrived at the first lock of the descent at Forsvik, I was delayed some time in finding the inspector and having my papers signed, but at last I passed through and by 10 o'clock I had found a nice sheltered little island with fairly deep water alongside, to which I tied up for the night. I don't think camping out on land would be very good fun, in that part of Sweden at least, not if other places have even half as many ants as that place was provided with. I suppose they must have been asleep when I tied the boat up at night, but I'm sure that they weren't when I landed in the morning to cast off, for I had to beat a hasty retreat from the swarm.

On Wednesday (July 29) I was under way by 8:30 (earliest start on record) and had my breakfast under way. I had to row the last mile or two to Lake Vettern (in a calm), but shortly after getting on to the open lake was favored with a nice little southwest breeze, which lasted right across. It is fifteen miles from land to land, and took me about four hours. There is a small island about midway, with a lighthouse and two or three houses upon it. I sailed up the bay to Motala, a pretty, clean-looking town, whose red roofs and green trees look well when seen across the clear blue waters of the lake. The water here is wonderfully clear; I could clearly distinguish every stone at the bottom in, I should say, about fifteen feet of water, and could observe the bottom of the sluice gates as I was penned through the lock. I was glad to stretch my legs in the town and get my letters at the post-office; also something to eat at a restaurant. The wild strawberries (smultrön) which you get in many parts of Sweden are excellent, and those I got at Motala, with frozen cream, were no exception to the rule. Pretty little residences and fine trees line the banks of the canal, and as I had my tea with a hospitable family by the canalside, I had no further trouble about cooking for that day.

After tea I passed through a string of five locks on to Lake Boren, and spent the night at anchor under the lee of a point rather less than halfway down the lake.

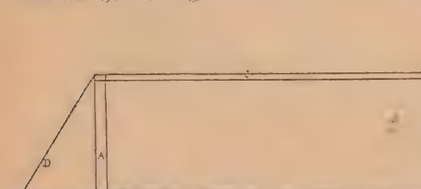


Next morning, Thursday, July 30, after breakfast and a swim in the lovely clear water, I left my anchorage with a fine breeze abeam. At Husbyfyl, where I had to pass another lock, I met the Motalaström, the steamer in which I went from Gothenburg to Wenersborg, and was glad to shake hands with the captain and mate and have a short chat. There were lots of small bridges along the stretch of canal which followed, and although they were often open, I frequently found, when they were closed, that my lowering mast enabled me to pass them with less delay than by waiting for them to be opened. It was 7 P. M. before I came out of the last lock of the sixteen, by which the descent is made to Lake Roxen. The last mile or so of the canal is quite on the top of a hill, and the sensation of sailing or rowing along up there while you overlook the broad waters of Roxen below, is rather peculiar. As the wind was abeam I sailed about half way to Norsholm, at the outlet to the lake, before dropping my mud hook at 9:30. The sun set 8:15, but for an hour afterward it was fairly light. The changes in color among the clouds at and after sunset quite baffle description, and I was specially struck by the lovely tints which played upon a rain squall which worked down upon me shortly before I stopped for the night. Oh, those moonlight evenings. The charm of them is with me yet, and again, in fancy, I recline in the boat idly looking out from my tent door, while the smoke from the evening pipe slowly circles round.

Friday morning was dull and I didn't wake until late, so my start was delayed until noon. The wind came in hardish puffs over the hills, but as it was abeam I had a fairly pleasant sail to Norsholm, where I re-entered the canal and had again to take to the sculls, as the high land and trees drew the wind all ahead. Lake Asplargen is a small sheet of water surrounded by hills clad with the usual pine woods. Crossing it, it was a case of holding the mainsheet in hand and being ready to hop on to the weather deck, as the puffs came down very smartly. When by dint of hard rowing along the canal which followed, I reached the first lock of a long series, I was somewhat surprised to have to wait about half an hour until a steamer which had been signalled came up and passed through. This was the more unpleasant because it began to rain in a most persistent manner. After going through seven locks, which, naturally slow in their action, seemed none the quicker on account of the rain, I was glad to find a snug corner and put up the tent. After a good hot jorum of soup and a cup of cocoa, I turned in and slept securely, lulled by the pattering rain drops on my tightly stretched tent.

The Scotch mist which greeted my view on Saturday, Aug. 1, was not reassuring, nor was the bad cup of cocoa, made from the dirty water of the canal, with which I had to content myself. However, I rowed on to Soderkoping, and while I waited for an upward-bound steamer to pass the lock, I had a good cup of coffee at a restaurant hard by and also filled my keg with clear water. Feeling depressed by the damp weather and lack of wind, I tied up astern of a vessel which was being towed by a yoke of oxen, and cooked a meal on board as I traveled the remaining three or four miles to Mern, where the descent is made to an arm of the Baltic. After a short sail on the sea I hauled the boat out, and, as I wished for a few days in Stockholm, put her on board a steamer at about 7 P. M. The passage among the islands showed me that I should have had my work cut out to find my way had I sailed in the Cassy.

After a 12 hour passage I was put overboard at Stockholm and



after some time succeeded in reaching the Stockholm Rowing Club boat house, where I left the Cassy. From the members of the club I received every courtesy. They have, so I was told, about 20 canoes altogether, belonging to the various members, but most of them were away at the summer residences of their owners. The usual method of steering appears to be with a rod from the end of a half yoke, on the Norwegian principle, and deep keels seem to be preferred to centerboards. Masts are shipped on ferrules which project 6 or 8in. above deck. Thus there is no hole in deck and the spar is shortened for stowage. The weather was not very good while I was in Stockholm, so I did not do much sailing. It is, however, a splendid field for the sailing canoeists. On Tuesday afternoon I sailed, with a companion, to a place some 9 miles distant. All along the waterside at intervals are the summer residences of the Stockholm people, each with its little pier and bathing house, and often with a boat alongside. If the inhabitants wish to go to town, they have simply to hail a passing steamboat, of which there always seemed to be plenty. As we were late, we rowed a good part of the way back and landed for supper at an island (Feather Island).

FISHING BOAT OR BALLAST LIGHTER.

On Wednesday, Aug. 5, the Cassy was rowed to the nearest point to the railway station, hauled out (with all on board), put on a luggage cart and taken to the platform. Fortunately I had the kind assistance of the captain of the rowing club as interpreter or I don't think I should ever have got over the difficulties raised by the railway officials. As it was an hour and a half was consumed from leaving the water to having the boat safely stowed in the luggage van. The charge was made on 240 kilos—500lbs. by actual weighing—and came to about 35s. 8d. The railway vans are rather larger than ours and the boat went in very easily. At home she has to be turned half over in order to get her into the passenger van and then she is a tight fit. Twelve hours' traveling brought us to Gothenburg. There are any quantity of lakes in sight all along the line. After a day's cruising on the Göta River, the boat was hoisted on board the Orlando and on Sunday, Aug. 9, we arrived in Hull after a good passage. There were a good many emigrants on board who would persist in using the Cassy as a seat or as a standing place for looking over the bulwarks. I almost feared they would damage the boat, but when the canvas cover was removed, there wasn't a crack anywhere.

For such a cruise as this, including living on board, I don't think you could improve on the Cassy. I used an A tent, coming down to the outside of gunwale, with two uprights and ridgepole, folding up together when not in use, with tent wrapped around all. The upright A is stepped in the centerboard trunk and B at after end of well, the latter not being used in the daytime, as the ridgepole, C, is held up by the rope, E, on mizzenmast. The entrance at the after end is thus left clear. A guyline, D, is made fast forward. The tent buttons along the coaming.

THE CASSY'S TENT.

The blanket bag is about 7ft. by 2ft. 6in., and is folded in ground sheet. Large clothes bag fills space on port side of centerboard. The part of deck under tent is very useful to shove things in at night, so as to have them out of the way. For cooking, a small "flamme forcée" lamp was used. The total distance traveled was about 200 miles. There is no current in any part. The boat was much admired, and I was amused to find—through a Swedish friend—that the newspapers remarked on the voyage of the "sport-loving son of Albion."

CASSY, H. Y. C.

MEETS, RACING AND CRUISING.

THE following letter from Mr. W. Baden-Powell to the *Field* deals with a subject that has lately been discussed in the FOREST AND STREAM. The writer puts very plainly and forcibly the place which racing should hold, and also the valuable features of the meets and the benefits to be derived from them by all cruising canoeists. Prizes, with us, have of late years been pretty evenly distributed, and the difficulty met with is men are apt to take fright at the name of some well-known canoeist and make it an excuse to keep out of racing. Last year some very fine sailing was done by novices, and the greatest number of prizes were taken by a new man, a comparative novice. The article quoted is the proposal of Mr. Gibson for a senior class.

"Opinions seem to differ widely as to the best mode of promoting canoeing. It has been said, with truth, that popular racing fosters cruising, and I for one assert, that popular racing at canoeing centers is the very blood of canoe life; but it must be popular. The question now before canoeists, and which will be brought up at the R. C. C. autumn meeting is how to make racing more popular. I hold an opinion upon the subject, which I shall, with your permission, publish before the general meeting of the club on the 24th; but meantime I am anxious to learn the opinions of canoers generally, whether owners of classified or non-classified canoes, paddlers or sailers, or mixed, as to the best means to attain this desirable end. It appears to me that canoeing is built up of three component parts—meets, racing and cruising. I put meets first, as they should induce recruits; racing second, as it perfects a man in fitting and handling his canoe; and cruising last, as none but an expert with a properly constructed and fitted canoe should attempt to cruise, that is, beyond home waters, for he will either drown himself, or wreck his craft and come home disgusted. The common belief of a canoeist is that his canoe is perfect, and this idea clings to him until he has met several other "perfections," who out-sail or out-paddle him, and show him novelties in fitting and rig which he never dreamed of till he saw them—but has dreamed of them ever since. Herein lies the use of 'meets,' especially camp meets and inter-club meets. Racing holds out a bribe, which works the canoer up to perfect his canoe and her fittings, and to practice himself in handling her. A novice at canoe sailing, for instance, cannot win against an expert (bar flukes), however perfect a canoe he may have purchased; as witness many a well-known yachtsman who has attempted to win a canoe "pot," and, no less, rowing men who attempt for the first time to paddle. But it is found that the existing bribe of racing is not strong enough to enslave a large number of men, unless the almost certainty of a prize looms conspicuously at the home end of the course. The cry is that the prizes are in the hands of one or two almost to a certainty. Well, we are not alone in this state of things. In America they are suffering from the same congestion, and here may I quote their views and proposed remedy.

* * * * *

"American canoeing has made enormous strides in the last three years, chiefly owing to the benefits derived from the meets (camping and racing) of the American Canoe Association. At these annual meets the various clubs and independent members come together; healthy rivalry is established to show the best sailer, the fastest paddler, and the most perfect camp outfit. The meet is continued for some fourteen days, and this is worth traveling some distance to attend. Canoes, such as sailing cruisers and paddling cruisers, are directly patronized, while unclassed paddlers and sailing craft (approaching the genus "boat") are indirectly patronized. I have little doubt that we in England should do much better were we to so arrange our regular races that a man could enter with fair chance of success both paddling and sailing races in the same canoe; as, for instance, in a paddling race the canoe not to weigh less than a certain limit—say, 150 pounds, representing an average cruising canoe with stores. Any canoe, then, of itself under weight would have to be weighted down to the standard. Thus, an empty cruiser and a loaded paddler—weighing as near as may be the same—would paddle on even terms as to weight, though still a slight advantage would hold to the narrow paddler.

"We might also well institute a race or two for unclassed sailing canoes, such as canoe yawls and so-called Mersey canoes (I say so-called, because my idea of a Mersey canoe has always been of the nice little cruising craft one used to see at Bond's at Birkenhead, about 15ft.x30in. and 7in. draft, not 18ft.x6ft.x2ft.). I am sure it would be most instructive to see some sailing of these large craft, say, on Hendon Lake, which, it may be remembered, is close to a Midland Railway station; and a competition between them and R. C. C. first class would be instructive to both. The great difficulty in the way of holding a meet near the metropolis, combined with racing, is that of want of suitable water. A camping meet, with a cruise in company, can easily and pleasantly be carried out on the Thames. If once train or cart is used, there are lakes in plenty get-at-able; but this would only be advisable for an inter-club meet on a large scale, when traveling expenses would cheerfully be incurred in obtaining so desirable a result.

"For the purpose of sailing races I am in favor of adopting the American limit to the weight of center-plate, viz., 60lbs., and in addition to limit the sail area. This would at once tend to equalize the canoes in driving power, and leaving success to be gained by model and handling; there would also be less out-building and out-monkeying. In the second class, over and above 200lb. limit, including center-plate if any, I would allow water ballast, and limit sail area to two thirds of first class area.

"The record points as tried this season in the R. C. C., exhibit one difficulty, and that is that in being spread over the whole season a man's chance of success depends on his attending every race, not as in America, merely turning up and racing in all the record races at one meet. However, a man who wins several pots and then fails to turn up at one other race, whereby others get ahead of him in points can always follow the puppy's tactics, who at the dog show having blown himself out with a good dinner, was content to tell the attendant to stick up a card 'not for competition' when the judges came around."

NAUTILUS, R. C. C.

A DOCKRAT RACE.

TAKING advantage of the general holiday on the 3d inst (Election day) several members of the Newburgh Canoeing and Boating Association arranged for a handicap sailing race. The course chosen was from a stakeboat anchored off the "retreat" north to the red buoy off Low Point and return, distance five miles, this course having been chained off on the ice last winter.

The day was cloudy, wind strong and squally, flying around from S.W. to N.W. Water cold with a decidedly lumpy sea. Tide a strong ebb. The following came to the starting point: Scylla, 21ft., open boat, Hudson River model, rig, mainsail, jib and dandy, and manned by Commodore Bartlett and his two sons, Harvey and Fred; Ripple, 20ft., open boat, Hudson River model, rig large cat mainsail, Vice-Commodore J. T. Van Dalfsen; Mabel, 17ft., New York Bay model, sharpie rigged (two leg of mutton sails) manned by Captain Nate Smith and his son Fred; Jennie, 17ft., Rushton open boat, rigged same as Mabel, sailed by Harry Marvel; Iolas, 15ft., Mohican No. 2 model, Mohican sails, sailed by W. Van Dalfsen; Wenonah, 15ft. Peterboro canoe, sailed by G. Edgar, Jr., rig, a combination sail of his own design.

The run to the buoy was made under full sail, and the little craft fairly flew over the water. Mabel held the lead for half the distance and was then passed by Wenonah, and both were a little later overhauled by Scylla.

The latter turned the buoy first, followed 2min. later by the Wenonah, with Mabel a minute behind her, the others considerably away. On the run home all used their reefing gear with the exception of Scylla, who made the whole run under full sail. Luffing, easing sheets, doing graceful and ungraceful balancing acts and taking plenty of water aboard was the order of the day; and all were glad when the stakeboat was passed and they could amuse themselves by wringing out their clothes and emptying their craft of water that they thought did not belong there. The result was as follows:

	Start.	Finish.	Elapsed.	Corrected.
Scylla	2 46 00	3 40 00	0 54 00	0 54 00
Iolas	2 45 00	4 04 00	1 19 00	1 13 00
Wenonah	2 45 00	4 05 00	1 20 00	1 14 00
Mabel	2 46 00	4 06 30	1 20 30	1 16 30
Ripple	2 45 00	4 03 00	1 18 00	1 17 00
Jennie	2 45 00	4 10 00	1 25 00	1 21 00

The Commodore takes first prize—one of Prang's new pictures of the finish of the Iolan—Genesta race; W. Van Dalfsen second prize—a handsome silk "Dockrat" flag.

SEASHELL.

SOME QUESTIONS ABOUT SNEAKBOXES.—A correspondent in England asks the following questions, most of which have at times been answered in our columns. The oars in New York would be nearly $100. Lyman's oars are among the best. "London, Eng., Oct. 19.—*Editor Forest and Stream:* I have been waiting to hear something more of the sneakbox at your late canoe meet, but from your paper I see it was not represented, or if so mention is not made of it, and wanting to know more about it than was published last year, if you can will you kindly answer the following questions: Will it be safe for a beginner? Does it row easily, and if it has any faults what are they? Who are the best builders, and about the cost f. o. b. at New York? Who are best makers of bow-to face oars?—G. ATKINS."

WATERPROOFING TENTS.—*Editor Forest and Stream:* Will you please ask "Nessmuk," through the columns of your paper, if the waterproofing process which he mentions in "Woodcraft" is also good for canvas tents. If so how much lime water and how much alum is required for a tent 6ft. high, 6ft. wide and 8ft. long. If it is not good for canvas, can he or any of your correspondents tell me a good waterproofing for canvas which will turn a heavy rain for hours and days if necessary.—RED BREAST.

OFF FOR FLORIDA.—Dr. Neidé called on us this week before sailing for Florida. He will be at Jacksonville during the winter. Mr. George W. Andrews, of Painesville, Ohio, also a canoeist, accompanies the Doctor. Mr. Hugh L. Willoughby (Windward) also visited us last week on his way from Newport to Florida. The yawl Windward is laid up at the former place and the canoe Windward will soon be launched again at Jacksonville.

"CANOE HANDLING."—Extract from a letter to the author from Mr. C. H. Farnham, author of "Labrador," in *Harper's Monthly:* "I have just read the last pages of your clear, sensible and interesting 'Canoe Handling.' I like it very much."

COST OF "DEJA'S" BOAT.—The cost of the little boat described by "Deja" is given by him as follows: Hull and ballast, $100; five sails and two flags, $28.75; fitting, $7. Total cost, $135.75.

Yachting.

WHOSE WATERLOO?

INASMUCH as every point in my review of the Genesta-Puritan matches was supported and demonstrated directly by the evidence of third parties, it does not seem necessary to reply to the inaccurate imputations and the unsupported, one-sided, individual assertions of your correspondent "Cape Cod."

Neither has the letter from "Reader" any particular import, except that its conclusions bear me out in the estimate I placed in my review upon the relation of type to speed. But I hardly crave indorsement from "Reader" or any other amateur source.

Permit me to say that sustained effort on my part in behalf of the cutter in America has come to a close with the review in question.

The cutter and her modifications have now been so extensively introduced in our waters that they can henceforth be trusted to survive opposition on their own sterling merits.

Fighting against enormous odds from the start of my campaign for reform with trifling weapons and small opportunities, it is likely that I have sinned against the precious decalogue of prim propriety in the heat of what I conceived to be a good and just cause.

Possibly the difficulties with which I had to contend will serve as a sufficient excuse among those who can appreciate the weight which had to be lifted in the task I set myself some five years ago.

And possibly there are not a few who will detect in the American fleet of to-day a regeneration attributable to my labors, at all times single and disinterested.

There may be even those ready to concede that but for my expostulations the Cup we covet so much would not now be in our possession.

For a verdict upon such results as may have been achieved through one scratchy pen as a lever, good will as the power at its end and truth as the fulcrum, I am content to abide by the decision of years yet to come.

Until the smoke of the battle lifts that the field may be coolly surveyed, it is reward enough to know that light has been shed in many a dark place through an agitation in which the undersigned was a prime mover.

C. P. KUNHARDT.

A CHALLENGE TO AMERICAN YACHTS.

THIS season's racing seems likely to revive international yacht racing, as British yachtsmen are not likely to accept quietly the defeat of one of their fastest yachts, a far better boat in her class than any previous challenger; while at the same time two of our challenge cups are now waiting for us on the other side. Galatea has already thrown down the glove for next season, and now comes another challenge from a no less notable competitor, in the following letter to the London *Field:*

SIR—As long as the cup won by the America in 1851 remains on the other side of the Atlantic there will be an inducement for the owners of our best yachts to go over and try to bring it back; but it seems to me a pity we have not some similar attraction on this side for which such vessels as the Puritan might think it worth while to visit our shores. I will endeavor to supply this deficiency. As has been often pointed out in your columns, the America took the R. Y. S. cup from a very moderate lot of English yachts, the two best, the Alarm and the Arrow, being out of the race, the latter having run aground, and the former going to her assistance. Consequently the trial, internationally speaking, was of no value. In the following year America met Arrow at Ryde, also for a Queen's Cup, and great interest was excited among yachtsmen anxious to see what the cutter could do with the schooner, bar accidents. The result was that Arrow beat her decisively, Lord Londesborough's Mosquito being next vessel (only one second behind Arrow), and then at some distance came America, and the last vessel was the schooner Zephyretta. Mosquito's defeat of America, although as decisive as Arrow's, need not be alluded to, as I am only concerned with the actual winner of the cup.

The difference between the race in 1851 and that in 1852 is this: The latter was not, strictly speaking, an international struggle, inasmuch as the America then belonged to an English nobleman and was manned by an English crew; but, bar this, the trial was certainly between representative vessels from either country, and these vessels had not sailed a race together before.

Moreover, no American yachtsman would despise or seek to underrate the well-known capabilities of English sailors. In the match in question, in similar weather and over the same course as in the previous year, the American vessel took less time to sail over it, and she was undoubtedly well handled, and the Arrow beat her when before the wind, on which point of sailing the excellence of the crew is more or less immaterial. There are two cups in the races for which the America took part—one, the R. Y. S., she took away, and the other, a Queen's cup, is in my possession. I propose to offer it as a challenge cup, as the other has been, and I trust an American yacht will come over and try to win it. While it remains here the value of the other one is lessened, inasmuch as the American vessel which won that lost this to an English yacht.

I must consider that the Arrow is the present holder, and I have sufficient faith in my old ship to think that, after some suitable alterations, I should be able to make a gallant, even if a losing, fight in defense of the trophy. I have not raced her for the last three years because she has been so mercilessly boycotted by the Yacht Racing Association, and made to measure thirty tons more than the Marjorie, though the latter is really the larger and more powerful vessel. However, with an American boat she would be on better terms, as the "lead and canvas type" is not so much in vogue over there and stability is sought in the shape of the hull and not obtained only artificially by hanging on so many tons to the keel. Your journal is widely read in America and I hope this challenge will catch "the eye" of some enterprising owner of one of their beautiful sloops. It is, of course, unnecessary now to speak of conditions, but I will name three: 1. The challenging yacht must be a cutter or sloop. 2. The best out of three races over the Queen's Cup course at Cowes, to determine the contest; and 3. Six months' notice to be given to me. I ask for this because I should have to do so much to my old cutter to make her fit to compete with a modern flyer. If any American brother yachtsman will honor me with a reply, I shall be delighted to hear from him at my home, Cranbury Park, near Winchester.

TANKERVILLE CHAMBERLAYNE.

STEAM YACHT AMAZON, Salcombe Harbor, Oct. 27.

Though she has been rebuilt, altered, and to a certain extent modernized, Arrow can trace her record back to 1822, and to-day she is vastly different from the modern racer, being more like Puritan than Genesta. Her length on waterline is 79ft. 2in., beam 18ft. 9in., draft 11ft. 8in. at heel of sternpost, and 10ft. 8in. amidships, displacement 106 tons, and ballast 40 tons, 13½ tons of this having been transferred to the keel of late years. In waterline length, displacement and ballast she differs little from Puritan, having less weight outside but at a greater depth. Her beam is less by 4ft, and her depth of body, exclusive of keel, is greater.

It is only within a few years that it has been generally understood here that we did not own a Queen's Cup, and had never won one, but if there is any desire to import such a piece of silverware, the owner of the Arrow offers every opportunity to our yachtsmen. In this case the question of measurement does not stand in the way, as Arrow is penalized by the Y. R. A. almost as heavily as Puritan would be, and from Mr. Chamberlayne's bold denunciation of the Y. R. A. it would seem probable that he would not desire to race under such a rule, but under one that is fairer to all models. His challenge is a fair and manly one, and it now rests with American yachtsmen to accept it in the same spirit in which it is issued.

GENESTA'S PASSAGE.

THE navigator of Genesta on her return trip, Capt. J. W. Saunders, has just returned to New York by steamer, having left Genesta on her arrival out. He speaks in the highest terms of her behavior in heavy weather, as will be seen by the following interview in the New York *Herald*, and bears full testimony as to her seagoing powers. This rather contradicts the reports that have been circulated regarding her performance in the Brenton's Reef race, but in the latter she sailed with reefed mainsail instead of setting a trysail, as it was expected that the weather would moderate as the day advanced. When she was near the finish, about noon, the wind was heavier than ever, but it was too near the end to set a trysail, and to the end of the race she was punished with her long boom. Her two Atlantic passages have, however, fully proved her speed and ability as a seagoing vessel. Capt. Saunders speaks as follows:

"The Genesta is a wonder. I have never seen her equal as a sea boat. The voyage was a continued series of surprises to me in the way of her marvelous performances under adverse circumstances. We had heavy, strong and baffling contrary winds nearly all the way over and heavy seas, and it was amazing to see that little devil get through the water.

"Our voyage began on Oct. 9 at 6 P. M. and ended at Gosport, England, Oct. 28, at 25 minutes past 9 A. M. She traveled 3,300 miles in 19 days, 10 hours, an average of about 7 knots against heavy seas all the way over. The entire passage was made under reefed sails, with the exception of two or three brief intervals only. The boat's behavior throughout was beautiful. It couldn't have been better, and every day developed some new good quality in her. There was sea enough to have swamped any boat but her. Why—to give you an idea how stiff she was—her two small boats were not even lashed. A small piece of rope was passed over them and run through a little eye bolt in the deck. Two hundred pounds weight would have loosened them. I never got my feet wet but once.

"I do not think the Genesta can be beaten as a sea boat, and I am satisfied she lost her last race with the Puritan by carrying her topsail. I proved that theory to my satisfaction during the voyage.

"The only accident we had during the trip was the breaking of the jaws of the gaff on the 21st. There was not wind enough at the time to counteract the heavy seas and keep her steady, and a sudden jerk snapped the gaff. We repaired it by rigging a spar and chafer.

"To describe the voyage more in detail: We got under way at 3 P. M., Oct. 9; passed Sandy Hook at twenty five minutes to 5 and the Lightship at 6. There was a strong wind from the northeast, which had increased to a severe gale by 11 o'clock, and we were obliged to heave-to. At 5 o'clock A. M. we let her run again. The sea was more regular and the wind moderated. We set the forestaysail at 10. The first day's run was 89½ miles from the Lightship.

"The second day we had strong northeast winds and very heavy sea, the yacht rolling and slatting considerably. At 8 A. M. we set the clubtopsail, with the wind north-northeast, less sea and better weather. On the 11th we had moderate north-northeast and north winds, but heavy northeast sea, and the yacht jumped like a wild horse. From 8 P. M. to midnight we sailed 40 miles. The day's run was 212 miles. On the 12th the wind continued northeast, and the yacht made 9½ knots in a heavy beam sea. We sailed 12 knots an hour, or 48 knots from 8 to midnight, and we ran 288 miles that day. On the following day, with north winds and heavy sea, we ran 10 knots an hour, and traveled 240 miles. It blew hard in squalls, and we took in racing staysail and reefed topsail.

"On the 14th we had strong gales from the north and heavy seas, and reefed the mainsail, but traveled 200 miles. On the 15th we had northeast gales, which increased and there was so much sea during the night that we lay to, but our run was 150 miles. Next day we remained hove to, the seas running mountains high. The 17th came in with a northeast gale and a tremendous sea. The weather moderated during the night and we made 162 miles. The 18th brought an east southeast wind, but a heavy sea, and we ran 116 miles. On the 19th we had a smoother sea and an unsteady wind from the southeast and made 111 miles. The next twenty-four hours was fine weather throughout with light southeast breezes, 103 miles. On the 21st we broke our gaff and made only 96 miles. On the following day the wind freshened to strong gales from the northwest and we travele

216 miles Heavy gales from the northeast marked the next day. It shook us up so that the ship's compass turned upside down in the box. 180 miles. On the night of the 24th we had a north by east wind and a tremendous sea. The mate hurt his foot while jibing the mainsail, but not seriously. Distance run 194 miles. The 25th brought strong north by east gales, followed by spits of rain during the night. Our run was 200 miles. We had thick weather during part of the 26th. We took soundings and found 80 fathoms. That day we reeled out 171 miles. On the 27th we had north northwest winds, blowing hard and increasing to a gale. We saw the Lizzard lights bearing north by east at 10 A. M. We sailed 183 miles that day. October 28 was the last of the voyage. It blew a parting gale from the northeast, but we ran our usual nine or ten knots an hour. At 4:20 A. M. we saw the Needles and at 9:25 came to anchor in Gosport, Portsmouth, amid cheering from all the yachts and men-of-warsmen in the harbor, having made 161 miles that day."

"M.'S" LETTER TO THE "FIELD."—*Editor Forest and Stream:* Can you explain to me why your yachting correspondents cannot answer a letter, with the conclusions of whose writer they may chance to differ, without becoming personally offensive to a degree that would insure a row if the argument were made face to face? I allude to the criticism (*sic*) on a letter of mine published in a recent *Field*, which appears in your current issue signed "Vindex." I do not propose to answer V. because he offers no argument, but simply confines himself to assertion; but I will say that his statement as to the newness of deep sloops and outside weight in this country is absolutely false, as he will find out if he examines the records, consults Henry Steers or any of the old-time builders, or examines any collection of models. In writing what I did in the *Field* I was governed more by a consensus of the opinions of men who really know something about yachting than by any belief in my own authority. I have, it is true, been present, either as actor or spectator, at some 150 races in the last thirty years, and in addition I have owned and sailed a number of boats, and have been at sea a good deal; but I count all that as of no avail, and am guided by the opinions of such men as A. C. Smith, Capt. Coffin, Mr. Tams, Mr. Stebbins, Mr. Center, Mr. Steers, *et id genus omne*. Of course, in the opinion of the "cuttah" crowd, such opinion is worthless; but it suffices for me. On my own account I will say that I never saw worse weather made than by Genesta, whenever the wind blew hard.

As to Clara. I consider her a better boat than Genesta, aed we have no 50ft. sloop to beat her. Athlon, I know cannot do it in a sea, as I was on board Athlon and saw her try. As to Daphne, Fanita, and so forth, with 45ft. waterline, Clara outclasses them hopelessly. I also repeat my assertion that if Clara had challenged we would have had to have built in her class, for no man in his senses would race a 55ft. waterline against an 80, no matter what were the types. I, would not have written all this, but "Vindex" writes like a man who is angry and young, and to such a little explanation is charitable.—M.

THE KALAFISH COLLISION.—The master and mate of the British steamer Albicore were lately tried in Edinburgh on a charge of culpable homicide. It will be remembered that on Aug. 22 the Albicore ran down a schooner yacht, the Kalafish, while the latter was at anchor in the Sound of Mull, sinking her, and drowning the owner and his wife and three of the crew, only two being saved. The master was first tried, pleading not guilty. It was proved that though the weather was clear overhead there was a mist on the water and that the schooner had no lights out, on which evidence the master was pronounced not guilty, and the case against the mate was dropped.

TRIAL TRIP OF THE STEAM YACHT EROS.—Baron Rothschild's new steam yacht Eros made her trial trip on Oct. 29, running around the Isle of Wight. The Eros is 220ft. between perpendiculars, 27ft. beam, 18ft. depth keel to deck. Her engines are 32 and 60 by 36in. The two boilers, 14ft 6in. long and 10ft. in diameter, have each three corrugated flues 8ft. 9in. in diameter. The working pressure is 120 pounds. The run of 60 knots was made in 4½ hours, or about 13 knots, the tide being against her for three hours of the run. The Eros will leave soon for Havre.

LEAD KEELS AT BAY RIDGE.—New York, Nov. 6.—*Editor Forest and Stream:* When I read your article headed "What Next?" you might have knocked me down with a feather. To think that lead keels had traveled to Bay Ridge! I had heard about the defection of Gleam, but the Crocodile! Great Scott! Why, I always heard that lead keels were "logy," and that FOREST AND STREAM did not know what it was talking about. When Bay Ridge yields I succumb. Pray, now, be gentle with your converts.—WHITE ELEPHANT.

THE BARNEGAT CRUISER.—We have received a number of inquiries in regard to this new boat. "Seneca" will have another and slightly different boat this week, and we shall secure the drawings of it and publish them in a couple of weeks. A fleet of twelve of these boats proposes to start from New York soon on a cruise to Florida.

ANOTHER CRUISER FOR FLORIDA.—A correspondent in New Jersey writes as follows of a new cruiser he has built. We hope to have a log from him after his cruise is completed, as there should be plenty of material for an interesting narrative: "I am building a centerboard boat after the model of an eastern catboat, in 'Small Yachts,' Plate IV., I think. Am building it to the scale of 18ft. to the waterline in place of 15ft. as there given, which gives it about 6ft. 8in. beam. Am also making about 18in. overhang and 2in. greater freeboard than the above scale would give. Have it planked up, and in two or three weeks expect to have it completed. Am making the centerboard well but 16in. deep and boxed in on top, with a piece of 2in. galvanized iron pipe at the aft end leading up to the deck, through which a chain will lead to the centerboard. This latter I shall make in two pieces, each 15in. wide by 6ft. long, and folding up side by side when in the well; and so arranged that one may drop below the other when down. This is an experiment on the principle of the folding centerboards used in canoes, and I think will work all right. I shall put a small house 4ft.x7ft. on deck and about 16in. high, and by having a low centerboard well, will be enabled to make a bed across the top of it. Would not go to this trouble but my wife expects to accompany me to Florida, and I wish to make things as comfortable as possible. Shall ship the boat to Fernandina by steamer, and from there to Cedar Keys by rail. I spent a winter some ten years ago in Florida camping and cruising on its western coast. We found great trouble in getting a craft suited to our wants and I thought in this case I would so arrange as to be independent of the natives. I started out with no experience in boat building, but with a knack at handling tools and the aid of 'Canoe and Boat Building' and 'Small Yachts,' I have come through all right, and think I have a strong and well built boat. Now that I have it nearly finished I am not sure but it is larger than necessary, still, to take a three months' supply of provisions will require plenty of room.—J. R."

STILL ON THE SAME TACK.—Roslyn, L. I., Nov. 12.—*Editor Forest and Stream:* I, for one, am sick of this "sloop-cutter" childishness, and did not intend to further trouble either you or your readers in that direction; but your correspondent "XIX." has so beautifully, in one sentence, settled the whole wearisome business, that I must have the pleasure of congratulating him. That man is a genius who just snuffs out such tallow dips as "Blue Ensign," etc., in a style worthy the emulation of the talented and never-to-be-conquered author of "Whose Waterloo?" "XIX." is correct. Drive a stout bolt down through Genesta's bowsprit into her stem, and lo! she becomes a sloop. Cast off the fixings about Puritan's big horn; presto! she's a cutter. Could anything be more simple? Now, my dear Mr. Editor, can't we take a recess? When I was a boy the sloop smacks nearly all carried loose-footed mainsails and— But excuse me; "XIX." has squashed all that, and for the rest, we Yankees should be satisfied with the fact that a genuine Down East, light-draft, beamy sloop beat the best deep and narrow boat that could be moulded on the other side of the water after many years experimenting on a racing machine called a yacht. Genesta was a thing of beauty viewed any way but endways, and she was thrashed, thrashed soundly, easily, by bilge beam and centerboard embodied in a sloop far smaller than herself.—THOMAS CLAPHAM.

A NEW RACING SLOOP.—The reign of lead is now fairly inaugurated at Bay Ridge, the sharpie Vidette has gone on her way rejoicing with 1½ tons added to the very respectable lead keel she formerly carried; the Crocodile has completed her process of "Puritanizing," and now comes the latest, a "racing sloop," from a model by Mr. Phillip Ellsworth, just commenced for Messrs. Lawton, formerly owners of the Gleam, and Mr. Arnold. She will be 32ft. over all, 29ft. waterline, 10ft. 9in. beam, 5ft. 2in. depth of hold, 3ft. 8in. draft, and will have 5ft. 9in. under a cabin trunk. The board, 9ft. long, drops through a heavy oak keel, under which will be 3½ tons of lead, all taking the shape of the hull, being fair from bottom of keel to plank-sheer. The frame will be of hackmatack, as light as practicable, as the boat is intended for racing, and with the big rig she will have she should sweep the class next season. Let the good work go on; she is not a cutter and we will not claim her as such, but she is a marked advance on the Gleam of three years since, and every point to which she differs from the Gleam makes her more like the cutter. Outside lead, Gleam's was all inside; a real outside keel shaped to the hull, Gleam had no keel at all; less beam, rocker keel, all these features betray their origin.

HARLEM Y. C.—A meeting of the Harlem Y.C. was held on Nov. 7, the following officers for 1886 were elected: Commodore, J. A. Hutchington; Vice Commodore, Henry Tarbush; Secretaries, C. T. Vanderhoof, W. J. Parker; Treasurer. H. M. Jones; Directors, Messrs. Andrus, Fitzgerald, Metzer, Marco and Cregan.

OHIO Y. C. This club was lately organized at Toledo, O., with the following officers: Commodore, S. C. Reynolds; Vice-Commodore George W. Bills; Rear Commodore, James Doritz; Secretary, J. E. Gunckel; Treasurer, George H. Ketcham.

YACHTING NOTES.—The regular meeting of the Knickerbocker Y. C. was held on Nov. 10 ...Atalanta, steam yacht, is overhauling for a southern cruise... The British steamer Waikna that arrived in New York on Nov. 10, is a new vessel, launched on Sept. 10 by Messrs. R. Thompson & Sons, Sunderland, Eng. She is 104ft. on waterline, 23ft. beam, and 8ft. 6in. depth. She will soon leave on a cruise to the West Indies... Norseman, Nooya and Dauntless are now at Poillon's yard for repairs....Victor, steam yacht, 55x13ft., has been sold by Mr. Manning to Mr. James Renwick. Mr. Manning has also sold the Decoy, sharpie, to Mr. Henry S. Wood, Atlantic Y. C....Coronet, schooner, is now nearly completed at Poillon's....San Francisco—Nearly all of the yachts are now laid up for the season. The old steam yacht Amelia, once owned by Com. Platt, has been rebuilt as a schooner with Bermudian sails, and will be used on the Mexican coast. The Startled Fawn has been repainted and will be in commission all winter. The only yacht building in San Francisco is a 30ft. boat of 18ft. beam, at Oakland ...Gitana, schooner, has had her bows opened and will be lengthened forward 5ft. with 15 tons of lead added to keel. Smith is making the alterations....Orienta, steam yacht, will come out next season with an overhang forward and a bowsprit....Whim, schooner, was lately anchored off Baltimore, on her way to Florida. The steam yacht Lelia, of Calais, Me., is also bound for the same destination....A new sloop, Wallin & Gorman, of Bay Ridge, are building a centerboard sloop 26ft. 6in. over all, 24ft. waterline, 11ft. beam, 3ft. depth, and 2ft. 6in. draft....James Lennox, South Brooklyn, is building a steam launch 27ft. by 6ft. 3in. and 2ft. 7in. deep, for Messrs. Price & White....Cora, steam yacht, is now fitting out for a winter trip to New Orleans ...Wizard, sloop, has laid up at South Brooklyn this week....Wavecrest, schooner, is at Nyack, where J. E. Smith is lengthening her 10ft. at the bow. She will have a new outfit of canvas from Sawyer's loft.

OBITUARY.—Another of the members of the New York Yacht Club has lately passed away, Mr. Charles J. Osborn, who died on Nov. 11 at the age of 48 years. Mr. Osborn was widely known and generally esteemed, both on Wall street, where he was engaged in business for many years, and in the New York and American yacht clubs. He at one time owned the schooner Dreadnaught, and later, in 1880, had the Corsair built. Mr. Osborn was noted in business as a bold and shrewd operator and was successful in all his ventures. As a yachtsman he was always devoted to the sport and was a general favorite with all who knew him. Mr. Foster Conner, owner of the 63 ton cutter Marguerite, died lately in England of typhoid fever, so that the new 90, just designed for him by Watson, and which he proposed to bring to America, will not be built. Mr. Conner was long and favorably known as a thorough yachtsman and racing man, and for the last two seasons has owned Marguerite.

OSWEGO Y. C.—A meeting of the Oswego Y. C. was held on Nov. 2 at the Hamilton House, at which the following officers were elected for 1886: Commodore, W. B. Phelps, Jr.; Vice-Commodore, Allen Ames; Captain, J. B. McMurrich; Secretary, A. N. Radcliffe; Treasurer, Geo. D. Hart; Measurer, W. P. Judson; Surgeon, J. W. Eddy; Directors, J. T. Mott, Swits Condé, J. B. Donnelly. Commodore Mott, who has held the office for so long, declined to fill it another year, and Mr. Phelps was elected in his stead. The club is in an excellent condition, with 36 new members added. They have spent $2,000 during the year on improvements in their property, a new boat house having been built beside the club house, for the rowing boats of the members. The club is now one of the first in membership and in its fleet, on the chain of lakes, and it has every outlook for a prosperous future.

A FINE LITTLE STEAMER.—Payne & Soh, of Southampton have lately launched a handy little steam yacht of 33 tons, named Chimera. She is 54ft. on load line, 11ft. 4in. beam, and draws 4ft. 6in. Her topsides are of polished teak and her interior is finished in teak and oak. Below she has a saloon, owner's berth and sleeping cabin, two berths forward, w. c., bathroom and pantry, and captain's and crew's quarters aft.

The St. Lawrence Gang.
(Pat. England and United States, 1881.)

This cut shows No. 1-0 (or Black Bass size) with living Minnow attached.
MANUFACTURED IN ALL SIZES FROM No. 5-0 TO No. 4, SUITABLE FOR
Muskallonge, Pickerel, Black Bass, Lake Trout, Etc., Etc.
All have patent treble hook with baiting needle, adjustable lip hook and treble swivel, and best silk metal wound gimp.
This is the most ingenious invention and radical improvement in trolling tackle yet made. Its manifest superiority to all gangs now in use is evident to every expert angler. A few of its peculiar excellences are:—It is the only gang on which a bait can live. It is the only gang which can be adjusted to any sized minnow instantly and perfectly. It is not only the simplest but also the strongest gang made. It does not scare away the big and wary fish by a long array of treble hooks. The treble swivel insures perfect revolution of bait and reduces to the lowest possible point the liability of kinking the line.

PIEPER

Nos. 586, 588, 589 and DIANA.

There is Nothing Else in the World Like Them for the Money.

Mr. W. K. Haynie, Chappell Hill, Texas, writes under the date of Aug. 21, 1885:

"I have given the Pieper Diana gun you sent me a thorough trial, and I endorse it in the strongest language. I am satisfied I have the best gun I ever shot, and I have used many of leading fine makes both English and American. I have broken glass balls at 87 yards, and killed ducks with No. 6 shot at 75 to 80 yards. It shoots buckshot equally well; I brought down two deer, one with the right and other with the left barrel. There is no possible shot the gun won't make. The finish is equal to the shooting. I am recommending the Pieper to all my friends."

For Sale by all First-Class Dealers in Arms.

IF YOUR DEALER HAS NONE, DON'T BUY TILL YOU INSPECT THE PIEPER. SEND FOR PIEPER CATALOGUE TO

SMALL YACHTS.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice.

By C. P. KUNHARDT.

THE FOREST AND STREAM PUBLISHING COMPANY takes pleasure in announcing the publication of a magnificent quarto volume, bearing the above title. This book covers the field of Small Yachts, with special regard to their design, construction, equipment and keep. The opening chapters are devoted to a consideration of the model and the draft, their relations to one another, and the purposes which they subserve. Full directions are given for producing the plans of a yacht with reference to the chief points in design, and the method of taking off the lines of a boat already built is likewise described in detail.

All elements entering into design, such as Resistance, Stability, Balance of Rig, Handiness, Displacement, etc., are dealt with in separate chapters. The rules necessary for the mathematical computations, and a review of theory and practice close the first division of the book.

The second portion comprises the description of the Plates, covering the whole range of type in small yachts, from the shoal catboat and American centerboard sloop to examples f the narrowest and deepest British cutter yet built. These yachts have their lines, build and fittings depicted in the Plates, which are drawn to scale. With their aid and the specifi- ations presented, the reader is placed in possession of accurate information concerning the mould, accommodations, rig and characteristics of all styles of yachts which have received avorable recognition. Sporting boats, combination row and sailboats, and various examples of special form are introduced.

The third division offers a comprehensive review of single-hand sailing, to which small yachts are especially adapted. Directions are given as a guide in selection of type and sail plan, and subsequent equipment and proper management.

The iron work of yachts, their gear, yawls, stearing apparatus, boat building and much other closely related matter is entered upon. The new I nternational Rules of the Road, Signal Service, and a bibliography appear in the Appendix.

The work is profusely and handsomely illustrated with 150 illustrations inserted in the text, besides the sixty-three plates as follows:

LIST OF PLATES.

I. The Sloop Yacht Schemer.
II. The Nuckel.
III. The Windward.
IV. A Newport Catboat—Portable Catboat.

"FOREST AND STREAM SERIES."

DEER HUNTING.

BY JUDGE JOHN DEAN CATON.

BY and by it will be time to hunt antelope and deer. It is always time to read about them. Judge Caton's book on the antelope, elk, deer, moose and caribou of America discusses in a readable way the life history of these animals and the methods of their capture. It is the work of an enthusiastic sportsman who has had a wide experience and has devoted the leisure of years to studying these interesting game animals. The volume is very fully illustrated, and is a perfect storehouse of information and entertainment. The first edition was sold by the Boston publishers at $4. Price $2.50.

WOODCRAFT.

BY "NESSMUK."

A COMPACT pocket handbook of condensed, boiled-down, concise, clear, comprehensive, sensible, practical camp gumption. "Nessmuk" has been "in the woods" in Michigan, New York, Pennsylvania, and South America, and this is a book for outers, wherever they kindle their camp-fire. The author believes in "smoothing it." He has learned how; now he tells others. It is much easier to learn from "Nessmuk" than from Dame Experience. We should not be surprised if "Woodcraft" completely revolutionized the methods of camping out. If you are going to the woods, read "Woodcraft" before you go. It may add to your trip a hundred fold. Price $1.00.

DOG TRAINING.

BY S. T. HAMMOND.

HE was a promising puppy, and when you turned him over to the breaker to be educated, you thought he was bound to make "the best dog in the world." And you'll not soon forget how disappointed and disgusted you were when the dog, the breaker and the big bill—all three turned up together, and you saw that the animal's spirit was broken and it would take a steam calliope to make him mind. Now, this could not have happened if you had been wise enough to buy a copy of Hammond's book, and in your odd leisure moments *train* the dog yourself instead of having him *broken* by some one else. We are selling edition after edition of this book, and it is revolutionizing the system of preparing dogs for work in the field. Price $1.00.

SHORE BIRDS.

A PAMPHLET for those who "gun" along the shore. Tells of: I. Haunts and Habits—Where the bay birds live and what they do at home. II. Range and Migration—Where they go to breed and where to spend the winter. III. A Morning Without the Birds—An episode of shore shooting. IV. Nomenclature—A list of our American species of *Limicolæ*, with a description of each species. V. Localities—Where to go to shoot them. VI. Blinds and Decoys—How to shoot them after you have reached the grounds. 45 pp., paper. Price 15 cents.

ANGLING TALKS.

BY GEORGE DAWSON.

AS a political writer of conceded power, Mr. Dawson wielded a trenchant pen; when he turned from the conflict of parties to the praise of the favorite pastime of "simple wise men," his essays, limpid as the crystal streams, are aglow with the soft summer sunlight and melodious with the songs of birds. When angling was the theme, he wrote from a full heart and in closest sympathy with the scenes and pursuits described. These "Talks" are brimful of manly, wholesome sentiment; there is in them all not a particle of cant. Their sincerity and overflowing spirit at once win the reader, and he perforce shares the author's enthusiasm. The effect is magical, like that of the mimic players in Xenophon's *Memorabilia:* he who reads, if he be an angler, must go a-fishing; and if he be not, straightway then must he become one.—*Extract from Publishers' Preface.* Cloth, price 50 cents.

CANOE "AURORA."

BY DR. C. A. NEIDÉ.

A CHARMINGLY written and always entertaining account of a canoe cruise from Lake George, New York, down the Ohio and Mississippi Rivers to the Gulf of Mexico, by the Secretary of the American Canoe Association. To read the cruise of the "Aurora" is the next best thing to having made it; and the reading is decidedly more pleasant than would have been participation in some of the misadventures related. 216 pp., cloth. Price $1.00.

A FAMILIAR TALK.

With the approach of a new year it is not necessary to announce any change in our manner of conducting this journal. Just what the FOREST AND STREAM has been in 1885 we hope to make it in 1886. It will be run on the same old principles, tested by experience and approved by prosperity. It will be just as entertaining, just as instructive, just as frank and outspoken, and just as helpful.

We are sometimes asked to explain the reason of the FOREST AND STREAM'S constantly widening influence and prosperity. Well, there is no

Trade-Secret

about it, and we do not mind telling you. It is this: We have not expended our energies in preposterous spread-eagle proclamations of tremendous attractions in the dim and distant future, but have pinned our faith to present performance, each week, and fifty-two weeks in the year. This in the kind of journalism that is bound to succeed. Nothing very occult about it, you see.

Another element of strength is the jealousy with which we have maintained the inherent dignity and entire respectability of the pastimes discussed in these pages, and the extreme care we have taken to keep the tone of the columns such as renders the paper fit for any man to receive into his family. We are assured by men, whose good opinion we value, that they do not think it necessary to make

A Weekly Scrutiny

of the contents of the FOREST AND STREAM before venturing to lay it on the family table, We determined, years ago, that a clean paper must win its way among sportsmen (not "sporting men"). The fact that it has done so is now cited, not that we may boast of our own prescience, but as a most gratifying evidence of the high standing of the field-sports to which this journal is devoted.

In other words, the reason why the "Forest and Stream" is liked by sportsmen is that the "Forest and Stream" is the kind of paper that sportsmen like.

This, as we have said before, is complimentary all around. A third element of the paper's popularity is this: It has some hundreds of correspondents and contributors, who write for it because they have something to say. You have heard the story of the German professor who was assigned to prepare a thesis on the elephant. Now, he had never seen an elephant, so he evolved one out of his inner consciousness. Though we never read his essay, we have not the slightest doubt it was a very dry one. But if the German professor had ever come across

A Real Live Elephant

in an African jungle, he could have written a thesis on the beast that would have had some animation in it. That is just the secret of the interest of the FOREST AND STREAM'S contributions. They come from men who have seen or done or heard something to write about. Nothing dry in their notes and sketches and letters. They put it on paper just as entertainingly as they would talk when gathered in camp after the hunt, or sitting about the fire and comparing notes of the day's shoot. These stories and sketches come to us from sportsmen who represent every phase of life—all the professions and trades and occupations, from which busy men now and then turn aside for a bit of fun by the stream or in the stubble.

Of course the great bulk of matter appearing in this paper has related to the game and fish of our own country, for that, after all, is what FOREST AND STREAM readers are most interested in. And what a variety there has been! Squirrel shooting in the woods back of the barn, antelope on the distant plains, quail in the wheat stubble, and "chickens" on the prairie; ruffed grouse on the wing and "partridge" on a limb; elk on the "hogbacks," moose in the timber, deer in the brush, caribou on the barrens and coon in the hollow. All sorts of game by all sorts of methods, and in all sorts of places, and by all sorts of people.

Give Cuvier a Bone.

and the great naturalist could construct from it (or he pretended he could) the whole of the animal, living or fossil, to which it must have belonged. Give a man (say 500 years hence) the file of the FOREST AND STREAM for 1885, and he will not need to be a naturalist to reconstruct from its pages the animals and birds and fishes of this country (and he'll find in it a vast deal of curious and instructive information about the "true sportsman," too).

So, you see, the FOREST AND STREAM is a journal of recreation. We do not mean alone that it treats of recreation, but in its columns *is* recreation. This is the practical nineteenth century realization of the old story of

The Magician's Carpet,

on which one sat cross-legged and wished himself in a lovely garden a thousand miles away. With the FOREST AND STREAM in hand you do not need to be a magician to transport yourself in a second to the hemlock browse and the trout pools, the quail cover or the "chicken grounds." Perhaps, after all, we should have named this first, when we began to tell you the secret of FOREST AND STREAM'S success as a sportsman's paper.

The weekly issues of the FOREST AND STREAM form two volumes each year of twenty-six numbers, or 500 pages each, and the file constitutes a library of permanent worth. Twenty-four volumes have already been published. We furnish handsome file binders (price $1.50) which hold twenty-six numbers.

Subscriptions may begin at any time. Per year, $4; $2 for six months. Remit by post-office money order, draft or registered letter. Give name, town, county and State. Address

FOREST AND STREAM PUB. Co., 39 Park Row, N. Y.

For Sale—Thoroughbred red Irish setter stock, full pedigreed. Address with stamp,
W. N. CALLENDER, Albany, N. Y.

FOR SALE.—ONE BROKEN POINTER DOG, 3 yrs. old, drops to wing and shot and retrieves from land or water. Also one broken setter dog, 6 yrs. old, works close and slow. Will show them on game. GEO. W. LOVELL, Middleboro, Mass. nov12,2t

FOR SALE.—ENGLISH BEAGLE HOUND PUPpies, trained on rabbits only, 6 mos old. GEO. L. BARNES, Tyringham, Mass. nov19,3t

FOR FOXHOUNDS, COCKER SPANIELS FROM 1 to 4 yrs. old at living prices, write J. B. COOK, Afton, N. Y. nov19,1t

FOR SALE.—LEMON AND WHITE POINTER bitch Mag M., whelped June 26, 1884 (A.K.R. 1790), broken on woodcock and partridge. This is a remarkable fine looking bitch, and a willing, stylish worker. Address M. MILLS, P. O. Box 153, Jersey City, N. J. nov19,3t

FROM PRIZE-WINNING AND TRAINED STOCK, one dog, one bitch, Llewellin setters, blue belton, very handsome. Will sell low. CHAS. YORK, 9 & 11 Granite Block, Bangor, Me. nov19,tf

FOR SALE CHEAP.—FOX-TERRIER SPOT (Primrose—Swansdown) 1 yr. old, color white black and tan; a nice dog and full of game. Winner of vhc. at Philadelphia. Price $25. Address B., room 29, 10 Pine st., New York. nov19,1t

FOR SALE.—FOUR IRISH SETTER PUPPIES, sire Galliard, dam Fawna (Elcho—Noreen). Address H. DRAIN, 344 Baltimore st., Baltimore, Md. nov19,3t

FOR SALE.—SETTER DOG, COMING 3 YRS. old, thoroughly broken, perfect retriever, elegant disposition. Has never been beaten. Price $80; nothing less. Address Box 1,684, West Chester, Pa. nov19,4t

SCOTCH COLLIES.—HAVE ON HAND SOME grand young dogs and puppies from 2 to 5 mos. old. JAMES LINDSAY, 346 Communipaw ave., Jersey City. nov19,3t

FOR SALE.—BEDLINGTON TERRIER DOG, also black and tan collie dog. F. P. KIRBY, 22 North Forty-first street, Philadelphia, Pa. 1t

BEAGLES FOR SALE CHEAP.—FIVE PUPS, two dogs, three bitches, whelped Sept. 13, 1885; color, black, white and tan; sire, Kino, won 1st prize, Pennsylvania State Fair, 1884; 2d prize, same place, 1885; dam, Bessie, out of Fly (A.K.R. 1012), by Racket. Bessie is full sister to Trailer (A.K.R. 2525). Also five pups, two dogs, whelped Sept. 27, 1885; color, black, white and tan; sire, Kino (see above); dam, Fly (A.K.R. 1012). Will sell them for $6 each or $10 a pair if taken soon. They are all very hardy and strong, and feed themselves. Also one dog and one bitch, bred same as above pups, 8 and 9 mos. old, $10 each. J. SATTERTHWAITE, Jenkintown, Pa. nov12,2t

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, NOVEMBER 26, 1885.

VOL. XXV.—No. 18. Nos. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices $1.00 per line. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by the Saturday previous to issue in which they are to be inserted.

Transient advertisements must invariably be accompanied by the money or they will not be inserted.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. Newsdealers in the United Kingdom may order through Davies & Co., No. 1 Finch Lane, Cornhill. London. General subscription agents for Great Britain, Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, $5 per year; $2.50 for six months.

Address all communications,

ANSWERS TO CORRESPONDENTS.

WHERE WE STAND.

CERTAIN comments which have recently appeared in the newspapers of different sections of the country relative to the course taken by FOREST AND STREAM on the Indian question, call for a word of personal explanation.

There is so wide a divergence of opinion as to the best methods to be employed in civilizing the Indians that the motives which govern those who write on this subject must be carefully scrutinized. On the one hand there are the people of the East, who confessedly know nothing about the Indian except what they have read. They know that he has been deeply wronged, and they find in this fact a sufficient excuse for almost all his misdeeds. They take a Cooperesque view of the Indian, and are warmly devoted to the red man of their imagination. In strong contrast with this sentiment is that held by the people of the West—those who live near the scene of the Indians' depredations. They know that when on the warpath the savages perpetrate atrocities too frightful for description, and that even when at peace they are prone to steal horses and other movable property. These people live in an atmosphere of hatred of the red man. This feeling is the popular one, and almost every one shares it, oftentimes without the slightest reason. Besides this there is everywhere in the West in the neighborhood of Indian reservations, a strong desire to see these bodies of land thrown open to public settlement. Such a course would not only give almost every one who wished to do so a chance to take up a valuable claim, but it would attract further immigration from the East and so be a benefit to the region.

It is quite clear that neither of these parties can take a complete and unprejudiced view of this question. They are looking at the shield from opposite sides. The Indian is not yet a saint and a martyr, nor is he an irreclaimable devil. He can be civilized if the work is wisely undertaken, and under instruction becomes an intelligent man. But he must be taught to think and act as the white man does. We have no word of sympathy or excuse for a hostile Indian. He should be killed as speedily as possible if he is caught depredating off the reservation. The swifter the punishment, and the more severe, the better. The Indian understands the logic of force, and yields to it. Punish him severely and you will find he has a long memory. So, too, we are ready to saddle up and ride as fast and as far as any one will follow after a horse stealing party, and we are quite willing to go any length to punish the marauders. *Experto crede.*

The editorials on this subject in the FOREST AND STREAM are written by one who professes to occupy a middle ground between the sentimentalists on the one side and the Indian haters on the other. He has for the past fifteen years met with the Indians under a great variety of conditions. He has lived with them for months at a time, eating of their food and sleeping in their lodges; has heard their hostile bullets sing, and more than once has depended for his life on his pony's speed and the irresolution of his pursuers. He knows the Indians in their agencies, in their camps and on their battle fields, and is thoroughly familiar with their modes of thought, and the views they hold with regard to their own position and that of the wites. His experience covers a territory extending from British Columbia on the northwest to North Carolina on the southeast, and from Southern California to the mouth of the St. Lawrence River. He has also lived long in the Far West, and is acquainted with the sentiment of that section, and with the causes which make that sentiment what it is.

Occupying this middle ground, and with this experience to draw upon, we submit that our remarks on this question are entitled to the careful and respectful attention of those who are interested in this subject.

FOREIGN GAME IN AMERICA.

A NEW YORK sportsman who has been spending several days shooting over the mountains between Bloomingdale and Newfoundland, two small villages in northern New Jersey, comes back with wonderful stories of the strange birds he met with and shot while on his trip. Besides killing a fair bag of ruffed grouse, some quail and woodcock, he asserts—and there is no reason to doubt but that he tells the truth—that he shot two birds "like quail, only that they were as large as tame pigeons and had reddish brown breasts." He also claims to have killed a number of other strange birds, the like of which he had never seen before, "that were evidently of the quail species, being of the same size as Jersey quail, but having blue heads." These birds, he claimed, were quite tame, and were all pointed by his dogs. Further particulars concerning them could not be elicited, nor was a more comprehensive description of the novelties forthcoming. Feeling somewhat anxious to solve the mystery, enquiry was made of the train conductors of the Midland Railroad Company, and it was then learned that Mr. F. S. Kinney, of cigarette fame, had recently moved into the section, and that he had attempted the preserving of the birds already on his farm, and was also known to have stocked his farm with foreign game birds.

Following this clew up, Messrs. Chas. Reiche & Co., importers of animals and birds, were then seen, and they, on reference to their books, remembered furnishing Mr. Kinney last year with a number of English pheasants and English partridges, besides a large number of English pheasant eggs. It is, therefore, to be surmised that "the birds as big as tame pigeons" were full grown English partridges, while the "blue-headed ones" were their young, about half grown. It is sincerely to be regretted that the birds planted by Mr. Kinney have not met with a better fate; especially as he is known to have gone to the chief market-shooter of the district and offered to pay him $10 a month not to shoot at the English birds. This liberal offer the market shooter declined, and it was with him the New York sportsmen went shooting.

If these birds were in reality English partridges, it is extremely gratifying to know that they have bred in a wild state in the New Jersey mountains, and that they were able to escape capture by the foxes and other ground vermin with which that section is infested.

Already the FOREST AND STREAM has reported Mr. Pierre Lorillard's success in naturalizing both the pheasant and the partridge, and it is learned that there are a number of roaming coveys of the last named birds scattered over the northern part of Burlington county, N. J. Mr. Reiche, who is one of the members of the Fisher's Island Club, also says that the partridges turned out on the island have proved themselves very hardy birds, that they wintered well last year and that several coveys of birds have been hatched out, and are now in a healthy condition. It is therefore safe to say that the English partridge at least can be successfully acclimated in the vicinity of New York. It is doubtful, however, if the experiment will meet with success unless means are taken to protect these magnificent birds. It is no joke to pay $6 a pair (for this is the lowest price for which these birds can be imported) for partridges every summer to pop at without let or hindrance. Both this State and New Jersey should take an interest in the introduction of foreign game, and feel a pride in enrolling the pheasant and partridge in the list of birds that are to be preserved for a number of years to come. As the matter now stands it is not an offence to shoot or trap these birds at any season of the year, and the gentlemen who have so generously published to the world their intention of introducing foreign game should certainly be given an opportunity to test their experiments.

This season such a report of the success of the introduction of new varieties of game birds is doubly gratifying because of the scarcity of the native birds. Not in twenty years, so far as our memory holds good, has there been such a meagre supply of migratory game birds in this vicinity as there has been this season. Barring a few scattering birds killed on the Jersey coast above Barnegat Bay, there have been no English snipe this autumn. The meadows were in prime condition during September and October, but the flights passed another way. Strange to say, however, a dozen or more birds have been killed within the last ten days on the Hackensack Meadows. They were fat and in good order. The woodcock puzzle continues to become more complicated than ever. The October moon, which filled on the 24th, was not incidental of shooting. In fact both in New Jersey and in Connecticut the sportsmen met with but poor success, and most of the birds killed were in the moult. At Lime Rock, Conn., where birds are usually plentiful, not twenty have been killed. In Sussex county, N. J., at Sparta, Tranquility, Vernon and Coleville, places regarded as good birds in ordinary seasons, birds were not seen. November came with a series of sharp frosts. Still no birds. On the 7th inst. a few birds were shot at Pleasant Valley. The first quarter of the moon was on the 14th inst., and on the day previous, the weather having become suddenly cold, there was a small flight of birds in Connecticut and in Orange county, N. Y. This sums up the woodcock shooting of this year. From actual observation it appears that where birds were most abundant last year none could be found this year. Even the Staten Island robin shooters have had a hard time of it this fall, the birds having given the island a wide berth.

POT-HUNTERS IN THE WOODS.

THEY are suffering from a plague of Pennsylvania pot hunters in Hamilton county, this State. Two years ago the advance scouts of the vagabond brigade spied out the land, learned the hunting grounds, established a number of salt licks and leagued themselves with fellows of their own ilk who live in the woods, and prepared for a systematic campaign. There are thought to be two hundred of these men. They hunt in the best deer ranges and send the meat to market. The resident hunters regard the Pennsylvanians as intruders and interlopers, and much feeling is reported to exist against them. A Morehouseville correspondent of the Utica *Observer* calls upon the sportsmen who are accustomed to go into the Adirondacks for sport, to contribute funds for the prosecution and punishment of the pot-hunting trespassers, wherever they can be detected in violation of the laws. That is a capital suggestion, and while about it, why not prosecute and punish every offender, whether he come from Pennsylvania or live in the vicinity.

'SQUIRE HORACE SMITH, whose death we chronicled last week, will be remembered for his many kindly ways, and among them the bright and cheery spirit with which he enjoyed and appreciated the present. His was not the disposition so commonly exhibited by men who have attained a ripe old age, of carping at the existing order of things and perpetually harping on the vastly superior ways of the good old times. 'Squire Smith never obliged his friends to join him in a doleful post-mortem over the dead joys of the past.

INTERCHANGEABLE GUN CHAMBERS.—The patent granted to Marshal Wheeler, of Washington, for a system of renewing or changing cartridge chambers in rifles and shotguns is fully described by the patentee in our pages. The endeavor is an ingenious one, but it should be borne in mind that in changing the charge of powder, as he intends, to shift from a short to a long range practice, there should be a corresponding change in the rifling if the best results are to be obtained.

M. PASTEUR'S IMPORTANT REPORT of the recent test of his hydrophobia remedy will be found in our Natural History columns.

The Sportsman Tourist.

A MISSISSIPPI QUAIL HUNT.

UP to the present autumn my acquaintance with quail had been wholly of a post mortem character. It had been confined to those which hang in festoons at market stalls, or those which are daintily served *à pain grillé* upon the snow-white restaurant cloth, with the "mellerin" accompaniment of Sauterne or Chablis.

I had never stood gun in hand, and seen "from the brake the whirring partridge spring."

Here at home our hunting ground provided us with woodcock, grouse and snipe, but the *Ortyx virginianus* was a thing of the past, which only the oldest settler dimly recalled.

I had planned various excursions after quail, but for different reasons they had come to naught, until my good friend W., who had owned a couple of plantations in Mississippi since the war, proposed that we should take a trip thither after birds, which were represented to be unusually plentiful this year.

In the month of October we turned our backs upon the richly-hued foliage of Northern Pennsylvania for the distant "land of cotton," leaving the half dozen unshot woodcock that still probed the rich mold of our hunting precincts to the tender mercies of our hunting confreres, the sporting editor and the "knight of the burning pestle."

We stopped one day at Cincinnati, where all was wild excitement over the election just held; the question at issue, as near as we could make it out, being whether King Halstead or King McLean should be sovereign-regnant in the Buckeye dominions. We threaded the eyes of the Kentucky and Tennessee Mountains by night, and in the morning rattled across the Tennessee River with the eastern sun peeping over Missionary Ridge, and Lookout Mountain ahead, frowning above the bustling, thrifty city of Chattanooga. In due course of time we arrived at a station on the Mobile & Ohio R. R from which a twelve mile ride overland found us at our destination, a thriving little village brought into being by the courage and enterprise of Col. A., a half owner in W.'s east Mississippi property, whose guests we are, and whose fine new brick residence faces the open square. Here he is surrounded by his well tilled acres, his flourishing flocks and herds, and his dusky retainers, like a feudal baron of old.

The day after our arrival, as our dogs which we had shipped by express had not come, we borrowed a native dog of its clever owner, and taking our guns we made a reconnoisance of the ground in the immediate neighborhood of the house. As this was mostly planted in corn, and chiefly chicken corn, which forms an almost impenetrable maze (no pun intended), it afforded poor opportunity for successful work. A bevy flushed on the outskirts would incontinently take to its shelter, and once there the mercurial little feathered scamps were perfectly safe. Guy, our borrowed dog, possessed a good nose, worked carefully and would retrieve. But he was firm in the belief, out of which no *a priori* or *a posteriori* arguments could move him, that a dead bird was not in condition for the bag until he had imprinted two or three indelible impressions of his teeth upon it. We stayed out but an hour or so under such disadvantageous circumstances.

That evening as we sat around the pine-knot fire, which even in the "sunny South" the close of an October day suggests for bodily comfort, a wagon drove up outside. The cheery voice of "black George" and sundry sharp barks were heard, and we ran out to find our dogs arrived in good condition, and glad enough to terminate their four days' imprisonment.

I may say here that my dog Thorn is a Laverack setter, five years old, broken by the late James Chubb, of Cleveland; that I have hunted for nearly four years. My friend W.'s dog is a pointer pup less than a year old, a grandson of Vandevort's Don and finely derived through the maternal line. While his pedigree is unimpeachable, he is raw and untrained; and all the brilliant qualities which his superior breeding pre-supposes are as yet *in posse*.

On the morrow, after breakfast, a spring wagon drove up to the door, and with dogs, commissary stores, water keg, etc., we start with pleasant anticipations of the day's sport. All conditions are favorable. A brisk shower during the night has wet down the weeds and grass, and the scent will lie well. And the sun is shining now from a clear sky with a fervency which promises discomfort at mid-day.

In a half-hour's time we are in the midst of a characteristic Mississippi scene; a broad sweep of prairie land, mostly under cultivation, but streaked with small belts of timber.

Autumn, as yet, has dealt kindly with the landscape. There is a faint blush of crimson on the oak leaves, and a tinge of yellow on the branches of the cottonwoods. Here and there a China tree looks fairly fresh. The willows alone show brightly green along the margin of the ditches. The golden rod sways its slender stems in the morning air, its earlier splendor somewhat dimmed; the sumac leaves blaze from the edges of the scrub oak copses, and the golden spheres of the osage orange lie thickly strewn beneath the hedgerows. Amid the sedge grass the dog fennel still shows its purple clusters, mingled with other wild flowers in full bloom. Between stretches of meadow lie the cotton fields flecked with their white-fleeced bolls, and the cornfields, where the stalks stand gaunt and brown, with their heavy ears dangling in the crispy husks. Yonder in a field are dark stacks of something resembling buckwheat, but which our sable attendant says are "goobers." It takes considerable cross-questioning before I finally recognize under this *outré* appellation the toothsome solace of my youth, the crackling peanut. The lark's joyous notes are heard on all sides as they flutter up from the tall grass. Flocks of doves fly from thicket to thicket, while, continually in sight, the turkey buzzards high up in the heavens soar with slow, majestic motion.

Our dogs have been cast off and are ranging industriously ahead; Thorn, with the rapidity which characterizes his field work, well to the fore. He has never hunted quail, his education having been entirely in the line of woodcock and grouse. We watch him admiringly as he nicely quarters the ground. Suddenly he slackens up his rattling pace as he approaches a wild plum thicket, and trails cautiously up, stretches his neck and gives several preliminary sniffs in the direction of the bushes. He whisks his tail friskily for a few seconds, and then curls it up over his back in the shape of a note of interrogation (?), as if to say, "What's this? Here is something new!" But the moment of doubt and uncertainty is soon past, a few steps forward and he has assumed a rigid point. Don advances and makes an awkward, but well-intentioned back.

We hasten to the spot and are hardly well ranged behind the dogs when the birds, to the number of a dozen, rise. Used as I have been to the whirr of the ruffed grouse, the noise which the flushed bevy makes startles me, and I nervously and fruitlessly fire one barrel. My friend W., better seasoned and experienced, coolly picks off a bird with his right, and would undoubtedly have scored a double but for a little mishap. He had gone out this morning with his wide, baggy hunting pants, and neglected to stuff the bottoms of them into his boots. He had just fairly covered his second bird when a grasshopper about four and a half inches long (a young and partially grown one), which had surreptitiously meandered up his trousers' leg, with a possible intention of establishing himself in winter quarters in the roomy posterior portion of his garment, called his attention quickly from the front to the rear. In clutching wildly at the invading insect he ingloriously lost the second bird. Meantime the birds have taken a long flight and settled in a large patch of corn, whither we do not think worth while to follow.

Further along at the edge of a scrub oak thicket the dogs begin to make game, but before they steady down to a point a bevy takes flight and is distinctly marked down at a short distance away in the open, among the weeds and grass. "Here's richness" at last. And now the real treat which belongs to successful quail hunting presents itself. It was for this we had braved the perils of twelve hundred miles of railroad travel; had bolted sodden sandwiches and apocryphal coffee at wayside eating places; and been patronized and overawed by sleeping car porters.

Among the tall, dry blood weeds, with close tufted grass beneath, the dogs work slowly and cautiously. The birds are flushed singly, and if we do not acquit ourselves well the fault is all with us.

So we go on with varying fortune. Every now and then the dogs stop and give an inquisitorial sniff at a bunch of weeds thicker than usual, and a flash of gray fur is seen as a rabbit swiftly shuttles through the grass.

We halt for lunch in a grove of cottonwoods on the crest of a slight rise of ground, within stone's throw of a darky's cabin. In the doorway the master of the mansion, his epigastric region filled with corn bread and sorghum, is taking his nooning, with his ebony feet planted against the door jam away above his head. We soon finish our provender, and a lusty shake of a neighboring persimmon tree provides us a desert of luscious fruit.

It would exceed the limits of an article of this sort to attempt to give the details of seven days' continuous sport. It was replete with incident and experiences. While we found quail in great abundance, our trip was timed a month too soon to get the best shooting. After the cattle are turned into the cornfields and the stalks are cropped down close, and the frost and rain kills and beats down the weeds, the opportunites for concealment are reduced to a minimum, and the largest bags then reward the sportsman.

In the direction of personal knowledge of the quail and its habits I made important advances. I discovered that for agility in getting away they have no equal. They are as elusive as globules of quicksilver. Out of twenty which are seen to go into a piece of corn, it is rare good luck to raise two. I found that dropping a quail with what was apparently a killing shot, and accurately marking it down, was by no means equivalent to having it safely in bag. A careful inspection of the place it fell in might disclose a feather or two, but the bird itself would frequently fail to materialize. Upon flushing a bevy *en masse*, I kept in mind the caution to single one bird; but *l'embarras des richesses* was usually too much for me, and I either hesitated too long, or like the Irishman in a similar predicament, I found when I had covered one bird two or three other meddling ones would get in the way and bother me.

A word about wood powder, apropos of the controversy as to its merits. In my right barrel I used cartridges of wood powder primed with black, and so far as effectiveness was concerned I could see no difference between wood powder and black powder. Three cartridges, however, out of one hundred, hung fire. What this was due to I cannot say.

I have not undertaken to give the number of birds we killed, either per day or total, although I know it would gratify a natural inquiry in many. While I appreciate the human weakness which prompts a desire to know, I believe it better repressed than encouraged. An ambition to make the biggest bag should be the "last infirmity" of a true sportsman. For us, we have come to the "years that bring the philosophic mind." We thank the chaste Diana that we shoot neither like professionals nor like louts, but like gentlemen—missing a due percentage of shots. We follow the dogs afield primarily for the pleasures of the chase, but scarcely in less degree, because we are brought in constant contact with nature and can taste the keen delights of outdoor life. If fortune be propitious and our game bag furnishes us a few choice bits for the table, we are pleased and grateful. May the spirit of moderation and content possess all lovers of dog and gun.

I had never before seen the plantation darky on his "native heath." As regards him as an element in the future industrial and social problem of Southern civilization I have no opinion to offer. But I found him a source of perpetual amusement. His peculiarities of speech, inveterate good nature, and readiness of retort were especially noticeable.

On our way from the railroad station we overtook a colored couple with their household gods loaded on a tumble-down wagon drawn by a lazy, plodding ox team. As we passed, Col. A. hailed them with "Hello! taking your bridal trip, eh?" The darkey widened his mouth in a portentous grin, until nothing but a slender cervical isthmus connected his upper head and shoulders, and replied, "Yes, sah."

"Pretty slow business, isn't it?"

"Yes, boss; but we'll git dar all de same!"

One day out hunting we had a colored boy for driver who had recently returned from Arkansas with the "shakes," and who was taken with a chill while we were out. He muffled himself up in the wagon and his teeth played a regular castinet solo. Upon returning to the wagon some time after we found him still looking the picture of suffering and despair. In my most sympathetic way I asked, "Andy, aren't you any better?" He rolled his eyes around wildly in their orbits two or three times, and dismally replied, "Ef I is, I doesn't know it."

Uncle Lem, an aged relic of the ante-bellum days, came to the house one Sunday night fresh from a love feast or some kindred affair at their church. He was bareheaded and had a woe-begone face. "Missus," he says to our hostess in a lugubrious tone, "dey've done stole dat bang up new hat de Co'nel gabe me, up to de meetin' to-night."

"Why, who could have done that," replied Mrs. A. "Some one of de brudders," was the emphatic response. "Oh no, Uncle Lem, it couldn't have been one of the brethen, surely." "Yes, shuah, kase we locked out all de sinners 'fore de meetin' began."

Our trip was thoroughly enjoyable. Upon all hands we met the friendliest reception. We can freely commend the "Mississippi plan" of treating strangers and visitors. Col. and Mrs. A.'s bountiful hospitality makes us their debtors for all time. And I can even find it in my heart to charitably forgive him for "wiping my eye" on that right quartering shot on a certain occasion. QUILP.

ANNUAL MEETING OF THE A. O. U.

THE annual meeting of the American Ornithologists' Union took place last week at the American Museum of Natural History, at Seventy-eighth street and Eighth avenue, in this city. The session opened on Tuesday, Nov. 17, and lasted two days. Among the members present were Messrs. J. A. Allen, R. Ridgway, W. Brewster, W. W. Cooke, O. Widmann, Dr. C. H. Merriam, A. K. Fisher, H. A. Purdie and E. P. Bicknell. A number of papers of very great interest were read, and there was much discussion of knotty points in ornithology. One of the most interesting features of the meeting was the account by Mr. Brewster of his observations carried on at lighthouses during the season of migration. By means of these observations the speaker had penetrated deeper into some of the secrets in the life of the small night migrating birds than any one else has yet done. His account of what he saw was most entertaining and valuable, and opens a new chapter in the history of our birds. After a very interesting meeting, an adjournment was taken on Wednesday, Nov. 18, it having been determined to hold the next annual meeting in Washington, D. C.

THE VIRGINIA BLACKSNAKE.

Editor Forest and Stream:

I always read FOREST AND STREAM with pleasure, and am charmed with "Catamount's" tribute to the lovely qualities of the blacksnake. His modest merit is doubtless the secret of the neglect he has suffered. What a pity the fathers of young families don't stock their nurseries with them to show their little girls the poetry of motion.

I would earnestly suggest to "Catamount" that he establish a blacksnake farm and go largely into the business. As hard as the Virginians are to "catch on" to a new idea, yet I am sure that in a few years "Catamount" could cultivate among them an ardent taste for blacksnake fricassee, blacksnake chowder and any number of other fancy dishes concocted from the delicious reptile. And then if the proprietor of the White Sulphur Springs and Phœbus of the "Hygeia" will only introduce these dishes upon their tables, of course Saratoga and Long Branch will follow suit, and "Catamount's" fortune is made! But I would advise him to start a poultry farm at the same time, so as to give his pets full rations of chickens and eggs, for while, as the friend of the sportsman, he may eschew partridge eggs, I know the blacksnake can get away with a nest of hen's eggs in quicker time than a half-starved hound purp, and there is no better judge of a fat chicken in the world.

I have been told by mountaineers that the flesh of the rattlesnake is more juicy and gamy than that of the black, but he is voted by nearly every one east of the Alleghanies a very disagreeable member of the community. Nevertheless, I have seen many a pet rattlesnake, and in West Virginia he is highly esteemed as an antidote to whisky.

COPPERHEAD.

TUCKAHOE, Nov. 17.

M. PASTEUR ON HYDROPHOBIA.

AT a recent meeting of the Acadamie de Medicine, in Paris, M. Pasteur presented a report of his latest experiments in the cure of hydrophobia, of which the following is a translation:

M. PASTEUR'S REPORT.

The discoveries which I reported on at one of your previous meetings constituted, no doubt, a real advance in the study of rabies, but it was an advance more scientific than practical. The application of the remedy was not absolutely certain, as out of twenty dogs treated I could not be certain of rendering more than fifteen or sixteen safe from contracting the disease. It was desirable, moreover, to conclude the course of treatment by a final inoculation of great virulence, in order to confirm and strengthen the immunity of the subject. This being done, it was necessary to keep the dogs under inspection for a period of time exceeding the duration of the inoculation of the disease produced by the direct inoculation of this final virus. This was tantamount to keeping them under watch for three or four months before being sure that they were incapable of contracting rabies. This would have reduced to very narrow limits the application of my method. Moreover, the process was one which could not be put in operation at a very short notice—which is all-important in cases of hydrophobia.

It was necessary, therefore, to arrive at some more rapid, and, if I may so call it, absolutely safe method, before experimenting upon human beings. After an almost countless number of experiments I have arrived at a prophylactic, practical and prompt method, which has been in so many cases tried successfully upon animals, that I feel the utmost confidence in its being generally applicable to all kinds of animals and to man himself. This method is based upon the following facts: The inoculation of the rabbit by trepanning underneath the dura-mater with the rabical marrow of a mad dog always communicates rabies to the rabbit after a mean period of incubation of a fortnight. If the virus of this first rabbit is passed on to a second, from the second to a third, and so on, by the same mode of inoculation as above, there is a gradually increasing tendency for the period of incubation to grow shorter, so that after about twenty-five transmissions from rabbit to rabbit have taken place the period of incubation has dropped to eight days. After another twenty-five transmissions have been made the period of

incubation drops to seven days; but though I have passed on the virus to as many as ninety rabbits, I have not found that the period of incubation falls below this. This series of experiment, commenced in November, 1882, has now been carried on for close upon three years without interruption, and without my once having recourse to other virus than that of the rabbits which died in a state of rabies. It was very easy, therefore, to have constantly at command, during a long period of time, a rabical virus perfectly pure and not varying in its properties. This I regard as the practical part of the method.

The marrow of these rabbits was in every case rabical throughout, and to a great degree of intensity. Upon detaching small portions of this marrow and suspending them carefully in a very dry atmosphere, the virulence gradually fades away, the period which elapsed before the virulence has become entirely extinct varying according to the thickness of the particles and the external temperature. The lower the temperature the longer the virus is maintained. This is the scientific point of the method. These facts being established, we come to the means of rendering a dog incapable of contracting rabies within a relatively short period of time. You suspend every day, in a series of flasks, the air of which is kept dry by fragments of potassium placed in the bottom of the flask, a piece of marrow freshly taken from a rabbit which has died of rabies contracted after an incubation of seven days. Each day you also inoculate into the dog a syringe full of bouillon, into which has been diluted a small quantity of the marrow which has been longest in the flasks, so as to make sure of its being the least virulent. Upon the following day you operate in the same way, but with marrow rather fresher and more virulent, until at last you get to the very virulent marrow which has only been in the flask a day or two. The dog is in this way rendered incapable of contracting rabies, and you can inoculate the rabical virus under the skin, or even into the surface of the brain by trepanning, without rabies declaring itself.

By the application of this method I had succeeded in obtaining fifty dogs of every age and breed, which were incapable of contracting hydrophobia, without having met with a single failure, when, upon July 6 last, three persons from Alsace called at my laboratory. Theodore Vone, a grocer at Meissengalt, near Schlestadt, was one of them, and he had been bitten two days before by his own dog, which had gone mad. The second was Joseph Meister, a boy nine years of age, who had been bitten by the same dog on the same day. The dog had pinned him to the ground and bitten him so badly about the hands, legs and thighs, that he had great difficulty in walking. He had been cauterized—but twelve hours after the accident—with phenic acid by Dr. Weber, a local practitioner. The third person was Joseph Meister's mother, who had not been bitten. Upon making a post-mortem examination of the dog, which its master had killed, the stomach was found to be full of hay, straw and bits of wood. The dog was unquestionably mad, and when the boy Meister was picked up he was covered with foam and blood. M. Vone was badly bruised about the arm, but he assured me that the dog's teeth had not gone through his shirt, so I told him that he might safely return to his home, which he did the same day. But I kept Joseph Meister and his mother at my laboratory. The sitting of the Académie de Médecine happened to take place that afternoon, and I got our colleagues Drs. Vulpian and Graucher to come and see the lad. There were no fewer than fourteen wounds, and as we were all three agreed that he must almost inevitably be seized with hydrophobia, I resolved, after communicating to them the result of my latest experiments, to try the method which I had found so invariably successful with my dogs.

These latter, it is true, had not been bitten before their immunity from rabies had been ascertained, but they did not cause me any anxiety, as I had already made several dogs impervious to rabies after they had been bitten. So, at 8 P. M. on July 6, sixty hours after he had been bitten, and in the presence of Drs. Vulpian and Graucher, we inoculated, beneath a fold made in the skin of the boy's right hypochondrium, half a syringeful of marrow, taken from a rabbit which died of rabies on July 21, and since preserved (that is to say, for fifteen days) in a flask, the air of which had been kept dry. Upon the following days I made fresh inoculations under the following conditions:

July 7, at 9 A. M.—Marrow of fourteen days.
July 7, at 6 P. M.—Marrow of twelve days.
July 8, at 9 A. M.—Marrow of eleven days.
July 8, at 6 P. M.—Marrow of nine days.
July 9, at 11 A. M.—Marrow of eight days.
July 10, at 11 A. M.—Marrow of seven days.
July 11, at 11 A. M.—Marrow of six days.
July 12, at 11 A. M.—Marrow of five days.
July 13, at 11 A. M.—Marrow of four days.
July 14, at 11 A. M.—Marrow of three days.
July 15, at 11 A. M.—Marrow of two days.
July 16, at 11 A. M.—Marrow of one day.

Thus I made thirteen inoculations in ten days, and, as I shall presently show, a lesser number would have sufficed, but in this, my first essay, I was obliged to exercise special precautions. Two fresh rabbits were trepanned with the various marrows, used so as to follow their degrees of virulence. The result showed that the marrows of July 6, 7, 8, 9 and 10 were not virulent, as they did not make the rabbits go mad. The marrows of the next five days were all virulent, and in gradually growing proportion. The rabies declared itself after seven days' incubation in the case of the rabbits inoculated upon July 15 and 16, after eight days in those inoculated upon the 12th and 13th, and after fifteen days in those inoculated upon the 11th. Thus, during the last two days of his treatment I had inoculated Joseph Meister with the most virulent rabical virus, that of the dog reinforced by a number of passages from rabbit to rabbit—a virus which communicates hydrophobia to dogs after nine or ten days' incubation. I was warranted in doing this by the result of my experiments with the fifty dogs referred to above. When the stage of immunity is reached, one can safely inoculate the most violent virus, and in unlimited quantities. Thus Joseph Meister escaped, not only the hydrophobia which his wounds would doubtless have developed, but that which I inoculated him with to verify the immunity due to the treatment—this being a more virulent form of rabies than that of the ordinary stray dog. A very virulent inoculation at the end has the further advantage of lessening the period during which alarm is felt as to the results of having been bitten. If hydrophobia were going to make its appearance, this would be hastened by the inoculation of a virus stronger than that of the bite itself. By the middle of August I felt pretty confident that the boy was out of danger, and now, three months and three weeks after the accident, his health is all that could be desired.

What interpretation are we to place upon the new method for preventing hydrophobia from following upon the bite of a mad dog, which I have placed before you? I do not propose to go fully into that matter now, and will merely give a few preliminary details which will explain the meaning of the experiments which I am carrying on, with the object of directing attention to what may be the best interpretation of them. Considering, upon the one hand, the gradual attenuation of the virus from the point at which it proves fatal, and the prophylactic lessons to be drawn from it, and upon the other hand the influence of the air in effecting this attenuation, the first point which strikes one is that the placing of the rabical marrow in contact with the dry air gradually diminishes and finally extinguishes the intensity of the virulence of this marrow. The conclusion to which this would point is that the true prophylactic method consists in employing first virus with no appreciable activity, then virus with a very little strength, and so on to the most virulent. I will show hereafter that the facts do not uphold this view. I will prove that the delay in the periods of incubation of the rabies communicated, to dog after dog to rabbits, as I said above, to test the degree of virulence of the marrow dried by contact with the air, are due to the impoverishment in the quantity of the rabical virus contained in this marrow, and not to its impoverishment in virulence. Can we admit it possible that the inoculation of a virus of unvarying virulence can secure immunity from rabies by administering it is small, but gradually increasing, quantities? This is an interpretation of the facts of the new method which I am studying experimentally. Another interpretation may be placed upon the new method, which, though startling at first, deserves the most serious consideration, because it is in harmony with certain known results exhibited to us by the phenomena of life among certain lower animals, notably among some of the pathogenic microbes. Many microbes seem to give birth in their growth to matter which has the property of hindering their own development. In the year 1880 I instituted researches in order to establish that the microbe which produced poultry-cholera must produce a sort of anti-microbe which acted as a poison to it. I failed to prove the presence of this, but I intend to resume my researches, using this time only pure carbonic acid gas. In the same way, the microbe which is found in some fevers seems to be combated, and eventually neutralized, by a substance of its own creation, and M. Roulin, Professor of the Faculty of Lyons, has shown that the vegetation of the fungus *Aspergillus niger* develops a substance which checks its growth.

The question, then, is whether the rabical virus may not be formed of two distinct substances, and whether, side by side with that which is living and capable of developing in the nervous system, there is not another, not itself alive, but having the faculty, when in sufficient proportion, of arresting the development of the first. This I will examine in detail at a subsequent meeting. I need scarcely point out that the most important, perhaps, of the questions now to be solved, is that of the interval to be placed between the time of being bitten and of commencing the treatment. In the case of Joseph Meister it was two days and a half. On Tuesday last, Oct. 20, I commenced, with the assistance of Drs. Vulpian and Graucher, the treatment of a lad of fifteen, who had been very badly bitten in both hands six days before. The results of this treatment I will lay before you as soon as it is completed.

Game Bag and Gun.

GAME NEAR NEW YORK.

I TAKE so much enjoyment in reading of the pleasure trips of others, that I feel as if we all ought to tell as much as we can of our outings for each other's benefit.

Both our senior and junior partners, though they take no pleasure themselves in shooting, seem to think that if a man wants to shoot, "better let him shoot;" and so in the spring or fall when I ask for a couple of days "to go shooting," the invariable answer is, "Why, certainly, go by all means." I go.

Last Wednesday I took the train for Colchester, Conn., a little town about twenty miles from the coast. Thursday afternoon my friend M. called for me, and we drove out of town about a mile to a little fallow spot, where M. had heard of a flock of game. We put the dog in, and after roading a long time he stood as prettily as one could wish. I said to M., "Let me go on and flush, for I have never shot at a quail, and when I miss you can get in both barrels." This was really the case, for I stood still and looked at the flying birds while M. got in a neat double. We followed these birds up, but they got into the densest brush they could find, and though we put them up again, M. was not well enough to work very hard, and so these were the only birds we got that day.

Friday we were out bright and early, drove over toward Exeter to a place owned by a Mr. Hall, who "doesn't let any one shoot on his land." We tried our best to persuade Mr. H. for permission to shoot, but he said that he was preserving his land for his sons to shoot on; and we couldn't blame him.

We went down to a patch of brush and briers across the road from Mr. H.'s place, and I guess we must have put up forty birds; but the brush was so dense and the mud and water so deep that it made bad work for both dogs and gunners. After a fruitless hunt in this place and putting up a couple of flocks of grouse, we took horse and buggy again and drove over to Backwoods Swamp. Here we put up several flocks of quail, each of us getting some; and in following one broken flock we scared up a flock of about ten black ducks, which, as we were loaded with No. 9 chilled, we had to let fly harmlessly away.

Saturday was a gala day. We hunted in a patch of woods near the town and got several quail, a couple of woodcock and three grouse. I can well understand now why I had little shivers run down my back when I read for the fiftieth time Mr. Hammond's story of the "One Eyed Grouse of Maple Run," I didn't know till I had shot at them.

I had a good deal to combat with, for brace shooting was an unknown quantity to me, and a bird with a noise still stranger. However, I "got on to them" at last and next summer will find me up in Colchester for the middle two weeks in October with dog and gun ready to "do or die." After hunting the last mentioned spot, we walked all around the country, stopping at each likely place and shooting, adding to our bag some squirrels. We took lunch at the house of a farmer over to Hebron woods. The lady of the house brought a loaf of new warm bread and a quart pan of milk and bade us help ourselves. We did and when I offered her fifty cents for our generous lunch she wanted to give me back all but twelve cents for the milk, and when I pressed her to keep it, took it under protest, still thinking she had cheated us.

We hunted after lunch with no luck till we came back to the first patch we had hunted in the morning and then we struck a large flock of quail and one of grouse. Forsaking the quail we turned our attentions to the grouse and spent a delightful time till nightfall after them, adding several more to our bag.

Should any of your readers have a chance to go to Colchester, let them seek a Mr. Metcalfe, who lives out toward Westchester, and who will show them the game and the country and a good dog. Any one at the post-office will direct you to his house. This dog is rather a strange one, part red Irish and part spaniel, and he is very staunch. We used, through the kindness of Mr. Brand, a son of Grousedale, owned by Mr. Buckingham, of Norwich. A better dog than Prince Brand never was hunted over. F. L. K.

NEW YORK, Nov. 17.

MY FIRST PRAIRIE CHICKEN.

FROM time to time some correspondent of FOREST AND STREAM gives a sketch of his first successful shot at some desired game; and the recital is always interesting, for on the part of the reader, as well as of the writer, pleasant memories are revived. How distinctly and pleasantly I remember my first shot at a prairie chicken, though it occured eight years ago.

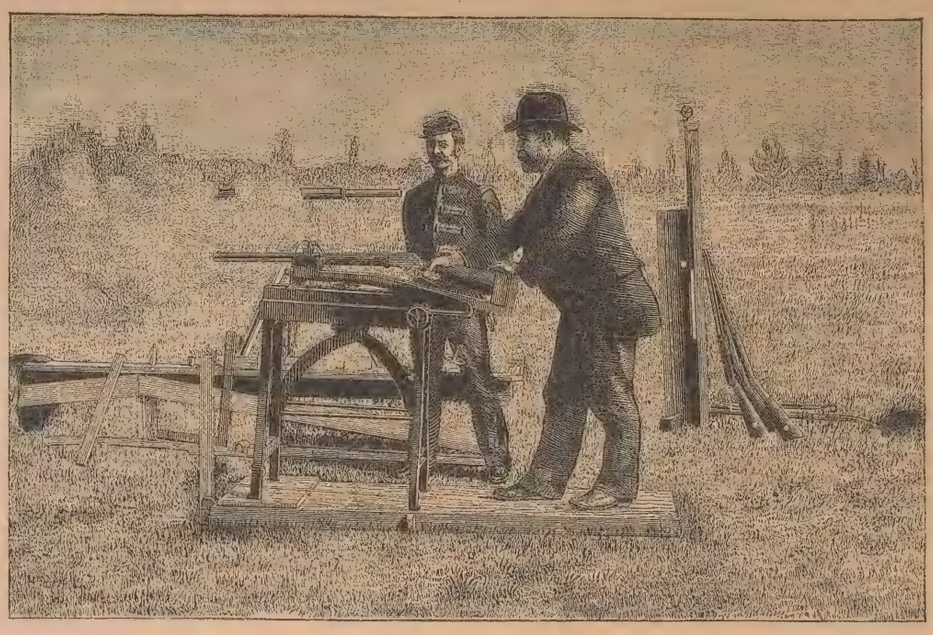
I had arrived in Minnesota only a few weeks previously, and temporarily was making my home near the village of Sauk Rapids. Quite frequently prairie chickens and other small game could be seen from the windows of my room, and like the old guard at Waterloo, I longed to be up and at 'em, but for three years I had been an almost helpless invalid, and a walk of three or four rods, even with assistance, was a tremendous undertaking.

Finally, after I had fumed and fretted for several days, my wife found for me a light, singlebarrel breechloading gun, and together we went hunting. Our progress was slow, and far from warlike or even alarming. Mrs. L. carried the gun, and with my left hand on her shoulder, my right grasping a cane, I could make from two to four rods at a pull. When we saw a squirrel, by resting the gun over my wife's back I could sometimes succeed in knocking it over. On our third outing, as we approached a fence, why, whirr went seven prairie chickens. Snatching the gun from my wife, excitement lending me a fictitious strength, I singled out two of the birds flying close together and pulled trigger, bringing down both of them. Seating ourselves upon a grassy hillock we admired their plumage, estimated their weight, and I think we were slightly childish in our delight. Both before and since I have made many far more successful shots, have lined the sights on great, hulking brain, and tumbled over the lordly buck, but never did shot of mine afford more sincere pleasure than that which gave me my first prairie chicken. J. FRANK LOCKE.

PILLSBURY, Minn.

DEER AND PANTHERS.

Editor Forest and Stream:

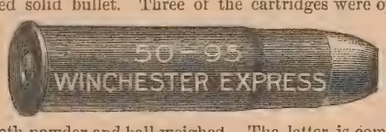


In his article of Nov. 5 "J." says that "it is safe to say that panthers never go back to feed on a cold carcass." Now according to my judgment they do sometimes take a cold meal in that way, or leave things in such shape as to convey that impression. A circumstance came under my observation once, while fishing in the Adirondack region, that led me to believe that they would sometimes return to a deer after having killed it.

About the middle of May, 1882, a small party, myself included, was fishing for trout on Jock's Lake Outlet. Three of us were working our way up the stream, when Orrin, who is ever on the lookout for signs, discovered among the stones on the bank of the stream a little tuft of hair, attached to a piece of hide perhaps as large as one of our "stove-lid" dollars. "Aha!" he said, "some deer has been scrambling around among these rocks and knocked off a piece of skin." A few feet further on was more hair, and then some blood was found scattered around, which gave evidence of a struggle. Our curiosity was by this time thoroughly aroused, and, looking still further, we discovered the carcass of a deer lying among the boulders which form a part of the bed of the stream. We thought it had lain there not more than eight or ten hours. The throat was partly eaten out, the entrails were out and gone, and a small piece was eaten out of one hindquarter. "Panther's work," was the verdict of the three jurors. A trout supper was of far more importance than a dead deer, and we proceeded upstream. We had gone only a short distance, however, when Orrin saw the varmint, stretched out at full length upon a fallen tree that projected from the bank a few feet above the water. When he saw us he immediately gathered up and disappeared in the underbrush. We were unarmed, not deeming it necessary to carry rifles and rods both where the fish were so scarce we could not get them with rods alone. In a couple of hours we returned, disgusted with the idea of fishing until there should be more evidence of fish in the creek. We stopped to look at the deer, and found that something had been eating it in our absence. The cavity in the throat was much enlarged, especially toward the head, and the mutilated hindquarter was nearly all gone. We of course laid it to the panther, supposing that we had disturbed him in his afternoon nap upon the log, and he had gone back to the deer for another meal. While we were inspecting the scene a large patch of moss dropped from a spruce tree, striking the ground within three or four feet of me; this impressed us very forcibly with the notion that we had disturbed him the second time and he had gone up the tree, although the foliage was so dense we could not see him. We made up our minds, however, that, like Lane, we "didn't care to stay in that place any longer." Two miles from camp was far enough away for three lone fishermen, with no weapons of defense but an 8oz. fly-rod and an empty creel. Now, I cannot say for certain that the panther returned to the deer, but appearances indicated it, as he was the only living animal we saw that day; and the probabilities are that if we had been hunting for panthers we would not have seen him. I am always willing to give the devil his due, and if a panther will only finish his work and eat cold venison when he has it, I believe in giving him credit for it. WILL.

"Forest and Stream" Trajectory Test.

(*Continued from page 334.*)



WE continue our report on the trajectories of rifles by presenting the figures of the .50-caliber weapons. In some respects these are the most interesting of all, in that they include the express bullets and permit direct comparison to be made between the performance of the same rifle with the same powder charge, but using two different bullets. Three different makes of hunting rifles are included in this instalment of our report, together with the figures on our old friend, the Remington State, which it would seem deserves a much better reputation than it generally enjoys. In many cases we think the rifle is fully up to the riflemen, and this applies to many other weapons besides this particular military one. We have given, as far as may be, all the data we have about each rifle. These figures are our own, as far as possible, but the facts about weight of barrel, of rifle and of composition of the bullet we take from the reports or letters of the rifle makers. The examination of the cartridges as to weight of powder and ball was intrusted to a man accustomed to just this sort of delicate manipulation of the balances, and each charge as weighed was put in a small vial for exhibition in our office and for future reference in case of dispute. As far as possible we will illustrate the cartridge used, as this will enable readers at once to see the sort of ammunition employed. Our cut is drawn from an instantaneous photograph, capitally taken at the moment of a discharge. It calls for no special explanation. The libel on the fair form and features of Mr. Sinclair, who is pulling the trigger, we leave for settlement between that gentleman and the engraver.

THE "FOREST AND STREAM" TRAJECTORY TEST.

Winchester .50, Solid Ball.

This arm was tried at 200 yards on Oct. 19, and was placed on the rest at 11:30 in the forenoon; the wind was then blowing at the rate of 18 miles per hour from the 7 o'clock quarter. The other weather conditions were: Barometer 30.205; dry thermometer 70.5, wet bulb thermometer 65, dew point 61.5 and humidity 73 per cent. The barrel was octagonal, 26 inches in length and bore the factory number of 48006. Weight of rifle 10 pounds 1 ounce, weight of barrel 3 pounds 2 ounces. Rifling 6 groove. Uniform twist, one turn in 60 inches, groove depth .003 and width .160. It was fired with Winchester made ammunition marked .50-95, having a three-grooved solid bullet. Three of the cartridges were opened

and both powder and ball weighed. The latter is composed of 1 part tin to 16 of lead. In the first cartridge opened the powder was found in fair condition and pressed hard, the charge weighing 90.8 and the ball 311.5. In the next the powder was in fine condition, and the weights of powder and ball respectively 91.3 and 313.3. The last one opened turned out the charge in fine condition, the powder weighing 90.7 and the bullet 312.0.

The rifle in the rest behaved very well, and the target was soon found and five scoring rounds secured as follows:

Round.	50 Yards.	100 Yards.	150 Yards.
1.....	7.727 in.	11.305 in.	8.625 in.
2.....	7.931 in.	11.270 in.	8.408 in.
3.....	8.459 in.	11.752 in.	8.844 in.
5.....	7.783 in.	11.079 in.	8.415 in.
6.....	7.932 in.	10.903 in.	8.273 in.
Average.....	**7.966** in.	**11.262** in.	**8.513** in.

The 100-yard test of the Winchester .50 express rifle with solid bullet was made on Oct. 5. It was about 11 o'clock in the forenoon, immediately following the trial at the same range with the express bullet, though the weapon had, of course, been cleaned as it stood in the rest. The wind was then blowing from the 7 o'clock quarter at an eighteen mile an hour rate. The barometer stood at 30.200 inches, the thermometer at 57°, and the wet bulb thermometer at 50°, leaving a dew point of 42 and a humidity of 57 per cent. The ammunition was from the same boxes used in the 200-yard test, and of the condition of which report is made above. A curious result is seen in the calculated figures, especially in the fifth and sixth shots, where the height at 75 yards is seen to be far above that at the middle screen at 50 yards. This novel result would seem to sustain the gyratory motion which it is claimed bullets sometimes take on, especially when traveling at a high rate of speed. It simply means that owing perhaps to some imperfection in the bullet, or it may be to other causes, the ball travels in a sort of corkscrew course, traveling spirally about an imaginary line, while, of course, obeying the forward impulse given it by the powder charge. In other cases during the tests this phenomenon has been even more marked, and every experimenter who has had occasion to narrowly watch and mathematically determine the antics of a bullet in flight will bear testimony to his observance of these facts.

At the 200-yard range it will be noted that this tendency to abnormally high trajectory points at the extreme screen came in the two leading shots, and that in the other shots the line seems to have been the ordinary line with the bullet maintaining its evolution on an axis parallel to and co-existent with the line of flight. The rifle was clean in both cases, and there was not at any time any leading or other physical interruption to correct firing; neither was the arm shooting wildly, and the bullets were in all cases traveling head on. We leave the point open for discussion by others at the conclusion of our report, only making note of the fact that the screens were examined with special care and the calculation thrice repeated, the first and natural conclusion being that some error in figuring had been committed. Under the circumstances, while giving all the results, we calculate the line of average trajectory to the three upper rounds, where it is evident the bullet was traveling in a normal line. The 5-round average is also given. The figures are:

Round.	25 Yards.	50 Yards.	75 Yards.
1.....	1.554 in.	1.975 in.	1.661 in.
2.....	1.896 in.	2.559 in.	2.124 in.
4.....	1.735 in.	2.141 in.	1.771 in.
5.....	1.660 in.	1.959 in.	2.733 in.
6.....	1.856 in.	2.381 in.	2.763 in.
Aver. (3 rounds)	1.728 in.	2.225 in.	1.515 in.
Aver. (5 rounds)	**1.740** in.	**2.203** in.	**2.210** in.

Winchester .50, Express Ball.

The test with the express bullet was made at once upon the completion of the solid ball record and without any material change of sight; of course all the data about the rifle hold as before and the weather conditions had not changed to any appreciable extent. The Winchester ammunition was used, the three-grooved bullet having the same

composition as before, one of tin to sixteen of lead by weight. The three cartridges opened showed the powder in fine condition in each case. The charges weighed 89.8, 89.3, and 89.3 in order, while the bullets corresponding were 305.3, 298.8 and 300.8. The gun barrel was given a cleaning before the new trial was made, the initial conditions were in every respect uniform. The figures stood:

Round.	50 Yards.	100 Yards.	150 Yards.
1.....	7.994 in.	11.362 in.	8.648 in.
2.....	8.139 in.	11.425 in.	8.507 in.
3.....	8.214 in.	11.800 in.	8.835 in.
4.....	7.883 in.	10.829 in.	8.120 in.
5.....	7.780 in.	11.116 in.	8.349 in.
Average.....	**8.002** in.	**11.306** in.	**8.492** in.

The trial of the Winchester .50 express rifle with an express bullet at the 100-yard range immediately preceded the test of the solid bullet cartridge in the same arm and at the same distance. It was about a quarter past ten on the morning of Oct. 5, with the wind blowing at an eighteen-mile-an-hour pace from the seven o'clock quarter. The barometer stood at 30.160, the thermometer at 56, with the wet-bulb ditto at 50, making a dew point of 43 and a humidity record of 62 per cent. Ammunition was taken from the same lot as before. The weapon behaved very well, gave no trouble in handling, and the shots as recorded on the screens do not show more than the average variation and nothing of the gyratory motion so plainly recorded in the solid ball test afterward. The average accordingly is on the full five shots, as follows:

Round.	25 Yards.	50 Yards.	75 Yards.
1.....	2.142 in.	2.401 in.	2.188 in.
2.....	2.124 in.	2.505 in.	2.235 in.
3.....	2.018 in.	2.299 in.	2.030 in.
4.....	2.124 in.	2.416 in.	2.216 in.

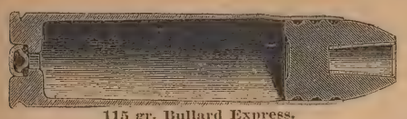
Average.....	**2.096** in.	**2.388** in.	**2.156** in.

Bullard .50, Solid Ball.

This weapon is noteworthy as carrying nominally the heaviest charge of any of the breechloaders in the trial. It was marked 346 in the shop numbers and had a 28-inch round barrel. The total weight of the weapon unloaded was 10 pounds ¼ ounce, while the weight of barrel alone was 3 pounds 8 ounces. There were five grooves, having a uniform twist of one turn in 72 inches. It was loaded with Union Metallic Company ammunition from a box marked ".50-115; for Bullard Repeating Rifle." The bullet had three grooves, and when three rounds were opened the powder was found in fair condition but pressed hard. The powder weights ran 112.5, 112.2 and 113.1, while the bullet weight figures were 350.5, 350.5 and 350 4. The weapon in the rest was rather obstinate, and at times it was necessary to push the carrier block down with a pencil, owing seemingly to the breakage or weakness of the carrier block spring. It was tested at ten o'clock on the morning of Sept. 30, under a three-miles-an-hour breeze blowing from the nine o'clock quarter. The other weather conditions were: Barometer, 30.100; dry thermometer 77.5; wet-bulb thermometer, 67.5; dew point, 61, and humidity, 57 per cent. The trajectory figures show:

Round.	50 Yards.	100 Yards.	150 Yards.
1.....	7.385 in.	10.386 in.	7.974 in.
2.....	7.459 in.	10.588 in.	8.350 in.
3.....	7.173 in.	10.179 in.	7.914 in.
4.....	7.044 in.	10.215 in.	7.795 in.
5.....	7.243 in.	10.078 in.	7.807 in.
Average.....	**7.261** in.	**10.289** in.	**7.968** in.



The 100-yard test with the solid bullet was made on the morning of Oct. 5. It was 11:20 when the weapon was fitted to the rest, with favorable weather conditions. The barometric reading was 30.275, the dry thermometer 57, the wet bulb thermometer 51, with a dew point of 45 and a humidity of 64 per cent. The wind, at an 18-mile rate, was blowing from the 8 o'clock quarter. The ammunition was as that used in the 200-yard test, and the figures of trajectory given are worthy of special study. In this as in almost every other case is seen the wisdom of an average result by taking five distinct records, as carried through the entire FOREST AND STREAM trial wherever practicable. A dropping shot, or one of those records which go to show that bullets have a way of their own of wabbling through the air, might upset the conclusions entirely if a trajectory test was made to depend on the figures of a single shot. We give the record as it comes from the calculation blanks, only remarking that every screen and target remain on file in our office, and that the oft-repeated calculation made to get at this result may be again repeated if at any time it is thought necessary. The record stands:

Round.	25 Yards.	50 Yards.	75 Yards.
2.....	1.555 in.	1.804 in.	1.770 in.
3.....	1.548 in.	1.636 in.	1.361 in.
4.....	1.667 in.	1.894 in.	1.710 in.
5.....	1.476 in.	1.764 in.	1.636 in.
6.....	1.746 in.	1.989 in.	1.810 in.
Average....	**1.598** in.	**1.817** in.	**1.657** in.

Bullard .50 Express, Express Bullet.

The trial of the Bullard .50 express with the light ball was not made until the afternoon of Oct. 19, at quarter past two, when it was put on the rest, with a 27 miles an hour wind blowing from the 4 o'clock quarter. The weather environments of the trial were: Barometer, 30.195 inches; dry thermometer 66.5°; wet bulb therometer 60.5; dew point, 55.5, and humidity 68 per cent. It was loaded with U.M.C. ammunition, and the three-groove bullet was on powde

pressed hard and in fair condition otherwise. The box was marked ".50 cal., 115 grains powder 'Express'; for Bullard Repeating Rifle." The weights of the three pow-

115 gr. Bullard Express.

der charges stood, 112.1, 111.2 and 110.15, while the three bullets weighed up to 303.6, 303.7, 306.8 grains respectively. The trajectory heights stood at:

Round.	50 Yards.	100 Yards.	150 Yards.
1.....	6.791 in.	9.888 in.	7.924 in.
2.....	7.828 in.	11.279 in.	9.012 in.
3.....	7.163 in.	10.061 in.	7.982 in.
4.....	7.410 in.	11.188 in.	8.077 in.
5.....	6.841 in.	10.048 in.	7.950 in.
Average..	**7.206** in.	**10.493** in.	**8.189** in.

The trial of the Bullard .50 express over the 100-yard range with the express bullet followed close upon the trial of the heavier solid bullet. The rifle was still warm, and in order that it might start under similar conditions as to the interior of the barrel, a sharp rubbing was given with the brush of the cleaning rod. It was 11:40 o'clock, and the wind was holding from the 7 o'clock quarter, but at a 15-mile-an-hour rate, the barometer mercury was at 30.240 inches. The thermometer was at 59, the wet bulb thermometer standing at 52, making a dew point of 45 and a humidity of 60 per cent. The loading of the weapon was from the same box as the 200-yard express bullet record.

The figures are again subject to comment, especially the second round, where the 75-yard screen shows a bullet mark fully one-tenth of an inch higher than at the screen 25 yards nearer the target. Again, the bullet would seem to have been corkscrew ing its way down the range, and caught the third screen on the upper section of the curve in which it was traveling. The figures as deduced show:

Round.	25 Yards.	50 Yards.	75 Yards.
1.....	1.586 in.	1.789 in.	1.629 in.
2.....	1.585 in.	2.191 in.	2.298 in.
3.....	1.746 in.	2.114 in.	1.891 in.
4.....	1.761 in.	1.930 in.	1.702 in.
5.....	1.772 in.	2.211 in.	1.869 in.
Average....	**1.690** in.	**2.047** in.	**1.878** in.

Whitney-Kennedy .50, Solid Ball.

This arm is the third of the large .50-caliber weapons using both solid and express bullet. Its ammunition was taken from the same boxes used by the Winchester of the same caliber, and all marks and figures on that ammunition apply to this. The cut of the cartridge used in the remarks on the Winchester gives rather undue prominence to the bottle-necked feature of the shell. The cut following gives a more correct idea of the appearance of the shell. The

shell itself is $1\frac{1}{8}$ inches in length. The arm weighed 8 pounds 11 ounces, and of this weight 3 pounds 8 ounces were in the barrel. It had a 26 inch octagonal barrel and was marked "Q. 95." The twist in the rifling was uniform, one turn in 30 inches, with six grooves, each .006 of an inch in depth. It was placed on the rest at 200 yards at half-past ten on the morning of Oct. 19, with the barometer standing at 30.205, the thermometer at 68.5, the wet-bulb thermometer at 64, indicating a dew point of 60.7 and a humidity of 76 per cent. The wind came from the seven o'clock quarter at a twelve-miles-an-hour pace. As in all the other express rifles particularly the traces of the gyratory motions by which the ball traveled from muzzle to target are noticed in the figures of the trajectory heights. The figures as reached are as follows:

Round.	50 Yards.	100 Yards.	150 Yards.
1.....	8.042 in.	11.246 in.	8.460 in.
2.....	7.067 in.	9.341 in.	8.446 in.
3.....	7.678 in.	11.474 in.	8.790 in.
4.....	7.108 in.	11.096 in.	8.481 in.
5.....	7.690 in.	11.962 in.	9.146 in.
Average....	**7.517** in.	**11.024** in.	**8.665** in.

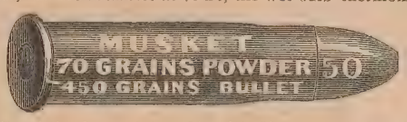
At the 100-yard range this rifle was tested on Oct. 10 with the ammunition taken from the Winchester box. The barometer at the time stood at 30.310, the dry thermometer at 62, and the wet bulb thermometer at 55, making a dew point of 48 and a humidity of 60 per cent. The wind came at 18 miles per hour from the 10 o'clock quarter. The results obtained appear somewhat startling, but careful verification of them and re-examination of the target shows that they are entirely correct, and that the course of each bullet in the series of five is most accurately noted. It affords one of the most marked cases of the existence of the gyratory motion on the part of the bullet. Why such a motion should exist we cannot now stop to consider. Whether it is due to a certain relation between the powder charge and thereby the bullet velocity and the character of the rifling, or to other circumstances, is in some measure an open question. That there is such a motion our figures show; that such a motion is not confined to small arms is the experience of every one who has had much to do with ordnance of a larger type, where it is not unfrequent in experimental arms to see a conical solid shot go off in a long corkscrew course down the range, and then after traveling in that way for a distance seem to correct itself, and with the diminishing velocity regain a normal course and travel in the usual arc and in a single vertical plane. In the table below it will be observed that the third and fifth shots show trajectory points on the 50 and 75 yard screens actually below the line of fire. This would naturally lead to the conclusion that the shot was dropping, whereas the true explanation is found in the remarks above. The second shot shows the same law at work, only in this case the third or 75-yard screen caught the bullet at one of its upper arcs of travel, and a constantly rising bullet would seem to be the conclusion. Really there was nothing of the sort, as the bullet-hole in the target went to show. Under the circumstances we have calculated the average trajectory on the entire line of five shots, as follows:

Round.	25 Yards.	50 Yards.	75 Yards.
1.....	1.090 in.	1.842 in.	1.552 in.
2.....	1.798 in.	1.844 in.	2.781 in.
3.....	1.250 in.	—0.879 in.	—1.714 in.
4.....	2.149 in.	3.411 in.	3.533 in.
5.....	1.098 in.	—0.328 in.	—0.008 in.
Average....	**1.477** in.	**1.178** in.	**1.229** in.

Whitney-Kennedy .50, Express Bullet.

The trial of the Whitney-Kennedy with the light express bullet at 200 yards, followed immediately upon the completion of the solid bullet shooting by the same rifle at that range. The weapon was not taken from the rest, though the barrel was cleaned by passing through the swab several times. The weather conditions it is not necessary to note again as they had not changed to any extent. For the report on the cartridge examined see the report on the Winchester .50 express bullet, as some from the same lot of cartridges were employed. The list of figures does not show in any such marked degree the vagaries seen in the case of the solid bullet, though the average at 150 yards would seem to be rather higher than one would expect. The record shows:

Round.	50 Yards.	100 Yards.	150 Yards.
1.....	8.145 in.	12.176 in.	9.769 in.
2.....	6.909 in.	11.013 in.	8.946 in.
3.....	7.240 in.	10.970 in.	9.009 in.
4.....	7.771 in.	11.072 in.	8.338 in.
5.....	8.938 in.	12.617 in.	9.464 in.
Average..	**7.800** in.	**11.569** in.	**9.105** in.



This rifle at 100 yards with the express bullet in it was fired at half past eleven o'clock on the morning of Oct. 10, and showed again the presence of this gyratory motion. In the record of several of the shots, particularly is it seen in the second round, which in the space between the 50 and 75 yard target dropped more than two inches. When the arm was tried the wind was blowing from the 10 o'clock quarter at the rate of 15 miles per hour. The barometer stood at 30.285 inches; the thermometer at 64.5 F.; the wet bulb at 55, giving a dew point of 45.7, and a humidity of just 50 per cent. For description of the ammunition see that described under Winchester .50, express, as also for cut of the light bullet. The results from the measurements of the screens and targets show:

Round.	25 Yards.	50 Yards.	75 Yards.
1.....	1.832 in.	2.673 in.	1.822 in.
2.....	1.380 in.	2.692 in.	.582 in.
3.....	1.849 in.	2.522 in.	2.134 in.
4.....	1.743 in.	2.311 in.	2.031 in.
5.....	1.814 in.	2.455 in.	1.580 in.
Average.....	**1.723** in.	**2.530** in.	**1.629** in.

Remington .50, N. Y. State Military.

This is the last of the .50-caliber rifles, and though not a hunting weapon was put upon the rest and subjected to a trial for trajectory as affording an interesting comparison with the expensive and specially adapted hunting arms making up the bulk of the list. It is not unusually used in field practice for game, especially in the rural sections of the State, and even in this city we recall a bit of very good work when Hoefle, of the 8th Regiment, and well-known to those who frequented Creedmoor in its earlier years, waited on bended knee for the approach of a mad bullock, tearing along a down-town street, and when the hot breath of the infuriated beast was almost in his face, pulled trigger, and a .50-caliber bullet went tearing open the bovine breast. The piece is slangily styled the "gas pipe" by the militia boys, but that now and then a good one is to be found in the lot issued to the regiments is evidenced in the figures below, which were taken from the trial of a gun loaned by General Robbins, State Inspector of Rifle Practice for the State, and one of the most enthusiastic, successful and careful students of rifle practice on the National Range. The weapon was marked on the butt-plate 28-H-55. It had a 36-inch round barrel and weighed 8 pounds 13 ounces without bayonet or sling. The rifling has a uniform twist of one turn in 42 inches, with five grooves each .005 of an inch deep and .16 of an inch wide. It was loaded with ammunition of the Winchester make, selected by State Officers as the best adapted to the arm. The bullet is of pure lead and is set down as of 450 grains weight with 70 grains of powder behind. The bullet is a three-groove one. Examination of three rounds found the powder in good condition and the weights at 71.2, 69.8 and 70 grains respectively, while the corresponding bullets weighed 450.8, 450.3 and 449.3 grains.

The weapon was put on the rest for the 200-yard test at 10:15 o'clock on the morning of Oct. 1, with the wind blowing in gusts at an average of about eight miles per hour from the one o'clock quarter. The barometer stood 30.150 inches, the thermometer at 76 F., the wet-bulb thermometer

at 67 and the dew point at 61, with 60 per cent. humidity. The rifle had been fired thousands of times before, and though old and rusty without showed that it had a good and trusty barrel, making a record as follows:

Round.	50 Yards.	100 Yards.	150 yards.
1.....	10.212 in.	13.850 in.	10.589 in.
2.....	10.094 in.	13.728 in.	10.885 in.
3.....	10.068 in.	13.664 in.	10.499 in.
4.....	9.754 in.	13.262 in.	10.276 in.
5.....	10.122 in.	13.672 in.	10.402 in.
Average ...	**10.050** in.	**13.635** in.	**10.530** in.

It was not until half past four on the afternoon of Oct. 12 that the rest was clear for the Remington State at 100 yards, and it was then tried under wind blowing at 19 miles per hour from the 2 o'clock quarter. The barometer stood 30.290, the thermometer 54.5, the wet bulb thermometer 50.5 and the dew point 46.5 with 51 per cent. humidity. The ammunition was same as used at 200 yards, and the weapon surprised its friend by its steadiness. It is to be regretted that more care was not taken and every weapon in the hands of the volunteers able to shoot as well. The record stood:

Round.	25 Yards.	50 Yards.	75 Yards.
1.....	2.298 in.	2.922 in.	2.393 in.
2.....	2.290 in.	2.935 in.	2.395 in.
3.....	2.385 in.	3.049 in.	2.524 in.
4.....	2.438 in.	3.100 in.	2.605 in.
5.....	2.251 in.	2.927 in.	2.429 in.
Average...	**2.332** in.	**2.986** in.	**2.469** in.

[TO BE CONTINUED.]

NOTES FROM ROCHESTER.

TWO events of recent occurrence here may recall reminiscences of an interesting nature to some of your readers who knew Rochester and its sportsmen twenty-five or thirty years ago. The departure from this moving world of Martin McIntyre, was one of the events, and the burning of the Sea Breeze House was the other.

Mart, as he was familiarly called, had attained the age of three score and ten years, and if he had any more than the usual reluctance to bid good-bye to the earth, I presume it was from the fact that in doing so he had to lay aside his gun and saw no prospect of resuming its use on the other side of the Styx. He lived in this vicinity from his early days and was one of several men who found game and fish so abundant hereabout as to afford a livelihood in their pursuit. He was ardently devoted to field sports and retained his love for them to the last, and long after there was any occasion to increase his income from that source. Many years ago he got possession of an unpromising elevation in the marsh at the mouth of the Genesee River, seven miles from this city, built a small house and began to accumulate money by furnishing boats, fishing tackle, etc., to those of a sporting inclination who found the vicinity a good angling resort, and he also supplied refreshments for the inner man to parties who heard of his capacity to provide at short notice white-fish dinners of a quality to rival the turbot of old Rome. In time Rochester found itself in need of watering place accommodations. McIntyre's site on Lake Ontario was recognized as the best to be had, and a company one day exchanged $30,000 for his hut and the land about it. On this sum he retired from business life and passed the remainder of his days quietly, but managed to shoot more than a hundred hares last season in the town of Greece, on the fields and waters of which I have no doubt he had bagged enough game to freight an express train.

The Sea Breeze House was a hostlery built at the sand bar between Lake Ontario and Irondequoit Bay a generation or so ago, when the wildfowl shooting and fishing to be had in the vicinity attracted sportsmen thither. As two lines of railway now reach the place, I need not say that the ducks are a little shy of the new summer hotels that dot the bar; and rise rather higher than formerly in going over it into the bay. I have heard some great stories about the endless flights of ducks which in the days of auld lang syne kept the guns hot on the sand bar, and the small, solitary flock I saw there a few days ago, when curiosity led me that way, told that the times change, and wild ducks change their flight with them. But in spite of the locomotive a sprinkling of birds still come into the bay, and some fair bags of widgeon and black ducks were shot there this fall. The ponds on the lake coast west of the river are not disturbed by steam whistles, and are otherwise more attractive for ducks in the fall, and in consequence good sport is had on them occasionally. A gentleman living near one of the ponds assured me that he had shot nearly two hundred blacks and grays this fall. He also had some excellent sport shooting plover, a good flight of which very accommodatingly came on to a bog where he was ready for them. A fisherman told me that one day recently on lifting his nets, set for whitefish, in water 110 feet deep in Lake Ontario, four miles from land, he found drowned in the meshes twelve ducks of the variety called by local shooters "coweens," worthless, by the way, except when, as in this instance, they serve to adorn a tale. He thought they must have dived to the nets at the depth above given.

I had some amusement a short time since building and testing a craft constructed on a principle not, to my knowledge, described by any of the naval architects, from Noah to him who designed the Puritan. The vessel is of the water-shoe family, and consists of two watertight floats about seven feet long, fourteen inches wide and four inches deep. They are united by a joint connection which allows them to move parallel, but not to separate. They thus constitute a

flat boat or float about thirty inches wide. The mode of propulsion was to be the walking movement of one's legs. On the bottom of each float fins or paddles are hinged across the line of travel. The paddles fold back flat against the bottom of the boat, but are arranged to stand perpendicular to the bottom when moved forward. The arrangement lets them cut through the water without resistance forward, but holds the boat from moving sternward. The first trip was made on the canal, and the craft slid into the water without the usual baptism of champagne, but amid the cheers of countless small boys. She moved easily, cannot be upset, and may possess some features that would be valuable in a sporting craft. My pride as the inventor of the novelty was taken down when an Englishman who heard of her said he saw one on exactly the same principle in England, and that her builder "made her go like 'ell." E. R.

ROCHESTER, November, 1885.

NOTES FROM FIELD, WOOD AND SHORE.

Editor Forest and Stream:

The cold season has begun, and the shooting, so far as birds are concerned, is over. The ruffed grouse is the principal game bird. Although not so numerous as they were years ago, there are enough birds to satisfy any reasonable sportsman. Small flocks of ducks are occasionally seen, but the wild pigeon is about as "scarce as hen's teeth." Fifteen years ago they were seen in countless numbers; likewise there were shooters in great numbers. There are a few deer on the peninsula of Bruce county, but I am afraid they will not last long; nine carcases were brought into Wiarton lately. Black bears are not uncommon, indeed I think they are increasing; are seen when raspberries are ripe. No one owns bear dogs to trail them, so they are safe in the heavily timbered pine and cedar swamps. There are very few sportsmen in the county, mostly pot-hunters, just because they are not acquainted with the FOREST AND STREAM.

TAMARACK.

CARGILL, Ont., Nov. 13.

Editor Forest and Stream:

Quail are plenty, and I hear of turkey and deer being seen in the hamak, a few miles out of town. A. S. A.

BELLEVIEW, Fla., Nov. 3.

Editor Forest and Stream:

Have just returned from a ducking trip off Fire Island. Saw very few birds, the most of which were sheldrake and brant. Birds are very shy, and stool miserably. Bagged one broadbill and one sheldrake. They say this has been so far a very bad year for waterfowl on the Great South Bay.

NEW YORK, Nov. 14. J. W.

Editor Forest and Stream:

The hunting season is at its height here. The quail shooting lasted but thirteen days this year, and every lover of the sport was out with gun and dog. Quail have been unusually abundant, and many fancy shots from Cincinnati and adjoining towns have been here and carried away birds by the dozen. Rabbits are very plenty, and hundreds are shipped from here daily. Squirrels can be found in the woods adjoining town. The quail law closed on the 13th, and we now shoot birds in Kentucky. If good shooting is wanted it can be found here. G. G. J.

MOSCOW, O., Nov. 17.

Editor Forest and Stream:

Ruffed grouse very scarce. Judge Farnham, of Wellsville, reports them plenty in Allegany county. J. O. F.

HORNELLSVILLE, N. Y., Nov. 20.

A NEW GUN PRINCIPLE.

Editor Forest and Stream:

With your permission I would like to call the attention of sportsmen and others interested in the progress of gunnery, particularly that of the modern breechloader, to an improvement which has been patented to me recently (Nov. 3, 1885) in breechloading firearms. So far in the history of breechloading arms, particularly in that of rifles, there has been no adequate provision made for prolonging and maintaining their accuracy to any material length of time, in the hands of the sportsman, to any degree of time at all comparable to the average life of the old muzzleloader; and there has been no special device whatever adopted whereby a radical change could be made with fixed ammunition at will and the gun remain intact in the hands of the sportsman; in this respect the breechloader again falls very far short in its sphere of usefulness of that of the muzzleloader with its unlimited charge.

When, after a season's repeated firing at the target or in the field, the bore or caliber of a breechloader has become so worn and enlarged as to create a windage of the bullet sufficient to destroy the accuracy of the arm, a resort for relief is generally had in a bullet of the Minie pattern, or one extra heavy, of soft lead on the theory that its inertia should cause it to upset upon the explosion of the charge, and by being pressed again to the bottom of the too shallow grooves, thus destroy the windage and restore the accuracy. Barring any consideration of the temporary character of the relief thus afforded, it is insisted that the methods are ineffectual, because uncertain, and unscientific because not positive in their action, as experience has always proven.

Regarding the second point made, as to a change of load, or charges that, in fixed ammunition, a charge cannot be increased beyond the limits or capacity of the shell, goes without the saying, because that fact is self-evident; and in decreasing the quantity of powder used in a fixed ammunition requires the production of a straight shell, of unnecessary and unseemly length, with a bullet shoved far down into it, on to the lessened charge; or the production of a shorter shell which will not reach the length of the chamber; or the production of a full-length shell filled with a miscellaneous assortment of powder, sawdust, bonedust, corks, wads, or air-space. Neither of these devices have proved of practical utility. In the first case, the shell, being straight, does not extract well, and the shell itself becomes fouled at once; if made tapering outside and straight inside there is a waste of valuable material and subject to the same fouling; in the second case there is a windage to the bullet, causing an escape of gas, an uncertainty as to how the bullet will take the lands, and a fouling of the chamber of the gun; and in the last case, saying nothing of the wear and general demoralization of the interior of the barrel from such a nondescript mass being repeatedly blown through it, the bullet is necessarily uncertain in its action and "almost invariably tumbles and penetrates the target sideways." Experience has proved these facts, too, indisputably.

And there is another point to be made in regard to the deficiencies of the breechloader, viz., there has been no proper means yet devised of handily extracting a shell which the extractor fails to draw. The gun, while in this condition, is rendered perfectly *hors du combat*, to the always great annoyance and sometimes imminent danger of the sportsman, and certainly the soldier in the field. The construction of breechloaders to carry ramrods as auxiliary extractors, beside "stealing the thunder" of the old muzzleloader, is false to a true conception of the proper functions of an independent breechloader, and practically but a lame apology for appropriate relief.

Having thus arraigned the breechloader and given the counts in the indictment against it, the next thing in order is to produce a remedy for the deficiencies set forth, and thereby perfect and establish the status of all breechloading arms, whether for the sportsman, the soldier, or the marine. It is proposed to produce a breechloader which shall be accompanied with a set of interchangeable auxiliary chambers, made to fit the breech end of the barrel, of different internal capacities to a given caliber, with a graduated fixed ammunition to suit. How this purpose is accomplished may be most readily apprehended by reference to the following illustrations, which were first drawn for application to a Frank Wesson .40-caliber.

Fig. 1.

Fig. 2.

Fig. 3.

Fig. 4.

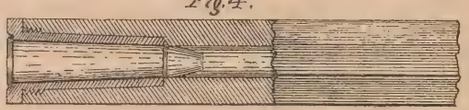


Fig. 5.

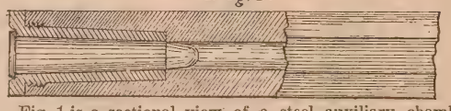

Fig. 1 is a sectional view of a steel auxiliary chamber bored to carry a .40-90-300 Bullard cartridge.

Fig. 2 is an exterior view of all the interchangeable chambers.

Fig. 3 is a sectional view of the .40-90 chamber and cartridge in place in the breech end of the barrel.

Fig. 4 is a view of a .40-75-325 Bullard chamber and cartridge in place in the same barrel, the .40-90 having been taken out and replaced by this.

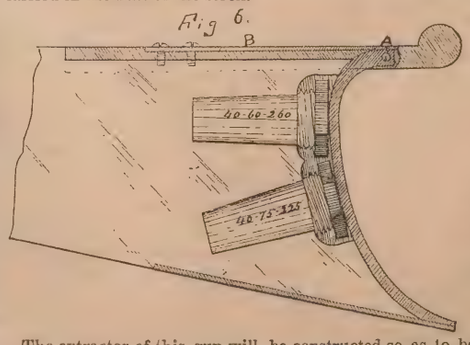

Fig. 5 is a view of a .40-60-260 Marlin chamber and cartridge.

An addition of still another chamber might be made of a .40 45-265 Sharps' patched. In such case there would be four changes of charges for the one gun, commencing at forty-five grains of powder and advancing by an addition of fifteen grains to each successive charge, and running up to the maximum in this case of ninety grains. In ordering a gun of this kind, of course it will be optional with the purchaser to choose the caliber, and the number and kind of auxiliary chambers to accompany it, and which may at any time be multiplied, the same being produced of standard interchangeable sizes for different calibers.

If, after a season's shooting, the gun has become, as the phrase goes, "shot out" and consequently inaccurate, the grooves may be re-cut, the bore generally repolished with the same facility as the muzzleloader, and the accuracy of the arm restored by the introduction of a chamber a size larger in caliber. This answers the purpose of reaming the bullet moulds of the muzzleloader and insures the possession of the breechloading Betsy for a lifetime, with all the pleasant memories connected with it. And thus is "Nessmuk's" wail for a breechloading gun that "can vary the charge according to the game," answered with an echo.

The following illustration will show where the extra chambers accompanying the gun are kept until wanted, with one in the barrel ready for use. The butt-plate opens and shuts, turning on the square joint A, and is held in either position by the action of the spring B, and the auxiliary chambers carried in the butt of the stock.

Fig 6.

The extractor of this gun will be constructed so as to be easily removed or turned out of the way to permit the passage of the chambers.

If a shell gets fast in the chambers and the extractor will not draw it, remove the chamber and drive the shell out with the handle of the little iron pocket chamber wrench made to accompany the gun and which is its only ramrod.

In the construction of shotguns two auxiliary chambers should be furnished for each barrel of the gun; one each for metallic and for paper shells. This will allow for the different thicknesses of the two kinds of shells, and the inside diameter of the two may be made alike, and to the caliber of the gun. This will permit the use of wads of the same size, and thereby insure uniformity of shooting.

The auxiliary chamber principle applied to arms used for military purposes will have a vital value, especially with regard to small arms in the hands of the soldier. During our late war we had our experience in this matter. The following extract, taken from a leading editorial of the FOREST AND STREAM, while treating of a prospective Anglo-Russian war, thus vividly portrays the fatal shortcomings of the military breechloader in action:

"Another point of more than ordinary importance in all this discussion is the trouble which constantly threatens from the confusion of ammunition. Each rifle carries its special cartridge, which will not serve any other weapon. The result is that in the hurry and scurry of train dispatching, it very often happens that the wrong cartridge cases are sent to the fighting men in the front, and they are left with magnificent rifles, yet of no more use than so many haysticks. This condition of affairs was met again and again during our late civil war, and it would require the most careful sort of management of the supply trains to prevent its happening along the enormous fighting line which will open with the Anglo-Russian war."

This experience has led the government into trying the experiment of establishing the use of a one-sized cartridge for all small arms. That ultimate failure in this direction will be the result is probable, owing to the different weights, and consequent recoil of the arms.

So far as the breechloaders now in common use are concerned, they can readily be changed so as to use auxiliary chambers, especially singleloaders, and there is nothing in the action of repeaters, but what slight changes will fit them to the use of auxiliary chambers.

The fixed ammunition prepared for use in the new gun will have heads all of one size to one caliber, and will be graded to suit the necessities of the sportsmen at the range or in the field.

Having already trespassed too much upon your space I will close by expressing the opinion that a white day has come in the history of the modern breechloader.

COMMON SENSE.

WASHINGTON, D. C.

HUNTERS AND SETTLERS.—There has been some trouble between sportsmen and settlers in the Pine and Popple river regions of Wisconsin. The Florence (Wis.) *Mining News*, Nov. 14, takes a very sensible view of the affair. It says: "The Ohio and other foreign hunters in the vicinity of the Pine and Popple rivers, were greatly surprised during the forepart of the present week by receiving visits from armed bodies of settlers, who requested them to leave the country. The settlers claim the hunters hound the deer, hunt with headlights, shoot their stock, insult their wives, and in many other ways trespass on their feelings and premises. If so, they have just cause for grievance, but are taking the wrong way to obtain redress. A homesteader has vested in himself the right to protect his home, stock and land, but his jurisdiction extends only so far as the limit of his own premises. He has not the power to order visiting hunters from lands owned by others than himself. If his rights are trampled upon, his feelings and property injured and the laws broken, the proper way is to appeal to the law, whose strong arm will protect him. In the large number of outside hunters who come to enjoy the rare sport to be found in the great forests hereabouts, there are of course some who have little or no regard for the welfare, safety and rights of any except themselves. But there are also many, and, in fact, the major portion of them, are law-abiding, sport-loving gentlemen, who have all regard for those things which are the inalienable right of their fellow men. In making trouble for these, they have done as great an injustice as the settlers claim they suffer at the hands of the other class. One hunter, a gentlemanly fellow, said to a representative of this paper: 'A body of armed men came to our camp on Monday and ordered us out of the country. There were a dozen of them at least and every man had a gun. We asked them if they owned the premises on which we were camping. They said that they did not. We asked them, then, by what authority they ordered us to go. They then left, but not without admonishing us to leave, and saying that we would hear from them again. I never will infringe on the rights of others, but this is a free country and I will not be bulldozed. The settlers may have been given trouble, but that does not warrant them in troubling innocent parties. I will let them strictly alone and I want to be let alone. These are the sentiments of all of the hunters I am acquainted with. We want peace if possible, but will stand up for our rights. If the settlers are troubled why don't they swear out warrants for the offenders and not bother those who mind their own business.' All of the hunters seem to talk about the same. They say they will not leave until they get ready; they will molest no one and will not be molested. Really the proper course for the settlers to pursue is to appeal to the law if they receive injuries of any kind and not resort to guerrilla practices and mob law. Unless matters assume a different phase, there is liable to be bloodshed, as the settlers appear to be on the warpath and the hunters are inclined to defend themselves and stand their ground. It is to be hoped that cooler counsel will prevail and that no violence will be done."

THE WILD PIGEON.—South Lyon, Mich.—In years back, up to 1874, we saw large flocks of pigeons migrating from north to south in the fall and from south to north in spring, sometimes staying with us a few days and then disappearing on their journey. Since 1874 we have not seen any flocks, and only a very few single birds in a whole year. Why have they stopped their migrating, and where have they gone to, or are they numbered with the past?—YOUNG READER. [There is no mystery about the disappearance of the wild pigeons. Their flocks have been depleted by market pot-hunters and by the trap-shooting game protective societies.]

SIMON TRUMAN, living near Elkland, Potter county, Pa., is dead at the age of seventy. He was a famous bear hunter and often asserted that he had killed over two hundred bears. He was driving along a road with a companion when the horses, scared at two trained bears, turned short around and threw both men out. Truman struck on a sharp knot on a log, breaking three ribs and pushing the broken pieces into his lung. He said to the physician: "This will settle me. I don't mind dying, but it's the thought that after escaping from wild bears for fifty years I am killed through tame bears, chained and muzzled; that worries me."—*Ex.*

GAME IN THE NORTH.—A correspondent writes from Faraday to the Belleville, Ont., *Gazette*, Nov. 6: "The supply of game this season is good, deer and partridge up to the average, but I think ducks are getting scarcer, and may perhaps ultimately leave us as the pigeons have, which used to be so plentiful some five and twenty years ago. There has been a remarkable migration of wild animals of the carnivorous kind into this quarter within the year, and independent of bears and wildcats, we now have wolves again, which we have not had for many years past. Several sheep have been destroyed by them in the Kavanagh settlement, and the folks there will not go for their cows after sunset, as the wolves sometimes come unpleasantly close. Mr. D. Kavanagh's son, a lad of fifteen, was chased out of the woods one evening by them. Sheep, which have been killed probably by wildcats, which have frequently been heard and seen, even close to L'Amable. Mr. C. Johnson, who has received the appointment of wood ranger and inspector of forest fires, made a trip last August through the woods to the northwest of Bancroft. He started early one morning from camp, and on his return found that a bear had paid a visit to his tent. Bruin commenced by eating all of Mr. Johnson's provisions, and being evidently in a sportive mood, he next mixed up the cooking utensils and blankets, promiscuously and impartially, and then tearing two large holes in the tent, upset it and left. During this trip, which was a short one, Mr. Johnson counted the bodies of one moose deer and thirteen red deer, which had been killed by the Indians, who appeared to have had plenty of provisions, for they had not used any of the venison for food, with the exception of a small piece of meat which they had sliced off the moose deer. Now, all these deer had been slaughtered merely for the sake of their skins, which the squaws tan and manufacture into mitts. I remember three years since, there were the carcasses of fifty deer strung along the banks of the York Branch, in the neighborhood of the Egan Farm, which had been killed in this way in July and August, by Indians. The deer come at night and feed on the pond lilies, of which they are very fond, and the Indian, with a light in his canoe, paddles up noiselessly, the deer appears to be fascinated by the light and never offers to run, and is then shot at leisure. Now this kind of thing is constantly going on, and it is the universal opinion that some one should be appointed by the Government to look after and put a stop to this shameful and wanton destruction.

A NEW GUN CLUB.—A number of gentlemen residing in Washington Heights and vicinity met last Monday evening for the purpose of organizing the St. Nicholas Gun Club. There were present, among others, Messrs. J. M. Bloomfield, Fay W. Kingsland, Harry Brower, W. B. Peet. F. H. Gibney, C. Donnelly, Lyons, C. F. Knapp, C. Develin, H. Griffin, E. W. Brown, P. W. Foster and C. S. Fitch. The following officers were elected: Mr. Fitch, President; Mr. H. Brower, Vice-President; Mr. Gibney, Secretary and Treasurer; Mr. Peet, Captain. The grounds leased by the Washington Heights Gun Club have been secured by the new organization, and regular shoots at clay-pigeons are to be held every second Saturday. The grounds will be open for practice by the members at any time. The club has determined to use clay-pigeons in its regular shoots, taking the ground that their flight resembles that of a bird more than does that of a glass ball. The first regular shoot of the club will be held on Thanksgiving Day. The new club starts out with a membership of about thirty, and the character of the gentlemen who belong to it would seem to insure its success.

SOME OF THE NEW JERSEY NEWSPAPERS complain that the woods are so full of whistling bullets from hunting rifles that a man's life is not safe there.

Camp Fire Flickerings.

"That reminds me."

175.

ABOUT two years ago myself and a friend, out snipe shooting, were driving along a main road, when I ordered my setter bitch over into a wheat field. At the further side, three hundred yards away from us, she came to a stand. My friend, who is an enthusiastic sportsman, jumped out of the buggy, and while I held the horse and looked on, waddled through the miry field toward the dog, making his way as fast as any other fat man could do it. After going about two hundred yards, trampling with his big feet at every step about ten inches square of nice green wheat, which he buried never to come up again; suddenly to his astonishment a farmer came out in great wrath, shouting, "Get right off that wheat!" My friend stopped to apologize and explain, but the owner was irrepressible and kept ordering him off thicker and faster. He finally got the man's attention and pointed the dog out to him, saying he was only going after his dog, which was paralyzed, and if he did not go for her she would stop there until she became petrified, "and if I lose her," he threatened, "I shall hold you responsible for not allowing me to go and get her." The farmer turned and saw the dog, apparently stiff, and said, "Oh, of course, go and get your dog." My friend resumed his tramp, came up, flushed the bird and shot it. The farmer was amazed, and was so tickled at the operation that he wanted the gunner to tramp all over the field to see if he could not find another bird. Then he wanted to keep him and his dog all night, for he said he had never seen such a dog and man before. X.

PORT ROWAN, Ont.

POINTS WORTH CONSIDERING.

1. Because of the compact style of its typography the FOREST AND STREAM actually contains, weekly, more reading matter pertaining to its chosen field than is found in any similar publication in the world.

2. In general excellence the reading columns of the FOREST AND STREAM are of a higher grade than those of any similar publication in the world.

3. Taking into account the amount and the character of weekly reading given, the FOREST AND STREAM is away ahead of any similar publication in the world.

4. If a sportsman wishes a sportsman's paper, he will be better suited by the FOREST AND STREAM than by any similar publication in the world.

Sea and River Fishing.

THE DUDE GOES FISHING.

Editor Forest and Stream:

We all know the young man who is suffering from overdress, youth and inexperience, whom it is the fashion to call a dude. Personally, I have a heart full of charity for him—if he aspires to fishing, partly because he is so fresh and his green harmonizes with the surrounding verdure. If I am rightly informed, the word dude is spoken in England, where it was evolved, with two syllables. In this form it strikes the ear with a melody unknown to the word as we speak it. In the following epic I have spelled it to accord with the European pronunciatiation, partly because "it's English, you know," but mainly for rhythmic reasons.

This *mania-a-potu* was caused by a visit to a theater where the "Mikado," Gilbert and Sullivan's latest atrocity, was being sung, and after going to bed and getting the Public Executioner mixed up with the fish laws of New York, and dreaming that Yum-Yum was a grayling that had too much sense to rise to a bunch of feathers and tinsel, the rhythm of Ko-Ko wove itself into the following nightmare, for which I disclaim any responsibility. I do not know who wrote it, but merely send it to you as found at my bedside in the morning:

THE DUDEY FISHES.

A Dudey who sat near a brook, on a stone,
Sang "Willow, tit-willow, tit-willow!"
Said a barefoot boy, "Why do you sit there alone
Singing 'Willow, tit-willow, tit-willow?'
You must have caught plenty, or else they won't bite,
For you came here this morning, and now it's near night."
A glance from the Dudey said, "By Jove, you're right,
Oh, willow, tit-willow, tit-willow."

He spat on his worm as he sang with a grin,
"Oh, willow, tit-willow, tit-willow:
There's no use of talking, I gather them in,
By willow, tit-willow, tit willow.
No angler like me ever fished in this spot;
I've read all the authors, from Walton to Scott,
And, like me, you will sing when you see what I've got,
Ah, willow, tit-willow, tit-willow."

"Now let's see your catch that has caused you to sing,
O, willow, tit-willow, tit-willow,"
But the Dudey kept on, as he held up his string,
Singing "willow, tit-willow, tit-willow,
I thought these small fish that I've taken with grubs
Were trout, and I'll tell you that here's where it rubs;
You break my heart, now that you tell me they're chubs,
Oh, willow, tit-willow, tit-willow."

FRED MATHER.

RED DRUM AT ANGLESEA.

I YIELD to "Kingfisher" the joys of the summer woods and to "Nessmuk" his pleasant outings along the swamps of Florida in search of alligator or dreaming of tarpon. For myself, I am content, when the mackerel disappear and when the blackfish are too far off, to take a train for Anglesea, armed and equipped for the channel bass or red drum. Their coming and going is as mysterious and uncertain as that of the black drum, which do not make half as lively a fight as that of the channel bass—a game fish which eclipses the salmon of the Marguerite for good, honest fighting and staying qualities as much as the channel bass outstays and outfights the tarpon.

Judge Miller (whom I have hitherto introduced to your readers as the "Judicial Mind") does not often have any luck either with the black or red drum, unless he goes with the fishing editor of the Cape May *Wave* (J. M. S.). He slipped off early in September, but didn't get a bite, but when I told him that my good friend, Cap' Ludlam, of the Life Saving Service at Anglesea, N. J., had just "bagged" six channel bass in two days, the Judicial Mind took a sudden interest in the situation and rigged up two formidable drum lines. Armed with his annual pass on the West Jersey Railroad and a complete fishing rig, we started for Anglesea, one of the numerous cities springing up along the Atlantic coast, and making the wilderness of sand blossom with the rose of civilization.

"Angle Sea" is well named. It is the best fishing point between Barnegat and Cape May lighthouse, and it is not open to the very serious objection which makes Cape May a bad and dangerous fishing point—the narrowness of the channel and the dangers of a treacherous bar to the south of the channel upon which I have twice nearly lost my life in the last two years. When a leisure hour dawns on me I will tell the readers of FOREST AND STREAM how a Pittsburgh party and myself, accompanied by Tom Ridley, one of the late Tom Scott's favorite railroad engineers, found fisherman's luck at this bar last August in Capt. Sutton's schooner, when the waves, six feet high, broke over us, and compelled all the party to climb the rigging like so many gray squirrels, to keep from being washed overboard. Poor Ridley gazed toward the new Columbia Hotel where his better half was, and said he thought he had gazed on the face of Mrs. Ridley for the last time on earth.

But we return to our drum. The Anglesea harbor is a safe one. There is never any trouble in getting out into the deep sea at any time of tide, and if the New York anglers knew of its many charms, its abundance of game, as well as fish, from red drum down to tomcod, it would soon become a big city by the sea much loved of anglers. The Judicial Mind prepared the lunch, and (I say it with great timidity, since the FOREST AND STREAM is striding with the steps of a racehorse toward temperance shores) that we had only six bottles of beer for Judge Miller, J. M. S. and Skipper Hankins—a good man and true—besides more solid material for three hungry fishermen.

Never was there created a better Boniface than the burly and bustling Englishman Weeks, who keeps the Hereford House at Anglesea. I guarantee that a tired sportsmen, in New York or out of it, who wants to hide himself away "from the gaze of the gross world" for a day or two, can't find any other place with equal attractions. And at this season of the year he will find on Seven Mile Beach all the wild cattle he wants to shoot, as well as rabbits galore, and on the mainland gray squirrels in abundance.

Apropos of wild cattle, the woods are full of them; and it is told of young L., the lighthouse keeper's son, that he shot at a big white bull on Seven Mile Beach, only wounding him in the neck, and that that bull "charged the Moors again," and the young and nimble Nimrod dropped his rifle and shinned it up a convenient persimmon tree, crying, "Ma! O, ma!" But the truth of this fairy tale rests on the unsupported evidence of Butcher Sigfried, a rollicking youth who bought the right to kill all the wild cattle on Seven Mile Beach. The lighthouse is called Hereaford Light, and it is said twenty years ago cattle were sent across the ford here at low water to browse on the fertile beach and got lost in the woods; hence the wild cattle. The word "Hereford" is probably derived from the words "Here a ford." Weeks's hotel is called the Hereford House. Two miles below is Holly Beach, a brisk settlement of wideawake Philadelphians, soon to be connected by railroad with Anglesea, which is located on a spur of railroad, four miles long, connected with the W. J. R. R. twelve miles from Cape May. I prophesy that Anglesea will soon be the best known, as it is now the best fishing, spot on the Jersey coast.

I am painfully conscious that my letters annent piscatorial joys are (in one respect only I fear) like Montaigne's essays. He began with the beginning of the world and ended by telling how he had the gravel! But I will localize no more. I will proceed to drag up the stalwart drum—painted red by the Creator—from the bottom of the deep.

Hankins had Weeks's catboat with a bottom big enough to accommodate a Virginia picnic. The day before our outing Cap' Ludlam had "corralled" on to a thousand mullet at a single haul of his seine. This is the red drum's favorite bait, and when the east wind don't prevail and the drum are not junketing off the Florida coast, the mullet will always capture a drum. It was one of those heavenly days when the earth and sky seemed to be intending matrimony and the denizens of the deep piously waited to witness the honey moon. There was just enough wind to take old Weeks's catboat out to Buoy No. 3, a couple of miles from the Hereford House.

The Judicial Mind struck first blood, for his half mullet, artistically tied on his limerick, looking toothsome enough for a two-legged gourmet, had scarcely touched the bottom before a strange pallor overspread the handsome countenance of the frisky and piscatorial Miller. "Hush!" he whispered, as he handed Skipper Hankins his croaker line with his left hand. Away went one hundred feet of line, till our judicial friend thought he must have tired out his drum and could venture to inspect the fish on closer acquaintance. Remember a red drum never breaks water like a bass or like the *Esox nobilior*. But alas! for a fisher's hopes; as Judge Miller drew his big fish close to the boat till we could get a glimpse of his red and glowing sides the drum made a rush *à la* Tarpon and took out—ran out every foot of his line, and it was a case of *abiit erupet evasit*. And as the Judicial Mind drew up his limp line no fish could be felt, for the monster of the deep at one mad dash had pulled the hook clean out of the snood as readily as I could pull Clark's O. N. T. out of the eye of a needle. The Judge looked unutterable "cuss words"—and said nothing, as the skipper hastily put on another hook with a shank two inches long.

The best of us enjoy the discomfiture of our nearest friends, and while smiling inwardly beneath a solemn exterior I felt a bite that might have been a flounder. But I put a pressure of twenty-five pounds on my line (of the strength of which I did not feel assured), I knew I had a fifty-pounder on the end of my line. I was determined to keep cool. The Judge begged to feel of my drum, and being of a sympathetic turn I allowed the Judge to feel the red devil *chasser* around for about five minutes, when he willingly handed me back my line. It took me half an hour by the skipper's watch before I could tire the shy fish out and bring him up to the boat while Hankins deftly inserted his right hand in the gills of the drum, and with a tremendous flop landed a sixty-pound drum on the bottom of our catboat.

I hope my temperance friends will not be disgusted if then and there the six bottles of beer and the entire lunch melted away like snow flakes on the sod.

Judge Miller took my line with wire snoods and soon hooked a big fish. He handled him like a master—gave him 200 feet of the line, and with gentle pressure brought Mr. Drum half way back again, then let him whizz toward buoy No. 2. As the fish came slowly in till his ponderous head broke water he made another spin for dear life. "Easy over the stones," ejaculated the wide-awake Miller, as he let him cavort at its own sweet will down in the caverns of the deep. He had this one securely hooked, and the wire attachment would have held a hundred-pound shark. In just forty minutes Judge Miller landed his own fish, with a wild Comanche yell which well might have reached Holly Beach, two miles below. We now had two noble redfish, still panting in the bottom of the boat, and flopping the water all over us. We cared no longer whether school kept or not. We had bagged the first Anglesea drum of the season.

By 2 o'clock I had hooked the biggest fish of the day, but my early success emboldened me—my line was too short—and once at the end of his tether the drum broke away, leaving me minus sinker, bait and two hooks. The power of this gamy fish is shown by the fact that we lost three lines and eight hooks in three hours. It was the Judge's hour now and he improved the occasion by laughing consumedly at me. I bore it like a martyr, having a new Krider line, Cuttyhunk, with swivel attachment, and I felt sure of at least one more drum.

In the next hour we landed five sharks, which upon so calm a day were as thick as blackberries in July. This is no mean fun in the pauses between drum bites. Soon I hooked a big fish, whose first rush for liberty in the briny deep, cut two fingers of my right hand till the blood came. This was the hardest fight of the day, and was the best fight I ever made with a fish. Sad experience taught me to give the drum all the play he wanted; and I let him have 300 feet of my laid cotton thread line double twisted. I felt sure of this one, and the skipper and Miller enjoyed the game which was neck and neck, for I could not get the fish within sight, and but for the downward pressure of the fish I might have thought I had hooked a shark. But a shark will run around a boat—the drum never. He gets as near the bottom and as far from the sight of man as he can get. I found him and played him one hour before he came in out of the wet. I handled him tenderly as if I loved him—as I did. I never caught a game fish that fought so well. He tipped, in his red splendor, sixty pounds, and was alive when we reached the Hereford House at 4 P. M., glad but tired sportsmen, more in love than ever with fishing in the deep sea.

J. M. S.

THE CENTRAL LAKE HERRINGS.—Central Lake, Mich., Nov. 12. The "herrings" were first seen at the bridge in in this village on the evening of the 10th. This is, as far as I know, the first time in several years that they have shown any disposition to holster up the old tradition of their always coming on that day. It shows that they can do it if they choose.—KELPIE.

BETHABARA, ALIAS GREENHEART.

Editor Forest and Stream:

In your issue of Sept. 24, page 169, "M." says under the caption, "Snake and Bethabara Woods":

"Greenheart is a variety of the genus *Laurus*, found in the West Indies and South America. That in Jamaica and Guiana is the *Nectandra rodiæi*, called also "cogwood" in the former and "sipiri" in the latter locality. Lancewood is a tree found also in the West Indies, called in botany *Guatteria virgata*, and is *par excellence* the best wood for fishing rods. It will be difficult to find bethabara wood in the botanical list, it is only found in the catalogues of some fishing rod makers who have enshrouded it in mystery, otherwise it is nothing but a fancy name for greenheart."

It seems strange that some one who believes in the superiority of bethabara (or wasahba) and labors under the idea that it has an individuality of its own, does not raise an issue with this last statement of "M.'s" How would it do to quote Henry P. Wells on bethabara or wasahba. He says on page 130, of "Fly Rods and Fly Tackle":

"Some think it a variety of greenheart, but he who has worked the two woods will hesitate to accept this opinion. It resembles greenheart in color, but still with a difference easily seen on close inspection, though difficult to describe. It is denser in grain, more bony in texture, and requires a sharper tool to work it. It has the peculiarity of depositing a gummy substance on the edge of the plane blade, producing the effect of dullness, which must at short intervals be removed on the oilstone before the plane will resume its cut. When under the plane a yellow powder, closely resembling pulverized gamboge in appearance, is profusely deposited on the bench and tools, as well as on the hands and person of the worker. This instantly turns to a strong salmon color in contact with soap and water, due doubtless to the action of the alkali in the former. Its shavings have nothing of the crumbling character of those of greenheart, from which *all the foregoing marked peculiarities distinguish it.*

The italics do not appear in the original text. It might be added that Mr. Wells believes bethabara to be inferior for rod-making purposes to greenheart, an opinion with which some of us who have been using bethabara rods for four or five years cannot agree. JAY BEBE.

TOLEDO, O., Nov. 18.

LARGE LAKE TROUT.—While taking trout for the purpose of getting spawn, Mr. F. A. Walters, Superintendent of the Adirondack hatchery at Little Clear Pond, took a trout measuring 36½ inches in length and weighing 22 pounds, which was dead when found. He reports taking "two larger ones which were alive and all right." This shows that this fish grows to a much larger size than is usually caught in those waters, although we have recorded instances of individuals taken at rare intervals there which were larger.

BE KIND TO YOUR BOATMAN.—First Scotch boatman: "Weel, Geordie, hoo got ye on the day?' Second ditto (Drouthy; he had been out with a Free Kirk minister—a strict abstainer): "Nae, ava; the auld carl had nae whuskey, sae I took him whaur there was nae fush!"—*Punch.*

THE WHITNEY BASS FLY.—Our correspondent "Cyrtonyx" informs "Percyval" that the Whitney black bass fly is made thus: Body green, with silver tinsel, tail and hackle green, wings yellow with lead-colored shoulders.

MAINE LAND-LOCKED SALMON.

THERE have been some busy days for those interested in the salmon weirs in Bridgton and Harrison, Maine, of which the FOREST AND STREAM has had previous accounts. Ten of the first ones—twelve in number—taken at Rodger's Brook two weeks ago, escaped through a break in the weir, caused by a sudden rise of water. But the break has been promptly repaired with a second weir put in a few rods below and a third one a short distance above. As fast as the fish come into the lower weir they are dipped out and put into the middle one. The upper weir is intended as a stop for the leaves and autumn rubbish.

On Monday there were seventeen salmon in the weir, and everything was looking favorable, but it began to rain, and Rodger's Brook became a torrent. The water was full of leaves, stones, roots and all manner of waste, swept along by the force of the current. It stopped against the weir and made a dam. The water was fast rising to the top of the stakes, while the watchman and one or two assistants were doing their best to clear the opposing refuse away. The harder they worked the harder it rained, and the more loose material was washed against the frail palings. More help came, and for hours, in the pelting rain, sometimes to their waists in cold water, six men were working as for life to keep the weirs and salmon from being swept down stream. As it was all efforts would have been useless, had not some one hit upon the plan of felling a tree across the stream a short distance above, and building a dam to turn the current into another channel. This proved successful, and by midnight the troubled waters were under control. The weir at Bear Brook had not had as hard a time; still the water cut a channel under the bank, by which some of the fish escaped up the stream. But they can easily be dipped up and put back into the weir when wanted.

Yesterday there were twenty-eight salmon in the weir at Rodger's brook and twenty more in and above the weir at Bear Brook. This is as many as the most sanguine expected to take in the whole season, and yet, if this year is to be judged by others, the season has hardly begun. The largest fish now on hand is fully thirty inches long and eight inches deep, and must weigh fifteen or eighteen pounds. There are others about as large. The largest of all—Jumbo—was one of the two of the first twelve that did not escape. The watchmen say that the fish run up the stream entirely in the night. In the daytime they are quiet, and a person not accustomed to looking for them might be very near one and not notice them. In the weirs all is quiet enough in the daytime, but at dark the fun begins. The water seems to be fairly alive and foams and splashes in a way that would hardly seem possible. The fish fight fiercely at times. Especially does each newcomer have to be thoroughly shaken up. If a fish of any other species gets into the weir it has no rest until it is either driven out or killed. The fish work large beds of stones and gravel together, in which to deposit their eggs, and as fast as the eggs are laid they are covered. The work of making the beds and covering the eggs seems to be done mostly by the males, and they show a great deal of perseverance and skill in moving some of the quite large stones that they have to handle.

Mr. Wilbur, the watchman at Bear Brook, says he noticed that a large male fish was beginning to form a bed in a part of the stream where an alder bush, about an inch and a half in the thickest part of the stem, was bent down into the water. The fish seemed to want that particular place, and the alder was in its way. At first he swam under it and tried to lift and push it one side. As this did not succeed, he swam up the stream six or eight feet, and turning around, came back "full chisel" against the alder stem, which was bent and lifted out of the water by the force of the 15-pound fish. Of course the alder at once sprang back into its place, at which the fish seemed to be very angry and snapped at it with its teeth, until finding that he had met with more than his match, he left that locality in apparent disgust.

The salmon seem to recognize their natural enemies very quickly. They soon become accustomed to the watchman, and allow themselves to be approached readily. A dog they will hardly notice, but when a mink came along the bank by the weir the other day, the whole scene was changed. The great salmon seemed frightened badly, and rushed like flashes through the water in every direction. The mink was shot, but the watchman says that the fish were very uneasy, and were sharply on the lookout for hours after.

There are a great many visitors, especially at the Rodger's Brook weir, and it is indeed a sight to make a sportsman's nerves tingle to see thirty such noble specimens lying almost within reach of his hand, and, what is better, safe from harm. It is reasonably sure that the fish are being well protected in these two streams at least. At Bear Brook no attempt has been made at stealing them, but Thursday night there were persons sneaking around the Rodger's Brook weir. They left promptly, however, when Mr. Rich came out of his camp breechloader in hand. A man a few days ago tried a new dodge. While standing with Mr. Rich, the gentleman in charge, looking at the salmon, he turned and asked in a confidential tone if $5 would not be an object for him to leave the weir alone for a few minutes. The would-be poacher—he is a Maine woollen manufacturer—found in short order that he had waked up the wrong man.

It is now known, though it was not intended in the outset, that with the weirs in the two best breeding brooks a strong military move has been made against those who have been in the habit of dipping out bushels of these noble salmon in spawning time. Not a salmon can go above the first weir; hence Mr. Poacher will find no fish in the miles of stream he has been in the habit of robbing. The Commissioners say that in the protection of these small streams at breeding time lies the whole secret of the future success or ruin of the salmon fishing in the Sebago lakes, covering an extent of nearly twenty miles in length. "Take all the fish out of these streams when they come up to breed in the fall," says Commissioner Stilwell, "and your salmon are gone from the lakes! Protect them and they will multiply, and soon give such sport as only salmon can give!"

Many who have an appetite for salmon are much disgusted to find their accustomed poaching ground fenced off, by a weir below, and well under the eye of the law. That crowd that came fifteen miles the other night and hauled a boat only to find themselves left, went home sadder and wiser, as well as badly out of pocket. Woodsum Brook, at the head of Anonymous Pond, still gleams with the torch of the fish sneak on dark nights, and Mutiny Brook, at the head of Bear Pond, is scoured almost every night. But the worst work is without doubt at Crooked River and Songo. A man from the former place reports that salmon are being taken by the wagon load, and at the latter locality there are parties who own a seine and work it whenever they can. There are men on the watch for them, but a large extent of territory, with so many hiding places, is hard to protect.

But after all, the work of breeding the noble land-locked here is not likely to meet with the success this fall that experience would have brought. The Commissioners being at a distance, and no one present having sufficient experience to successfully strip the females, a number of them were found to have cast their spawn before stripping was successfully attempted the other day. Some six to ten thousand eggs have been secured, and the season is not yet over. Still a large number of the females have been released, having cast their spawn. The stones and sand on the bottom in the vicinity of the Rodger's Brook weirs are mixed with salmon spawn, which will probably hatch naturally. Not knowing how to manage, the males and females were not separated in season, and the spawning was much earlier in consequence. An attempt was made to dip out the large males and put them in the upper weir, which resulted in plenty of excitement, and making kindling wood of every landing net that could be procured. Indeed, considerable fun has grown out of this salmon breeding by novices. Oh, to see one of our respectable townsmen, new at the business, attempt to take the eggs from a 15-pound salmon, alive, slippery, strong; the sight was comical in the extreme. It would make one laugh till the tears come. But we learn by experience. BRIDGTON.

THE ADIRONDACK HATCHERY.—Through the vigorous enterprise of Fish Commissioner R. U. Sherman the hatchery and dwelling for the superintendent are complete and operations have begun. Although the season was well advanced and the surroundings were new to those engaged, they have now in the troughs 115,000 eggs of brook trout, 5,000 lake trout, and 9,000,000 "frost fish," a small species of Coregonus. In addition to this number Mr. Ed. Boehm, of the Caledonia hatchery recently took there 875,000 eggs of lake trout, most of which were from the Great Lakes and a few from Caledonia. This makes a very fair beginning for the young hatchery. The buildings are situated on the road from Upper Saranac Lake to Bloomingdale on the outlet of Little Clear and about a thousand feet from the pond. The hatchery is fifty-two by twenty-eight feet and is two storie high. It contains thirty batching troughs, each fifteen feet long, which will easily hatch 40,000 trout each, making the capacity about 2,000,000. Besides this an indefinite number of frost fish may be hatched in jars, and more troughs can be put up, if necessary. The water is brought in a six-inch wrought-iron pipe from a dam in the outlet above the house, which gives six feet of fall when full. The hatchery will be a point of interest for tourists in that region and will in time benefit the fishing of the whole Adirondack region.

BROWN TROUT.—These excellent fish which were first sent to this country by Mr. von Behr, President of the German Fishery Association as a present to Mr. Fred Mather, in the shape of eggs, and by him presented to several fishculturists, have spawned at two-and-a-half years old. Mr. Frank Clark, of the U. S. Fish Commission at Northville Mich., getting about 4,000 eggs from three fish. Mr. James Annin, of Caledonia, N. Y., reports them about to spawn. Some eggs have been taken at the State hatchery at Caledonia, N. Y. and others at Cold Spring Harbor. At the latter place there is one male fish which will weigh two pounds and the others will average half that weight. This is remarkable growth and the number of eggs in such young fish is surprising to those who have only handled our native brook trout. The fish appear to be thoroughly acclimatized and at home. They will prove of great value to our streams and when better known to our anglers will become great favorites.

CARP FOR THE SOUTH.—The United States Fish Commission car No. 2 left Washington Monday night with carp for the supply of applicants in South Carolina, Georgia, Alabama and Florida. The distribution to South Carolina will be made from Columbia by express; for Georgia from Atlanta; for Alabama from Birmingham and Montgomery; for Florida from Jacksonville. Car No. 1 left Tuesday afternoon with carp for the supply of applicants in West Tennessee, Arkansas, Mississippi, Louisiana and Texas. The distribution to West Tennessee and Arkansas will be made from Memphis; to Mississippi from Jackson; to Louisiana from New Orleans and Shreveport; to Texas from Dallas and Austin.

FIXTURES.

BENCH SHOWS.

Dec. 15, 16, 17 and 18.—First Annual Dog Show of the Western Connecticut Poultry, Pigeon and Pet Stock Association. Frank D. Hallett, Superintendent, Winsted, Conn. Entries close Dec. 5.

March 16, 17, 18 and 19, 1886.—Western Pennsylvania Poultry Society's Dog Show, at Pittsburgh, Pa. C. B. Elben, Secretary.

April 6, 7, 8 and 9, 1886.—Second Annual Dog Show of the New England Kennel Club. Jean Grosvenor, Secretary, Boston, Mass.

FIELD TRIALS.

Dec. 7.—Seventh Annual Field Trials of the National Field Trials Club, Grand Junction, Tenn. Entries for Derby close April 1. B. M. Stephenson, La Grange, Tenn., Secretary.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **2908.**

PHILADELPHIA CLUB TRIALS.

[From a Special Correspondent.]

THE second annual field trials of the Philadelphia Kennel Club began at Rio Grande, N. J., Nov. 17, Mr. C. S. Westcott judge. Rio Grande had been selected owing to the number of birds liberated in that section, but it was learned that poaching had been allowed on the 3,000 acres said to be preserved and that much shooting had been done before and since the season opened. The All-Aged Stakes, therefore, after several heats had been run and the Puppy Stakes had been first decided, were declared off by the judge, as it would have been impossible at the rate birds were being found to finish the contest in the allotted three days as first laid down. The following is a summary of the heats as run:

THE DERBY.

FAIRY GLEN AND BUCKINGHAM

were put down at 7:45 over in a sorgum stubble back of the club house where a covey of quail were known to feed, but it was drawn blank, as were also several likely fields to the south as we moved on. Fairy Glen is a good-sized bitch, resembling her sire, Glen Rock, but did not show the speed of her rival Buckingham, an eleven-month old puppy of great promise, who made a show of poor handling by his breaker, Hoffman. Coming to a thicket on the edge of a stubble field Fairy Glen pointed and was well backed by Buckingham. Shorebrook, Fairy's handler, being orded to put up the bird and kill, no quail were found and Fairy was scored a false point. After the dogs were down two hours without finding game they were ordered up.

VICTORIA AND LEIGH DOANE II.

were put down in a large grass field interspersed with cedars, a very likely looking place for a covey. Victoria is a dark red bitch with a white blaze on her face and two white feet, and is speedy in gait, but appeared to lack nose. Leigh Doane II. is one of the most level-headed Irish setters the writer ever saw, and showed fine nose and tractability and free range. Predmore, her handler, worked her to good advantage and she showed fine training. Several fields and thickets were drawn blank after being carefully worked, so these dogs were likewise ordered up and the first two put down again.

FAIRY GLEN AND BUCKINGHAM,

being started a second time, in a field which a new pilot declared contained a fine covey of quail, were worked carefully against the wind, and as dog and handlers approached the corner of a fence near the road, where Leigh Doane II and Victoria were being held in readiness for their turn again, somebody stumbled over a hare and Leigh Doane II. broke loose and gave chase. This and the noise caused by the pilot shooting a hawk which flew over, flusned a large covey which was hiding in a deep ditch in the field. These birds took to a heavy cedar and bayberry thicket near at hand. Buckingham here pointed but failed to locate. Fairy Glen then pointed and Buckingham called to back, which on coming up he failed to do, but moved up to the bitch, pointed by her side for a few seconds, then moved ahead and the birds got up. The dogs were then ordered up, the heat being given to Fairy Glen, and the party returned to the club house for dinner.

After dinner Victoria and Leigh Doane II. were put down again to the south of the club house. Fairy flushed a single bird in the open, an excusable fault, as she was urged on by her handler, Shorebrook. Victoria also flushed a single bird in the sedge grass. More fields were worked over, but no quail found. It was becoming discouraging. The dogs were taken up, and the next day were put down in the sorgum stubble back of the club house at 7:30 A. M. In five minutes Leigh Doane II. pointed a covey in a squatting position staunchly in the open, the wind being full in her face. Victoria, handled by Shorebrook, coming up to back, rushed in, and, without hesitating, forged ahead and put the birds up. Leigh Doane II. remaining firm and dropped to wing when the covey arose. She was at once given the heat. This was a very pretty piece of work on the part of Chief's daughter and showed that Predmore, her handler, had given her very careful training.

FAIRY GLEN AND LEIGH DOANE II.

were at once put down to contend for first place. The last covey had taken to an almost impenetrable thicket of briers, where it would be impossible to move them from. So it was decided to use Mr. DeHaven's Don, an old-time setter, to start them, which he soon did, but the puppies failed to find the single birds, and the judge ordered the brace up and all returned to dinner. At 2 o'clock the same dogs were put down again and the heat was soon finished, Leigh Doane II. winning first prize and Fairy Glen second prize of the puppy stakes.

At 10 A. M. of this same day, owing to the great scarcity of quail it was agreed to draw a judge to decide a separate heat in the all-aged stakes and thus facilitate the trials, which were consuming too much time. Cassino Gladstone not being present, the owner of Leigh Doane agreed to wait a day longer for her appearance, and Mr. Jas. Watson, of Philadelphia, was appointed to judge the next brace in order.

BRUCE AND KNOB

were cast off, and after hunting two hours and failing to find game, they were taken up and the party went to lunch. After lunch the dogs were put down in the thicket back of the house. Knob pointed a brace. Bruce backed, but the thicket being very dense the noise made by the handlers coming up flushed the birds. Bruce dropped to wing. Bruce then pointed a single bird and Knob failed to back and ran in. The heat was given to Bruce.

GROUSE AND JESSIE

were put down, and L. E. Wills, of Lehighton, Pa., was appointed judge of the heat. Taking a southerly direction in the open sugar stubble, Grouse ran by with the wind and flushed a large covey of quail, which took to a cedar thicket. The

dogs were ordered on by the judge. Grouse pointed to a single bird. Jessie was called to back but failed to do so and ran in and flushed. Grouse then made three more points on single birds which Jessie would not respond to, when Hoff man, her handler, withdrew the bitch, considering her out of condition, and the heat was awarded to Grouse. Grouse is a large orange and white setter dog, of part native blood, and a remarkably fast and wide ranger, and with more work will be a hard one to beat. His handler, Shorebrook, states that he never tires. Jessie, red Irish setter bitch, is well-known as a bench show winner, and has been doing good work since the season opened, her failure in this heat can doubtless be attributed to her condition, as her nose and head were very feverish.

LEDA AND WRAGG

were the next put down and drew three or four fields blank. Leda was the winner of the All-Aged Stakes last year, but on this occasion did not seem to have her usual excellent nose, for on ranging down a large stubble she ran by a covey, which flushed and took to the woods, where it was impossible to follow them owing to the dense briers. Wragg is a very handsome Gordon setter, rather heavy in movement, but covering considerable ground for his size and make up. In returning to the club house Leda made game at the corner of a fence, when a large covey rose from a dusting place about twenty yards from the bitch, near her handler and owner, Colonel Richardson, and took to a cedar thicket. Going in the direction where the birds were marked down, a second covey of scattered birds got up in ones and twos near Mr. Emlin, Wragg's owner, who shot at last bird and missed. Both Leda and Wragg dropped handsomely to shot. Leda proved the best ranger in this unfinished heat when, darkness coming on, the dogs were taken up for that day.

The following day Wragg and Leda were cast off again at 7:30 A. M., but failed to find birds, though a large area of country was carefully worked over. The judges therefore decided to take up this pair and put down Creole and Leigh Doane II., which last-named bitch was also entered in the All-Aged Stakes. Creole is a very handsome Irish bitch, the property of Major Wibert, of Mauch Chunk, and will make a hard one to beat when she has had more work on quail. These bitches did some very good ranging, and more country was worked over with the same poor results, when it was plainly seen the trials could not be finished without material to work upon. A consultation was held at the club house, and it was decided to call the All-Aged Stakes off and to allow only to stand the record of the Puppy Stakes, which had resulted in Leigh Doane II. winning first prize and Fairy Glen second prize.

The failure of a successful termination of these trials demonstrates the fact that it is not practicable to hold such contests in the North unless the grounds are strictly preserved, and that the South only, where quail are plentiful and the cover suitable for finding single birds after the covey is flushed, is the region to be selected hereafter by the Philadelphia Kennel Club.

Where birds were found at all at the Rio Grande grounds they invariably took to cover where they could not be followed by dog or man. The work your correspondent saw the dogs do was very good, especially that of Leigh Doane II. Buckingham, although a beaten dog, was one of the best in the Derby; certainly the finest ranger, and had it not been for the manner his handler worked him he would not have been defeated. MARK.

THE EASTERN FIELD TRIALS.

THE All-Aged Setter Stakes of the Eastern Field Trials Club commenced at High Point on Monday, Nov. 16. There were twenty-three entries, all but three of which started. None of the judges selected were able to be present, and Messrs. B. F. Wilson, of Pittsburgh, Pa.; F. R. Hitchcock, of New York city, and W. A. Coster, of Flatbush, L. I., were appointed instead. We had beautiful weather all through the week. The birds were fairly plenty, although not so many were found as in previous years. The dogs were in much better condition than they were last year, and although the work was not quite up to the average, there was a very creditable showing. Many of the dogs had not had work enough to put them in proper condition, and on this account the trials should be held at least a month later, and two months would be still better. In January the vegetation is killed and the birds are more in the open, and the trials could be run through much quicker then. The handlers are unanimous in this opinion, and the club will consider the matter, and, it is to be hoped, will make the change. Following is the running:

BRANDON AND GLADSTONE'S BOY.

This brace was first on the card, but owing to mistaken direction as to place of starting, Brandon and Countess, one of the second brace, were not on hand, and the third brace was run first. We give the running however in its regular order. The morning was perfect, there had been a hard frost, but the sun had shone bright and except in the shady places it had disappeared. We left the hotel at a quarter past eight and as the other dogs were not on hand Sportsman and St. Elmo IV. were put down and at the finish of their heat Brandon, handled by C. L. Dick, and Gladstone's Boy, handled by Chas. Tucker, were cast off in some pines and worked down to a valley and then along the edge of some woods where Brandon flushed a single and Glad put up the rest of the bevy. A little further on Glad challenged but soon went on. Brandon then made a nice point which Glad honored at once. Brandon then drew on a short distance and again pointed, but went on a short distance and gave it up. Then in some woods Glad stopped just as a single bird got up, and Brandon dropped to one that laid until Mr. Dick to order flushed it and missed, when several more got up and Brandon was a trifle unsteady, but dropped to order. The handler of Brandon was not in condition to run him, and Mr. Dick took him in charge, although he had not previously handled him. We then took a turn back but only two more birds were found and they were flushed by the judges. We then crossed a ravine to where some of the birds had settled and Brandon made a nice point which Glad backed in fine style, Mr. Dick to order flushed them and made a double, and Brandon retrieved one in good form, and Glad pointed the other and started to retrieve it but Brandon got it and brought it in. He then made a point to a brace that flushed wild and flew back over the dogs, both remaining steady. Brandon then made a capital point to a single, Glad did not see him and went too close to the bird which got up just as he dropped. This was very close to, if not quite a flush. Working up through a meadow, Brandon made a point and one flushed wild. Several then got up near Glad, he then made a point to the bevy and soon after Brandon nailed a single in fine style. They were then ordered up and the heat was awarded to Brandon. Down one hour and three quarters. Brandon ran a good heat considering that he was unacquainted with his handler. Gladstone's Boy was all off in nose and could do nothing.

COUNTESS AND BLARNEY.

Countess, handled by W. Seager, and Blarney, by T. M. Aldrich, were at once put down and worked along a hillside, when Countess pointed a hare, and nothing more was done, although we worked over some good ground until half-past twelve found us at the barn at the Model Farm, where lunch was spread. After an hour's rest, the dogs were again put down in the stubble field near the house. Neither dog went very fast, although at times both showed a fair amount of speed. After beating through the field, Blarney made a point near the fence. Countess did not back, but went on and flushed a bird, and the bevy, which was somewhat scattered, got up from both sides of the fence and settled in the adjoining field of briers and weeds. Working round to get the wind we beat toward them. Countess was the first to find. She pointed a single, and a second or two later Blarney also pointed a short distance beyond her. Seager to order flushed and killed the bird, when several more got up and among them the one in front of Blarney. Countess retrieved her bird in good form. Blarney then flushed one down wind, and soon after put up one that he should have pointed. A little further on he pointed one, and Countess, a little beyond him, also pointed the same bird. Aldrich to order flushed and missed, and Blarney was not quite steady, but dropped to order. Countess then half pointed, but went on, and as Blarney worked that way one got up within ten feet of where Countess had challenged. A little further on Blarney pointed a single, and Countess went up to him and also pointed. Aldrich flushed to order and missed. They were then ordered up and the heat was awarded to Blarney. Down one hour. Blarney was handled by T. M. Aldrich, of Manton, R. I., and Countess by W. Seager, of Sewickly, Pa. The heat was not a brilliant one, but as it was run in the middle of the day it was perhaps not a fair test of the merits of the dogs.

SPORTSMAN AND ST. ELMO IV.

This brace was the first to go down in the morning, owing to the absence of some of the other dogs. They were put down at 8:45 in a stubble field. Both dogs have run before, and need no introduction to our readers. Sportsman was handled by Chas. Tucker, of Stanton, Tenn., and St. Elmo by E. H. Haight, of Allaire, N. J. Both started off at a good gait with Sportsmen in the lead, and as he went down to the corner near some woods, he ran into a bevy and scored a flush. The dogs were then worked toward the scattered bevy, and both scored a flush of a single bird each. Sportsmen then whirled round on a beautiful point to a single, which Tucker, to order, flushed, but as it flew over the judges he did not shoot. Sportsman then made a point and then roaded a short distance and again pointed, but nothing was found. We then worked through a cornfield to a stubble field, where Sportsman pointed and roaded, but he was behind the bevy, which flushed as the judges came up, and scattered in some open woods. Following them, one got up near St. Elmo as he went into a thicket, and soon after another one flushed near him. Sportsman then got a point that St. backed indifferently. Tucker, to order, flushed the bird, which he killed, and Sportsman retrieved it nicely. A little further on St. Elmo made a capital point to a single, which Haight, to order, flushed and killed, and St. Elmo retrieved. We then worked out into a sedge field and Sportsman challenged but went on, and as the spectators came up they put up a bevy there which settled in the woods. Following them up, both dogs pointed very nearly at the same time. The bird in front of St. Elmo flushed as his handler came up. Tucker, to order, put up the one in front of Sportsman. We then turned down a branch and through some woods, when Sportsman half pointed, but soon moved on and shortly after he pointed a bevy in the edge of some pines, and Tucker, to order, flushed them. This ended the heat, with Sportsman the winner. Down one hour and twenty minutes. The work of both dogs was far below expectation. They are both well known as about as good as the best, and a grand heat was looked for. Sportsman was off in nose, and St. Elmo had been worked but a few days and was in no condition to run.

CLIFFORD AND BELLE OF PIEDMONT.

Both of these dogs ran here last year and Belle ran here this year in the Members' Stake. Clifford was handled by John Lewis and Belle by Capt. C. E. McMurdo. Both have greatly improved since last year, but Belle has improved the most and showed much better under her handler than she did in the Members' Stake. Both started off well, but Belle had the legs of her antagonist. As Clifford went by a bunch of alders a single bird flushed, and soon after he pointed where it got up. We then took a long turn through the woods, down to the brook where Belle challenged and then made a cast and dropped on point and remained for some time until her handler came up, but nothing was found, the birds had probably run. She made a cast in the woods and struck a bevy, but whether the one that ran from her or another one, could not be determined. Clifford came up and backed indifferently to order. Capt McMurdo flushed the birds to order and we followed them to the edge of the woods, where Belle pointed a single which her handler flushed to order and missed. She went but a short distance and pinned another which the Captain killed. Clifford then made a nice point, but nothing was found. Soon after Clifford again pointed very nicely and commenced roading, Belle came up and backed a second, but caught the scent and pointed the bevy, which Capt. McMurdo to order put up and killed one. They were then ordered up and the heat awarded to Belle of Piedmont. Down one hour and eight minutes. This was a very fair heat, Belle showing better work than we had yet seen.

NELLY II. AND GUS BONDHU.

These dogs are also well known. Nelly was handled by W. Tallman, and Gus by Chas. Tucker. They were cast off in a large cornfield, and given a spin, both of them going in capital style. Nelly was the fastest. After a turn in the corn they were worked toward the last bevy, which had settled in the woods. Gus made a false point at the edge of the woods and Nelly backed him. A little further on Nelly pointed and Gus backed her. She then drew on a few steps and located a single very nicely, which Tallman, to order, flushed. Gus then pointed and Nelly came up beyond him and challenged and was dropped. Gus then roaded a running bird and pointed again. Nelly made a cast ahead of him and flushed the bird. A little further on Gus made a point just as the bird got up. Nellie then got in a good point to a single that Tallman, to order, flushed and winged. Nelly, sent to retrieve, took the trail of the bird, but was called off; she then challenged, but the bird got up wild before she had a chance to locate it. She soon had another one fast and Tallman, to order, flushed and killed it, and Nelly, after considerable time and help, found and retrieved it. Gus then found a bevy and pointed it in capital style; Tucker, to order, flushed them and missed. Following them up Gus challenged and went on a short distance and pointed, and the bird flushed some distance ahead of him. Nelly then got in two good points in quick succession, both of which Tallman flushed to order. Gus then made a nice point to a running bevy, and drew on and pointed several times. Nelly backed him but went on when he moved, and made a cast for them and pinned them in fine style; Tallman, to order, put them up and scored a miss. They were then ordered up with Nelly the winner. Down forty-nine minutes. This was a capital heat and lots of good work was done with but few mistakes.

WINDEMERE AND DASHING NOBLE.

This brace was at once put down in a meadow. Windemere, handled by Haight, is a big dog with a slashing way of going. He is a dog of much promise, but had been with his handler but a few days, and had not had work enough to steady him. Dashing Noble ran in the Members' Stake. He was handled by Seager and did much better than when run by his owner. Windemere was the first to find, but he ran into them and scored a flush. We then turned toward town, and worked over considerable ground without a find. At last, while crossing a fence, a bird flushed and Dash dropped just a second before another one got up. Soon after the spectators flushed a bevy and we followed them into some sprouts. Windemere was again first, and this time he pointed very nicely. Haight to order flushed and killed the bird, and Windemere broke shot, but dropped to order. He then retrieved, and soon after again pointed, but nothing was found. Dash then made a nice point to a single, that Seager to order flushed and winged, and Dash retrieved it very nicely. A little further on Windemere made a very stylish point. Haight to order put up the bird and Windemere was a trifle unsteady, but dropped to order. He then dropped just as one got up near him, then in the open he made a point, but moved in and scored a flush. They were then ordered up and Dashing Noble was declared the winner. Down one hour and three minutes.

PRINCESS HELEN AND SLOCUM.

This brace was put down at nearly half-past 5, and after a five-minute spin were taken up, to go down again in the morning. Nothing was done except that each made a point to which nothing was found. On Tuesday the day was more perfect if possible than Monday. It was too warm to hunt for meat, but just right to loaf around with dog and gun and enjoy to the full the pleasures of the field. We left the hotel a few minutes past 8, and the dogs were put down fifteen minutes later, about one mile northeast of the town, in a field of sedge and brush. Both dogs ran here last year. Princess Helen was handled by John Lewis and Slocum by T. M. Aldrich. Both ran better than last year, and did some good work. Starting off at a good rate of speed, Helen went but a short distance before she made an elegant point to a bevy, and Slocum backed her, and then drew on but stopped to order. Lewis put up the birds and missed, and as Helen showed symptoms of unsteadiness he caught hold of her and steadied her. Then in the woods after them both pointed, almost simultaneously, a bird each. Aldrich to order flushed the bird in front of Slocum and killed it. Lewis then put up the one that Helen was pointing, and then several more got up. The dogs then went on, and one got up suspiciously near Slocum. Helen then pointed a single, that flushed as we came up, and she roaded out the trail very nicely. Slocum then pointed where a bird had been flushed, and Helen backed him. Both then struck out at speed, Helen showing up quite speedy and very stylish. Beating through an open field Slocum pinned a bevy with his tail straight in the air. Helen came round between him and the birds, with her head toward him, and partly backed, and then went behind him and stopped to order. Aldrich went up and the bevy rose, and he killed one that Helen retrieved in good form. We then took a turn over a knoll and swung back into some woods after them. Helen was the first to find, making a beautiful point to a single that got up as her handler and the judges came up, and then several more got up. Slocum challenged, but the bird rose before he located it. Lewis killed one, which Slocum retrieved very well. Helen then pointed and roaded, and was joined by Slocum, and he also roaded, but Helen was the quickest and located the bird in fine style. This was very well done. They were then ordered up, and Princess Helen was awarded the heat. Down altogether forty-eight minutes This was a good heat.

PENDENNIS AND ELCHO, JR.

These dogs have never before run in public. Pendennis, handled by Mitchell, is a well-formed little dog, with no great pretentions to beauty, but is quite a workman for a youngster. He will also run in the Derby. Elcho, Jr., handled by Tallman, is well known as a winner on the bench. He was entered here last year, but was withdrawn as he was not in good form. He showed quite a turn of speed, but was not so stylish as his competitor, and did not have so good a nose. They were put down in an open field, and both went at a good rate of speed and ranged wide. We then beat out a stubble field and Pendennis dropped to a bevy. Elcho did not see him, but got a little scent and drew too close and the birds went up. Both were steady to wing, and a moment later two or three more got up. Following them into some woods, both got a point at the same time, and both handlers to order flushed and killed. Pen was steady, but Elcho made a snap for his bird, which went partly over his head. Both dogs retrieved their birds in good form. They were then sent on, and a bird got up near Elcho, and Pen made a point and Mitchell flushed the bird, but Pen held his point, and Elcho came up and backed him and another bird was flushed to the point. This was a good bit of work. A little further on Pen pointed and a few seconds later Elcho also pointed the same bird, which had run. Tallman to order flushed but did not shoot. We then worked over to a run, where Pen dropped to a single just as it rose. A little further on some one flushed a woodcock that settled close to Pen, but at once started again, and as it was disappearing in the distance Mitchell cut loose and brought it down. Several of the party started for the meat, but Elcho was too quick for them and Tallman bagged the bird. We then went back to the woods, where Pen dropped on point, but went on as his handler came up. He was right, however, as a bird was flushed near them a little later. We then turned back through the stubble and worked over considerable good-looking ground without a find. Then in some sedge both challenged and roaded a short distance. Elcho went on, but got too close, and one flushed and the rest of the bevy got up. Following them up, one flushed on top of a knoll near Tallman; then in some pines Elcho pointed and drew on. Then Pen made a point and drew a short distance, and as we came up the bird flushed behind him. Meantime Elcho made a point to a single that Tallman to order flushed and missed. Pen then dropped on point and Elcho, not seeing him, went ahead and stopped to order and then half pointed. Mitchell to order put up the bird and killed it, and Pen retrieved it nicely. This ended the heat, with Pendennis the winner. Down one hour and twenty-one minutes. This was a good heat, considering that it was hot and much of the work was on dry leaves.

PLANTAGENET AND ROSE OF KILLARNEY.

After a rest of fifteen minutes this brace was called for. Plantagenet is well known and great things were expected of him, but as a whole his work was very disappointing. Rose is yet young. She is very fast, and is reported to be a good one, but she did not show up to advantage. Plantagenet was handled by Tallman and Rose by Luke White. They were put down in a stubble field. Both went fast and ranged fairly well. Rose was the first to find. She pointed a bevy in a thicket close to a branch. The birds were flushed, and some of them settled on top of the hill near by. Meantime Plantagenet had made a wide cast up the branch, and it was some little time before he was brought back. Following them up Rose dropped just as one got up. Plantagenet then made one of his stylish points to a single, and Rose backed him nicely. Tallman to order flushed the bird, both dogs remaining steady. A little further on one got up near Rose, and then Plantagenet dropped to a single that flushed as the judges came up. A little further on one flushed near Plantagenet on bare ground, and soon after he pointed where one had been seen to rise, but he held his point until his handler came up, when he drew on and again pointed two or three times. Then Rose pointed and a few seconds later Plantagenet also pointed and a bird was flushed before the judges came up. Then down near the branch Rose challenged and a bird got up behind her. Plantagenet then made two or three beautiful points, but they were false. We then beat out a lot of ground without result, but finally Rose got a nice point to a bevy, which she roaded out very well. White flushed them as he came up and scored a miss. Plantagenet had made a wide cast and would not come back when called. Finally he was brought round, and both dogs worked over the ground, but neither could smell a bird, nor did they appear to try, and after considerable time spent feeling around, they were taken up and the next heat was run and they were then put down again in some pines among scattered birds. Plantagenet got in several very nice false points and finally a good one to a bevy. Rose came up and backed very indifferently, and then drew on and half pointed and stopped to order. Tallman put up the birds and killed one, which Plantagenet retrieved well, after a long search and considerable help from his handler. Following them into some woods Plantagenet made a beautiful point, then drew on and located his bird nicely. Rose partly backed him to order. Tallman put up

the birds, both dogs remaining steady. Then several more flushed wild, and a little later Rose flushed one, and they were ordered up and the heat awarded to Plantagenet. Down altogether one hour and fifty-two minutes. Taken as a whole this was a very poor performance. Although Plantagenet shows lots of style on point, the fear that he is pointing false takes away all the pleasure. He is capable of doing good work and may do better next time.

GATH'S MARK AND QUEEN ALICE.

This was the last brace to run, neither has run before in public. Mark, handled by Tucker, is a fine, slashing going dog, with lots of speed and style. He is entered in the Derby, and if he goes all right, he will make a good race. Queen Alice, handled by Seager, is a well known bench show winner. She moves very nicely, and has quite a turn of speed, and is very stylish when on game; she has recently weaned a litter and was in no condition to work. They were put down in a stubble field, and had gone but a short distance when Mark flushed a single, and dropped to wing. Alice came up and as soon as she saw him backed him in beautiful style. As Tucker came up, both dogs went on, and Alice ran up a single, and dropped, and the rest of the bevy then got up, and settled across the brook and could not be found. We then beat over a lot of ground without a find, and at a quarter to one found ourselves at the house of Mr. Holden, where lunch was spread, and they were taken up, and after nearly an hour were put down again and considerable ground was worked over without result, except that Mark had a bit of a race with a hare. Finally Mark dropped on point to a bevy, which Tucker to order flushed and of which he killed one, which Mark retrieved nicely. Following them up down wind several flushes were made, for which the dogs were not greatly to blame, as the birds were wild. Mark then made a beautiful point to a single that Tucker flushed to order. They were then ordered up and the heat was awarded to Gath's Mark. Down altogether an hour and a quarter. This finished the first series, with the following result:

First Series.

Brandon beat Gladstone's Boy.
Blarney beat Countess.
Sportsman beat St. Elmo IV.
Belle of Piedmont beat Clifford.
Nelly II. beat Gus Bondiu.
Dashing Noble beat Windemere.
Princess Helen beat Slocum.
Pendennis beat Elcho, Jr.
Plantagenet beat Rose of Killarney.
Gath's Mark beat Queen Alice.

Second Series.

BRANDON AND BLARNEY.

This brace was cast off at three o'clock in an old field and worked down to a branch where both challenged, and a short distance further on Brandon dropped on point as if shot, and Blarney backed him. As Dick went up to flush Brandon raised up and drew on in capital style a long distance, and Dick flushed a large bevy and firing into the brown knocked out three with one barrel, and Brandon retrieved nicely. Then turning into some woods Brandon made a point to a running bird, and Blarney backed him. Brandon then drew on a short distance and both dogs pointed, Brandon drew on and the bird flushed. Dick fired but was ordered not to kill. Blarney then pointed and Brandon backed him. Blarney was pointing from over-caution, and could not be urged away from his handler. A little further on Brandon pointed at a treetop, and when the bird flushed he was a trifle unsteady. He soon had another one fast that Dick flushed to order and fired, both dogs steady. Brandon then pointed, drew on and scored a flush. Blarney then went a few steps and half pointed, and Brandon then pointed a bird that flushed as we came up. We then worked through to the upper edge, where Blarney made a point to a bird that Aldrich to order flushed and missed. We then took a long turn and spent a lot of time uselessly. Finally Blarney pointed false and Brandon backed him, and this ended the heat, with Brandon the winner. Down one hour and twenty-three minutes. This heat was prolonged beyond reason, and should have been decided in twenty minutes, as Brandon in this time plainly showed up the better dog. Blarney was over-cautious and would not let out at all.

SPORTSMAN AND BELLE OF PIEDMONT.

This brace was put down in a field of sedge where both made points where birds had probably been flushed. We then worked over considerable ground without result until we came to the sprouts where Foreman, in the Members' Stake, found the woodcock. Belle here made a point to which nothing was found, although the spectators flushed a bird there when they came along. Turning down a run we beat through to a stubble field, where Belle went on the upper side and Sportsman on the lower. He had the luck of the birds and wind and whirled on a beautiful point to a bevy which were almost under the horses' feet, and a few seconds later they got up and settled in some sprouts where Sportsman made a nice point to a single and was handsomely backed by Belle. Tucker to order put up the bird. Belle then got in two beautiful points in rapid succession, to each of which Capt. McMurdo to order flushed the bird; then Sportsman dropped to a single just as it rose. Belle then pointed and a second later Sportsman also pointed the same bird, which Tucker flushed and missed. Belle then pointed a single and Sportsman backed her nicely, the birds flushing as we came up. Belle soon had another one that got up wild before the judges came up. Belle then pointed a running bird and Sportsman came up and also pointed. Belle roaded to the left and Sportsman to the right. Belle had the best of it and located her bird in fine style, and the Captain flushed it. This was very well done. We then turned back along the edge and when near the lower end Belle swung in and made a very gamy point to a single that the Captain flushed to order. As soon as she got the word she took a few quick strides and nailed another. This was also flushed to order, and they were ordered up and Belle declared the winner of the heat. Down fifty-two minutes. This was a rattling good heat. Most of the work was in thick sprouts and on dry leaves, and could not be plainly seen, yet the work was of such a character that those who saw even but a portion of it felt well repaid for their rough scramble through the thicket. This finished the work for the day.

NELLY II. AND DASHING NOBLE.

Wednesday morning was pleasant, with a gentle breeze from the southwest; it was partially cloudy and the air was moist, giving promise of a good scenting day. We left the hotel a few minutes before eight and the dogs were put down fifteen minutes later in a field of sedge. Dash soon flushed a single bird and went for it a short distance, but soon returned and put up the rest of the bevy and stopped to wing and Nelly dropped. We then beat out the rest of the field, and at the lower corner Nelly dropped on point to another bevy that Tallman to order flushed and scored a very neat double miss. We then turned into some sprouts after the first bevy. Nelly found first and pointed, but the birds were running and Dash struck them ahead of her and also pointed and the birds flushed as Seager came up. A little further on Dash again pointed a single that flushed as the handlers came up. Nelly then dropped just as one rose, and soon after Dash made a point to a bird that flushed wild, and Dash ran after it and out of the race, as they were ordered up and the heat awarded to Nelly. Down fifteen minutes. Except for his unsteadiness Dash showed up very well, and with proper handling and plenty of work will do better next year.

PRINCESS HELEN AND PENDENNIS

were at once put down in the field of sedge where the birds were first found, and after a short spin sent after the second bevy in the sprouts where Pen dropped to a single that Mitchell to order flushed. He then went a short distance and dropped just as one rose; this was very near a flush. Helen then pointed, but soon went on. Pen meantime pointed and then roaded up to a flush. The birds were running and Helen roaded a short distance and turned and backed Pen as he stood backing her. We then went to a stubble field where Helen pointed and Pen backed or pointed, we could not determine which. Both then roaded and pointed, and then drew on and Helen swung round to get the wind and made a stylish point. Pen meantime pointed and then drew on as Lewis to order put up the birds and killed one, that Helen retrieved nicely. A little further on Helen again pointed, and Pen came round out of sight of her and pointed the same bird, which flushed as the handlers came up. Then in some pines Helen got in a very nice point to a single that Lewis to order flushed. This decided the heat, with Helen the winner. Down forty-six minutes. This was a good heat and some very pretty work was done.

PLANTAGENET AND GATH'S MARK.

This brace was at once cast off in a small stubble field. Plantagenet took a few jumps and dropped on a very gamy point. Tallman went ahead of him, but as he did not put up the birds he thought that it was a false point, and hit him a lick and ordered him on. At this a bevy flushed close by him. We then went into some pines, where Mark scored a false point, and a little further on they were found backing each other very prettily. Soon after Mark was found sitting down on point, and as Plantagenet came up he backed him a short time and then roaded up the bird. We then went into a narrow strip of pines, where Plantagenet pointed, but Tallman ordered him on, thinking it was false, but as the judges came up a bird flushed near them. The dogs were then worked toward some birds that had been marked down. One flushed near Plantagenet, and he stopped just as Mark had established a point on another. Tucker had seen the bird go, and as he came up he allowed that his dog was backing, but he ceased to smile when another got up, and Tallman had the laugh all to himself. A little further on Plantagenet made one of his stylish points, which Mark at once honored in fine style. The birds bushed as we came up and Tailman scored a miss. We then went on and Mark pointed, but went on of his own accord. Then in some woods Mark made a nice point and Plantagenet backed him in fine style. This ended the heat, with Gath's Mark the winner. Down thirty-two minutes. This finished the second series with the following result:

Second Series.

Brandon beat Blarney.
Belle of Piedmont beat Sportsman.
Nelly II. beat Dashing Noble.
Princess Helen beat Pendennis.
Gath's Mark beat Plantagenet.

Third Series.

BRANDON AND BELLE OF PIEDMONT.

This brace commenced the third series. They were put down in a pine thicket and worked down to a run which we crossed and beat out a nook when Brandon challenged and then dropped but went on to order, soon after two flushed under the horses' feet. Brandon then dropped on point to a bevy that Dick, to order, flushed and missed. A little further on Belle made a nice point and Brandon came up and half pointed and drew to point just as the bird rose. Then in some pines Belle ran up one and then pointed another that her handler flushed to order. Meantime Brandon pinned one in the sedge which Dick flushed to order and killed. Sent to retrieve, Brandon dropped just as another one rose and then went to the bird, but it was so badly shot that he refused to touch it. Belle then made a good point and as Brandon came up he backed indifferently and then went round him. Both then roaded a short distance and Belle made a cast and located the bird in fine style. Brandon roaded by her and got too close and scored a flush. Belle then roaded and half pointed just as her handler, who was ahead of her, put up the bird and killed it, and she retrieved it. They were then ordered up and the heat was awarded to Belle. Down sixteen minutes.

NELLY II. AND PRINCESS HELEN

were at once put down in a field of sedge and worked down through a stubble field to a branch and then up into some pines, where Helen made a stylish point. Nelly came around and stopped to order. Lewis put up the birds and Helen took a few steps and pointed and then roaded, but Lewis called her off. She was right, however, as when the judges came there they flushed a bird. We then took quite a turn without a find, but as we crossed a ditch to an open field Helen challenged and went on a few steps and pointed, but as her handler came up she commenced roading. Nelly came round and challenged, and then made a cast and nailed a bevy in capital style. Tallman to order flushed them and killed two at one shot, and Nelly retrieved one in good form. Meantime Helen was roading out the trail in good style. We then turned into some woods, where Helen got in a good point to a bird that Lewis flushed to order. Nelly then pointed a bird that flushed wild. Helen then flushed one, and Nelly soon after did the same. Then in some woods Helen was lost, but Nelly found her on point and backed her. Lewis was calling and Helen left her birds, which flushed as the judges came up This was unfortunate for Helen, but she had been pointing for some time. Following them up Helen ran up one and soon after made a nice point. Nelly came up and drew partly round her and stopped to order. Lewis to order flushed the bird. A little further on Nelly put up one and stopped. We then turned into a field of sedge, which Helen beat out in fine style, but Nelly appeared tired and did not go at speed. Then in some woods Nelly pointed and Helen backed. Tallman to order flushed. Each then pointed false, and as the heat had lasted for a long time, and it was decidedly hot, Tallman requested the judges to decide, which they did by awarding the heat to Princess Helen. Down one hour and thirty-five minutes. This finished the third series with the following result:

Third Series.

Belle of Piedmont beat Brandon.
Princess Helen beat Nelly II.
Gath's Mark a bye.

Fourth Series.

BELLE OF PIEDMONT AND GATH'S MARK.

It was now getting interesting, as there were but three left in. All of them were good ones and every move of the dogs was keenly watched. They were put down in a stubble field a few minutes before twelve and after nearly a half hour's work without a find they were taken up for lunch which was waiting near by, and at a quarter past one they were again put down in an old field. Mark went but a short distance before he pointed, but nothing was found. A little further on Belle made a very pretty point and Mark came round, and catching the scent before he saw her, also pointed and a large bevy was flushed from between the dogs. Mark then went on and pointed, but soon moved on, and as Belle came round she also pointed at the same place and was handsomely backed by Mark, but the birds had run away and were not found. We then took a turn without a find until we came back to a field of sedge that bordered a piece of stubble, when Belle made a stylish point to a bevy and was handsomely backed by Mark; part of the bevy rose as her handler came up, but she still held her point and two or three more were put up ahead of her, and when the dogs were sent on one more got up near Mark. The birds settled in some woods. Mark was first over the fence, and after a few strides he came to a point to a single that Tucker to order flushed and missed. Belle then pointed one that flushed as her handler came up, and then another one got up and the Captain missed it. This was very pretty work. Belle remaining perfectly steady. We then beat out considerable ground without a find, until we came to a cornfield in, a valley, when Belle caught scent and drew a few steps, and finding the direction, went like a rocket with Mark a little behind and at one side of her, straight to her birds, and jumped into a very gamy point, which Mark instantly honored in grand style. The birds flushed a few seconds later, both dogs remaining steady. This was a very fine piece of work. The dogs then went on and a bird flushed near Belle, but we could not determine whether she was to blame or not. Following them up Mark got in a capital point to a single in a cornfield that Tucker to order flushed and killed, and Mark retrieved it nicely. We then went down to a run, and as we came up a black pig started along the edge and scored a flush, and as we came up several more got up near the handlers. Belle was not going so well as she had been and appeared tired. Mark, although sick, was going nicely, and after beating out the thicket, he swung into some sedge and nailed one in capital style. Tucker to order put up the bird and the heat was ended, with Gath's Mark the winner. Down altogether an hour and three-quarters. This was a capital heat, both dogs doing excellent work. Belle is a very high-spirited animal, and is used to hunting in her own way, and her handler explained that her tired appearance was owing to her not liking the way she was called back and made to work in a different direction from that she thought best, and that she was disheartened instead of tired. This ended the fourth series. Following is the result:

Fourth Series.

Gath's Mark beat Belle of Piedmont.
Princess Helen, a bye.

Tie for First Place.

GATH'S MARK AND PRINCESS HELEN.

This was the final heat for first place. They were put down in a field of sedge and given a spin, and then worked up along a branch and then to some woods, where Helen dropped on point just in front of the horses. Mark came up and also pointed; he then cast into the woods and made a point, and Helen backed him, but the birds went before we got there. A little further on Mark dropped to a single that Tucker flushed to order, but did not shoot. Mark then went a short distance and again pointed, but as his tail was not quite still Tucker ordered him on, and as he took a step the bird went up. This was well done, as the bird was down wind. Then in a thicket he again pointed just a second before one flushed. We then went some distance without a find until we entered some woods, where Helen made a stylish point, and Lewis to order put up the bird; meantime one flushed close to Mark. We then took quite a tramp, Helen going at speed but Mark had a touch of dysentery and appeared weak and tired, he was game, however, and kept going. Finally in some pines he made a nice point to a bevy which Tucker flushed to order and tried for a double and succeeded in bringing down but one. They were then ordered up and the heat was awarded to Gath's Mark, and he was declared winner of first place at half past four. Down one hour and sixteen minutes. This was a very good heat and a fitting wind up, as this proved to be the finish. Belle of Piedmont was selected as the best dog previously beaten by the winner to run with Princess Helen for second place, but the handlers agreed to divide the honors and money equally, and the race was finished.

THE ALL-AGED POINTER STAKE.

Eighteen of the twenty-two entries in the All-Aged Pointer Stake filled. Of the four others, Scout was dead, and the three bitches, Flotsam, Jetsam and Pocahontas, were in season. As a whole, the work of the pointers was ahead of that of the setters. Many of the heats were very brilliant, and the pointer men may congratulate themselves upon the marked success of their favorites. The judges were Messrs. B. F. Wilson, J. O. Donner and W. A. Coster. The dogs were drawn to run as follows:

GRAPHIC (Jas. L. Anthony, New York), liver and white dog, 4½yrs. (Bonus Sancho—Fursdon Juno),
against
DONALD II. (J. H. Phelan, Jersey City, N. J.), liver and white dog, 3yrs. (Donald—Devonshire—Lass).

TAMMANY (F. R. Hitchcock, New York), liver and white dog, 2¼yrs. (Tory—Moonstone),
against
NED (Charles Heath, Newark, N. J.), lemon and white dog, 3½yrs. (St. Valentine—Beulah).

RUE (Bayard Thayer, Boston, Mass.) lemon and white bitch, 6yrs. (Snapshot—Ruby),
against
MADSTONE (Westminster Kennel Club, Babylon, L. I.), liver and white bitch, 2¼yrs. (Tory—Moonstone).

BLOOMO (Jas. L. Anthony, New York), liver and white bitch, 4yrs. (Leach's Bang II.—Whippell's Lady),
against
SNIPE (S. L. Pettit, New York), liver and white dog, 3½yrs. (Croxteth—Gyp).

JILT (Neversink Lodge Kennels, Guymard, N. Y.), liver and white pointer bitch, 2½ years (Croxteth—Lady Gwendolin),
against
BRADFORD (Chas. H. Mason, Bay Ridge, L. I.), liver and white dog, 6 years (Bow—Beulah).

BEAUFORT (Chas. H. Mason, Bay Ridge, L. I.), liver and white dog, 6 years (Bow—Beulah),
against
LUCIA (D. S. Gregory, Jr., 2d, New York), liver and white bitch, 4 years (Croxteth—Belle).

DUKE OF BERGEN (F. R. Hitchcock, New York), liver and white dog, 22 months (Bang Bang—Fan Fan),
against
FLASH R. (D. S. Gregory, Jr., 2d, New York), liver and white bitch, 2¼ years (Ranger—White Lilly).

MAINSPRING (J. T. Perkins, Brooklyn, N. Y.), liver and white dog, 4 years (Mike—Romp),
against
BANG BANG (Westminster Kennel Club, Babylon, L. I.), lemon and white dog, 4 years (Bang—Princess Kate).

HALF AND HALF (Edward Dexter, Boston, Mass.), liver and white dog, 20 months (Priam—Malt),
against
SPOT (Charles Heath, Newark, N. J.), liver and white dog, 3½ years (Top—Fannie).

The running, as far as Friday noon, was as follows:

GRAPHIC AND DONALD II.

Graphic was the first dog drawn. He had been sold a few days previous for $2,000, and all were eager to see how he would acquit himself at work. He was imported last spring, and, of course, had but a few weeks in which to get ready for the trials. He came to the post, however, in good condition, and ran through his heats in very good form. He is very stylish when in motion, and fairly so when on game, and appears to have a good nose. He goes at an easy lope, with a far reaching stride that covers a lot of ground, at a rate of speed that is not apparent at first glance. Take him all round he is a remarkably fine representative of the large pointer, and his owner may well feel proud of him. He was handled by W. T. Mitchell. Donald II. is well known. He was in good form, and ran with credit, making but few mistakes. He was handled by E. H. Haight. There was a dense fog in the morning, but a gentle breeze from the northwest soon

dissipated it, and the day was a delightful one except that it was rather warm. Leaving the hotel at 8 o'clock the dogs were cast off fifteen minutes later in a field of sedge. Both started off at a terrific pace. Donald had the best of it for the first ten minutes, but after that he slackened his speed and did not go so fast as Graphic. The heat from start to finish was simply a race between handlers and dogs, and was not run as it would have been had they been out for an ordinary day's shooting. Much of the ground run over was not worked out as it should have been, as the dogs were urged on at top speed, and at the finish had run away from their noses. The horses were blown and the men exhausted. Working through a field to some woods we turned down a branch and swung back into some pines, when Graphic challenged, but could not make it out. We then went through to a stubble field, which Graphic beat out in beautiful style, quartering his ground perfectly, to the upper end, where he challenged, and at almost the same instant Donald made a beautiful point a short distance from him, and a second later Graphic dropped on point, but nothing was found and the dogs went on a short distance, when Graphic made a gamy point that Donald at once honored, but they soon moved on. They were then sent down a run, but nothing was found and they were brought back, and a little further on Graphic pointed, and as Donald came up he did not see him and was stopped to order. Both soon went on, and in going down wind Graphic made an excusable flush, and a little further on he dropped on point and Mitchell flushed to order. Donald then pointed, but was not quite rigid, and as Graphic came round he also half pointed, but before either could locate the bird it flushed wild beyond them and two or three more got up, and as Graphic went on he pointed where one had flushed, and a little further on he made a nice point, but nothing was found. We then swung back to the pines and Graphic pointed in grand style, and a second later Donald also made a beautiful point a little beyond him. Mitchell went on to flush, and Graphic drew a few steps and the bird got up and flew over Haight, who killed it, and Donald to order left his point and retrieved it, and then went back and resumed his point and was handsomely backed by Graphic. This was all very pretty, but the bird had probably run away as nothing was found. Then circling round the pines we went into some woods where some of the birds had gone, but nothing was found except a single that was flushed by the handlers, both dogs dropping to wing instantly. Some distance further on a bevy flushed near the dogs, but we could not see whether they were to blame or not, as the undergrowth was very dense. A little further on one flushed near Graphic. We then went on some distance, and, not finding, turned back to a large stubble field, which the dogs ran through but did not fully work out. We then turned up a hillside grown up to briers and sedge. Both dogs had slowed down. Graphic was still going well, but Donald was evidently tired, although he kept going. We went on for quite a distance until finally Graphic, when going down wind, caught scent and whirled round, and dropped to a bevy and Donald backed him. Mitchell to order flushed the birds and scored a very neat miss. They were then ordered up and the heat was awarded to Graphic. Down one hour and fifty-one minutes.

TAMMANY AND NED.

Both of these dogs have run here before. Tammany ran last year, but had been worked too hard and was stale, although he did some good work. This year he came out in capital form and ran through his heats in fine style. He was handled by John White. Ned ran two years ago, and won the admiration of all by the very knowing way in which he handled his birds. He started off well, but had not had sufficient work and was not under good control. He was handled by Mitchell. They were put down in the stubble where the last brace was taken up. Both started off well, and beat out the stubble in good style. We soon turned up a hill to some pines, where Ned pointed, and two or three seconds later Tam also pointed, with his head well up. White, to order, put up the birds and killed one, and Tam retrieved it nicely. Ned was pointing a single bird that ran away from him, he roaded a while and left it. Tam came round then and roaded out the bird and located it in fine style, and White, to order, flushed it. We then went on to the edge of the woods where several birds flushed near the handlers, both dogs remaining steady. The dogs then went down to a thicket along a branch and Tam made a point, and then commenced roading and the bird got up. Meantime Ned also pointed further up the run, but nothing was found. He then made a cast up the hill and made a good point to a single that Mitchell to order flushed and killed, and Ned retrieved it poorly. Tam came out of the thicket and went up a short distance and pointed, but soon went on and turned back into the thicket again and a bird flushed near him. A little further on he made a nice point to a single, and a few seconds later Ned also pointed a short distance from him and then moved on and scored a flush. Tam held his bird, which flushed as the judges came up. Ned then cut loose and went over the hill, and it was some little time before he could be brought back. Mitchell got him and gave him a taste of the whip, but it was too late, as Tam made a point to a bird that flushed wild, and they were ordered up and the heat was awarded to Tammany. Down twenty-six minutes.

RUE AND MADSTONE.

These dogs both ran here last year and are well known. Rue was in good form and went well, but appeared to be a little rank. Madstone has greatly improved and did her work very well. Luke White, her handler, said that she was not in good condition. They were put down in an old field just below where the last brace were taken up. After a turn in the open they were taken back into the pines, and Rue made a nice point. Madstone backed her and then drew on, when Rue went round her and put up the bird. Soon after she dropped very prettily to a single, and an instant later Madstone flushed one, and then made a nice point to another. Both handlers to order flushed the birds, and Aldrich scored a miss. White did not shoot. This was done very nicely. Then among some fallen timber both stopped at once, and backed each other or pointed, we could not determine which. Beating out the cover, we swung back to the lower end, where Madstone got in a good point at a fallen tree top, and White to order put up the bird and missed it. Rue came round and put up another one. White then sent Madstone in some pines, and she nailed one nicely. Rue was brought round, but refused to back and drew on by her, and would not stop to order. White then put up the bird and missed. They were then ordered up, with Madstone the winner. Down twenty-one minutes.

BLOOMO AND SNIPE.

Bloomo is a well-made little bitch with plenty of bone and muscle; she arrived in this country the middle of October and has had but little experience on quail; she showed natural ability, moves easily and is stylish on point. She was handled by Mitchell. Snipe is a well-built, good-looking dog. He moves rather heavily and appears to lack experience. He was handled by John Vail. They were put down in a stubble field and worked up to the open field where the first heat of the first trials held here was run. The spectators had flushed a bevy just below that settled in the adjoining pines, and the dogs were ordered in their direction. Snipe was the first to get a point and Bloomo backed him nicely. Vail to order put up the bird and missed it. Snipe soon pointed another and Bloomo backed him. We then went on and both dogs commenced roading, and as the handlers came up the birds flushed. A little further on Bloomo made a nice point to a single that flushed as her handler came up. She soon pinned another one in fine style, and Mitchell flushed it to order. Snipe then pointed, but went on and roaded to a flush. He soon had another one, and his handler was ordered to kill, but the order was disobeyed. Bloomo then made a nice point and Mitchell to order flushed the bird, and Snipe was unsteady but dropped to order. They were then taken up and the heat was awarded to Bloomo. Down fourteen minutes.

JILT AND BRADFORD.

Jilt ran here last year, and did some very fine work. She appeared to be stale and didn't get around nearly so well as she is capable of. She was handled by Thurtle. Bradford is a well-made dog of large type and moves very well. He is six years old and has never been trained until this season. He has had but little work and was rank and at times unsteady. He was handled by Tallman. They were put down in a stubble field and worked to some pines, where Tallman flushed a single bird, and soon one got up near Jilt. Then in some sedge Bradford challenged where some larks had been, and Jilt crossed over a run and pointed a bevy in fine style. Bradford was not inclined to back, but drew up behind her and also pointed. Thurtle to order flushed the birds and hit one, but it went on. Following them up, Bradford made a nice point at a fallen treetop, and as Tallman came up drew on a step or two and located the bird, and Jilt backed him. Tallman to order flushed the bird, which flew close to Bradford, and he made a snap for it, but dropped to order. A little further on Jilt picked up a dead bird and soon after she pointed, but nothing was found. We then beat over considerable ground without result. Finally on a knoll both challenged, and Jilt half pointed and roaded a short distance, when a hare started in front of her; but this was not what she was after as a second or two later Thurtle came up and a bird flushed there and he killed it, and Jilt retrieved it well. Bradford was unsteady at the sound of the gun and started that way and would not stop at command. A little further on Bradford pointed a single that Tallman to order flushed and Bradford was not quite steady to wing. Jilt then made a point and Bradford bakked a second or two and then drew up near to her. Thurtle to order flushed the bird, both dogs remaining steady. Then swinging round into some pines Bradford whirled round and made a nice point to a single, but he spoiled it all by starting to chase when Tallman flushed the bird, but he stopped to order. He then half pointed and roaded to a a flush, and the two were ordered up and the heat awarded to Jilt. Down forty-nine minutes. It was now half past twelve and we went to lunch.

[TO BE CONTINUED.]

Following is a complete

SUMMARY.

First Series.

Graphic beat Donald II.
Tammany beat Ned.
Madstone beat Rue.
Bloomo beat Snipe.
Jilt beat Bradford.
Beaufort beat Lucia.
Flash R. beat Duke of Bergen.
Spot beat Half and Half.

Second Series.

Graphic beat Tammany.
Madstone beat Bloomo.
Beaufort beat Jilt.
Mainspring beat Flash R.
Spot a bye.

Third Series.

Spot beat Madstone.
Beaufort beat Graphic (withdrawn).
Mainspring a bye.

Final Tie for First Place.

Spot withdrawn.
Mainspring beat Beaufort and won first prize.

TIES FOR SECOND PLACE.

First Series.

Tammany beat Donald II.
Bang Bang beat Flash R.

Second Series.

Bang Bang beat Tammany.

Final Tie for Second Place.

Bang Bang beat Beaufort and won second prize.

THE DERBY.

The judges were Messrs. B. F. Wilson, F. R. Hitchcock and W. A. Coster. Fourteen of the eighty-three nominations filled their entries. They were drawn to run as follows:

NEVERSINK (Neversink Lodge Kennels, Guymard, N. Y.), liver and white pointer dog, July 25 (Croxteth—Fan Fan),
against
NELLY BLY (Edward Dexter, Boston, Mass.), black and white English setter bitch, Nov. 3 (Count Noble—Nellie).

BANG GRACE (Luke W. White, Bridgeport, Conn.), lemon and white pointer dog, May 23 (Bang Bang—Grace),
against
PENDENNIS (Charles Heath, Newark, N. J.), black and white English setter dog, Jan. 1 (Blue Drake—Diana II.).

BELLE (E. H. Haight, Allaire, N. J.), black and tan bitch, January (Dan—native bitch),
against
GLENCLAIRE (James T. Walker, Troy, N. Y.), red Irish setter dog, April 10 (Glencho—Claire).

NANNIE S. (Dr. G. G. Ware, Stanton, Tenn.), black and white bitch, April 12 (Dashing Berwyn—Juno A.),
against
GROUSE III. (W. T. Mitchell, Lynch's Station, Va.), red Irish setter dog, Feb. 22 (Grouse II.—Colleen Rhue).

PRINCE IMPERIAL (Ramapo Kennels, Ramapo, N. J.), orange belton English setter dog, Feb. 28 (Emperor Fred—Bessie),
against
DAME PETREL (Rancocas Kennels, Jobstown, N. J.), black, white and tan English setter bitch, July 25 (Don Juan—Petrel).

SHARPLESS (L. Shuster, Jr., Philadelphia, Pa.), blue belton English setter dog, July 12 (Gladstone—Coomassie),
against
GATH'S MARK (James N. Maclin, Keeling, Tenn.), black, white and tan English setter dog, May 23 (Gath—Gem).

DIANA III. (Charles Heath, Newark, N. J.), black and white English setter bitch, Jan. 1 (Blue Drake—Diana II.),
against
CARLOTTA (W. H. Parsons, Atlanta, Ga.), black, white and tan English setter bitch, Jan. 1 (Lightning—Dora Royal).

Pendennis, Grouse III., Sharpless and Diana III. were withdrawn before running, and the others were run as follows:

Neversink against Nelly Bly.
Bang Grace against Nannie S.
Belle against Glenclaire.
Prince Imperial against Dame Petrel.
Carlotta a bye.

SUMMARY.

First Series.

Nelly Bly beat Neversink.
Nannie S. beat Bang Grace,
Belle beat Glenclaire.
Prince Imperial beat Dame Petrel.
Carlotta a bye.

[Special Dispatch to Forest and Stream.]

HIGH POINT, N. C., Nov. 23.—The Derby finished to-day at 4 o'clock. In the second series Nelly Bly beat Carlotta, Belle beat Nannie S., and Prince Imperial a bye. In the third series Prince Imperial beat Nelly Bly, and Belle a bye. In the final tie Belle beat Prince Imperial and won first prize. In the ties for second Nannie S. beat Glenclaire, and in final tie Nannie S. beat Prince Imperial and won second prize. The judges selected Bang Grace to run the final tie for third place with Prince Imperial, and they divided the honors equally, Bang Grace receiving three-fourths of the money and Prince Imperial one-fourth. This finished the trials.

ENGLISH BENCH SHOWS.

THE British Kennel Association held their second venture at Sheffield in connection with the Sheffield and Hallamshire Dog Show Society, on Oct. 20, 21 and 22. There were 780 entries in ninety classes. There were no challenge classes provided, and no dog qualified to be called a champion under the new regulations of the Kennel Club was qualified to compete. Consequently dogs qualified to compete in challenge classes, and publicly looked upon as champions, found their way into the open classes here; and we understand in some cases objections were lodged and held good, for instance, in the cases of the pointer Ponto and the Dandie Dinmonts Rhoderick and Jennie Deans. The average per class was not on the whole, we should say, what was generally expected, and the matter would certainly have been much worse were it not for the large porcentage of double entries. We understood that the entries for the show were to close at the latter end of September, yet we noticed that dogs shown in Edinburgh on the 7th, 8th and 9th inst., and which had changed hands, were exhibited here in the interest of their new owners. The judges were: For bloodhounds, mastiffs and foreign dogs, E. Portier, Esq.; St. Bernards, J. F. Smith, Esq.; Newfoundlands, W. F. Bagnall, Esq.; Greet Danes, R. Groom, Esq.; deerhounds, greyhounds, Airedale, Irish, Skye and Bedlington terriers, Col. Cowan; harriers, pointers, setters, retrievers and spaniels, W. P. Arkwright, Esq.; basset hounds and dachshunde, W. Wootten, Esq.; sheepdogs and hard-haired Scotch terriers, J. Perin, Esq.; bulldogs, A. Best, Esq.; bull, black and tan and white English terriers, toy spaniels and toys, A. George, Esq.; fox-terriers, A. H. Clarke, Esq.; pugs, W. L. Sheffield, Esq.; sporting puppies, Messrs. Cowan and Arkwright; non-sporting puppies, Messrs. Portier and Smith. The local classes were divided between Messrs. Smith, Bagnall, Arkwright, Clarke and George.

As usual, bloodhounds were the first on the list divided into two classes with a total entry of twenty-seven, and the quality throughout was good, it being generally admitted one of the best collection of the breed seen for a long while.

St. Bernards, as usual, were one of the principal features of the show. Mr. J. F. Smith's kennel being entered, not for competition. Our old friend Save, looking as fresh as we ever saw him, had a small box fastened to his collar collecting subscriptions on behalf of a local charity. Sultan III., the well-known brindle and white, was looking well, and, as usual, in good coat, in fact we have always found him with plenty of coat. If he were more typical in head we would consider him one of the best going. We found Carl Rosa, the young dog first at Edinburgh, which made such a sensation when shown for the first time at Birkenhead, and which led to some person offering £300 for him, entered here but absent, which we think showed more judgment on behalf of his owner than we had given him credit for after refusing £300, as when we saw the dog at Edinburgh we certainly considered him only a second-rater, and quite too narrow in chest to develop into such a dog as many of our present champions. Nero III., often noticed, was here equal second with Gaylord, the former being much the largest. Yet for type we consider Gaylord about the best St. Bernard going, and he might be better on his legs. He was afterward purchased by the judge, Mr. J. F. Smith, who refused a handsome profit on him before the close of the show. Bayard was entered for the stud prize which he won; he is showing age and we think his day is about over on the show bench. In bitches, the brindle and white La Mascotte, owing to her condition, won well. Recluse, from the same kennel, out of form. Lady Laura, good body, in fact a well made bitch, with plenty of bone, rather deficient in markings, and wants character in face. Queen Jura, a very typical bitch, winner at Edinburgh and Hull this month, sadly out of coat, and we consider the want of markings against her. Lady Eva, as good, if not better than any in the class, shown here out of coat. Brin, good bitch, ear rather high and head weaker and wants expression of those placed over her. We find the well-known Musgrave entered in this class and he was in good form.

Victor Emmanuel won first in a small class of smooth dogs. He has improved but still wants more body. In smooth bitches only four turned up, and we considered them correctly placed. In puppies Mr. Hall introduced us to another youngster (Save ex Bessie II.), and like many of Bessie's stock, a good way over the average in size and quality. He was awarded the special cup offered by the St. Bernard Club. Mr. Hall also won first in bitch puppies with a granddaughter of Bessie II.

The awards in the mastiff classes caused a deal of dissatisfaction, but we consider the dog class did not contain a first-rate one. The winner is quite too long in face and void of character, and cow-hocked. Yet he has a very large scull and otherwise is a strong, powerful dog. Beaufort is of good stamp, but very straight and bad behind. In mastiff bitches the brindle Lilly II., being a qualified champion, was entered not for competition, but competed and won the specials, beating Cambrian Princess and Lady Isabel, two real good ones, and we believe quite the equal if not the superior of Lilly II. Outside of these there was nothing special in the class.

The winners in the Newfoundland classes are pretty well known. We preferred King Bruce for third in the dog class. The first and second in bitches stood well ahead of the others. In other than black the large, well-known Charlemagne won first and Welsh Nell, from the same kennel, stood far ahead in bitches.

Greyhounds were a good collection. Risingham, a good, strong, useful dog, won, the Messrs. Charles coming second and third with Cassells and Balkis, both well-known but not in good form. In bitches we preferred second to the first. Alcalia, well known, came third, and Coral unnoticed. There was a prize offered for the best pair of deerhounds or greyhounds, which was awarded to the deerhounds Robin Gray and Mina. In the class for foreign dogs Mr. Taunton had thirteen entries, none of which competed.

The pointers were a good collection, and the dog class saw our old friend Don IX. in the same position as at Hull the week previous. Second went to Ponto, looking wonderfully well for his age, but we understand he was disqualified. Earl of Croxteth, Don Pedro and Alden Rap are all good, strong, useful dogs with quality, the latter a lemon and white. Bracket, hc., smaller in size but a good stamp, by Graphic. Mr. Norris came well to the front in the bitch class with Revel III. and Beau Ideal, two very handsome liver and white, by Graphic. Aldin Bell, a very handsome lemon and white, dividing Mr. Norrish's pair. Aldin Bell won first at Hull, and about the best lemon and white we know at present. Mr. Norrish won the team prize with Brackett, Revel II. and Beau Ideal, and we consider won easy, being three good specimens, all marked very much the same and in good condition, with not over two pounds difference in the weight of any of them.

English setters were a remarkably strong class. King Ned won well, being in much better condition than we ever saw him, and later on he won special cup, beating his brother, champion Sting. Blue Peter is improving and we consider is not near his best yet. Count Howard, in bad condition, we consider as good as any in the class and better than his brother Sir Gilbert, placed over him. The bitches were another good class, first going to a remarkably good-headed bitch, shown in

good condition, but which falls off a little in quarters, while the second was, in our mind, best of the two, head not quite so long, but of the correct type and full of character and better in quarters than the winner. Only four black and tan setter dogs. We preferred the second prize winner to the first; both good dogs. In bitches first went to a very nice sweet bitch, too fine and snipy for a black and tan or Gordon. Second same stamp with lump on foreleg. We preferred Heather Beauty, hc., to any in the class, and Mr. Bulled showed a very good bitch; Devon Duchess out of coat and unnoticed. In Irish setters Mr. Shorthose only got vhc. with his new purchase Rash, first at Edinburgh, a good strong dog, too strong in skull. Kildare, another not good in skull, but otherwise good. Mate bad in expression. Roy carries too much coat for an Irish setter. In bitches Lanor II., light in bone. Muffett, a very nice young bitch; much improved since we saw her at Stratane, where she won third as Nell VII. Kathleen, light in color, typical, and shows quality. We noticed, although some of the pointer and setter classes were well filled, only two prizes were given.

In wavy-coated retrievers the classes were small but the quality was good, and we were surprised to find Mr. Shirley only able to get second in the dog class and vhc. in bitches, being in both cases beaten by dogs from his own kennel; but then he can't "eat the loaf and have it." There were some very good curly-coated retrievers, but we think the pick of the basket was the winner in the bitch class. The special for best couple of retrievers went to Lieut.-Col. Leigh's Mahdi and Myra.

In Clumber spaniels Duke won. In Sussex we considered Horatio best type and best color, Ruler short of coat and bad eye, Noble more typical. Black spaniels Le Roi and Chevalier leggy. Newton Abbot Darkie good-bodied dog, low on the leg, bit thick in skull, and eye shows the haw. Negro, first prize, good head and ears and capital coat, rather leggy and flat-sided. Bitches, Buxton Beauty small, short in leg, rather low at shoulder, with only a moderate head. Easton's Busy good stamp, light in eye. Flirtation too strong in head. Squaw, entered not for competition, looks worn. Coy best in class we think. Thyra, a good spaniel on the large size. Cockers, first, Zue, a real handsome little bitch, won easy, bar being a little weak in muzzle. We think her a clinker. Field spaniels other than liver and black a good class, but we could not follow the judge. Winfred II. ought to have got more than c; Bryden Bruce was unnoticed; Easton Bride, hc., was not in her best form, and Beauty II. ought to have been further up. Mr. Jacobs won the team prize.

Basset hounds were fairly represented, Mr. Krehl carrying off most all the prizes. Dachshunde, one of the best collections ever brought together, nothing but good hounds being able to get noticed in any way. A class was given for beagles, and only one entry turned up, a very good specimen.

In sheep dogs, Claudian, good, well-made dog, plenty of bone, plain in head. Motley, dished-faced. Escort, large, plenty of bone and quality. In bitches, Whin Blossom, ears large, bad expression. Llyne, nice bitch, tail high. Wild Rice, heavy in ear. Some very good smooth collies. Melody, which won first and special at Hull, was here unnoticed. Novice class, Somerville, a grand young dog; his greatest fault is that he is too fine, but would be bad to beat if a bitch. Blister, a very good black and tan. Somerville won first in puppies, with his sister, a black and tan, coming second, too fine in face.

In bulldogs, Jimmy Gripper, good-made dog, all white, too pinched in face. Rabagas, leggy. Rustic King continues to improve, and stood a clear winner. We notice he was entered and won first prize in one of the local class, but fancier's local classes were not intended for such dogs as Rustic King. No. 501 in the catalogue, Terra Cotta, was a very good representative of bulldog made in fire clay. His pedigree is given as breeder German, by Fire ex Earth, Sparatan, good brindle, rather small in skull. In bitches, Jenny Howlett II. was looking well. Black Eye, a very nice typical brindle, white front and blaze. Dolores, plain in face. Bradmante, bad head. Acme, the winner, a very good-bodied bitch, we think won well, showing plenty of character throughout. In small dogs, Don Pedro won well. General Gordon, plain in skull. Sampson, leggy.

Bull-terriers—Spot, cheeky and light in eye; Harvester falls off before the eye. Small class—Little Dorrit, young and like growing thick in skull. Powerful Playboy, dished-faced. Airedales were a good class and more of a uniform type. Fitz should have been mentioned. Rover III., good dog, thick in head. Rasper also thick skull. Vixen III., a young one we like as well as any in the class, yet she was unnoticed. Venus III., good bitch, weak in quarters. Veto, nice size, good terrier and shows well.

Sporting puppies—A grand collection. First and second went to the retrievers Mahdi and Myra, with a fair good spaniel, too light in eye, third. There was a very handsome young setter shown in this class, but he dropped away in his quarters. However, we fancy he should have been mentioned. Aldin Wonder, a fair lemon and white pointer. In a mixed class for any breed not previously classed there were three entries, all poodles, and the well-known Styz won easy. Royal a very good second. Max II. only a very moderate specimen.

Foxterriers—First, Norman, a real good terrier, with his legs well set and good shoulders. Meersbrook Ross, rather strong in head and on the strong side right through, not enough of quality. Saraband might be better in shoulders. Belgrave Squash, the Edinboro winner, good stamp, strong in head. Bitches—Meersbrook Model, well known, a real good bitch, wants more quality in shoulders. Rose Bloom, good stamp, weak before eye and full, too much coat. Safety, a very nice terrier and bad to beat. Richmond Mince, a nice bitch, sadly out of form. Compton Vic, a good stamp, full of quality. Puppies, Nellie weak before eyes. Hatfield Sparks, ears badly carried and head full thick for a youngster.

Wirehairs as a class better than the smooths. Carlisle Jack once more first and deserved his position. Master Brown is another good one, good size and compact well-made dog, difficult to beat. Bitches—Barton Wonder, a clinking good one, good look out. Eye may be a bit prominent, but good in coat and well made, the best we have seen for years. Tees Venus and Tees Mixture, a pair of good ones. Venus might be stronger in jaw. In puppies Master Brown had a good win over Tees Mixture, Boston Clinker making a good third. Roseblossom rather leggy.

Black and tan terriers—First to Sir Frederick, the winner at Hull, closely pressed by Viscountess. Kenwood Queen, another good one with a very clean, long head, we consider more greyhound shape than terrier. This class was a very good one. In the small class, first, a very fair little bitch, catalogued at £8 and claimed by the judge, Mr. George. We fancied a little bitch, Lustrum Lady, first at Hull, but we suppose, owing to her ears being uncropped, she lacks that character most people admire in a black and tan. However, she possessed too much merit to be unnoticed.

White English terriers—First, Leading Star, looking well; second to Mrs. Troughear's North Star, the same lady taking third with a puppy. White Diamond Spark, the winner at Edinburgh, got only vhc., and we think correctly, having too much black on his ear.

Irish terriers, two fair classes, the winners here holding the same positions at Edinburgh and Hull this month. They also won special for best pair of rough terriers.

Some very good Bedlingtons were shown, Hairdresser winning, and the Bishop, looking well, making a good second. But we fancied Nelson very much; he seemed darker in color on this occasion than at Hull, where he won second.

The Dandie classes contained some of the best, and the competition was very close. Border King just managed to beat Roderick, who, we understand, was afterward disqualified from having second prize along with his kennel companion, Jennie Dean, first in bitches. The second, third and reserve in bitches were all good ones.

Skyes were small classes compared to what we see at some of the Scotch shows. A nice class of hard-haired Scotch terriers turned up but Ashley Nell won easily, and next we preferred the hc. Worry.

In pugs Pasha just managed to beat King of Diamonds who took ill during the show and had to be removed. Fun is another very nice little dog, good in size. Mrs. Foster came out first in bitches with Our Jenny, sister to King of Diamonds, and Duchess of Wednesbury closely pressed the winner. In puppies first went to Fun, shown in the open class, Lillibulero coming out only third best, with a vhc. card.

Toy spaniels—A walk-over for Mrs. Stanhope with Bendor and Jumbo II., a very fair King Charlie bitch coming third. Mrs. Foster had the Yorkshire and Maltese classes to herself with two entries, and the same in toys. In the next class for smooth toys and Italian greyhounds under seven pounds, Mrs. Foster again first and second.

In the local class only two entries and the bulldog Rustic King had little difficulty in defeating the third prize King Charles. As the entry fee for all dogs was 12s. 6d., and a great many of the toy classes together with the local classes had only a £2 prize, while in other classes there were third and fourth prizes, commencing at £4 first and falling off with a fourth prize of £1. We heard a good deal of grumbling, and evidently exhibitors object to pay the same entry fee for a small prize as others pay for a larger prize, and besides small dogs are easier benched and attended to than the larger varieties. The attendance was good, and we hope it will turn out more satisfactory for the committee than their last venture at Aston Park.

BEAGLES AT PHILADELPHIA.—*Editor Forest and Stream:* The size of beagles was fully discussed some time ago. I fail to see the necessity of giving my opinion on this subject, as I have already done so in one of your former issues. It is at all times a matter of opinion with every owner of beagles, and I assure Mr. Schellhass that if a vote was taken on the height limit of beagles he would be badly disappointed. If any one claims to keep beagles in their purity, let him do so with due deference for the meaning of the word beagle (originating from the Celtic word *begele*, meaning small, little). If, on the other hand, a part foxhound in size is desired, I, for one, have no objection. There are lots of them in the market and they are easy to breed; but the twelve-inch beagle, on the contrary, is not quite so easy to obtain nor to breed. I do not mean stunted specimens, which are generally frail and light in bone, in short, only weeds; but perfectly developed little hounds, with lots of substance in their small, compact frames—a separate family. Mr. Schellhass takes me to task for stating facts. Would not I have a better right to do this for the insinuation he expresses, viz., that I desire and prefer Bannerman under twelve inches? This I never said or wrote, as Mr. Schellhass is well aware. What I did write of Bannerman was facts of which I felt convinced, and for proof I referred to gentlemen who saw Bannerman measured at the late Philadelphia show. Were Bannerman over twelve inches I would just as readily acknowledge it as I now deny it. Let me give Mr. Schellhass a nut to crack. Bannerman at the last Philadelphia spring show measured 12 inches or over, as Mr. Schellhass says. Now at the late show in the same city, he measured 11 inches or a trifle over. Trailer by the same measurement measured about 16 inches. Now I think Mr. Schellhass can consider himself lucky that his dog was not entered at the Philadelphia spring show, for if Bannerman then measured one inch more than he did at the late show, Trailer would certainly have done the same, *i.e.*, 17 inches. In regard to my entering Bannerman in a class over 12 inches, I refer your readers to my letter in your issue of Oct. 29. I make it a rule to give the truth whether it excuses my actions or not. Fabrications and cowardly insinuations are not my forte. Your readers, I hope, will pardon me for not closing this letter on quite such a romantic and poetic style as that of Mr. Schellhass, for although Bannerman lies at my feet sleeping he does not dream; he don't snap nor kick frantically, for he never gets the fits. I would not have a snappish beagle, it is not characteristic of the breed. No, Bannerman does not dream, but he rests from an all-day's hard hunt, which will be resumed in the morning. I have had a good time on the first day with my Bannerman, Queen and others. The cottontails here are scarce. Our woods are not full of them, it therefore requires a little beagle with good trailing qualities to work out the intricacies of an occasional trail. "With true love for the little hounds, and fraternal feeling toward all their owners and admirers," writes Mr. Schellhass in conclusion, and I cannot help but extend to him the hand of friendship, as I do to all those who have the interest of the beagles at heart.—A. C. KRUEGER. (Wrightsville, Pa., Oct. 5).

BEAGLE PEDIGREES.—*Editor Forest and Stream:* Mr F. T. Wheaton says Lee was probably the sire of the beagle Louise. He is correct. A letter from Mr. Cameron says such is the fact. Mr. Wheaton asks why I advertise Trailer Rowett strain. I briefly say in the advertisement "Rowett strain," as he is on his sire's side, and any one replying to the advertisement receives one of my printed pedigrees which says "he is strong in the blood of the Rowett strain." I would have stated that his sire was pure Rowett strain, but had doubts as to Louise's sire's breeding. Racket, now owned by Mr. Cameron, is a pure Rowett, and has eighty-seven per cent. of the pure Sam—Dolly blood, the foundation of the Rowett strain. I claim Pet and Beauty as imported because they were so given to me with a very explicit and certified pedigree of Trailer. Mr. Satterthwaite wrote me, "Pet and Beauty were both imported." I put no premium on a beagle from the mere fact of its being imported, after having written a broker in Ireland last summer for a beagle to beat anything here, and received his reply that he could not send me what I wanted as their beagles were not up to ours. This is William Graham, whose advertisement appears in the FOREST AND STREAM, and I consider his writing me as he did a guarantee of his thorough honesty and reliability. Mr. Graham attended many of our prominent shows, and is capable of judging how the best of all breeds here compare with any he may send over.—HERMAN F. SCHELLHASS.

COCKERS AND FIELD SPANIELS.—Hornellsville, N. Y., Nov. 12. *Editor Forest and Stream:* I am sorry that Mr. Rendle feels so bad when I find a little fault with his dog, but does not say anything about your criticisms. The way to judge a dog is by his faults; the good points will take care of themselves. I claim the right to find fault with any dog as long as I tell the truth. I know a cocker from a field spaniel, for I have bred and owned more prizewinners than all the other breeders in America. A bet is no argument, and I am not familiar with "pots;" but I shall surely show Silk against Brahmin until I drive him into the field spaniel class, where he belongs. As it will be some time before the Boston show I should be pleased to meet Mr. Rendle and his dog in the field against myself and Hornell Silk. That is what I call the true test of merit in a spaniel. I refer Mr. Rendle to the Rev. Mr. Willett on "cat-sided cockers," and would say it's easy to catch a cat; then he will see why I say Brahmin is cat-sided. Brahmin (late Hindoo)—by the way, I named Brahmin myself—when one year old weighed twenty-four pounds, and at the time of the first Cleveland show he weighed thirty pounds here on a United States standard scales, and for that reason he was not shown. I reduced his weight to twenty-seven pounds and sold him to the Fleetfoot Kennels; they exchanged him with Mr. Schenk for Brag (that was another dog I bred). Mr. Schenk sold to J. F. Kirk, he to James Luckwell. That is the whole history of Brahmin. I admit that he beat Silk, but I say that he cannot do it under a judge of cockers—say Messrs. Kirk, Watson, Niven, Willey, Mortimer, Hemingway, Wilmerding or any member of the American Spaniel Club. We all know that Mr. Dalziel gave first at New York in 1880 to Duffer, that had a topknot five inches long. I know Mr. Winslow has owned a few spaniels, but I have yet to hear of his breeding a prizewinner, so I for one do not care who is the judge. Coat doesn't make the dog, nor the man, and when Mr. Rendle knows as much about cockers as he does about Katisha's shoulder-blade it will then be time to bet; but first of all he must learn that a cocker has a round body. In 1881 I bought all of Mr. A. H. Moore's black spaniels—Hindoo (now Brahmin), Creole, Dash, etc. Brahmin and Dash are now champions. Did I make a mistake in selling them? No, not much. Was it a mistake to sell Benedict, Brag, Princess, Bob III., Hornell Dandy, Little Bob, King Coal, etc., etc.? No. I sold them for cash, the field spaniels for black spaniels, the cockers for cockers.—J. OTIS FELLOWS.

KENNEL NOTES.

KENNEL NOTE BLANKS.—For the convenience of breeders we have prepared a series of blanks for "Names Claimed," "Whelps," "Bred" and "Sales." All Kennel Notes must be sent to us on these blanks, which will be forwarded to any address on receipt of stamped and directed envelope. Send for a set of them.

Corrections. Owing to illegibility of manuscript sent us by the Detroit Kennel Club, their Sue was spoken of as Sin, King Bow as Kingan, Rose Pape as Rose Pope, and 1885 was printed 1883.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Blanche. By C. F. Danforth, Bangor, Me., for orange and white pointer bitch, whelped July 7, 1885, by imported Bang (champion Bang—Luna) out of Rita Croxteth II.

Bonnie Bang. By H. W. Durgin, Bangor, Me., for orange and white pointer dog, whelped July 7, 1885, by imported Bang (champion Bang—Luna) out of Rita Croxteth II.

Alert. By Shaw & Bates, Clinton, Mass., for fawn mastiff dog, whelped Sept. 6, 1885, by Agrippa (A.K.R. 449) out of Antea (A.K.R. 200).

IMPORTATIONS.

Duke of Lancaster and Lady Hanley. The Chequasset Kennels, Lancaster, Mass., have imported the white, with brindle markings, rough-coated St. Bernard dog Duke of Lancaster, bred by Washington Hall, Hanley, Eng., whelped June 23, 1885, by Plinlimmon (E. 15,050) out of Lady Burghley (E. 15,750); also Lady Hanley, orange brindle, with white markings, of the same litter.

DEATHS.

Scout. Liver and white pointer dog, whelped Dec. 21, 1881 (Croxteth—Belle), owned by D. G. Elliot, New Brighton, Staten Island N. Y., Nov. 7, from congestion of the lungs.

Recently thirty Baker county men with sixty dogs had a fox hunt. In the course of the hunt they jumped a fox, which gave them a fine race from 8 in the morning until 6 in the afternoon, when they lost him. The trail ran through Baker, Calhoun, and part of Early, making a distance of 130 miles.—*Augusta (Ga.) Chronicle.*

Rifle and Trap Shooting.

OBSOLETE ARMS.—Adjt. Gen. R. C. Drum in his annual report to the Secretary of War says, in connection with an extended report on the militia of the State: "I beg to invite your attention to the subject of the obsolete arms and ammunition in the hands of the State militia or stored in the several State armories. Many of the men are armed with the discarded caliber .50 Springfield rifled musket, for which it is difficult to obtain cartridges, and some of the reserve ammunition bear the stamp of manufacture in 1871—material now as unreliable as it is cumbersome, and it would seem a most wise measure if, at the approaching session of Congress, a general act was passed providing for immediate exchange, when requested, of all obsolete arms now in the hands of the militia of the several States for improved Springfield rifles, caliber .45, and appropriate amm nition therefor. Should Congress, however, not deem it advisable to pass a general act looking toward absolute exchange of obsolete weapons in the hands of the militia for improved arms and ammunition, I beg earnestly to recommend it be urged to grant authority for returning to the United States, at a fair valuation, all obsolete guns in hands of States, the money value thereof to be placed to their credit and to be drawn against in form of issue of improved weapons. Until this is done the usefulness of the State militia, in either State or national emergency, must remain sadly impaired by the great disadvantage under which it suffers."

LEOMINSTER, Mass., Nov. 20.—The Gardner Rifle Club, of Gardner, were here yesterday as the guests of the Leominster Rifle Club and to shoot the return match. The distance was 200yds., shooting off-hand. The American decimal target was used. The totals were as follows:

Gardner Club.				Leominster Club.

Nov. 21.—There was a large attendance of riflemen at the range today. During the forenoon the weather conditions were bad, but in the latter part of the day they improved. Mr. J. N. Frye has completed his third clean score in the rest match, which places his aggregate at 498 out of a possible 500. Below are the scores of to-day:

Decimal Match.

W Charles, C	10	10	9	8	6	5	10	10	8	9—85

S Winchester	10	10	0	10	10	10	9	10	10	9— 97

AMATEUR SHOTS.—The question of amateur vs. professional shots has not fortunately come to be a very pressing one, either before the trap or on the rifle field. So we are saved the consumption of printer's ink and type space which would come with the excitement of the marksmen on this matter. In England the question of amateurdom as it affects other sports is a pressing one, and this leads the Chicago *Herald* to speak lightly of our British cousins as follows: "Sydney Smith's '2 pence looking down on 3 half pence,' has just had an illustration which transcends the most moving instance of national weakness cited in the 'Book of Snobs.' It should be well known that one of the burning questions of the day on the other side, and to some extent here, is and has long been as to the essential elements of the prodigy known as a gentleman amateur. There are amateurs and amateurs as there are fagots and fagots, and the degrees of great fleas and little fleas do not travel off more curiously into the infinite than do the grades and varieties of the British amateurs. His more recent performance is the proclamation by the cricketers of a club formed by athletes employed in wholesale houses to the effect that 'the gentlemen engaged in wholesale commerce' are required as a condition of membership of the club to take no part in matches against 'persons employed in retail trade.' This seems incredible, but it is in print all the same."

THE TRAP.

Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

NEW YORK, Nov. 18.—Emerald Gun Club regular shoot at New Dorp, S. I. Weather and birds all that could be desired:

Ties, miss and out, 30yds., for first prize, gold medal: J. Glaccum 3, Measel 2. For second, $10 gold: Gehring, 25yds., 2; Grainger, 30yds., 3. For third, silver badge: McMunn, 25yds., 4; Hudson, 30yds., 3; Schermerhorn, 30yds., 2; W. Glaccum and N. Measel, 9.

JOHNSTOWN, N. Y., Nov. 5.—Weekly shoot of Johnstown Gun Club, 20 glass balls, rotary trap: Banta 18, Pierson 15, Walrath 15, Northrup 17, Newnham 17, Hillabrandt 17. McMartin 11, Hainbridge 12, Sponable 14, Pike 11, Lingenfelter 15, Fulton 14. Potter 8. Newnham, Hillabrandt and Northrup tie on 17. Miss and out—Newnham 9, Hillabrandt 8, Northrup 1,

NEW ENGLAND TRAP-SHOOTING.—The members of the N. E. T. S. A. were out in full force at the Wellington Range on the 19th to participate in several events, including the contest for the Knoxville blackbird badge. The results were as follows: 1. Five pigeons—Spring, Bartlett and Webber first. 2. Five blackbirds, 15 entries—Eager and Webber first. 3. Three pair pigeons, 13 entries—Stark and Gray first. 4. Five pigeons, straightaway, 19 entries—Curtis first. 5. Three pair pigeons, 23 entries—Curtis first. 6. Five blackbirds, 27 entries—Bartlett and Eager first. 7. Five pigeons, 24 entries—Davis first. 8. Five blackbirds, 16 entries—Eager first. 9. Five pigeons, 15 entries—Shumway first. 10. Five pigeons, 19 entries—Faulkner, Shumway and Sanborn first. 11. Five blackbirds, straightaway, 19 entries—Faulkner and Sanborn first. 12. Five blackbirds, 19 entries—Farrar, Davis and Curtis first. 13. Five pigeons, 19 entries—Wilson first. 14. Five pigeons, 18 entries—Davis and Stark first. 15. Fifteen blackbirds, 27 entries—Schaefer first. 16. Medal match, nine singles and three pair blackbirds, 27 entries—Won by Schaefer with a total of 12. Delegations were present from clubs in Providence, Boston, Lowell, Brockton, Manchester, N. H., Worcester and Amesbury.

WELLINGTON (MASS.) GUN CLUB.—The regular weekly shoot took place on the 21st, and, although the weather was cold and disagreeable, there was a large number of gunners before the traps. Following is the result of the several sweeps: 1. Five clay-pigeons—Shumway and Wilson divided first. 2. Five blackbirds—Schaefer first. 3. Five clay-pigeons—Snow first. 4. Five blackbirds—Schaefer first. 5. Three pairs clay pigeons—Wilson first. 6. Five blackbirds—Shumway first. 7. Five blackbirds—Wardwell first. 8. Schaefer and Swift divided first. 9. Five blackbirds—Schaefer first. 10. Medal match, ten clay-pigeons—Frank first. 11. Five blackbirds—Lawson first. 12. Five blackbirds—Lawson first. 13. Five blackbirds—Wardwell first. 14. Five clay-pigeons—Schaefer and Stanton divided first. 15. Five blackbirds—Schaefer and Stanton divided first. 16. Five blackbirds, straightaway—Adams and Lawson divided first.

NATIONAL GUN ASSOCIATION TOURNAMENTS.—Special Notice.—Members desirous of organizing tournaments in their vicinity, under the auspices of the Association, are requested to notify the undersigned. All the expenses of the same will be paid by us. Make your arrangements for 1886. We propose to establish a circuit of tournaments annually. Claim your dates now. General office and headquarters, Macon, Ga.—MATT R. FREEMAN, Vice-President and General Manager: F. C. ETHRIDGE, Secretary, Macon, Ga. Send 10 cents for hand book containing rules, constitution, etc. "Fairly started and its future depends entirely upon the manner in which the sportsmen throughout the country respond."—C. M. STARK, April 18, 1885.—*Adv.*

THE BRITISH RACERS OF 1885.

THROUGH the parallel performances of Puritan and Genesta it is possible this season to compare more closely than commonly happens, the racers here and abroad. The *Field*, in a late summary, deals with the leaders as follows: "Galatea made her debut in the match from Southend to Harwich, and, so far as looks went, she satisfied the critics; and, indeed, she seemed "all there" for speed so long as they were before the wind, but when it came to pinning in sheets it was plain that she could not go the road that Irex and Marjorie did, although some allowance had to be made for an error of judgment in carrying a balloon foresail. In the match around the Shipswash, and up Swin to Southend, Galatea sailed like a light wind craft of great promise, but she failed to win any prize, and she was equally unfortunate on the Thames and at Dover. On the Clyde the same fate followed her, and in Belfast Lough she sailed what must be considered a test match with Irex in a fine breeze, and was beaten seven minutes over a course of fifty miles. It must be confessed that this result would stamp Galatea as being a fairly good boat, and probably Irex would not have beaten her at all had Irex not been sailing much better than she did in 1884. On the following day they had a trial in half a gale and some sea.

"Irex was certainly making an example of the heavy weight, but what the end of it would have been no one can now say, as Galatea was dismasted on going the second round, being at the time about five minutes astern of Irex—it should, however, be noted that Galatea at the outset lost some time in a luffing match with Marjorie. After this Galatea had some lead cut out of her keel forward an aft, and missed the Kingston and West of England regattas while the alterations were effected. She chimed in again on the Solent; but in the hands of a strange sailing master cut a sorry figure, winding up her season with two second prizes for fifteen starts. Galatea's ill-success is attributed by some to faults of handling, but with such a man as L. Cranfield in charge, this opinion does not seem worth much. No doubt when once a new gear is imbued with the idea that the vessel is "no good," they make her appear very much worse than she really is by the slow and sullen way they handle her, and most likely Galatea's crew were not superior to the usual superstition of sailors about a fated craf . She certainly never but once in the match up Swin from Harwich, got away with anything like life, although like Erycina, she time after time seemed to do something electrifying.

Irex had a charmed time of it, from end to end, and no doubt is some ten minutes faster over a fifty mile course than she was last year. Possibly this is under the mark, but, as near as we can get at it, that is the extent that she was improved on her first year's form. She is now probably the fastest yacht of her regatta course in this or any other country. Whether or not she would hold Puritan off the wind is another matter; we, however, are inclined to think that she would not. She began her victorious march at Dover, and on the Clyde fortune showered prizes upon her; but her first really brilliant performance was in Belfast Lough, and this was followed up by an equally fine display in Dublin Bay; but Irex's achievements in the North were entirely eclipsed by what she accomplished on the Solent, where, in a reef sail breeze, she went over the 50 miles course of the Royal Victoria Yacht Club in 4h. 7m. 40s.

As a prize winner Marjorie stands next to Irex, and rivals her as a "fair weather" craft. She too, has a like number of flags, but Irex has 19 firsts against Marjorie's 12. There is no doubt that this beautiful vessel owes her success mainly to her marvelous weatherly qualities, and she never displayed them to a better advantage than she did this past season. A great many people think that Marjorie, for this reason, would stand a better chance for the America Cup than any other English yacht would. This seems to us to be by no means so conclusive as many think against vessels like Puritan and Priscilla, both of which have very fine reaching powers. Perhaps if Genesta and Marjorie should meet next season, some light may be thrown on these conjectures; meanwhile we all agree that Marjorie is as good as she is beautiful. The records show for Irex 19 prizes (9 firsts) for 37 starts, and £1,210 winnings, while Marjorie has 23 prizes (12 firsts) for 41 starts, and £1,005. In summing up the *Field* adds:

"In scanning over the list of prizewinners—it is a beggarly short one—it comes into one's mind to ask where Genesta's number would have been had she been present. It is possible that she would have taken some prizes from Irex and some from Marjorie, and have secured a place next below the latter. Marjorie would perhaps have suffered the least by the presence of Genesta, as no doubt the latter would have been good enough to have pinned Irex many times, and that would have all added to Marjorie's chances. On the other hand, there would have been times when a weather bower or two from Genesta or Marjorie herself would have just prevented that craft from saving her time on Irex. Still this could not have been of frequent occurrence, as Genesta's place, if she is any good at all, would be close up to Irex."

This estimate places Genesta as second or third of the trio of fastest British yachts, and is additional proof of her right to represent them; but at the same time it goes to prove that Irex is enough better to have reversed the differences in one if not both of the races here. Where Puritan would be placed in a season of racing with the three is a very interesting question. No doubt she would not be last, but we do not think that her presence would have altered Irex's place as first and fastest of the large racers.

SEAWANHAKA CORINTHIAN Y. C.—The fifth and last regular meeting of the year will be held at Delmonico's on Monday, Nov. 30, at 8:30 P. M., at which several special reports will be submitted. Mr. William Swan, one of the founders of the club and its first commodore, will be proposed for honorary membership. Thirteen applicants for active membership will be proposed, Messrs. Wm. G. Dedricksen, R. P. G. Bucklin, James Townsend, Chas. Sweet, Walter C. Hubbard, T. Harrison Garrett, C. H. Tweed, Dr. Francis H. Markoe, J. J. Heiser, Chas. T. Van Santvoord, H. S. Rokenbaugh, R. F. Bixby, and M. R. Martinez.

ACCIDENT TO A SLOOP.—On Nov. 17 the sloop Butler, with Capt. John Davis and a crew of five on board, sailed from South Brooklyn on a fishing trip. After spending the night off Rockaway they sailed for Long Branch, but the storm of Thursday caught them and they tried to beat inside the Hook. They were unable to make any way against tide and wind and finally hoisted a signal of distress, which brought to their aid the crew of lifesaving station No. 5, who took them off safely and brought the boat into the iron pier.

LIST OF RACES SAILED 1885.

In the following lists all races for boats above the skiff class, of which any accounts could be obtained, were inserted. Where accounts of races mentioned no second or third prizes, it is assumed none were offered. Names of ports are printed in full. Most of the clubs are abbreviated according to the following table:

Am.—American, of New York
Am. of New.—American, of Newburyport.
A.—Atlantic.
B.—Beverly.
Bk.—Brooklyn.
B. S.—Bay Shore.
Bn.—Boston.
Buf.—Buffalo.
B. H.—Bunker Hill.
B. Q.—Bay of Quinte.
Bar H.—Bar Harbor.
C. A.—Cape Ann.
Col.—Columbia.
Cor.—Corinthian.
Clev.—Cleveland.
Ch.—Chicago.
C. P. M. F.—City Point Mosquito Fleet
D.—Dorchester.
E.—Eastern.
E. R.—East River.
Ec.—Eclipse.
F. R.—Fall River.
G.—Greenwich.
G. H.—Great Head.
Gan.—Gananoque.
H.—Hull.
Har.—Harlem.
H. R.—Hudson River.
J.—Jeffries.
J. C.—Jersey City.
K.—Knickerbocker.
King.—Kingston.
L.—Lynn.
Larch.—Larchmont.
Minn.—Minnetonka.
Mob.—Mobile.
Marb.—Corinthian, of Marblehead.
Mich.—Michigan.
Mon.—Montreal.
N. Y.—New York.
N. C.—North Carolina.
N. H.—New Haven.
N. J.—New Jersey.
New.—Newburyport.
N. B.—New Bedford.
Os.—Oswego.
Osh.—Oshkosh.
P. B.—Pelham Bay.
Pen.—Pentucket.
P.—Portland.
Penn.—Pennsylvania.
Pac.—Pacific.
Prov.—Provincetown.
Q.—Quincy.
Quin.—Quinapowitt.
Q. C.—Quaker City.
R. C.—Royal Canadian.
R. Y. S.—Royal Yacht Squadron.
S. F.—San Francisco.
S.—Seawanhaka.
S. C.—South Carolina.
S. B.—South Boston.
S. Bay—Salem Bay.
South.—Southwark.
Sav.—Savannah.
Tor.—Toronto.
Tol.—Toledo.
T. R.—Tom's River.
Wil.—Williamsburgh.
Win.—Winthrop.
W. L.—West Lynn.
W. V.—Washington Village.
Yon.—Yonkers.

RACES SAILED 1885.

Mar. 28. New Orleans to Charleston:—Match: Gitana E.Y.C. beats Mohican E.Y.C.

Apr. 1-4. Charleston to Fortress Monroe.—Match: Mohican beats Gitana.

2. South Boston.—C.P.M.F. First class, 7 starters: Dot 1. Second class, 6 starters: Grace 1.

2. South Boston.—Match: Dot beats Wizard, both C.P.M.F.

May 15. Savannah.—Sav. Y.C. First class, 5 starters: Claude 1. Second class, 7 starters: May 1. Jennie S. 2. Third class, 2 starters: Uncas 1.

16. Short Branch.—Short Branch Y.C 6 starters: Mary M. 1.

16. Winthrop.—G.H.Y.C. 6 starters: Mi-chief 1, Cadet 2.

21. Detroit.—Mich Y.C. 4 starters: Madeline I

22. Charleston.—Car.Y.C. 4 starters: Au Revoir 1.

25. New York.—Match: Duplex beats Ægir, both N J.Y C.

25. Gananoque.—Gan.Y C: Minnie C. 1, Mabel 2, Merlin 3.

29. Oswego.—Os.Y.C. 7 starters: Ethel 1.

30. Toledo.—Tol.Y.C. 6 starters: Scud 1.

30. East Boston.—J. C. sweepstakes. First class, 6 starters: Sea Bird J.C. 1. Spider B.Y.C. 2. Second class, 3 starters: Zetta J.C. 1. Hard Times J.C. 2.

30. New York.—N J.Y.C. Open sail to Fort Lee, 5 starters, out: Dare Devil 1. In: Growler 1.

30. Rockport.—Sandy Bay Y.C. 12 starters: Black Cloud 1.

30. New York.—K.Y.C. First class, 8 starters: Wacondah 1. Second class, 8 starters: Whimbrel 1. Third class: Lizzie R., w.o. Fourth class, 5 starters: Adele 1. Fifth class, 3 starters: Maggie 1. Sixth class, 5 starters: Hornet 1. Seventh class, 4 starters: Bon Ton 1. Eighth class: Jean w.o. Lizzie R. pennant for best time and a second leg for Mott Cup.

30. New York.—A.Y.C. Opening sail. Schooners, first class, 3 starters: Grayling 1. Second class, 2 starters: Agnes 1. Prize to Haze. Sloops, first class, 4 starters, Athlon 1. Prize to Gracie. Second class, 7 starters: Fanita 1. Third class: Crocodile w.o. Fourth class, 2 starters: Romeyn 1. Agnes and Athlon being flag officers' boats prizes go to Haze and Gracie.

30. New York.—S.C.Y.C. Opening sail. Schooners, 2 starters: Clytie 1. Sloops, first class, 3 starters: Isis 1. Second class, 5 starters: Maggie 1.

30. Fall River.—F.R.Y.C. Sloops, 2 starters: Tabena 1, Mystery 2. Catboats, first class, 5 starters: Ideal 1, Kickament 2. Second class, 3 starters: Unknown 1, Nellie 2. Third class, 8 starters: Bertha 1, Flossie 2.

30. Newark.—Newark Y.C. Sloops, 3 starters: Emmy C. 1. Jib and mainsail, first class, 3 starters: Rambler 1. Second class, Eddie, w.o. Catboats, 3 starters: Shadow 1.

30. Dorchester.—D.Y.C. First and second classes, no starters. Third class, keels, 4 starters: Banneret 1, Kitty 2; centerboards, 5 starters: Queen Mab 1, Muriel 2. Fourth class, 5 starters: Scamp 1, Mabel 2. Fifth class, 4 starters: Mirage 1, Guenn 2.

30. Lynn.—Sweepstakes. 3 starters: Alice W.L.Y.C. 1.

30. South Boston.—S.B.Y.C. First Pennant race, special class, 3 starters: Violet 1, Maggie 2. Second class, keels, 8 starters: Nydia 1, Monarch 2. First class, centerboards, 2 starters: Awilda 1, Thisbe 2; keels, 4 starters: Altaire 1, Ibex 2.

June 1. Greenpoint.—Wil.Y.C. Sloops, first class, 4 starters: Carrie Van Voorhis 1. Second class, 3 starters: Lancer 1. Catboats, first class, 3 starters: E. Preston 1. Second class, 7 starters: Armenia J. Foster 1.

1. New York.—Match: Jessie beats Iris.

2. New York.—Match: Jessie beats Iris.

2. New York.—A.Y.C. Ladies' Day. Schooners, first class, 2 starters: Grayling 1. Second class, 2 starters: Agnes 1. Sloops, first class, 3 starters: Athlon 1. Second class, 5 starters: Enterprise 1. Third class, 3 starters: Crocodile 1. Fourth class, 2 starters: Romeyn 1.

3. New York.—Match: Iris beats Jessie.

4. Tom's River.—T.R.Y.C. 5 starters: Martha 1.

5. New York.—Match: Jessie beats Iris.

6. Charleston.—Car.Y.C. 6 starters: Eleanor 1.

6. Larchmont.—Larch.Y.C. Pennant Regatta: Third and seventh classes no starters. First class, 3 starters: Fanita 1. Second class, 2 starters: Hope 1. Fourth class, 4 starters: Gannet 1. Fifth class Laura w.o. Sixth class, 2 starters: Fairy 1. Eighth class, Shibbereen w.o.

6. Quincy.—Q.Y.C. First class, no race in time. Second class, 5 starters: Tartar 1, Herald 2. Third class, 3 starters: Flora Lee 1.

8. Yonkers.—Yon.Y C.—First class, 1 starter, gave up. Second class, 3 starters: Racket 1. Third class, Rambler w.o. First class, 3 starters: Comfort 1. Fifth class, 4 starters: Cutty Sark 1.

8. Philadelphia.—Q.C.Y.C. First class, 3 starters: Venitzia 1. Second class, 2 starters: Consort 1. Third class, 3 starters: Nahma 1. Fourth class, Elwell w.o. Fifth class, 3 starters: Richmond 1.

9. New York.—N.J.Y.C. Catamarans, 2 starters: Duplex 1. Sloops, Hattie w.o. Jib and mainsail, first class, 6 starters: Lily R. 1. Second class, 3 starters: G. B. Deane 1. Third class, 2 starters: Cate Cale 1.

9. New York.—A.Y.C. open regatta. Schooners, first class, 2 starters: Grayling N.Y.Y.C. 1. Second class, 4 starters: Agnes, A.Y.C. 1, Haze A.Y.C. 2. Sloops, first class, 4 starters: Mischief N.Y.Y.C. 1. Gracie N.Y.Y.C. 2. Second class, 4 starters: Daphne N.Y.Y.C. 1, Fanita N.Y.Y.C. 2. Third class, 2 starters: Crocodile A.Y.C. 1. Fourth class, 3 starters: Ideran A.Y.C. 1, Nomad A.Y.C. 2.

9. Charleston.—S.C.Y.C. English Cup, five starters: Won and held by Au Revoir.

11. New York.—N.Y.Y.C. Schooners, keel class, 3 starters: Gitana 1. Second class, 2 starters: Grayling 1. Third class, 2 starters: Nirvana 1. Sloops, first class, 4 starters: Mischief 1. Second class, 6 starters: Athlon 1. Third class, 2 starters: Espirito 1. Bennett cup: Grayling. Russell cups: Montauk and Mischief.

12. Portland.—P.Y.C. 6 starters: Willie 1.

13. New York.—S.C.Y.C. Open regatta. Schooners, 2 starters: Clytie 1. Sloops, first class, 2 starters; Gracie 1. Second class, 3 starters; Isis 1. Third class 4 starters; Schemer 1. Fourth class, 4 starters: Wacondah K.Y.C. 1.

13. Boston.—Bn.Y.C. First class, 4 starters: Adrienne 1, holding Connor cup, Undine 2, Shadow 3. Second class, 7 starters; Edna 1, taking second leg for Pfaff cup, Eva 2, Kitty 3.

June 13. Winthrop. Sweepstakes. First class, 19 starters: Black Cloud C A.Y.C 1, Queen Mab H.Y.C. 2, Good Luck, Dighton, 3, Sea Bird H.Y.C 4. Second class, 11 starters: Flora Lee S.B.Y.C. 1, Mirage B.Y.C. 2, Mischief G.H.Y.C. 3, Flirt S.B.Y.C. 4.

14. New York.—Eclipse Y.C. Sloops, 3 starters: Susie V. 1. Jib and mainsails, 2 starters: Thorn 1. Cats, first class, 2 starters: Horner 1. Second class, 3 starters: Hoodoo 1. Third class, 3 starters: Jean 1.

15. Philadelphia.—Penn.Y.C. 11 starters: T. M. Seeds 1, W Graham 2, Violet 3.

16. Harlem.—Har.Y C. Sloops, first class, 2 starters: Sasqua 1. Second class, 5 starters: Peerless 1. Jib and mainsails, first class, Nettie Thorp w.o. Second class, 3 starters: Dandy 1. Cats, first class, 3 starters: Gussie 1. Second class, 5 starters: Little Dean 1. Third class, 4 starters: Harry C. 1.

17. Rockport.—Sandy Bay Y.C. 14 starters: Kittiwake 1.

17. Toledo.—Tol.Y.C. 14 starters: Oberon 1.

17. Nahant.—B.Y.C. Open regatta. First class, 5 starters: Huron E.Y.C. 1. Second class centerboards, 4 starters: Shadow B.Y.C. 1, Magic L.Y.C. 2. Third class centerboards, 17 starters: Black Cloud C.A.Y.C 1, Muriel L.Y.C. 2; keels, 11 starters: Lizzie F. Daly H.Y.C. 1, Banneret H.Y.C. 2.

17. Merrimack River.—Pen.Y.C. First class, 4 starters: Fannie 1. Second class, 3 starters: Ideal 1.

29. Swampscott.—B.Y.C. One hundred and third race. Third championship. First class, 6 starters: Witch 1, Expert 2, Bessie takes pennant, tieing Expert and Atalanta. Second class, Spider w.o. Third class, 3 starters: Mirage 1, Psyche 2.
29. Monument Beach.—B.Y.C. One hundred and fourth race Open. First class, 13 starters: Surprise B.Y.C. 1; Alice, Galveston, 2; Myrtle, Mon. Beach, 3. Second class, 11 starters: Good Luck, Dighton, 1; Nellie W., Wareham, 2. Third class, 7 starters: Petrel B.Y.C. 1, Fannie B.Y.C. 2. Fourth class, 3 starters: Island Belle 1, Wideawake B.Y.C. 2.
29. Swampscott.—B.Y.C. One hundred and fifth race. First class, sail off for pennant, Atalanta beats Expert, Bessie did not start.
29. Toronto to Niagara.—Tor.Y.C., 7 starters: Oriole 1, Verve R.C.Y.C. 2.
29. Toronto.—Match: Meteor Tor.Y.C. beats Mischief Tor.Y.C.
31. Dorchester.—D.Y.C. 86th regatta, 1st open cup race. First class, 7 starters: Tartar leg for cup and club pennant, Second class, 7 starters: Flora Lee S.B.Y.C. leg for cup, Hornet club pennant.
—. Fon Du Lac.—Carrie Osh.Y.C. beats Hattie Osh.Y.C.

Sept. 1. Pawtuxet.—Cats. First class, 2 starters: race off, owing to error of judges. Second class, 6 starters: Alice 1, Ideal 2. Third class, 8 starters: Rarus 1, Zara 2. Sloops, first class, 5 starters: Lydia C. White 1, Peri N.B.Y.C. 2. Second class, 4 starters: Diamond 1, Myrtle 2.
1. Salem.—S.Bay Y.C. First championship. First class, 2 starters: Cygnet 1. Second class, 4 starters: Expert 1. Third class, 2 starters: Comus 1.
2. Bridgeport.—First class, — starters: Arrow, Stratford, 1. Second class, — starters: Americus 1. Third class, — starters: Reindeer 1
2. Marblehead.—Cor.Y.C. Second class centerboard sail off: Dash beats Delphine.
3. Dorchester.—D.Y.C. 89th open. First class, 8 starters: Queen Mab 1, tieing Tartar. Second class, 7 starters: Hornet B.Y.C. 1, tieing Flora Lee.
4. Oshkosh.—Osh.Y.C. Second class, 3 starters: Hattie 1, Carrie Morgan 2. Pinafore 3. Third class, 5 starters: Sylvia 1, Mary 2.
5. Larchmont.—Larch.Y C. Pennant race. Class IV.: Gannet beat Nora. Class V.: Minnie w.o. Class VIII., 5 starters: Fairy 1.
5. Monument Beach.—Sweepstakes for B.Y.C. cats. First class: Mattie beat Surprise. Second class, 4 starters: Petrel 1.
5. Wilmington.—N.C.Y.C. 4 starters: Vixen 1.
5. Lake Geneva.—7 starters: Whisper 1. Blossom 2, Ethel 3.
5. Toronto.—Tor.Y.C. Cosgrove Cup; Gypsy 1.
6. Gloucester, Del.—"Tuckup" race. First class, 12 starters: Chas. Benton 1, Thos. Sparks 2, T. Ledyard 3. Second class, 6 starters: J. L. Noble 1, Amand AC. 2, Geo. Bosler 3.
7. Scotland Lightship.—20 miles to windward and back. First attempt to sail for America Cup. Race postponed for want of wind. Puritan well ahead.
8. Scotland Lightship.—Second attempt to race for America Cup. Puritan fouled Genesta before start. Race postponed.
8. New York.—A.Y.C. Class E pennant race. Romeyn beats Ideran.
9 San Francisco.—Pac.Y.C. Schooners, 5 starters: Nellie 1 and champion pennant. Sloops, 2 starters: Annie 1. Lurline takes cup for best time yet made over course.
11. Toronto.—R.C.Y.C. 3 starters: Aileen 1, taking Wales, Lorne and Anderson cups.
11. Scotland Lightship.—20 miles to windward and back. Third attempt to sail for America Cup. Race postponed for want of wind. Puritan far ahead.
12. Scotland Lightship.—Fourth attempt. No wind. Boats not started.
12. Toronto.—Tor.Y.C. Race for Murray Cup and champion flag. 2 starters: Wenona 1.
12. West Lynn.—W.L.Y.C. Fourth championship. Second class. 2 starters: Marguerite 1, holding pennant. Third class, 2 starters: A B C 1, holding pennant.
12. Marblehead.—Cor Y.C. Fall race. Keels, first class, 3 starters: Bessie 1, Mavis 2, Second class, Thelga w.o. Third class, 4 starters: Carmita 1, Vera 2, Mona 3. Centerboards, first class, 2 starters: Atalanta 1. Second class: Expert w.o. Third class, 5 starters: Joker 1, Peri 2, Comus 3, Dash 4.
12. Mattapoisett.—First class, 7 starters: Surprise B.Y.C. 1, Quisset, Matta. 2. Second class, 5 starters: Zillah, Marion 1, Tantrum, Mon.Beach, 2. Third class, 5 starters: Mystic, Matta. 1, Spray, Matta. 2. Fourth class, 3 starters: J. T. Sampson 1, L. Bacon 2.
12. Quincy.—Q.Y.C. First class, 5 starters: Amy 1, Posy 2. Second class, 8 starters: Wildfire 1, winning championship; Tartar 2. Third class, 4 starters: Elsie 1, Mischief 2.
12. South Boston.—S.B.Y.C. Fifth championship race. First class keels, 4 starters: Breeze 1, Altaire 2; centerboards, 3 starters: Em El Eye 1, Thisbe 2. Second class keels, 4 starters: Nydia 1, Monarch 2. Prizes awarded as follows on an average of the 5 races. Special class: Nimbus 1, Violet 2, Keels, first class, Altaire 1, Breeze 2. Second class, Nydia 1, Monarch 2. Centerboards, Awilda 1, Em Ell Eye 2.
12. San Francisco, Mosquito race. First class, 5 starters: Rambler 1, Dawn 2. Second class, 4 starters; Thetis 1, Restless 2. Third class, 5 starters: Rose 1, L'Esperance 2. Fourth class, 2 starters: Sadie 1. Fifth class, Idlewild w.o.
14. Hull.—H.Y.C. Second Championship. First class, no starters. Second class, keels, 2 starters: L. F. Daly 1 tieing Banneret; centerboards, 2 starters: Atalanta 1 taking pennant. Third class, centerboards, 3 starters: Queen Mab 1 taking pennant; keels, 3 starters: Kitty 1 tieing Thelga. Fourth class, 3 starters: Amy 1 tieing Joker. Fifth class, 6 starters: Em Ell Eye 1 holding pennant. Sixth class, 2 starters: Mirage 1 tieing Elsie.
14. New York.—N.Y.Y.C. Course. First Race for America Cup. Wind light to moderate. Puritan E.Y.C. beats Genesta R.Y.S. 16m. 47s. actual time, 16m. 19s. corrected time.
15. Dorchester.—D.Y.C., open to B.Y.C. First class, no entries. Second class, 2 starters: Atalanta B.Y.C. 1. Third class, centerboards, Queen Mab D.Y.C. w.o., no prize awarded; keels, 3 starters: Kitty D.Y.C. 1, Gem B.Y.C. 2. Fourth class, 5 starters: Scamp D.Y.C. 1, Tartar D.Y.C. 2. Fifth class, 3 starters: Mirage B.Y.C. 1, Nora D.Y.C. 2.
16. Scotland Lightship.—Twenty miles to leeward and back, wind very strong. Second race for America Cup. Puritan E.Y.C. beats Genesta R.Y.S. 2m. 9s. actual time, 1m. 38s. corrected time.
17. Oak Point.—Harlem Y.C. First class: Peerless 1, Crescent 2. Second class: Nettie Thorpe w.o. Third class: Little Dean 1, Comet 1. Fourth class: Captain 1, Rambler 2.
18. Scotland Light.—N.Y.Y.C. Bennett and Douglass cups. Schooners, 3 starters: Grayling N.Y.Y.C. 1. Sloops and cutters, 7 starters: Genesta R.Y.S. 1. Sweepstakes between Athlon, Iris, Daphne and Clara: won by Clara N.Y.Y.C.
19. Lake Minnetonka.—Min.Y.C. 6 starters: Ida 1.
19. Oshkosh.—Osh.Y.C. Steam yacht handicap race, 5 starters: Albania 1. Annie made best time.
19. Nahant.—B.Y.C. Open to N.H.Y.R.A. First class, 10 starters: Atalanta B.Y.C. 1, Seabird H.Y.C. 2. Second class, 10 starters: Thisbe D.Y.C. 1, Zantho B.Y.C. 2. Third class, 5 starters: Flora Lee S.B.Y.C. 1, Flirt Win.Y.C. 2.
19 Gloucester, Mass.—C.A.Y.C. 5 starters: Kittiwake 1.
19. Hull.—H.Y.C. Third championship. First class keels: Hera w.o. Second class keels, 2 starters: Banneret 1. Third class keels, 2 starters: Kitty 1. Fourth class, 2 starters: Amy 1. Sixth class: Elsie w.o. Winners all take pennants.
21 Bellevile.—Steam yacht match. Ometa beats Annie Gilbert.
21-23. Sandy Hook Light.—Round Brenton's Reef light and return. N.Y.Y.C. Bennett challenge cup: Genesta, R.Y.S., beats Dauntless, N.Y.Y.C.
24. Toledo.—Tol.Y.C. 3 starters: Kate Graham 1.
25 8. Sandy Hook light, round Cape May light and return. N.Y. Y.C. Bennett challenge cup. Genesta, R.Y.S., beat Dauntless. N.Y.Y.C.
26. Toronto.—Tor.Y.C. and R.C.Y.C. Handicap. 7 starters: Oriole R.C.Y.C. 1.
26 East Boston Y.C.—Keels. 4 starters: Zetta 1, Judith 2. Centerboards, 5 starters: Seabird 1, Phallas 2
28. Mattapoisett.—Match: Atlanta B.Y.C. beats Myth B.Y.C.
28. Taunton.—Fifteen starters: First class, Ideal, Dighton 1. Surprise, Fall River 2. Hope, Fall River 3. Second class Florrie, Somerset 1. Bertha, Somerset 2. Romp, Fall River 3.
28. Newark.—Newark Y.C. Open race. Cabin sloops. 3 starters: Vixen, Newark Y. C. 1. Jib and mainsails, first class, 5 starters: Just Woke Up, Newark Y.C. 1. Second class, Maggie P., Newark Y.C. w.o. Cats, first class, 5 starters: Teaser, Oceanic Y.C. 1. Second class, 4 starters: Fleetwing 1.
30. New York.—K.Y.C. Open race. Cabin sloops, first class, 6 starters: Surf S.Y.C. 1, Second class, Lena K.Y.C. w.o Jib and mainsails, first class Lizzie R. K.Y.C. w.o. Second class, 2 starters: Rosetta A. K.Y.C. 1. Third class, 2 starters: Dandy K.Y.C. 1. Cats, first class, Hornet Larch. Y.C. 1. Second class, 2 starters: Bon Ton K.Y.C. 1. Third class, 3 starters: Vaddie K.Y.C. 1. Steam launches, 2 starters: Mystic K.Y.C. 1.
30. Lake City, Minn.—Three starters: Narragansett 1.

Oct. 3. Dorchester.—D.Y.C. Thirty-first Race. Open Cup Race. First class, 2 starters: Queen Mab D.Y.C. wins holding Cup. Second class, 3 starters: Flora Lee S.B.Y.C. 1 holding Cup.
7. New Haven.—N.H.Y.C. Class C, 3 starters: Wild Duck 1. Class D, 5 starters: Stranger 1. Class E, 2 starters: Alice 1.
8. Detroit.—Mich.Y.C. Pennant Race. Second class, 5 starters: Petrel 1 tieing Partridge. Third class, 3 starters: Nona 1 taking pennant. Fourth class: Flush 1.
10. Toronto.—Tor.Y.C. Third class Handicap, 8 starters: Mischief 1.
10. Oak Point.—Sweepstakes, 3 starters: Adele K.Y.C. 1.
10. Buffalo.—Buf.Y.C. 4 starters: Ripple 1, Edgar B. Jewett 2, Turk 3.
10. Newburyport.—Am.Y.C. First class, 4 starters: Torment 1, Vici 2. Second class, 3 starters: Banneret 1, J. S. Poyen, Jr., 2. Third class, 4 starters: White Cloud 1, Jumbo 2. Fourth class, 7 starters: Pert 1, Ivory Soap 2.
11. Jamaica Bay. Trembly Challenge Cup, 11 starters: Kate 1.

CRUISE OF THE COOT.

1.

IT was blowing and it was cold. The air was raw. People had red noses and rubbed their hands with vim as I fought a passage up Broadway one dreary afternoon near the close of October. It was laborious, breasting the blasts uptown, for they sought the nethermost garments with a directness uncongenial to one only recently returned from the mild and balmy climes in the heart of the world's great tobacco belt. Corkscrewing along the pavements, turning first one side, then the other, to the chilly puffs, there was a sudden flash of light which caught my eye and riveted attention. Horrors! The gleam shot out from highly polished steel. Ugh, the mockery of that burnished metal as it turned about and drove forth dart upon dart of cold, unsympathetic sheen! It sent a shiver down my back.

It was a skate twirling in a shop window.

Up at a bound rose visions of ice and snow and inclement seasons, of slushy streets and hail and sleet, of clumsy coats and uncouth arctics, frozen ears, colds in the head, rheumatic twinges, and fretting life caged up six months in a stuffy office redolent with vitiated coal-gas atmosphere upon which the lungs were to feebly feed a constitution craving oxygen untainted and the robust expansion of exercise unfettered. Blinking snappishly at my shivering figure, that wretched skate seemed to enjoy the predicament: "What are you going to do about it?"

I must get out of this and I must get out in a hurry.

One more button tightened the coat about the throat, and with collar turned up fresh headway was made as I cogitated with myself and fouled the passers-by, absorbed in my reflections. Get out? Yes, but how? Railroad? No, I had enough of that kind of travel with thousands of miles to my credit cuffed and jolted in hurry and scurry, in dust and grime, all over the country from the East to the Rockies and back, from the North to the South, and several times diagonally across. In palace cars whirled through space over level oceans of prairie land. In narrow gauges, puffing, snorting up the mountain ranges, winding and twining about the brows of nature's rocky pyramids, whose heads pierced the cloud lands above. In brake vans slowly hobbling over the rude irons of "huckleberry" roads, backing and filling to pick up stray freights by the wayside. Railroads enough for me with sleepless nights, stiff limbs, tired backbone, experienced sandwiches and fossilized pie. Nor did travel by steamship offer inducements. Any man's money can buy a ticket and there was no special attraction in the damp, ill-smelling sheets and sea-sick surroundings. Bycicling calls for good roads, and these were wanting. Canoeing is good enough in its sphere, but life is too short, and besides the weather was unpropitious for snail-paced locomotion. Only one suitable means of quitting the country appeared to be left, and that appealed ardently to my fancy.

I concluded to sail my own boat. I would fit her out with all that was needful for a life of six months afloat, bid adieu to the inhospitable regions of the rigorous North and drive away with a flowing sheet, a light heart and a full larder, as inclination prompted. Hither and thither would I cruise in congenial waters, explore unknown grounds, tarry when and where I list, as events should unfold themselves. No rigid rules, no routine, no fixed plans to mar the ease of perfect freedom, no worry and fret about reaching a spot in appointed time, no concern about the date of turning home and nothing to mind but the management of yourself and your boat to the best interests of both. What I did, what I saw, what I found out, I would jot down in sundry letters to FOREST AND STREAM for the benefit of many who might profit by the information collected, and possibly some day follow the course undertaken.

The season was fast slipping by, and I must be up and doing. I had no boat. Where could I get one—just what I wanted? A nice little cutter or keel sloop, as a matter of course, and there ought to be plenty in the market. I would profit by mine enemies' own conceit. Since the Puritan "conclusively proved," etc., it would be the easiest thing in the world to pick up just what I had set my heart upon. Indeed cutters and keel yachts had no doubt so fallen in the good public's estimation that such boats would be freely given away, and glad to have any one take them for a gift. They would be thrown at me. Owners would beg me to relieve them of articles which the Puritan's races had presumably "boycotted" for all time in American waters. Their loss in confidence would be my gain. The customary channels of reaching the public were worked. In place of a bushel of letters only a few replies awaited my expectations. So-and-so had a cutter, but he liked her so much that he would not part for less than original cost. He sold only because he longed for another of the same kind, but larger. The next man was in the market, providing I would give him a bonus on first cost. He did not care to let his favorite go except as a profitable deal. No. 3 had another cutter, the particular one I had hoped for as a gift, but on the whole he did not think he would sell anyway. The Genesta had done well enough for him. Mr. Z. wrote to say that I might have jumped into possession of his little keel sloop before the international matches for very little money, but since he had seen the Genesta in "the races" he had concluded to adopt the cutter rig and his price would probably not suit me. But he had a friend who had a cutter, which, he thought, was willing to hand her over for a song. His friend said "go to blazes." That ended the category of cutters and keels in the market and I sat down disconsolate. Somehow owners of these sturdy little vessels were not in the least disgusted. The estimate placed upon able, little cruisers seemed to be quite exalted. Now, since Captain J. W. Saunders, of New York, has testified, in the *Herald*, Nov. 15, to the marvelous sailing powers of Genesta during her homeward passage, and added his conviction that in point of ability, dryness and speed in a heavy Atlantic swell, the modern cutter is without a peer, I suppose neither lucre nor the wiles of boating diplomacy would suffice to part owners and small keel craft. The barometer of expectations took a downward turn and I mapped out my plans were to end in snow and sleet for lack of a suitable vessel. The idea of a southern cruise had been all but abandoned. It grew colder day by day. Ha! What was that? A flash!

That skate again!

I must get out of this. It matters little how—go I must, if I have to go in a sandbagger or balance along on my eyebrows in a trap. Anything is better than nothing. To work again. And this time such an array of flatirons, with scaly clothespin rigs, such wretched boxes, flung together with tenpenny nails and putty! Scores of them! Your choice along the whole line, from the utterly wretched to the absolutely worthless. Never before did I realize the mass of trash that has been put afloat under the hallucination that inefficient style and shabbiness in build are the chief requisites of vessels meant for sport instead of trade. As though real service under canvas were not a *sine qua non* to all that float, regardless of their special spheres of usefulness. A had a 28ft. machine, flat as a sheet of paper, broad as she was long, "The finest seaboat of her length, sir." I thought I might call again. B pulled me out to a skipjack whose rail was all the freeboard she could boast. "Could go to windward in a heavy sea with the best of them." I was sorry, I wanted something that would run well. C skippered an uptown still. He took me for a mild youth from the country. He was whole-souled and "set them up," as the slang phrase has it, several times while he dilated upon the virtues of the Boomerang, strong, able, beat everything out of sight from Harlem to Gowanus and round to Hoboken. Knew she would fill the bill. Might pay for her right then and there. Look at her afterward. I went down town to get the money. D did not care whether I took her or not. She was good enough for him. Merely wanted to accommodate a nice young man. I started. He thought he might take less. I got to the door. He would almost give her away. Had I hesitated I might have had to take the thing for nothing, just to oblige him. E thought his lath and plaster contrivance would do. He was honest. She needed a new rig perhaps; would be better with a new keel; frame might be doubled up; board ought to be longer; fresh siding would not hurt her either; wanted more ballast; leaked a little, but never troubled him; just bailed her out with a cask. F kept his magnificent singlehand yacht, 35ft. long, habitually on the mud. The shrewd custom had grown on him, for the boat was sure not to sink at her moorings. G had a libel of some kind or other on a yacht. But why tire the reader with my fruitless search and endless wanderings looking for a boat which was really a boat and not its counterfeit presentment. Shoe leather, car fare and patience were exhausted. Disconsolately I twirled my thumbs, while my heart sank as I thought of that which might have been, of glorious bouts to windward in the lower Chesapeake, of sunshine, sparkling wavelets and westerly breezes, laden with the odor of the pine, while my trusty little craft turned in and out the reaches of Albemarle and Pimlico; of the maze of silvery streaks which thread their way twixt waving reeds and tassling rushes of the isles which fringe the lower coast.

Then a friend dropped in.

"I have found a boat."

"Indeed! a real boat?"

"Yes."

"Can she float?"

"Yes"

"Is she nailed or glued?"

"Nailed."

"Got a rig on her?"

"A very fair rig."

"And a model that won't make you sick to look at?"

"A very good model for one of her kind."

"Oh, pray what kind?"

"Not exactly your kind, but a first-rate South Bay cat."

"And she won't blow over in a breath?"

"She is quite stiff."

"And she is not so eternally fast that her plank has been worn thin on the bottom?"

"No, but she is a good sailer for all that."

"And she does not leak faster than it will run out through the seams?"

"No, she is tight as a bottle."

Then I thought of that skate.

"That boat is mine."

She proved to possess all the virtues enumerated, and others besides. She was truly a good boat—of her kind. As for the kind, I had been brought to that submissive frame of mind through disappointment, that any kind at all was welcome enough, and I accepted the South Bay cat for better or for worse, hoping that a small sail and diligent attention to the sheet, with conservative views as to the weather, would see me safely through the long voyage in strange waters I contemplated. Thus it was that I fell in with the centerboard catboat "Coot," of fair fame, though not quite as young as she used to be in ages whereof yachting memory runneth not to the contrary.

The Coot posed well on the water. She was shapely, more so than a dozen other boats of similar origin anchored near. She was rough and neglected for reasons best understood by a fair lady who was soon to change her name. Coot rejoiced in a nice easy bow, sharp, but not cut away at the expense of good bearings. She had a plump, roundish middle of good length and a clean run, well tucked up into an overhanging counter. The sheer was graceful and quite moderate. This gave enough side without being topheavy. The bilge was low and full, but easy, so that stiffness might be expected, while internal capacity was enlarged. The quarters were light and the sweep of the sheerplank a fair curve from stem to stern. The gripe was cut away, while a strong drag gave a draft of 28in. at the sternpost, which had a slight rake. The cockpit was square aft, the forward half being housed in with a light summer cabin having canvas sides after the usual fashion. The Coot had a mean length of 21ft. 3in. by common repute, which made her about 20ft. on waterline, and a beam of 8ft. 6in., rather uncongenial proportions, but for the clean way in which her model had been cut. As a result, there was considerable floor on each side of the centerboard casing, which, if roofed over with a permanent cabin trunk, would afford very reasonable accommodations for one or two hands and their traps, the wings being utilized

for stowage. With this and a general overhaul the boat could be turned into a very fair yacht, more suitable to my purpose than anything else which had come under notice. Hence the owner was hooked up, a transfer made, and the renovation begun.

As plans of the Coot and her arrangements will appear later on a description in detail may be postponed until then. C. P. K.

LAKE ONTARIO.

Editor Forest and Stream:

As your records will show, the Bay of Quinte Y. C. has maintained its position this year, its representatives having carried all before them except in two instances. In a few days all will be in winter quarters, the big ones having been stripped and the Norah and Dauntless having had their spars taken out.

Our little fleet has been diminished in numbers by the sale by Com. Roy of the Gracie. Mr. Roy was one of our most enthusiastic racing men, but he had not met with much success during the last few years, and probably grew weary of playing second fiddle. It is to be hoped that he will again figure in the list of racers next year, and that he may have a craft which will be second to none. The next event to which yachtsmen look forward is the annual meeting of the L. Y. R. A., which is to be held in Oswego.

The very able letters of Mr. Kunhardt on the subject of the races for the America's Cup, have given great satisfaction here. I had the pleasure of seeing the first and second failures in the series—on Sept. 7 and 11—and the first portion of the race over the inside course, and can indorse every word of what he says with regard to them. More outrageous treatment than the Genesta received after the Puritan drew ahead of her under Staten Island, favored as the latter was by the marvellous luck which stuck to her, as far as my observation went, I never saw. It is to be hoped that the next challenger will pursue different tactics and endeavor to start ahead. In such case only will the steamboat men allow the Britisher a clear course. The New York Y. C. are perfectly clear of blame in the matter, but if they can devise means of keeping the steamers out of the way they will add to the excellent reputation which they have fairly earned since they decided to rely on a single champion against the challenger.

PORT TACK.

BELLEVILLE, Ont.

THE TORONTO SKIFF SAILING CLUB.

Editor Forest and Stream:

This club, which was first organized by Mr. E. Macrae and Mr. H. S. Hall, on the 19th day of February of this year, has grown so fast that it has far exceeded the anticipation of those most interested in it. Our club house, which is on Mr. Hick's property, at the foot of York street, was commenced about the 20th of March, and we were in it on the 20th of June, on which day we held a formal opening and "at home," under the auspices of the Lieutenant Governor of Ontario and Mrs. Robinson, and from which date we may be said to have been fairly installed in our quarters.

Our spring and fall races were particularly successful. We divide the skiffs into classes, and, therefore, have three sets of races both in the spring and fall. Among the winners in the different classes may be mentioned Mr. Bath's Psyche, and Dr. Riordan's Shamrock in the special class; Mr. Macrae's Eva in the first class, also Mr. Hime's Comet in first class. The second class skiffs, from 16ft. 6in. in length down, includes several boats. Mr. Howard's Arrow, Mr. Geo. Goodersham's Zip, and Mr. Hall's Truant being the principal ones.

The committee decided to hold an open race on the 3d of October, at which we had twenty-four entries and was one of the prettiest sights that have been seen on this bay, as we had large skiffs and small ones; also, seven or eight entries from the Toronto C. C.

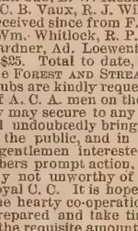
All boats carried numbers on the starboard side of mainsails, and you can imagine the interest that would be taken in it.

The winners were: First, Psyche, owned by P. A. Bath and sailed by G. E. Macrae; second, Zip, owned and sailed by George Goodersham, Jr.; and third, Vectus, owned and sailed by O. Martin.

During the summer months we had impromptu dances, some of them in boating costumes, which were very enjoyable and which went a long way to keep the members together. H.

BEAM AND LEAD.—*Editor Forest and Stream:* Against my wish I once more address you, hoping thereby to undeceive any young yachtsman who, influenced by your paper, may attempt to build a speedy yacht. My idea of speed in yachts, and which has been demonstrated by many years of practice and trial, is small displacement, in other words, the opposite of the cutter theory. Regarding the Crocodile the fact is she has less keel than before. She will sail next season with one and one half tons less displacement than last season, and consequently draw 2½ins. less water. If she be improved in speed it will not be the reason of a lead in "Whose Waterloo" is about equal to his argument some time since in which so much ink was wasted to prove the schooner Montauk 26×93ft. a narrow vessel. I see you prophecy that Mr. Lawton's new sloop will outsail her class. So did the *Herald* and *World* newspapers before you. Easy, Elsworth, plenty of beam, small displacement, and not the lead upon bottom will do it. Had not "M.," your correspondent, better first find out who Vindex is before giving his authorities. I take Vindex instead of being angry and young, to be quite middle-aged, the hero of much science, many races, many disappointments, and consequently soured.—CORINTHIAN. [If "Corinthian" has followed our arguments for some years past, he must be aware that we have never contended that light displacement was incompatible with speed—but only that heavy displacement was capable of as great speed under average conditions. Speed may be obtained in a properly modeled boat, on almost any dimensions or displacement. The question is, which of the other desirable ends are obtainable at the same time.]

PAINT VS. "TAR."—A very amusing suit was lately decided in the Kings County Supreme Court, the defendant being Mr. Herman Oelrichs, owner of the racing yacht Hildegarde, and the plaintiff being Mr. Franklyn Bassford, a rising young marine artist, whose works we have commented upon favorably on several occasions. The latter claims that Mr. Oelrichs employed him to paint a portrait of his yacht, 36 by 42in., for which he was to pay $500. On completion of the picture Mr. Oelrichs refused to receive it or to pay for it, claiming that it was not a likeness of Hildegarde, and that the drawing was faulty. The picture in question was on an easel in the courtroom. The specific points of the defense were that the picture was not delivered on time, that the part forward of the chains had a list to port, while the after portion was on an even keel, and that it did not resemble the yacht at all. A part of Mr. Oelrichs's criticism was as follows: "The gentleman on the bowsprit weeping, and the other gentleman trying to console him, both in skating costume, with red turbans or fur caps on, have no business on a bowsprit handling a jib 45ft. on the foot of No. 4 duck. It needs sailor men." Mr. Bassford was examined as to his knowledge of seamanship, navigation, astronomy, rule of three, splicing and knotting, and kindred arts and sciences, in all of which he proved remarkably proficient. A number of ancient tars, including Mr. Robert Centre, formerly owner of the cutter Vindex; Mr. J. Frederic Tams, owner of the sloop Pocahontas; Mr. Dodge, of the sloop Chester; Mr. William Kreis, Mr. C. H. Stebbins, and others, were examined as to the technical and artistic points of the picture. The jury finally handed in a sealed verdict in favor of Mr. Bassford. This gentleman presents his side of the case as follows: "When Mr. Oelrichs declared the picture unsatisfactory, although, as many of my witnesses testified, it was at that time a good portrait of the Hildegard, I offered to alter it to meet his views. He stated his objections, and I did so alter it in accordance with them, and when, after weeks of waiting, I merely asked him to look at it, he positively refused, and never saw the picture until he came in court. Had he looked at it and even expressed further objections I should have altered it again and again until I had met every criticism he could have brought against it. Could any one do more?"



YACHTING NOTES.—The sharpie Tarpon on her way to Florida twisted off her rudderhead when off the mouth of the Rappahannock River on Nov. 16, and put into Cricket Hill for repairs.... Loiterer.—This schooner, lately wrecked on the coast of Japan, was built in New York from a design by Nelson Spratt and taken to China in sections, being put together at Hong Kong. Her owner was Com. John Heard, of the Eastern Y. C. The Loiterer was 60ft. 5in. over all, 55ft. waterline, 16ft. beam, 6ft. 6in. depth of hold and 7ft. 9in. draft. At the time of her wreck she was chartered by Dr. C. G. Weld, of Boston.... Sans Peur, steam yacht, with her owner, the Duke of Sunderland, on board, left Southampton on Nov. 6 for a cruise to the West Indies, and will also visit the United States next spring or late in the winter.... Marchesa, steam yacht, with Earl Dudley on board, arrived at Montevideo on Nov. 4.... Nirvana, schooner, better known as the old sloop Julia, has been sold by Mr. E. M. Brown to Gen. H. W. Perkins, who will cruise in her to Nassau and perhaps Cuba.... Magnolia, steam yacht, Mr. Fairman Rogers, passed through Staten Island Sound on Nov. 21, bound for Florida via the canals.... Radha, steam yacht, is still in the East River. She has been docked and painted and is nearly ready for her Southern cruise.... Polynia, steam yacht, will be lengthened twenty feet at Newburg, where she was built.... Wood Bros., of East Boston, will build a sloop for a New York owner this winter. She will be 50ft. on deck, 44ft. waterline, 15ft. beam, 6ft. 6in. depth of hold and 6ft. draft.

Canoeing.

Address all communications to the Forest and Stream Publishing Co.

CANOEISTS *are invited to send us notes and full reports of cruises, club meets, information about canoeable waters, and other communications of interest.*

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signals, etc., of their clubs, and also notices in advance of meetings and races, and reports of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, raaps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

SECRETARY—Dr. C. A. Neidé, Schuylerville, N. Y. Candidates for membership must forward their names, with $3 for initiation fee and first year's dues, to the secretary, who will present names to the the executive committee. Money should be sent by *registered letter* or money order.

THE INTERNATIONAL CHALLENGE CUP.

MR. WM. WHITLOCK, as chairman of the committee appointed at the meeting of Nov. 7, begs to acknowledge subscriptions of one dollar each as follows: Thos. Commodore Parmele, $19, subscribed by F. F. Andrews, E. B. Edwards, S. G. Fairtlough, R. W. Gibson, Jas. W. Higgins, Wm. Hindhaugh, J. B. McMurrich, C. A. Neide, R. S. Oliver, F. S. Rathbun, B. W. Richards, G. M. Roger, J. H. Rushton, W. P. Stephens, C. B. Vaux, R. J. Wilkin, J. C. Wilson, J. T. Mott, Geo. L. Parmele. Received since from F. A. Renton, Jr., Henry Stanton, Edwin Fowler, Wm. Whitlock, R. P. Martin, L. W. Seavey, Arthur Brentano, A. J. Gardner, Ad. Loewenthal, E. W. Brown, $10. By Guenn—Sharpie race, $25. Total to date, $54. All contributions will be acknowledged in the FOREST AND STREAM and the *Canoeist* as received. Secretaries of clubs are kindly requested to bring the above resolutions to the notice of A. C. A. men on their roll, and to forward such suscriptions as they may receive to any of the committee. As an international race will undoubtedly bring the sport of canoeing very prominently before the public, and in all probability largely increase the number of gentlemen interested in it, this committee urge on all A. C. A. members prompt action, that it may take early steps to procure a trophy not unworthy of comparison with that annually offered by the Royal C. C. It is hoped to secure about $300. To do this will require the hearty co-operation of all without delay, as designs have to be prepared and take time to carry out, while nothing can be done until the requisite amount is assured.

CANOE COMPLICATIONS.

Editor Forest and Stream:

I think "Brass Cleat" is a little rough on the poor novices. He can hardly blame them for adopting the so-called "improvements" that have been brought out by old canoeists. I don't think that novices are responsible for the introduction of cam cleats, clutch tillers, drop rudders and many other fandangles that ornament the modern canoe; but I have noticed that after a visit to the A. C. A. meet the poor novice would come home with his head full of these things and straightway must have them on his canoe. Still, I would not advise the novice to stay away from the meet on that account. "Brass Cleat" cannot reconcile my assertion "that it requires constant practice to handle large areas of sail," etc., with the one "that it requires as good seamanship to win a race with a small area of sail as with a large one;" but it is not very difficult to do so.

It must be acknowledged that it requires a little seamanship to sail a 5-ton sloop, and the helmsman would look slightly ridiculous if he hung out to windward when she heeled over (although a canoeist would probably do it from instinct). It also requires seamanship to sail a canoe under moderate sail; if a man does not trim his sails properly, steer his boat correctly, pay proper attention to tides and currents, and slants of wind, the man that does do all this will win the race. Climbing out to windward can scarcely be called seamanship, but still it requires practice to do it successfully, and when it is done the boat is driven by an excess of force rather than by skill in sailing. It is simply the same practice of using shifting ballast that has been so strongly condemned in the yachting columns of FOREST AND STREAM, and puts the canoe in the same category as the shoal sandbagger and the hiker. "Brass Cleat" says that the racers do not carry such large spreads, where does he put Tramp, Guenn and Pearl, which, as I understand, all carry considerably over 100 sq. ft. If the racer limit their area to 85ft. it will be better, but even that is too large, 75ft. would be plenty. "Brass Cleat's" advice to novices in the matter of canoes is sound, and I can indorse it from experience, as I have used canoes long before a canoe club was thought of in this country. I hope to see him at the next A. C. A. meet and talk the matter over personally. SPIKE.

HOW BIRCH CANOES ARE BUILT.—The canoe has become so popular among sportsmen and tourists that the building of this light and graceful craft has grown to be an important industry in Maine, especially on the Penobscot River. Jack Darling, of Lowell, a famous hunter and guide, and an adept at building the birchen craft, says that when all the work of getting the materials from the woods and putting them in proper shape is considered, $35 is not a big price for a canoe. Time was when the big birch trees were to be found near by, and clear straight cedar was at hand in plenty, so that the materials for a canoe were easily obtained. Nowadays the birches are from fifty to one hundred miles from the up-river towns, and two suitable trees are seldom found within sight of each other, while the cedar is also distant. All bark for canoes comes from the white birch's outer coating, the inner side of which in winter has a reddish-brown coat, while in summer it is smooth and yellow. The winter bark is preferred, because it is tougher, and because of the opportunity afforded by its brown coat for tracing various designs with a knife. The canoe builder fells a white birch, which is at least one foot in diameter 18ft. from the butt, allowing it to fall across some small logs to keep it from the ground, and then strips off the outer bark. The bark is hard to handle, curling up in eccentric coils, and must be warmed or toasted over a fire before it can be straightened out and rolled up properly. The bark and a lot of clear, straight cedar are carried from the woods to the building yard in canoes or boats. At the yard stakes are driven into the ground in the shape of a canoe, and the bark, after more toasting, is fitted to this frame. Next the gunwales, strips of spruce and cedar, are shaved out and fastened to the top side of the bark with copper nails. Then the whole inside of the bark is lined with lengthwise strips of cedar and over these about fifty transverse timbers of the same material are sprung in, their ends being secured under the gunwales. All cuts made in bringing the bark to the required shape are sewed up with strips of cane and gummed over with a mixture of gum and rosin. Ash thwarts, very narrow, are fitted, and strips of tough canvas are glued over the lap of the bark at each sharp end, and the canoe is done. With two smoothly shaved, wide-bladed paddles of poplar, maple or ash, she is ready for service. If the canoe is intended for deep water, where there is a sea, she is fashioned deep; if for small lakes and trout streams she is shallow. Nearly every Indian tribe has a model of its own and the white men use entirely different forms. A good canoe of the ordinary length—15ft.—will carry four men safely if properly managed. The only tools used by white man or Indian in making the graceful birch are a knife with curved blade, an awl, a drawshave and a hammer. The Indian often has only the knife. The red man is not so neat a builder as many white men are, but he navigates a canoe with greater skill. It comes natural to the Indian—even a fat squaw paddles with dexterity. About ten years ago canvas was introduced as a substitute for bark for covering canoes, and many cloth canoes have been built in this vicinity since. The duck craft is covered with a thick coat of paint to make it watertight and is lighter, while fully as cheap as birch, but not so symmetrical. Birch will never be displaced by canvas, for it bends in prettier forms.—*New York Sun.*

A RIG FOR SMALL CRUISERS.

WITHIN ten years the whole character of American water sports has changed greatly, presenting to-day a totally different aspect from that of 1875. Two features of this change are specially noticeable, as they both have had a great influence on the development of our pleasure navy. One of these is the great decadence in shell rowing, a sport that reached its climax among amateurs in 1875 and professionals a little later, but that since has lost greatly in caste and popularity in both branches. Of course a few large colleges still keep up the eights, but shell rowing, both in private clubs and among our colleges, has fallen greatly from the place it once held; while among professionals it is in still worse repute. The other and more promising feature in our boating and yachting is the introduction of a large class of small pleasure boats that offer much more to a man than either shell boat rowing or the ordinary sand bag racing and sailing, that only a few years since was the only form of "yachting" open to men of limited means. The shell, or at best a gig or wherry, were the only rowing boats, and similarly the ordinary shoal centerboard cat-rigged craft was really the only sailing boat in general use until a comparatively recent period.

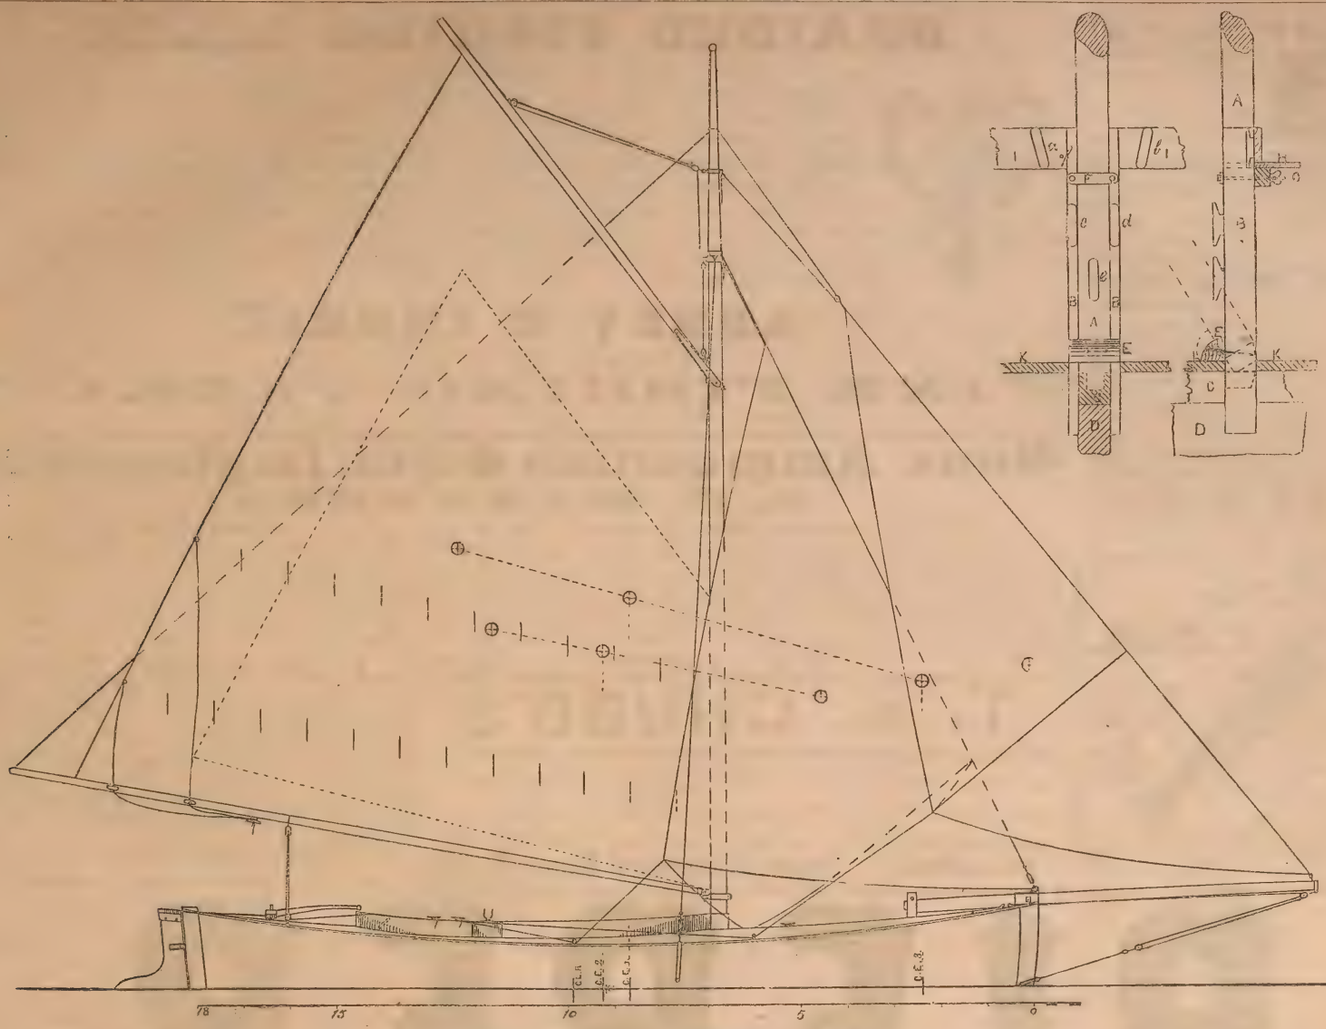
As the idea of cruising developed among boating men the existing boats were pressed into use, for want of something better. The first cruise of the early canoeists who afterward formed the New York Canoe Club was made in a "Whitehall" boat, up the Hudson to Albany and Troy; in 1877 a Brooklyn oarsman made a cruise from New York along the New England coast to Portland, Me., in a narrow decked wherry, and even the single shell has been pressed into similar service; but all of these craft were unfitted for such work. In a like manner the catboat was used for cruising and living on board, an end for which she was in every way unfitted.

The want of suitable boats kept many men of leisure and aquatic tastes from cruising, and hindered the development of this most charming sport, but the general circulation of Mr. MacGregor's books, more than any other cause, turned attention to cruising and cruising boats. First came the canoe, whose wonderful growth in popular favor is a sufficient reason for its existence and also for its encouragement; but it is too small a boat for many, who are still unsatisfied with the catboat. Various local craft, such as the sneak-box and New Haven sharpie, were made to do duty as cruisers, until, as the subject gained in importance, boats were specially designed for cruising work in all its varieties, and to suit men of all tastes and circumstances. Even now this class of boats is still in its infancy, its growth and development has just begun, but in place of the old shell, rowboat and catboat of a decade since, we can muster a fine fleet of cruisers, from the little Rob Roy canoe of wood or canvas to the larger class of canoes proper, then the coasting canoes and "canoe yawls" so called, then the improved sneakbox and sharpie, the small safe sloop, either keel or centerboard, up to the narrow yawl of 25ft. or so, such as the Boston Fad or the Molly, of Lake Ontario.

Ranging in cost from $50 to $1,000, in capacity from one to three or four, in draft from four inches to five feet by all gradations, suiting them to all waters; and in accommodations, from a tent and blanket at night to a snug cabin with stove and berths for two or three; but all of honest model and within the power of one man to handle; our progress in this direction is something to be proud of and augurs well for the future of the noblest and manliest of our outdoor sports. It is not and never can be followed for mere gain, it cannot be corrupted by the betting and evil practices that have debased shell rowing, it does not derive its attractions from the merely brutal pleasure of killing something, while it gives full scope to the best development of the physical and mental powers. Each year sees more cruises and more and better boats of all sizes and descriptions, as the subject is more carefully investigated.

One of the most interesting boats of the class is the "canoe yawl," an enlarged canoe that is known to many of our readers through the medium of Mr. Speed's little book, "Cruises in Small Yachts and Large Canoes," which we have noticed before. The author writes us under date of Nov. 4: "I have been cruising in the Viper since June, and came up Chichester Harbor on Monday last and will lay up at a village named Bosham, hauling her up. She has been and is the most satisfactory little vessel I ever came across, and is now as sound as ever and equal to the day on which she was launched. I have in hand a new boat, the Lizard, built at Inman's yard at Lymington for a friend in the Isle of Man, which has proved very satisfactory. She is 20ft. 10in. by 5ft. 8in. beam, with 17cwt. of lead outside and 4cwt. inside, with the same lines as Viper but a little more rise of floor and finer ends, which I think a mistake, and also more sheer: otherwise she is a sister boat. Such boats as these are easy to work with but one hand, one can live in them comfortably, they are safe and uncapsizable and not costly to keep up; in fact, absurdly inexpensive. Should I build another for myself I should make her a size larger still, but not going beyond a single hand's power to work easily. A very capable boat might be, say, 25ft. by 6ft. 2in., with other dimensions in same proportion."

The sail plan shown above is that of a similar boat 18ft. 4 in.×5ft., the lines of which, taken from the *Field*, were published in the FOREST AND STREAM of Nov. 6, 1884. The boat in question was built from these lines for Mr. Edward Burgess, of Boston, by Lawley & Son, and Mr. Burgess rigged her as shown, instead of as a lugger, the rig of the original. The dimensions are as follows:



Length on deck	18ft. 4in.
Beam	5ft.
Draft	2ft. 2in.
Freeboard	1ft.
Cockpit	7ft. 6in×4ft
Lead keel	850 pounds.
Ballast inside, iron	250 pounds.
Planking	¾in.
Mast, from fore side of stem	6ft. 10in.
Mast, deck to hounds	14ft. 3in.
Mast, deck to truck	18ft. 9in.
Mast, diameter at deck	4in.
Bowsprit, outboard	6ft.
Bowsprit, diameter at stem	3in.
Bowsprit, diameter at end	2in.
Mainboom	15ft.
Mainboom, diameter	2½in.
Gaff (oval, 2¼x1½in.)	9ft. 6in.
Center of lateral resistance aft center of loadline	10in.
Center of effort forward of center of loadline	5in.
Center of effort above loadline	6ft. 4in.

SAIL AREA.

	Foot.	Luff.	Leech.	Head.	Area.
Mainsail	13.9	11.0	17.8	8.9	150 sq.ft.
Staysail	8.2	13.0	11.3	...	48 sq.ft.
Jib	8.0	15.8	11.0	...	45 sq.ft.
Total sail area					233 sq.ft.
Area of reefed mainsail					80 sq.ft.

With the above amount of ballast the draft is a little less than 26in., out in cruising the crew and stores would bring her to her load line. The center of effort of reefed mainsail and whole staysail is shown at C. E. 2, and of the two headsails at C. E. 3. Many will object to the double rig, but in practice it is found to work excellently, being very easily handled. The three small sails are easily set by a boy and the headsail sheets, leading to the rail as shown, may be reached from the tiller. In tacking they are readily got down with one hand without leaving the stick. The jib is set flying, the outhaul being an endless line, with a snaphook spliced in. The hook is snapped to the jib tack, the sail partly hoisted and hauled out. When not in use it is stowed in a bag instead of being furled on the bowsprit. No jibstay being needed the bowsprit is fitted with a tackle on the bobstay and is easily housed entirely, which is sometimes a great convenience in running into odd places as such small boats constantly do. The convenience of the device on the boat in question was practically shown this summer, where, starting from beside a float in a very strong tideway, a lull in the light breeze stopped all steerageway, and before an oar could be got out, threw the boat between two piles. She held for a moment, jammed by the tide, but before she had slipped so far astern as to strike the bowsprit, in which case it must inevitably have carried away, the jib tack and bobstay fall were cast off, bowsprit run in, the boat swung clear, the stick went out, and fall and tack were made fast, a pull on the jib halliards, and all was right again. The fittings are very simple, a gammon iron bolted to port side of stemhead, a sampson post of 2x6in. oak plank with a 3¼in. hole bored through for the heel of the round bowsprit, a fid of ½in. round iron, and two small iron blocks for the bobstay tackle, one hooking into a wire rope bobstay.

In some cases a tabernacle and lowering mast are desirable, and with a forestay both are easily fitted. The tabernacle is made of two pieces, B B, of oak 1¼x4in., stepped in the keel D, and coming to the coaming I I. The mast is stepped in the block C under the floor K, and is held by the forestay and two shrouds, all fitted with turnbuckles. A bar F of 1¼x¼in. iron is bolted to the tabernacle's sides, one bolt G being fitted with a thumb nut, while the bar is slotted on the starboard side to slip over the neck of the bolt, turning on the port bolt. When G is loosened the bar may be turned over out of the way, and the mast lowered. To avoid cutting away the floor for a distance aft of the mast, a block of oak E is bolted to the heel of the latter, on the after side. When the mast is lowered the block turns on the edge L, lifting the mast out of the step as it falls aft. In lower rig, the halliards are stopped to the mast out of the way, the jib halliard is carried forward and hooked to stem head, the bar F is swung back and the mast is lowered by the jib halliard. The shrouds and

SAIL PLAN FOR A SMALL CRUISER.

also the parrel on the gaff must both be slackened. One man can readily lower and hoist the mast for bridges, etc.

The leads of the various lines are as follows: Throat halliards to cleat *d* on starboard side, peak to cleat *b* on same side so that both can be reached at the same time; staysail halliards on cleat *c*, jib on cleat *a*, topping lift on cleat *e* on mast, staysail downhaul knotted in hole in coaming at *f*. The mainsail is thus set from the starboard and the head sails from the port side of boom, and the downhaul is handy to the staysail halliard. All are easily reached by leaving the tiller for only a moment, and one man can manage all lines. The boat has airtanks in each end, a large cuddy forward, and seats in the cockpit. For cruising the seats would fold out, making a bed for two or even three (4×7ft.), while a tent would be pitched over the boom. The yawl rig would answer well for such a boat, but the present one has proved very satisfactory for singlehanded sailing and cruising. Apropos of these boats it may be mentioned that Mr. MacWhirter, formerly of Erith, who built both of Mr. Speed's boats, is now settled at West Brighton, Staten Island, where he is engaged in yacht building.

WIDE OR NARROW CANOES.—Roslyn, L. I., Nov. 9.—*Editor Forest and Stream:* Having been for some years a member of the A. C. A., and taking a passive, if not active, interest in canoeing, I would like to ask a question or two and make a suggestion or so on the question of beam. Many prominent canoeists have long since deserted the canoe for cruising under sail, and have adopted square stern boats simply because the canoe, as at present limited in width, is neither safe, handy nor comfortable for sailing purposes; in short, is about as cranky and dangerous a combination of complications as could well be devised for capsizing. It is time that a note of warning should be sounded, which, if not heeded, will result in debasing legitimate canoe sailing from its enviable distinctiveness to a sort of mongrel sport, without name or position. What possible objection can be made to such an increase of beam as will render the canoe serviceable, as an honest and speedy little sailing craft, quite capable of thrashing the over-estimated sneakbox to windward or free? In view of the above named considerations, I would suggest that about the following proportions be embodied for improving the sailing canoe: Say, length over all, 15ft.; beam, 42 to 48in.; draft of water, 6in. Of course she must be sharp at both ends, not an ounce of ballast should be permitted in racing, and her centerboard ought not to exceed 30 pounds in weight. There is no difficulty in designing such a boat, absolutely unsinkable without necessity of tanks, light enough for one man to easily haul out of water, and with steering qualities which will render her as sure and quick in coming about as the sharpie. In order to admit her legitimately into the A. C. A. for racing purposes, it would be well to make two distinct classes of sailing canoes. One class embracing those under 36in. beam, the other including those between 36 and 48in.—THOMAS CLAPHAM.

REFORMS IN BRITISH CANOEING.—Mr. W. Baden-Powell writes us that he will present at the general meeting of the Royal C. C., a resolution for the adoption of the rules of the American Canoe Association, together with a limit of sail area, an allowance of water ballast in cruising trim races, the establishment of a senior class, on Mr. Gibson's plan, the members to take no club prizes, but a silk flag for each race won with any extra prizes. He will also move to abolish deck flaps, on the grounds that they are detrimental in a cruiser and racer. Mr. Powell will cut down his 80-lb. board to the A. C. A. limit. His proposed limit of sail area is 100 and 25ft. for main and mizzen in first class and half as much, 62ft., for spinnaker. Cruising class, 75ft. total, with 38ft. spinnaker.

SIMPLICITY AND EQUITY.—One of the neatest, simplest and most attractive policy contracts now issued by an insurance company is the new Accident Policy of the Travelers Insurance Company of Hartford. Those who have any acquaintance at all with insurance business, or the men engaged in it, know that the complexity and volume of conditions on policies is not due to the wishes of those who issue them; that a company would far rather issue a policy with no conditions at all, and that the multiplied provisions and restrictions on their policies have been gradually forced on them by the dishonesty of policy-holders and the monstrously strained decisions of the courts. THE TRAVELERS has been an unusually severe sufferer from this cause, but they have at last determined to make a brave trial, and deserve equity if they cannot receive it. Their new policy is a model of brevity and compactness, the conditions being cut down to not much more than a third of their former volume, and stated in admirably clear and lucid language. The most unlettered man could not hesitate for an instant over the meaning of its concise, emphatic and even curt sentences, and it would seem that even a court could hardly find ambiguity in them. They are also very broad and fair; and the fact that the company refuses to pay for injuries received through violation of law, or in blood-feuds or drunken fights, should only make honest men feel all the more certain of receiving their just claims.—*Adv.*

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

T. B.—See advertisement of the article elsewhere.

G. L. O., Jr., Boston.—We cannot tell you what is the cause of the change in color of hair.

J. W. H., Owingsville, Ky.—Does the new, plain, edition of "Sport with Gun and Rod," advertised in Sportsman's Library column at $5, contain the same matter and illustrations as the finer edition? Ans. Yes.

N. L., Paterson, N. J.—Please give me the dimensions of a hand grasp for a single-handed fly-rod. Ans. From one inch to one and an eighth, the smaller preferred.

BARCKLAND, Silver City, Utah.—Please give me the name of the duck of which I inclose the head herewith? Ans. The head is that of a red-breasted merganser (*Mergus serrator*), also called "sheldrake," "fish duck," etc.

SPARROW PIE.

THE *St. James Gazette*, with no kindly feeling toward the sparrow, discourses thus: Many things are necessary for a sparrow pie; and the chief of these is first to catch your sparrows. The sparrow likes best the neighborhood of rick yards; and the artfulness and dexterity with which he will hang by his feet, throw the whole weight of his little body on to an ear of wheat, and carry it off, is one of the things that are rarely observed though they are well worth observing. Naturally they are as unpopular with the farmer as is the barn rat; and the sparrow catcher, like the rat catcher, comes from the town to exterminate him—being paid, like the wolf catcher of old times, by the number of heads delivered. Sparrows are much too artful for any trap. It is almost idle to set nooses or lay clap nets for these birds. The sparrow catcher's method is known as bat-fowling. For bat-fowling four sportsmen are the proper number. One of these carries a long stick, with which he beats the ivy or the sides of the rick and so starts the game. The second bears a lantern at the end of a pole, toward the light of which the birds fly when suddenly aroused from sleep. The other two hold, and rattle close against the roosting haunt of the birds a wide-mouthed net, made like a shrimping net but considerably larger; and into this the sparrows dash, bewildered by the noise and dazzled by the light. Sparrow catchers need no license, their gear is cheap, and sparrows in good condition command a very fair price. As the sparrow catcher is paid by the head, or rather the dozen of heads, you will never find the head of a sparrow in a town pudding.

When the sparrow reaches the London market guile commences. His head is gone already; his feet are now removed, and he does duty for the lark at many a London restaurant and hotel (indeed in the best of these the lark makes his appearance on your plate with his feet on, so that the long claws may establish his identity). Were we willing to call things by their right names, this deception would be unnecessary. A corn-fed sparrow differs as widely from an insectivorous lark as does a Norfolk turkey from a Scotch capercailzie. Each is excellent in its way; but they no more resemble each other than does the genuine red venison the park-fed fallow deer. Those who have merely looked at the vignettes in Yarrell can distinguish in a moment between the breastbone of the lark and that of the sparrow. Some sceptics declare that boned larks served as alouettes en caisse are nine times out of ten simply sparrows, the whiteness of whose flesh is concealed by highly colored gravy.

But there are other ways of cooking a sparrow than to boil them with beefsteak under crust; and in every way he repays the trouble of the cook. Roll a piece of bacon over his breast (not too large a piece), toast him in a Dutch oven, and so serve him hot. Schoolboys know this, although they are often obliged to dispense with the bacon. Or, "another way." Curry a dozen sparrows and serve them with the proper gravy in a rampart of rice. In fact, when you have once understood how dainty a bird a well-fed sparrow is, a dozen worthy modes of presenting him at table will occur to you. Has not a book been written detailing a hundred methods of cooking the potato?

One way may be recommended as excellent. Cut enough off the end of a large potato to enable you to scoop a receptacle for your sparrow. Place him therein, as Izaak Walton said, "tenderly," with appropriate adjuncts to your taste. Lute on the head of your potato again with flour and water. Use your judgment as to time of serving, and this baked potato will astonish your guest. Nor need the humanitarian be aggrieved at all this good advice, nor argue about the number of lives that have to be sacrificed for a single pudding. The sparrow is not easy of extermination, as the good people of Australia have discovered. You might as well talk of overshrimping Pegwell bay as of overbatfowling English rick-yards. Nor has the sparrow, like the quail, to be kept in a dungeon and stuffed with millet until he is quite uncomfortable. Scholars of the Paul Rondolet type, should they be disposed to think of Lesbia's sparrow, and therefore hesitate as to a sparrow pudding, may take comfort from the thought that the pet of Lesbia was certainly not our own Passer domesticus, inasmuch as it used to flutter round her head, pick playfully at her finger, and twitter a welcome to her. The bird in question was probably a goldfinch, a redpoll or siskin. The Romans applied the term passer to all small birds indiscriminately. Anyhow, there is very little of romance about a well-fed cock sparrow captured during his winter season among the corn ricks.

POT LUCK FROM EXCHANGES.

Mr. Len Piles, a citizen of Sullivan county, Ind., is the owner of a mad-stone. It is gray in color, full of pores, and almost as light as a piece of paper. It is a genuine mad-stone, and Mr. Piles keeps it wrapped in a piece of soft cloth. It was brought to the United States from Ireland many scores of years ago by Mr. Piles's ancestors. Great care has been taken of it, and it has been handed down from generation to generation. It is valued at $400. Over 1,000 applications have been made by it.

"Lord Tweedmouth," says London *Truth*, "was recently obliged to surrender to the notorious Mr. Winans the remainder of his lease of the Glenafferie shootings (in Scotland) belonging to the Chisholm. No sooner had the grounds been transferred than Mr. Winans commenced to erect high fences with the object of cutting off all communication with various bridges which Lord Tweedmouth had built in order to facilitate access to the high road. Mr. Winans seems to be a person of extraordinary effrontery, and he requires a sharp lesson; but he has conceived an entirely erroneous impression of his power if he supposes that he can stop up bridges and claim the exclusive right to roads and paths which have been freely used by the public for centuries. His stupid arrogance has excited keen indignation in the Highlands."

The *Lumberman's Gazette* says: "The lumber business as at present conducted, is to a great extent a speculative undertaking. Fortunes can be made almost as rapidly as in fortunate speculating in Wall street, or lucky strikes in gold mining. Men who were mill laborers ten and fifteen years ago have retired with princely fortunes or remain in the trade to become millionaires over and over. None of them has thought of creating a great industrial establishment to be handed down to his family to the third and forth generations. The thought of obtaining vast landed estates, the timber of which should be prudently harvested and make a perpetual source of revenue to the latest generation, has not entered into the thought of the lumbermen." With here and there an honorable exception these plain words probably tell the exact truth about the spirit and aims of our "pine barons."—*S. W. Powell in Examiner.*

BRAIDED FISHING LINES.

TRADE MARK.

The great superiority of a properly braided line over a twisted or laid line, has increased the demand for braided lines enormously. This demand has induced a number of manufacturers, entirely unacquainted with the requirements of anglers, to put on the market a quantity of perfectly worthless goods. Many of these lines are undersized and short of marked length; nearly all of them are made of poor material and on old-fashioned machines. Anglers will please take notice that *all of our best braided lines—cotton, linen, raw silk, dressed silk, oiled silk, enamel, and polished waterproof tapers—are labeled with our full firm name and trade mark*, except the enamel fly lines on cards, which bear only our trade mark and the name of the Empire City Braid Co., whose agents we are.

If your dealer does not keep our goods in stock, or will not order them for you, send us 50 cents for our 180-page folio illustrated catalogue.

T. H. CHUBB'S

"Henshall" Split Bamboo Bass Rod.

This cut represents our "Henshall" Split Bamboo Bass Rod length, 8 feet 3 3-10 inches; weight 8 oz. This rod has extra tip light wood hand-grasp whipped with cane. Metal reel seat, or reel bands, as preferred. Hexagonal cap ferrules, with welt, no dowels, anti-friction tie guides. Three-ring tops, nickel plated trimmings fastened on. These rods are all ready for use, with the exception of winding and varnishing, for $7.50. This rod is made according to the dimensions given us by Dr. Henshall, and is indorsed by him as a "Standard Henshall Rod." Above rod with German silver trimmings, instead of nickel, $9.25. Send for catalogue of Trout and Bass Fly Rods, also Amateur and Rod Makers' Supplies, to

T. H. CHUBB, Post Mills, Orange Co., Vt.

PIEPER

Nos. 586, 588, 589 and DIANA.

There is Nothing Else in the World Like Them for the Money.

Mr. W. K. Haynie, Chappell Hill, Texas, writes under the date of Aug. 21, 1885:

"I have given the Pieper Diana gun you sent me a thorough trial, and I endorse it in the strongest language. I am satisfied I have the best gun I ever shot, and I have used many of leading fine makes both English and American. I have broken glass balls at 87 yards, and killed ducks with No. 6 shot at 75 to 80 yards. It shoots buckshot equally well; I brought down two deer, one with the right and other with the left barrel. There is no possible shot the gun won't make. The finish is equal to the shooting. I am recommending the Pieper to all my friends."

For Sale by all First-Class Dealers in Arms.

IF YOUR DEALER HAS NONE, DON'T BUY TILL YOU INSPECT THE PIEPER. SEND FOR PIEPER CATALOGUE TO

SCHOVERLING, DALY & GALES, Sole Agents.

Wholesale Dealers in Guns and Gun Goods.

84 & 86 CHAMBERS ST., NEW YORK.

The NEW MARLIN .32 and .38 Rifles, 7½lbs., kill twice as far as any other of same calibers. The DALY HAMMERLESS captured the Illinois Diamond Badge again this year.

"FOREST AND STREAM SERIES."

DEER HUNTING.

BY JUDGE JOHN DEAN CATON.

BY and by it will be time to hunt antelope and deer. It is always time to read about them. Judge Caton's book on the antelope, elk, deer, moose and caribou of America discusses in a readable way the life history of these animals and the methods of their capture. It is the work of an enthusiastic sportsman who has had a wide experience and has devoted the leisure of years to studying these interesting game animals. The volume is very fully illustrated, and is a perfect storehouse of information and entertainment. The first edition was sold by the Boston publishers at $4. Price $2.50.

WOODCRAFT.

BY "NESSMUK."

A COMPACT pocket handbook of condensed, boiled-down, concise, clear, comprehensive, sensible, practical camp gumption. "Nessmuk" has been "in the woods" in Michigan, New York, Pennsylvania, and South America, and this is a book for outers, wherever they kindle their camp-fire. The author believes in "smoothing it." He has learned how; now he tells others. It is much easier to learn from "Nessmuk" than from Dame Experience. We should not be surprised if "Woodcraft" completely revolutionized the methods of camping out. If you are going to the woods, read "Woodcraft" before you go. It may add to your trip a hundred fold. Price $1.00.

DOG TRAINING.

BY S. T. HAMMOND.

HE was a promising puppy, and when you turned him over to the breaker to be educated, you thought he was bound to make "the best dog in the world." And you'll not soon forget how disappointed and disgusted you were when the dog, the breaker and the big bill—all three turned up together, and you saw that the animal's spirit was broken and it would take a steam calliope to make him mind. Now, this could not have happened if you had been wise enough to buy a copy of Hammond's book, and in your odd leisure moments *train* the dog yourself instead of having him *broken* by some one else. We are selling edition after edition of this book, and it is revolutionizing the system of preparing dogs for work in the field. Price $1.00.

SHORE BIRDS.

A PAMPHLET for those who "gun" along the shore. Tells of: I. Haunts and Habits—Where the bay birds live and what they do at home. II. Range and Migration—Where they go to breed and where to spend the winter. III. A Morning Without the Birds—An episode of shore shooting. IV. Nomenclature—A list of our American species of *Limicolæ*, with a description of each species. V. Localities—Where to go to shoot them. VI. Blinds and Decoys—How to shoot them after you have reached the grounds. 45 pp., paper. Price 15 cents.

ANGLING TALKS.

BY GEORGE DAWSON.

AS a political writer of conceded power, Mr. Dawson wielded a trenchant pen; when he terned from the conflict of parties to the praise of the favorite pastime of "simple wise men," his essays, limpid as the crystal streams, are aglow with the soft summer sunlight and melodious with the songs of birds. When angling was the theme, he wrote from a full heart and in closest sympathy with the scenes and pursuits described. These "Talks" are brimful of manly, wholesome sentiment; there is in them all not a particle of cant. Their sincerity and overflowing spirit at once win the reader, and he perforce shares the author's enthusiasm. The effect is magical, like that of the mimic players in Xenophon's *Memorabilia:* he who reads, if he be an angler, must go a-fishing; and if he be not, straightway then must he become one.—*Extract from Publishers' Preface.* Cloth, price 50 cents.

CANOE "AURORA."

BY DR. C. A. NEIDÉ.

A CHARMINGLY written and always entertaining account of a canoe cruise from Lake George, New York, down the Ohio and Mississippi Rivers to the Gulf of Mexico, by the Secretary of the American Canoe Association. To read the cruise of the "Aurora" is the next best thing to having made it; and the reading is decidedly more pleasant than would have been participation in some of the misadventures related. 216 pp., cloth. Price $1.00.

A FAMILIAR TALK.

With the approach of a new year it is not necessary to announce any change in our manner of conducting this journal. Just what the FOREST AND STREAM has been in 1885 we hope to make it in 1886. It will be run on the same old principles, tested by experience and approved by prosperity. It will be just as entertaining, just as instructive, just as frank and outspoken, and just as helpful.

We are sometimes asked to explain the reason of the FOREST AND STREAM'S constantly widening influence and prosperity. Well, there is no

Trade-Secret

about it, and we do not mind telling you. It is this: We have not expended our energies in preposterous spread-eagle proclamations of tremendous attractions in the dim and distant future, but have pinned our faith to present performance, each week, and fifty-two weeks in the year. This in the kind of journalism that is bound to succeed. Nothing very occult about it, you see.

Another element of strength is the jealousy with which we have maintained the inherent dignity and entire respectability of the pastimes discussed in these pages, and the extreme care we have taken to keep the tone of the columns such as renders the paper fit for any man to receive into his family. We are assured by men, whose good opinion we value, that they do not think it necessary to make

A Weekly Scrutiny

of the contents of the FOREST AND STREAM before venturing to lay it on the family table, We determined, years ago, that a clean paper must win its way among sportsmen (not "sporting men"). The fact that it has done so is now cited, not that we may boast of our own prescience, but as a most gratifying evidence of the high standing of the field-sports to which this journal is devoted.

In other words, the reason why the "Forest and Stream" is liked by sportsmen is that the "Forest and Stream" is the kind of paper that sportsmen like.

This, as we have said before, is complimentary all around. A third element of the paper's popularity is this: It has some hundreds of correspondents and contributors, who write for it because they have something to say.

PAPERS TO APPEAR IN 1886.

Among the papers and sketches to appear in FOREST AND STREAM in 1886 are the following:

To the Walled-in Lakes.

Sketches of exploration and hunting in the Northwest with the Blackfeet and Kootenays. By "Yo."

Cruise of the Coot.

An account of a voyage alone in a single-hander from New York along the Atlantic seaboard to Florida. By C. P. KUNHARDT.

Hunting in the Himalayas.

Scenes and incidents in the life of an Indian forester. By "SHIKAREE."

Falcons and Falconry.

An introduction to the sport of hawking, with illustrations, drawn from nature. By R. W. SEISS.

Game Preserving in Britain.

A comprehensive series of papers on practical game preserving in Great Britain, with descriptions of the game birds of the British Islands, and sketches of sport. By "MOORMAN."

Scrimshawing.

A popular account of how a whaler spends the idle hours aboard ship. By JAS. TEMPLETON BROWN.

The Lower Forms of Life.

A continuation of the admirable series of essays on the beginning of animal life. By JAMES STELLER.

Studies in Botany.

New chapters on plants and plant life, written and illustrated from nature. By A. W. ROBERTS.

Land and Water Experience in Florida.

New chapters of experience on the Gulf Coast. By "NESSMUK."

Cruise of the Pilgrim.

A delightful description of a summer voyaging on the Atlantic in the cutter yacht Pilgrim. By W. H. WINSLOW.

The weekly issues of the FOREST AND STREAM form two volumes each year of twenty-six numbers, or 500 pages each, and the file constitutes a library of permanent worth. Twenty-four volumes have already been published. We furnish handsome file binders (price $1.50) which hold twenty-six numbers.

Subscriptions may begin at any time. Per year, $4; $2 for six months. Remit by post-office money order, draft or registered letter. Give name, town, county and State. Address

FOREST AND STREAM PUB. CO., 39 Park Row, N. Y.

AIR GUNS

PRICES: $6, $9, $10, $12, $15, $18 and $20.

FOR PROFIT AND PLEASURE.

The gun shown above is our **NEW COMBINATION AIR GUN.** This is the most complete arrangement ever offered. It combines two pieces in one (a perfect Rifle to shoot a regular 22-100 cartridge, and a superior Air Gun to shoot darts, slugs and shot). It can be instantly changed from one to the other, and has a steel barrel rifled. All the parts extra heavy, and so constructed of best material to stand continuous service, making the most durable gun manufactured, and by far the most practical long-range Air Gun ever made for gallery or field. WE MANUFACTURE A FULL ASSORTMENT OF AIR GUNS SUITED TO MEET THE TASTES AND WANTS OF EVERY ONE. The quality of our goods has established them in all the principal markets of the world, and their superiority has induced the United States Navy to place them, with success, on their school ships. ☞Illustrated price lists sent upon application. Address

H. M. QUACKENBUSH, Manufacturer, Herkimer, N. Y., U. S. A.

NOTE.—We stamp our name plainly on each gun we make. Send for catalogue B.

THE ITHACA GUN!

BEST ENGLISH TWIST BARRELS, $35.

DAMASCUS STEEL BARRELS, $50 to $200.

BAKER'S

Latest and Best Invention.

Strongest, simplest and best balanced gun made. All have Top Lever, Low Hammers, Rebounding Locks, Interchangeable Parts, Extension Rib, Self-Fastening Compensating Fore End, Rubber Butt Plate, and the shooting qualities that made the Baker Gun a great success. Send for Circulars.

ITHACA GUN CO., Ithaca, N. Y.

CANOE HANDLING.

By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners: and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

SMALL YACHTS.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice.

By C. P. KUNHARDT.

THE FOREST AND STREAM PUBLISHING COMPANY takes pleasure in announcing the publication of a magnificent quarto volume, bearing the above title. This book covers the field of Small Yachts, with special regard to their design, construction, equipment and keep. The opening chapters are devoted to a consideration of the model and the draft, their relations to one another, and the purposes which they subserve. Full directions are given for producing the plans of a yacht with reference to the chief points in design, and the method of taking off the lines of a boat already built is likewise described in detail.

All elements entering into design, such as Resistance, Stability, Balance of Rig, Handiness, Displacement, etc., are dealt with in separate chapters. The rules necessary for the mathematical computations, and a review of theory and practice close the first division of the book.

The second portion comprises the description of the Plates, covering the whole range of type in small yachts, from the shoal catboat and American centerboard sloop to examples of the narrowest and deepest British cutter yet built. These yachts have their lines, build and fittings depicted in the Plates, which are drawn to scale. With their aid and the specifications presented, the reader is placed in possession of accurate information concerning the mould, accommodations, rig and characteristics of all styles of yachts which have received favorable recognition. Sporting boats, combination row and sailboats, and various examples of special form are introduced.

The third division offers a comprehensive review of single-hand sailing, to which small yachts are especially adapted. Directions are given as a guide in selection of type and sail plan, and subsequent equipment and proper management.

The iron work of yachts, their gear, yawls, stearing apparatus, boat building and much other closely related matter is entered upon. The new International Rules of the Road, Signal Service, and a bibliography appear in the Appendix.

The work is profusely and handsomely illustrated with 150 illustrations inserted in the text, besides the sixty-three plates as follows:

LIST OF PLATES.

I. The Sloop Yacht Schemer.

A REPORT ON THE NATIONAL PARK.

WE take great pleasure in laying before our readers this week the full text of Mr. W. Hallett Phillips's report on the Yellowstone National Park. This document represents the investigations made during a month and a half in the Park last summer, and the conclusions reached are in almost every case identical with those which we have expressed in the past with others which we had drawn during a sojourn there in August last. These conclusions we had embodied in a series of letters on the Park which we had proposed to print on the assembling of Congress, and which are now forestalled by Mr. Phillips's excellent report.

The most important matter touched upon in this document relates to the government of the Park. We have often alluded to this subject in years past, and have urged upon Congress the necessity of providing some means of enforcing the law on this national reservation. The bills introduced in Congress have attempted to provide such government by placing the Park within the jurisdiction of Wyoming or Montana, but as these bills have failed to become law, the Park still remains without a government. We pointed out last August that, notwithstanding this fact, Wyoming had enacted a statute providing for the government of such portion of the Park as lay within the borders of that Territory, authorizing the election of peace officers for the reservation, and providing pains and penalties for violations of this statute. We also showed that the machinery thus provided was in operation, and remarked that, owing to the failure of the Vest bill to become a law, the statute passed by the Wyoming Legislature was without effect, and that the peace officers acting under the authority of the Territory had no jurisdiction whatever in the National Park. It will be seen that Mr. Phillips takes the same view of the case that we then expressed. He recommends to remedy the present condition of affairs in the Park, that two United States Commissioners be appointed, one to sit at the Mammoth Hot Springs and the other at the Lower Geyser Basin, and that these Commissioners be vested with such extraordinary powers as are conferred upon the Commissioners appointed under the recent Alaska act. They should have power to try all offenses not above misdemeanors, and all violations of the laws of Congress, or the rules and regulations established by the Secretary of the Interior. Congress should at the same time provide pains and penalties for the violation of these laws and regulations.

The attempt to govern the reservation by means of Territorial law has proved an entire failure. We should have been glad to see this means employed if it could have been done effectively, but the ridiculously low salaries appropriated for the justices made it very difficult to procure men of character for this position, and it is openly stated that the man Hall, who was the justice at the Firehole, made use of his office to squeeze what he could out of such visitors to the Park as were unfamiliar with the regulations and with the Wyoming statute, under which he supposed that he was acting. The Territorial plan having failed, we are inclined to regard with favor the one recommended by Mr. Phillips. It is certainly worth a trial. It is extremely important that some steps should at once be taken to deal with offenses more serious than misdemeanors. A few years ago last summer a party of tourists were "held up" on the Firehole River by a couple of ruffians, and this may occur again. Provision should be made for the punishment of all crimes, and some court or courts should be designated which shall have jurisdiction over this territory. It is further recommended that the assistant superintendents be vested with the powers of deputy marshals, including that of arrest, a most important and desirable addition to their powers, and one which we have long advised.

Mr. Phillips's recommendations with regard to the posting of the regulations, the prohibition against advertisements, against shooting within the limits of the Park, and the licensing of guides, will commend themselves to the judgment of all. His remarks on the liquor traffic in the Park are deserving of careful consideration. To the scenes of drunkenness at the Hot Springs, witnessed last summer, we have already alluded. His views in regard to the qualifications of the men to be employed as assistant superintendents and the name by which they should be known are excellent. The number of these men should be increased to twenty-five at least, and such increase should be made at once. The territory which they have to cover is very large, and each year the increase of travel to the Park adds to the danger to game and to the forests. We have long urged that the powers of the Superintendent should be considerably enlarged, and that matters should be left more to his discretion than is now the case. It is manifestly absurd that he should be obliged to appeal to the Secretary of the Interior whenever he wishes to purchase a sack of oats or to give a permit to cut a few tons of hay.

Mr. Phillips's remarks with regard to leases, while very interesting, call for no special comment.

The question as to the enlargement of the Park was wholly without the purview of Mr. Phillips's instructions and is not touched upon in his report. It is one that we hope to see come up later in Congress.

Taken as a whole the document is a remarkably clear and intelligent statement of the more pressing needs of the Park, and those who are interested in the reservation may congratulate themselves that so competent an agent was chosen by Mr. Lamar to look into the condition of this reservation. It is very gratifying to us that an intelligent gentleman sent out by the Government, and making his observations under the most favorable circumstances, should have reached conclusions identical in most respects with those which we have arrived at after years of investigation.

THE NEW YORK FISH COMMISSION.

WE find the following in the Albany *Argus* of late date:

"On investigation it has been discovered that the terms of office of the Commissioners of Fisheries, with the exception of that of William H. Bowman, of Rochester, have expired. The term is five years, instead of life as heretofore believed. The statutes are mandatory in the matter of filling these vacancies. The Anglers' Association of the St. Lawrence River has filed with the Governor a vigorous protest againt the reappointment of Fish Commissioner Blackford, of Brooklyn, because he is a fish dealer in New York city, and his private business interests are at variance with his public duties and inimical to all true sportsmen."

On two former occasions this objection was urged against Mr. Blackford, and twice a bill was introduced into the Legislature forbidding any person interested in the sale of fish to be a Commissioner. In each of these cases the bill was instigated by a man whom Mr. Blackford had discharged for stealing trout from Long Island streams, and the bill came to naught. If the Anglers' Association would make a specific charge and show in what way Mr. Blackford's private interests interfere with his public duties, we could then judge of the merits of the case. We know that Mr. Blackford has been one of the most active men in the board, and that he has not only devoted time but money to furthering fishculture. He has hired a room from the city and fitted it up as a laboratory, which is open to students of natural history at all times, and he has employed Prof. H. J. Rice to examine the stomachs of fishes in order to prove the nature of their food, so that some light might be thrown on the menhaden question, as well as on the breeding seasons of fishes. All this has been at his own expense. Besides this, he has given hundreds of dollars' worth of rare fishes to the National Museum, buying everything new or strange that comes into the market and donating it.

We are at a loss to understand this opposition to him by the Anglers' Association. This association is composed of enthusiastic gentlemen who, no doubt, mean well, but who do make a mistake sometimes, as in the case of the striped bass law, and we feel sure that they are mistaken now. In a former case when this same question came up, our late friend George Dawson said to us: "Why, you might as well pass a law that no man shall be a professor in a college who is competent to teach."

We know that some of the employees of the Fish Commission do not approve of Mr. Blackford because he has insisted on introducing some discipline and business methods, and has perhaps been lacking in hero worship, but if the association has been influenced in any way by them, it has listened to bad counsel. We asked Mr. Blackford about this matter, but he simply said that he should not fight it, the position was not sought by him, and he thought of resigning, as the duties had become burdensome. That this was the first complaint he had heard from anglers who have generally felt kindly toward his efforts to increase the fishes, and also for his hearty support of practical legislation for fish protection. This was all he cared to say on the subject. We would regard the absence of Mr. Blackford from the Board of Commissioners as a loss to the fishery interests of the State, and in the absence of charges showing wherein he has allowed his private interests to interfere with his duties we shall continue to think so.

THE EASTERN FIELD TRIALS MEETING.—The general dissatisfaction which appears to prevail among those interested, and the fact that some of the handlers almost came to blows on the field, indicate that all things did not go "merry as a marriage bell" during the trials at High Point. Most of the dissatisfaction appears to have arisen over the Pointer Stakes, though there are not wanting expressions of disapproval over some of the decisions in the Setter Stakes. It seems likely that there will be before long a vigorous criticism of the rules and of the judging, and there is no doubt that such a discussion is needed. The canons of good taste, if nothing more, were distinctly violated at the recent meeting as we hope they will not be again. We think that the time has come for a thorough revision of the field trial rules, and when such revision takes place we hope to see it undertaken by competent persons.

"PRACTICAL JOKING."—A community must be in a curiously benighted condition when it makes game of the statutes, and plays practical jokes in the form of farcical trials of offenders against the law. In a Vermont village, for example, a fellow who went out to the mountains and killed some of the deer—put there by the liberality of public-spirited gentlemen and protected by law—was, upon his return with the disgraceful booty, put through a mock trial by his fellow townsmen just for the fun of seeing him well "scared." That speaks well for public sentiment in that region; and when the community is so insensible of decency, what can be expected of the venison-hungry individual?

CONNECTICUT ANGLERS are advocating a six-inch trout law. That is right. Why fool with fingerlings when fish of decent size are to be had? And if the fish are not of decent size, then give them a chance to grow. The Connecticut Fish Commissioners have sent out 3,000 brook trout fry for distribution in the streams during the past year. Reports from a number of correspondents show that previous efforts in this direction have resulted in a tangible improvement.

THE DEER HOUNDING LAW ENFORCED.—Protector John Liberty, of the Sixth District, reports the conviction of four persons in Essex county for hunting deer with dogs. These are the first convictions reported under the new law forbidding hounding.

CRUISE OF THE COOT.—Begin at the beginning—last number—and follow this cruise, which is destined to become famous.

The Sportsman Tourist.

TO CHIEF MOUNTAIN.

THE summer was over; the prairie grasses were dried and yellow, the leaves had all fallen from the trees and every morning could be seen a thin scum of ice along the slough. We had worked hard all summer and thought we deserved a play spell, so we concluded to spend a week or two at the Chief Mountain lakes. Already the waterfowl were winging their way southward, flock after flock, betokening that winter was close behind them. So we hurriedly got together our outfit, and on the 24th of October pulled out from Kipp & Upham's store on Birch Creek.

There were four of us, Jim, Charlie, myself and an Indian named Man-who-first-took-his-gun-and-ran-ahead, but as this name is a yard or so too long to appear in print more than once we will hereafter call him Scip.

Our outfit consisted of our four-horse team and wagon, one two-horse team and wagon, boat, tent, stove, lantern, bedding and grub—plain grub, such, I think, as the majority of sportsmen would scorn, for it consisted only of bacon, flour, beans, coffee, sugar, potatoes and some sage, summer savory, pepper and salt. We had a big fishing outfit, including a gill-net, for we hoped to catch a barrel of whitefish for winter use.

Our arsenal comprised four magazine rifles and my 12-bore breechloader. I forbear mentioning the caliber, flatness of trajectory, etc., of the rifles. They were not of the kind recommended by many writers to FOREST AND STREAM; but I will give a pointer right here, that more elk, grizzlies, buffalo, bighorn and other game have been killed with guns of our kind than there are left for the men who can shoot only with certain caliber and flatness of trajectory. Come, you who are crying for more powerful and destructive weapons and look over our prairies, scarcely a buffalo is left of the vast herds which used to roam over them. Stroll through our valleys, scarcely a deer is left. Climb our wooded hills and rocky mountains, seldom will you see an elk or bighorn. And yet you want a more destructive weapon! Well, I wish you had one and would begin work by using it on each other, then in future years we might take a day's hunt with fair prospects of getting a piece of meat to take back to camp.

Oct. 28, the first day out, we made only sixteen miles, and camped at the Piegan agency. We noticed a great change in the management here since our last visit. The former agent, Major Young, through false reports to the Indian Department, had caused the rations to be so reduced that a number of the Indians actually starved to death last winter. Among other things he represented that the Indians had over 800 acres of land broken, and were raising plenty of vegetables, wheat, oats, etc. The truth is, they had not forty acres broken, and not half of that was tilled. In the presence of some U. S. Indian Inspectors, other and more serious charges were proven against this reputable member of a Brooklyn Methodist church, but they were not of a character that may appear in print. I visited the lodges on this reservation last winter, where I knew the occupants were dying of hunger. Many, especially the aged, were so weak they could not walk unassisted, and death was plainly visible on their countenances. You will wonder why there was not an outbreak. Well, when Mr. Young first came here, he had some trouble with six or seven different Indians, and, singularly, they all died. The cause of their death was at once said to be the agent's wonderful "bad medicine," and so fearful were the rest of this that when he began to starve them they dared not harm him. But for this he would have been killed long ago. Now, however, things are changed. The new agent, Major Allen, is a pleasant, energetic man, interested in the Indians and doing everything in his power to promote their welfare. They now have a fair supply of beef, flour, and other provisions, and are better off than they have been since the buffalo disappeared.

Oct. 25 we made 18 miles, crossed Badger and Two Medicine Lodge creeks and camped on Cut Bank, which is the north fork of the Marias River. The road was good, over gently rolling prairie. We passed several open lakes which were covered with ducks, but they were very wild and I succeeded in bagging only one, and that a hell-diver, which I cooked and fed to my retriever Babette. We had a good supper though, for while Charlie and I were pitching the tent, Jim caught a fine string of red-throated trout. About dusk I shot a couple of prairie chickens, which I flushed between the tent and the creek.

Oct. 26 we traveled 18 miles and reached the south fork of Milk River about four o'clock. The road was very rocky and constantly ascending, and the wind blew terribly. An overcoat wasn't a marker, and I could feel it even through the buffalo robe I wrapped around me. The mouth of this river is fully 700 miles from here, and yet here at its source it is larger than it is where it empties into the Missouri. There are no trout in this river nor in any of its tributaries. Just beyond us is Milk River Ridge, the dividing line between the waters of the Arctic and the Atlantic. One more day and we will have crossed it and arrived at our destination. There is no wood here and we take turns feeding the stove with fine willow brush. Time was, only four or five years ago too, when one might have made a good fire here of buffalo chips. Perhaps those certain-caliber-flatness-of-trajectory men will bring them back again. I might have killed a duck or two on the road to-day, but it was too windy to get out of the buffalo robe. The scenery here is bleak but picturesque. All around are flat-topped hills seamed with layers of soft, red sandstone, and here and there are fanciful columns of the same material. To the west, about 20 miles distant, the snow-capped mountains are in plain view.

Why, I would like to know, will civilized people persist in giving places, rivers and mountains such ill-fitting names. The Indian name for this river is Ke-nûk-tsĭ-sûk-tă, or little river, which aptly describes it; and the lakes for which we are bound are named Pûh'-to-mûk-sĭ-kĭm-ĭks, or Inside-big waters, meaning lakes in the mountains.

Oct. 27.—At daybreak we were on the road, and traveled over ridge after ridge, heading for Chief Mountain, which loomed up grandly in the distance. At 3 o'clock we arrived at a large prairie lake, about four miles in length, and as the horses were tired we decided to camp. As soon as we had turned out I took my gun and cartridge bag and went out on a point which reached far out into the lake. The wind was blowing very hard, and the ducks flew high and wild. I shot some twenty odd, but secured only eleven of them. My retriever never having seen any waves before, wouldn't venture in, and I didn't blame her, as it was so cold the spray froze as soon as it struck the rocks. Had a grand supper of stewed duck seasoned with sage and summer savory.

Oct. 28.—Arose at daylight and bagged a few more ducks before breakfast. We were now in the edge of the quaking asps, and confident that we would reach the lake by noon; but alas, we traveled through quaking asp groves, bogs and down timber until 2 o'clock, and then, on arriving at the edge of the hill, found we were about two miles below the lake, so we drove down to the St. Mary's River and camped. While going down Jim, who was ahead, jumped three whitetail, but didn't get a shot. When we came in sight on the hill we noticed an outfit on the other side of the river break camp, hitch up their four-horse team and strike out on the run. There is something suspicious about this. The truth is that last spring some Canadians cut a lot of timber here and drove it down to Fort Macleod, N. W. Territory, where they sold it to Sir E. T. Galt's "Coal and Navigation Co." A U. S. deputy marshal was sent here, but the timber was then all across the line, only six miles below here. We suspect that the fellows who left here so suddenly this morning are in the same business.

We are now close to Chief Mountain, which is certainly the grandest mountain I ever saw. It is a great spur jutting out eastward from the main range, and on the top of it is a great mass of rock which gradually tapers until its summit is lost in the clouds. One might ascend to its summit from the west, but the eastern side is a cut bluff thousands of feet high. I should judge that from its base to its summit the mountain is at least 7,000 feet high. St. Mary's River, on which we are camped, is a clear, rapid stream, some seventy-five yards wide, and from the short reach I have seen, I believe that it must contain fish. The ground here and all along the hillside which we came down has been literally torn up by bears; there are no fresh signs, however, and they have probably gone back into the heavy timber to hole up.

Oct. 29.—Our intention was, this morning, to pull out for some good camping place on the lake, but shortly after daylight there came a light skiff of snow. So we all struck out for the quaking asp groves after whitetails. We had not been out long before the sun came out and the snow went off. I returned to camp first, and finding the boys had not come in, started out to catch a mess of trout. Went up the river a little way, and looking down into a clear, deep pool, saw several hundred large fish. Hooked two, but each time lost part of the line, which proved to be rotten. Was returning to camp when I met Jim coming back, followed by a four-horse team load of people, who proved to be an outfit from the agency, here for a little sport. They were Mr. Fowler, Mr. Bird, Oliver, the interpreter, and two small boys. These last made themselves conspicuous by shooting their repeating rifles constantly and in every direction, regardless of the lives of the rest of the party. Charlie and the Indian having now returned, the latter with the saddle of a fine buck, we hitched up and all drove up the lake a mile or so and camped by a bay on the south side. Immediately we had the tents up, we pitched the boat, and although it was nearly dark, Jim and Mr. Fowler went out and caught three lake trout, the largest of which weighed about twelve pounds. These trout are identical with those found in the Fulton Chain and other lakes of the Adirondacks.

The lower St. Mary's Lake is about seven miles long and, in places, a mile wide. On the west side of the lake an immense flat-topped mountain comes down to the water's edge, and on the east rises a high, steep ridge—it would be called a mountain in the East—thickly wooded with fir. From this ridge one can get glimpses of the upper lake, much larger than this one and walled in by stupendous mountains. Beyond rise peak after peak of jagged mountains, some of them with sheer cliffs thousands of feet high.

Oct. 30.—This morning Mr. Bird, Oliver and Jim started out after bighorn and Mr. Fowler and I went fishing. We first tried a spoon, and trolled in deep and shallow water with and without lead, but didn't get a strike. We then tried hand lines baited with meat, and in a few minutes Mr. Fowler caught four large ones, the largest of which would have weighed ten pounds. I hooked a large one, but he broke away before I could gaff him. In the afternoon Mr. Fowler went out alone and fished with two lines. He was playing a fish when he saw his other line go spinning through the water. This last fish proved an immense fellow, fully four feet long, Mr. Fowler said, but alas! the gaff broke and the monster still lives. About 3 o'clock the Indian and the two small boys returned from down the river with thirteen trout (red-throated), the largest I ever saw; none of them would have weighed less than two pounds, and some, I have no doubt, would have tipped the scales at four. Saw a mallard in the bay, flushed it and brought it down. Babette retrieved it and laid it at my feet, when it took wing again; brought it down with the left barrel, this time dead. Just before supper Mr. Fowler went out behind the camp, and in a few minutes bagged six grouse and two mountain rabbits—fattest grouse I ever saw.

At dark the hunters returned. They saw plenty of sheep and mortally wounded two, which went up a cliff where they could not be followed. They report plenty of elk, bear and deer sign. The country is very rough, and away up in the mountains they found three large lakes which are the source of Swift Current, a creek which empties into the river about a mile below the lake on the north side.

October 31.—This morning the Agency party left for home. They took with them fifty fine lake and red-throated trout; the largest of each kind would have weighed about twenty-five and five pounds respectively. Took a spin on the lake with Charlie and caught several large lakers. If "Kingfisher" were here I believe he would for once get all the big fish and spring water he wanted. There are probably fifty springs for each mile of lake shore, and lake trout are so large and plenty that it is no pleasure to fish.

After dark a flock of geese lit on the shore near camp and I managed to get one of them. Crossed the lake near the outlet to-day, and as we suspected, found that the party which pulled out so suddenly had been at work in the timber. We found several thousand fine logs which they had cut. It seems to me that in the great and glorious province of Alberta, Dominion of Canada, these men could find enough timber without coming over here and stealing it from us.

As we were about to return to camp we saw two four-horse outfits rolling in, and were agreeably surprised to find that one of them belonged to Ben S. who is on a prospecting trip with two young men named Dick and John. The other was our friend M., a beaver trapper by trade and known to all by the name of Medicine Beaver. They crossed the outlet of the lake, and we packed up and all together moved up near the head of the lake, where we made a good camp. We had been using our gill net below with poor success; here, however, we did a little better, and during our stay at the lake managed to catch, in all, ninety-four whitefish, which, when weighed on our return home, tipped the scales at 282 pounds. I am satisfied that whitefish are very plenty here. Our nets were too fine, and only four feet deep, and the lake trout completely ruined them by tearing holes in them the size of a barrel.

In the inlet we caught another variety of trout. It is very long and thin and has an immense mouth, and is colored more like the Eastern brook trout; the belly is white, it lacks the red throat of the other variety, and has large dull crimson spots on its sides. The red-throated trout here are very small mouthed, and are shaped very like the bass; they are so plenty that the most insatiable "trout hog" would here become tired of the sport.

Nov. 2.—A camp of North Piegans, under Chief Yellow Fish, came in to-day and moved up to the foot of the upper lake. They say that they are starved out at their agency at Fort McLeod, Northwest Territory, and are here after game. This is an unlucky thing for us, not on account of what they will kill, but because they will scare everything out of the country. An Indian is insatiable. When he sees a band of game he is not satisfied with making one killing, but will keep following it and shooting as long as possible. This gives the game a tremendous scare, and they get out of the country as soon as possible. By the way, this will be a good place for the certain caliber flatness-of-trajectory men. They can sit on the lake shore and with telescopes on their improved rifles, kill sheep and goats on the top of the mountain. Afterward they can send their guides up after the choice portions of meat. We hear grouse drumming every night; had thought that their drumming season was the spring only.

Nov. 5.—Ben, Jim and the Medicine Beaver went up Swift Current to-day, sheep hunting. I took a short stroll through the brush and killed eight grouse. It is really no sport to hunt grouse here; as soon as one is flushed it lights on the nearest twig and will allow one to approach within ten feet of it. Wing-shooting is impossible, and the only thing is to walk up and blow off their heads.

Ben's two young men have been sinking holes in many likely places, but as yet have been unable to get to bed-rock on account of water. It is no boy's play to "delve for gold."

Nov. 6.—The sheep hunters returned this evening with three fine bucks, the fattest animals I ever saw. They went up Swift Current and passed five lakes, the two last of which are on the very top of the mountains. The last one has a sheer fall at the outlet of 200 feet. They say the scenery is grand, sheep plenty and the lakes teem with fish. Every evening now the boys congregate in our tent and tell stories "until further notice." Jim told us an amusing experience of his this evening. Long ago he and a partner were prospecting on the head waters of the Yellowstone. One day they saw a grizzly, and his partner shot it, wounding it slightly. The bear ran in Jim's direction, and Jim, badly scared, made for a tree and thought he climbed it, but when the bear had passed he found himself sitting at its base, his arms fast locked around the trunk.

One day Ben, Jim, Medicine Beaver and I concluded to go sheep hunting. We took saddle horses and one pack animal, a little bacon, bread and coffee, bedding and axe, and started for the head of the upper lake. We crossed the inlet above, where Yellow Fish was camped. The Indians told us that sheep were very plenty, and the numerous goat and sheep hides pegged out around the camp bore witness that for once they told the truth.

Leaving their camp we came to an old Kootenai trail, which we were told reached across the range into Missoula. This we followed through dense quaking asp groves, thickets of pine, and down timber, and after about two hours' ride came to a long park pretty well up on the side of the mountain. Although the view from here was magnificent we had no eye for it, but kept our necks craned toward the rocks above us in hopes of seeing a band of sheep. Riding through this park we came to an immense limestone ledge, which reached from the mountain above to the water's edge, terminating in a cut bluff. Running up the nearly perpendicular side of this ledge is an old elk trail, and we could see that the Indians had gone over it with their horses, but we thought it too risky a place for our animals, and turning them loose we pitched camp in a grove of balsams at the foot of the ledge and about fifty yards from the lake. As soon as we had eaten supper and made down a thick bed of balsam boughs, we found night had come, and after sitting around the fire for an hour or two, turned in. Now, we hadn't been in bed very long before an owl perched in a tree top close by, and said very plainly, "Go way! Go way! Go way!" At least this is the way Medicine Beaver interpreted its speech, and further, he assured us that we would kill no sheep on this trip as the owls scolding us was a sure sign that we were out of luck. Some time in the night Ben and the trapper assured us I said in a plain voice, "Throw it away," and Jim, sleeping by my side, said as plainly, "Yes, throw it away, it's no account anyhow."

As morning approached I arose and built a fire, and after a hasty and frugal breakfast we climbed the ledge on the old elk trail and reached the top of it at daylight. From here a long high mountain extended to the upper end of the lake. Jim and I concluded to follow it on the lake side and Ben and the Beaver were to go round it and meet us at the further end. After a long hard climb Jim and I got above the timber and found a very fair sheep trail which ran along the side of the mountain close up under the "reefs" or perpendicular rock walls, which are a distinctive feature of these mountains. Almost every mountain I have seen in this country is capped with these rock walls, some of which run up to a great height, gradually narrowing, so that the top is apparently as sharp as a jack-knife. Here on every side of us, and indeed along the whole length of the mountain we saw plenty of fresh sheep signs, but all that day we never saw a sheep, the Indians had apparently scared out of the country those they had not killed. We kept following the trail higher and higher, further and further until we came to what Jim called the "jumping off place," for here our mountains ended abruptly in a cañon of great depth. Here we were well repaid for our arduous climb. Never in my life did I behold such grand scenery. Below us several thousand feet, lay the lake (about twelve miles long), its unruffled surface dotted with several small islands. In places the lake is very narrow, some of them apparently not 200 yards wide. I could not describe it better than to say that it is an immense cañon partly filled with water.

Save at the head and foot of the lake there is no shore; from the very edge the water has that dark green hue which betokens great depth.

On the opposite side, and on our side of the lake across the cañon, the mountains rise to a great height, some of them shaped like a needle. Beyond the head of the lake is a long, wide, densely-timbered valley, and on the upper left-hand side of this valley is a mountain, the top of which is a true glacier. With the glasses it appeared to be at least 300 feet thick. We could see large fissures in it, and in one place a large mass had apparently lately broken off. A large stream of water which comes from this glacier dashes over a perpendicular cut on the face of the mountain at least 250 feet in height. We were unable to determine the length of the glacier, as intervening mountains obstructed a view of either end.

After resting here for an hour or two, and Ben and the trapper failing to put in an appearance we started back toward camp. I was surprised to see large flocks of geese flying above us, above the tops of the highest mountains, and apparently heading for the other side of the mountains. I always supposed that waterfowl fly north and south—that those which breed north of here winter in Southern Utah, Arizona and New Mexico. Is it probable that the destination of these was the Pacific slope?

About half way back to camp we stopped beside a little stream, which gushed out of a reef just above us, to rest and wet our whistles. As we sat there Jim, who is one of "ye ancient prospectors," picked up several pieces of float quartz, which were rich with gold and silver. As we were near the top of the mountain the lead from which they came could not have been far off, but as we were tired, and as this country is an Indian reservation, we concluded we didn't want a gold mine, and started on to camp, which we reached without further adventure. Ben and the trapper had not returned, there was not enough grub to last us till morning, so we saddled up and started home, leaving a note to this effect, stuck up by the only remaining piece of bread. The moon evidently isn't right for sheep, at least we didn't see any, and as this is the last piece of bread we have, decided to light out.

We hadn't been in camp long and had just finished our supper, when Ben and the trapper came. When they left us in the morning they got around behind the mountain, came to a lake high up and completely walled in by cut bluffs, and saw seven goats on the other side of it, but had not time to approach them. Thoroughly disgusted they fired their guns and had the satisfaction of seeing the goats strike out on the run, heading for Missoula, where Yellow Fish and his band of hunters will have to follow them if they want their hides.

We put in, altogether, twenty-one days at the lake, hunting and fishing, the others trapping and prospecting—to me, twenty-one days brim full of pleasure. At last the weather turned cold, and the snow came down thick and fast.

"Boys," said Jim, "the moon isn't right."

Myself—"Fish in the lakes."

The trapper—"Beaver in their holes."

Charlie—"Sheep high up."

Ben—"Bed rock deep."

Dick—"White-tail scarce."

John—"Goose gone over, and let's go too."

So we decided then and there to break camp the next day. We had concluded the night before to make the next camp on the South Fork of Milk River, but the hill, where we climbed it, was much steeper than we thought it would be, and it took us all day to get up, pulling up one wagon at a time with ten horses.

At the South Fork we camped two days and hunted. Jim and I rode up to the mountains after sheep. As we were riding along we came across a fresh sheep trail in the snow and saw the band just beyond going down into a pocket or basin on the side of the mountain. I ran to the right and Jim to the left. Ere long the band appeared beyond Jim going up the side of the mountain. Jim killed one, a fat doe. They were a long way from me and I failed to hit.

Nov. 21 we arrived at the North Fork of Cut Bank. There is a good trail which reaches over the mountains into Missoula and is much traveled by the several tribes of mountain Indians. The trail apparently follows up Cut Bank to its source. As far up as we went we found a wide, densely-timbered cañon, walled in by tremendous mountains. Old game signs were very plenty here, but there had been no cold weather and snow to drive the elk down, so we contented ourselves with hunting deer, and killed four altogether.

Nov. 23 we drove down to the junction of the North and South Forks, and on the 24th reached the agency.

All in all, we had a pleasant trip, plenty of fish and game for camp use, and, above all, a sojourn among the pines and lakes so like those of our boyhood days. As a resort for sportsmen the Chief Mountain country cannot be excelled. The scenery is grand, game plenty, the fishing unexcelled. Here the angler will find new ground, lakes and streams on whose bosoms a fly has never been cast, and in whose crystal depths a bait has never been dropped.

J. W. SCHULTZ.

UPPER MARIAS RIVER, M. T., January, 1885.

A RUFFED GROUSE STORY.—The Paterson, N. J., *Press* is responsible for the following: Up in West Milford township, where game is plentiful and wary, the partridge have very little to do to look out for hunters. Last week a number of hunters went up there from Paterson and the partridge evidently thought they would make fun of the hunters and so they proceeded to hunt the gunners. One of them tackled the wrong man in the person of Mr. Clinton, the janitor of the court house. The bird had evidently been started by some hunter, and the first thing that "Jimmy" knew was that the bird came toward him with the usual confounding noise these birds make when they are in a hurry. He did not want to take a shot at an incoming bird when he could get a quartering shot just as well, and so he stepped aside out of the way of the bird, which seemed to be in a particular hurry. The bird at that moment changed its mind and deviated from its straight course, coming into contact with the left cheek of the janitor. It struck the cheek with its wing and inflicted quite a painful and certainly unsightly wound. The blow rather surprised Mr. Clinton, but with the self possession that characterizes the true sportsman he turned around and emptied a barrel at the bird, which he had for dinner yesterday. The wound on "Jimmy's" face looks curious. The skin was not broken except at the lower extremity of the wound, the rest of it being bruised and the blood having gathered under the epidermis.

CLIMATE OF THE WEST.

DENVER, Col., Nov. 15, 1885.

Editor Forest and Stream:

In your issue of Nov. 5 there is an article without signature, but credited to "a special correspondent," which should not be allowed to pass without comment. It is upon page 282 and under the caption of the "Granary of the World." It is an admirable article for its purpose; so admirable that but for its fallacies and the harm they may work through your columns, it should not be questioned. The wrong that is done is in the assurance so forcibly stated that the climate of much of the region referred to in the article is undergoing change—rapid change from arid to humid. The writer says: "It is stated that the climate of the western country is constantly being modified by the changes wrought by human agency. And this statement is true. The annual precipitation is far greater now in regions recently occupied than it was when the settlers first came into the country." I have no hesitation in saying that the assertions quoted above are not true, although "it is stated" or "they say" it is true. I know that a large majority of the people who now live in these arid regions will assert that the climate is changing; that there is annually a great deal more rain and so on, with all the candor and positiveness of this correspondent. They say so with perfect honesty and fully believe what they say. Yet it is not true. The mistake of the farmer and the cow-puncher may be overlooked. His opportunity for observation is not large or extensive; his access to collated facts and figures is limited, and his methods are without system. But an intelligent and able correspondent, or a great newspaper whose opinions may influence hundreds or thousands of people in locating homes for their lifetime, should not propagate such false conclusions. Facts and figures are accessible to them and should not be ignored.

Now, I will tell you how the farmer in an arid region reaches his conclusion upon this subject. He comes from the Mississippi Valley, for instance, to Colorado—I use Colorado for the illustration because it is a fair and favorable section of the arid region and is more familiar to me. He settles upon the dry plain and begins the effort to make a farm. He has removed from an extremely wet agricultural region to an exceedingly dry one. The contrast is very great and strikes him forcibly. The memory of the old is yet vivid; the reality of the present is exaggerated in the comparison. He tries irrigation, and, in his opinion, cannot get water enough for the ground he tries to water. Yet he makes progress. The next year he finds his labor easier. Experience is educating him. He applies the water better and makes it go further. The ploughed ground holds moisture. The small rainfall that formerly flowed swiftly away over the hardened, unbroken surface of the plain is now absorbed and retained in the mellow surface of the ploughed field. Still better, the growing crop shades the surface and impedes the rapid evaporation of the little moisture by sun and wind. Our transplanted farmer thinks, "Well, this isn't so dry a summer as last." Already he is adapting himself to his surroundings and necessities. At the same time the memory of old things grows dimmer. His thoughts are more occupied by the present. His interest is here and he must make the best of it. He no longer contrasts the last summer with the summers of years ago in rainy Illinois or Iowa. And so the years go on. Each one adds to the area of his ploughed lands, and each ploughed acre ameliorates the natural arid and inhospitable condition of his surroundings. Each year his stipend of water from the neighboring streams will water a greater breadth of land. Each year it will be husbanded better and applied with more judgment, and thus the necessity reduced, the supply increased, the application improved—there is a threefold gain.

Again, during these years he has planted trees about his house and barn and along the roads and ditches; meadows have been established and blue grass covers the dooryard. In time he observes that there is dew on the grass. A portion of the moisture that was drawn up by the sun of yesterday has returned in the cool hours of the night and now appears in sparkling dewdrops at the tips of the green blades. The farmer is ready to assert, and swear to it if so asked, that the climate has changed, that he saw the change, and that the change goes on year by year because white men have settled the country and are scratching over a little of its surface like a bantam pullet in a ten-acre field. It is ten years since he left Illinois. He has forgotten all about it except a few of the most striking incidents of his life. He does not know whether the rainfall is fifteen, thirty or fifty inches per year. He is only certain that the climate of his new home has changed; that it changed for him and by his puny efforts, and to all this he is ready to append his solemn affidavit. The man's new education is complete; his forgetfulness of the past is more so; his ignorance of the real facts is most profound. Yet "special correspondents" listen to his story, accept his statements, adopt his opinions as their own, assert that "this is true," and then influential newspapers—the makers and leaders of public opinion—put them in cold type and spread them broadcast to the world. How much better it would be to prove such statements beforehand; give the truth, and not try to promote any cause or settle any country by false pretenses.

Now what are the facts? The site of this city has been settled twenty-seven years. As persistent an effort has been made here and throughout the neighboring country, to modify and improve the soil and the climate, as has been made in any part of the arid region of North America, and the effort has been quite as successful. No one will dispute that. The following shows the precipitation (rain and snow fall) for thirteen years: 1872, 17.95 in.; 1873, 11.73 in.; 1874, 13.45 in ; 1875, 17.25 in.; 1876, 20.12 in.; 1877, 16.38 in.; 1878, 15.51 in.; 1879, 10.86 in.; 1880, 9.58 in.; 1881, 12.79 in.; 1882, 14.49 in.; 1883, 19.49 in.; 1884, 15.07 in. Average per year 14.9 in. These figures are exact and reliable. They do not show any steady increase of rain fall. On the contrary they show a series of cycles—of increase and decrease, with extremes seven years apart. I could go back of 1872 but not without some trouble at the present time. I will only assure you that the record would be just about the same. The precipitation this year to the present time is 14.53 in., 4.94 in. of which was in two snow storms a few days apart in the month of April. And right here, to illustrate the infirmity of human memory and the fallacy of present judgment, I will refer to the month of August last past. Everybody pronounced it remarkably wet. "Never saw such a rainy August." "How the climate is changing." "Wettest summer ever known in Colorado," and similar remarks, with adjectives, were heard daily. The following figures show the August rain fall for fourteen years: 1872, 1.65 in.; 1873, 1.41 in.; 1874, 0.68 in.; 1875, 1 97 in.; 1876, 2.03 in.; 1877, 1.30 in.; 1878, 2 25 in.; 1879, 1.38 in.; 1880, 1 46 in.; 1881, 2.33 in.; 1882, 1.20 in.; 1883, 0.75 in.; 1884, 1.71 in ; 1885, 1.18 in.

Eleven Augusts in which more rain fell and only two in which there was less than in the last one. There were many light showers, days in which only one-hundredth or two-hundredths of an inch of water fell, yet the public mind was controlled and the conclusion reached unanimously that it was the wettest August ever known in Colorado. It could have been so proven in any court.

Now we will take a wider scope, giving the precipitation at certain stations in seven States and Territories, purposely extending from the great lakes and the Mississippi valley westward to the Rocky Mountains, to show the wide variation in rainfall. The reader can refer to a map and draw his own conclusions as to the limits of the humid and arid regions, and the figures for a series of years at many of the stations will tell whether there is material change or not.

THE SPECIAL REPORT ON THE PARK.

WASHINGTON, Sept. 12, 1885.

Hon. L. Q. C. Lamar, Secretary of the Interior:

SIR—Under date of July 20 last, I was appointed a special agent of the Interior Department to examine into the condition of the Yellowstone National Park, with reference to its protection, preservation and improvement, and by your letter of that date you ordered me to direct my attention particularly to the following subjects:

"You will examine into all leases and other privileges which have been granted by the Department, to ascertain whether the lessees of ground for hotels and other buildings have located the same upon the sites designated, and whether the buildings have been constructed substantially in accordance with the plans approved by the Secretary of the Interior. You will also ascertain whether any of the persons to whom leases or other privileges have been granted, have failed to comply with the conditions of the same, or have assumed to exercise any privileges not authorized by this Department, stating in what respect they have deviated from the grant, and the reasons assigned by them for such deviation. You will also direct your attention to the subject of what further provision is necessary to the comfort and accommodation of persons visiting the Park; whether it is desirable that any further leases should be granted for hotels, and if so, at what points. Whether it is desirable that additional privileges should be granted for erecting and providing livery stables, stage lines, or for furnishing pack trains and outfits for persons who wish to camp out, and generally whether any further action should be taken by the Department within the authority conferred by law upon the Secretay of the Interior, toward carrying out the design of Congress in setting apart the Park as a pleasure ground for the benefit and enjoyment of the people."

"It is also desired that you will ascertain whether there are any persons residing within the limits of the Park, or carrying on any business therein, without written permission from this Department, giving the names of such persons and their location in the Park."

You also remarked that my attention had been directed to the above mentioned subjects as those upon which information was particularly desired; although it was not intended that my examination should be strictly confined to those points, but might extend to any matters relating to the Park that might come under my notice; and that the Department would be pleased to receive any suggestions I might have to make in the direction of improvement in the management of the Park, and in the provisions for the enjoyment of it by the people.

I reached the Mammoth Hot Springs in the Yellowstone National Park on July 26 and remained within the Park until Sept. 6. The whole of that time I devoted to the examination of the matters mentioned in your letter of instruction. I visited all the localities where privileges had already been granted by the Department, and where they were likely in the future to be applied for.

The wisdom of Congress in setting aside the land embraced within the Yellowstone Park as a national resort has been fully demonstrated. Every year since 1872, when the action of Congress was taken, has seen a steady increase in the number of persons visiting the Park, and at the same time a corresponding increase in the facilities of reaching it.

From the best information I could gather, I would say that four thousand persons was a low figure at which to place the number of visitors to the Park during the summer just passed.

No portion of the globe affords in a circumscribed area such phenomena and beauties of nature as are contained within the limits of the Park. The Park has become in every sense a national one, and public sentiment demands that the Government should do all in its power toward its care and toward making its wonders accessible to the people.

THE GOVERNMENT OF THE PARK.

Before entering into the particular matters pointed out for my investigation, I desire to call to your attention, on account of its importance, the state of the government of the Park, in order that such Executive recommendations may be made as may seem proper.

It seems strange that Congress should have up to this time neglected to provide any government for the Park, except by the provision of the organic act, which places it under the exclusive control of the Secretary of the Interior, whose duty it was made to frame and publish such rules and regulations as he might deem necessary for the care and management of the same.

The Park has now assumed such national importance as to imperatively call upon Congress to provide some system of justice by which the Park and the public visiting it can be protected.

The land embraced within the limits of the Park was originally within the boundaries of the Territories of Montana, Wyoming and Idaho. The laws of those Territories presumably were in force over such land at the time the Park was established and continued in force after the reservation, unless there is something in the act of reservation preventing the continued operation of the Territorial laws, or such laws are opposed to laws of Congress or the rules and regulations made by the Secretary of the Interior. So much is clear. Chicago and Pacific Railroad v. McGlenn, 114 U. S. 547.

But a different question remains: Can the respective Territories exercise authority within the boundaries of the Park? This has been attempted by the Territory of Wyoming. At the present time, Justices of the Peace, appointed under a law of that Territory, dated March 6, 1884, are holding Courts at the Mammoth Hot Springs, and at the Lower Geyser Basin, both points within the Park, and since the enactment of the law have tried and punished numerous persons for violations of that law. But that act to render operative and effectual the laws of the Territory of Wyoming, within that portion of the Yellowstone Park lying within said Territory."

While some of the provisions of that law for the protection of the Park and the game within it are commendable, it is difficult to see by what right Wyoming has undertaken to exercise through its officers jurisdiction within the Park.

If Wyoming possesses such a right, Idaho and Montana have the same rights, and with such conflicting enactments as they might provide and enforce, it can be easily seen that the pleasure of the visiting public would be seriously interfered with.

It seems to me that when Congress by the organic act put the Park under the exclusive control of the Secretary of the Interior, they intended to take it from under the control of the Territorial authorities, and that inasmuch as the Secretaries of the Interior have promulgated such rules and regulations for the care and management of the Park as they have deemed necessary, there is no authority in a Territorial legislature to enforce Territorial enactments within its boundaries.

By the organic act, all persons located within the Park without the assent of the Secretary can be expelled as trespassers. By what right has Wyoming undertaken to locate her authorities within the Park and to enforce her law for its government? That law has never received the assent of Congress and cannot, therefore, be considered as enforced by Federal sanction.

Moreover, some of the provisions of the Wyoming law are in conflict with the rules and regulations of the Interior Department, and some of them are highly ridiculous.

A regulation approved by Secretary Kirkwood very properly prohibits "the removing of mineral deposits, natural curiosities or wonders, or the displacement of the same from their natural condition."

Regulation 2 provides that the Superintendent of the Park may give permission for the collection of such specimens as can be removed without injury to the natural features or beauty of the grounds.

But by Section 7 of the Wyoming act it is made unlawful "for any person to remove any part, portion or particle of the natural curiosities or objects of interest, or anything whatever, within the Yellowstone National Park, whether tree, rock, stone, shrubbery, earth, geyser formation, grass, or anything whatever, except that it may be permissible to use timber for fuel or house building, and any person so offending shall be guilty of a misdemeanor, and shall on conviction thereof be punished by a fine not exceeding one hundred dollars, or by imprisonment in the county jail, not exceeding six months."

This Draconian legislation was enforced by the Wyoming justices within the Park, to the extent of arresting prominent citizens of Philadelphia for picking up in the public road a few obsidian chips. They were fined $5 each.

It is in no wise an exaggeration to say that if ten thousand tons of this substance was removed from the road and its vicinity, it would certainly improve the road and add to the attraction of the scene.

While I was in the Park other visitors of the highest respectability, ladies and gentlemen, were arrested for picking up small pieces of the formation at the Hot Springs, and were likewise fined.

Many visitors to the Park desire to carry home with them such small specimens of the peculiar formations in the Park as they may chance to pick up, and while it is highly important that the natural beauties of the Park should be preserved from defacement, it can serve no purpose except to annoy visitors to enforce such rules as are contained in the Wyoming law.

By Section 12 of that law all fees collected by the justices of the peace, who are appointed for that portion of the Park formerly lying within the boundaries of Wyoming, are to be retained by such justices and paid to them or to the constables, and by Section 17 one-half of all the fines assessed against offenders shall be paid to the officer or other person who appears as the prosecuting witness.

Acting under the stimulus of prospective reward, arests were made of tourists while I was in the Park, and, from a full acquaintance with the facts, I do not hesitate to pronounce such arrests wholly unjustifiable. I refer particularly to the arrest of Messrs. Wylie and Koch, of Bozeman, in August, and that of Congressman Payson, of Illinois, in the same month.

I attended the former trial, which occurred at the Lower Geyser Basin before Justice Hall. The charge was that Messrs. Wylie and Koch had not extinguished their camp-fire before breaking camp in the vicinity of the place of trial. They are, I am informed, both gentlemen of high standing in Bozeman. The defendants testified that they had extinguished the fire. Assistant Superintendent Godfrey, who made the arrest, charged that the fire was still smoking when he saw it after the departure of the defendants. Mr. Arnold Hague, Chief of the U. S. Geological Survey in the Park, testified that he had visited the site where the camp-fire was built; that it was a very small fire built in the green grass, where there was no possibility of it communicating, and that it bore all the evidence of having been entirely extinguished. This was all of the evidence. The justice sentenced the defendants to pay a fine of $50 each and costs. Half of this, under the Wyoming law, went to the Assistant Superintendent who made the arrest, and Justice Hall informed me that he always divided the fine with the Assistant Superintendents when they made the arrests. As it is the duty of these assistants to enforce the rules and regulations made by the Secretary of the Interior, and as they are salaried officers of the United States, it is a scandal for them to receive a reward for performing their duty.

In the other case I have referred to, Judge Payson was arrested on a similar charge. He proved that he had extinguished his camp-fire and covered it up. He was fined by the same justice $60 and $12 costs. Upon his indignantly protesting against this sentence, the justice reconsidered his judgment and finally agreed to accept one dollar in place of the original fine.

Such instances as these show how necessary it is for Congress to provide some judicial machinery for the Park and not leave the public at the mercy of ignorant or unscrupulous men appointed under Territorial law.

The practical question is, what should that machinery consist of? I answer that it should be by all means of a federal character, and at the same time it should be of a simple character.

It seems to me that a measure should be adopted vesting in the Assistant Superintendents the powers of deputy marshals, including that of arrest. That two United States commissioners should be appointed, one to sit at the Mammoth Hot Springs and one at the Lower Geyser Basin, with such extraordinary powers as are conferred upon the commissioners appointed under the recent Alaska Act. They should be invested with jurisdiction to try all offences not above misdemeanors, and all violations of the laws of Congress, or the rules and regulations made by the Secretary of the Interior for the government of the Park. At the same time Congress should provide the pains and penalties for a violation of the laws or regulations.

The offenses of a higher nature might be tried by such United States court as Congress should designate.

It would seem too plain to call for argument, that in a national park the national laws and regulations should be enforced by a national tribunal. Unless this is done the traveling public, embracing persons from all quarters of the globe, cannot find adequate protection.

RULES AND REGULATIONS.

The first rules and regulations were made by P. W. Norris, Superintendent in 1881, and were approved by Secretary Kirkwood.

These were amended in 1882 by Secretary Teller, so as to absolutely prohibit the killing of certain kinds of game within the Park.

I nowhere observed within the Park any posting of these regulations and frequently I was asked by visitors to inform them what the rules and regulations were. The Superintendent had not posted the rules and regulations because they were at variance with themselves and moreover he was not advised whether the Department wished him to post the provisions of the Wyoming law, to which I have referred.

I think that the Secretary should revise the rules and regulations made by his predecessors so as to make them homogeneous, and at the same time should advise the Superintendent as to whether he should post the Wyoming law. While ignorance of the law is no excuse, at the same time it savors of harshness to punish for offending against regulations which the public have no accessible means of knowing. The regulations should be printed and posted in all the public houses within the Park, and at certain prominent points at which visitors might easily see them: at the same time a penalty should be provided for the defacement or tearing down of such regulations.

In this connection I beg leave to suggest the following additions to the rules and regulations:

(1) Advertisements are hereby prohibited being posted throughout the Park, except such as may be necessary on buildings situated on leased ground.

The propriety of this rule is manifest. The natural beauties of the Park will soon be obliterated, unless such a measure is adopted.

(2) The shooting at, wounding, capturing, or killing of any animal, or bird, within the Park, is hereby prohibited.

The regulation of Secretary Teller enumerates a long list of animals and birds which the regulation makes it unlawful to kill. While blackbirds and other migratory birds are enumerated, such animals as squirrels and rabbits are omitted. This is also the case as to bears; shooting, therefore, is still permitted to a limited extent within the Park. The consequence has been that under the excuse of hunting bear and other animals, not on the enumerated list, the large game in the Park, which the Government is so much interested in protecting, has been slaughtered.

If the game within the Park is to be preserved (and that is one of the most important objects of the Park) I am of opinion that all shooting within its limits must be prohibited.

It has occurred to me to suggest an absolute prohibition against the carrying of guns within the Park as an efficient remedy against the killing of the game. In answer to this suggestion it might be rightly said that many visitors to the Park go through it with their guns for the purpose of shooting outside the limits of the Park, and that it would be a hardship to prohibit such persons from carrying their guns with them, or else avoid the Park. Without further remark I will leave this point for your consideration.

In a few years the buffalo and elk and mountain sheep will only be seen in the United States within the limits of the Park, and no measure too stringent can be adopted for their protection.

(3) No person without a license from the Superintendent shall be permitted to reside within the Park and act as guide; and the Superintendent shall have the power at any time to revoke such license.

I think it would be of great advantage to the public if this rule should be adopted. The traveler would know when he selected a licensed guide that he was a person on whom he could rely, and at the same time the Superintendent would be greatly aided and assisted by a body of men skilled in woodcraft and thoroughly acquainted with the country. As guides licensed by the Government they would take a natural pride in serving well the public and in the protection of the Park. As it is, the public is at the mercy of hordes of worthless fellows in the Park, who frequently succeed in palming themselves off as guides.

Before leaving the subject of the regulations, I call your attention particularly to the open violation of the regulation forbidding the sale of intoxicating liquors within the Park. That regulation is a dead letter. At every point in the Park where there are found hotels saloons are openly kept. At the Geyser Basins there are saloons of the lowest character separate from and adjoining the hotels, and in full view of every one entering the hotels. Much of the disorder which has occurred during the past summer in the Park is traceable to these saloons, and the Superintendent should, be at once ordered to have them closed, and to strictly enforce the regulation.

SUPERINTENDENT AND ASSISTANTS.

The present Superintendent, Mr. Wear, is thoroughly efficient and desirous of promoting the interests of the Park. It is absolutely necessary, however, for its protection, that his assistants should be skilled in woodcraft, capable of finding their way through vast tracts of mountain country without roads or trails. Their duties principally consist in protecting the game and extinguishing forest fires. They should be selected, if possible, from the surrounding region, and be tried men appointed on account of their knowledge of the country. Instead of being called Assistant Superintendents, they should be designated by a name which describes their duties—Park Police.

The present number of Assistants should be increased if the Park is to be properly protected.

Under the appropriation acts there has been a lump sum appropriated each year for every purpose necessary for the Park. Out of this salaries are to be paid, and it is uncertain how much of the balance is to go to the Superintendent for the general purposes of the Park, and what portion is to be used for roads.

Until an agreement is made between the Engineer officer in charge of the roads and the Superintendent, this is not determined.

It would be of much advantage should the Superintendent file in the Department his separate estimates as to the sum he will require, and for the Engineer officer in charge to make a like estimate for the roads. Congress would be thus enabled to make a separate appropriation for each.

It seems to me advisable that you should vest in the Superintendent all the power you are capable of delegating. He is the representative of the government in the Park. Being on the spot he is enabled to form a correct judgment upon which to base action.

The Secretary should be appealed to only in matters of of large importance, such as relate to the Government and regulation of the Park.

Thus the Superintendent should have full authority to give permits, to cut hay, or such minor privileges as keeping cattle for beef, or herds of cows for supplying milk.

RAILROADS WITHIN THE PARK.

Interested parties have for some years brought to bear a constant pressure upon Congress and the Department, to induce action in favor of a railroad through the Park. This railroad is sought ostensibly for the purpose of bringing to market the ore from Cooke City, a mining camp adjacent to the northeast boundary line of the Park.

If there is one object which should be kept in view more than any other, it is that of preserving the Park as much as possible in a state of nature. A railroad through the Park would go far to destroy its beauty, and besides is not demanded.

The roads are being improved yearly, and soon will make every portion of the Park easily accessible. The distance between the points of interest is not great, and transportation is good and plentiful.

Apart from the consideration that a railroad is not needed in the Park and that it would deface its beauty, is the further consideration that the two great objects of Congress in creating the Park, to wit: the preservation of the game and the forests, would be unattainable, should a railroad be allowed within the limits of the Park.

The parties interested in the Cooke City Mines are seeking to have a portion of the Park cut off and restored to Montana, in order to have a railroad built through it to Cooke City.

I think the Department should strenuously oppose this project. The country proposed to be cut off is one much frequented at times by game, and its retention within the boundaries of the Park is necessary for the protection of the game.

If the parties interested in the mines really are desirous of a railroad reaching that place, I am satisfied from diligent inquiry that a route from Billings, Montana, to Cooke is practicable. Such a route would lie wholly outside the boundaries of the Park.

ROADS.

Lieut. D. C. Kingman, the efficient engineer officer in charge of the roads in the Park, will report fully on this subject.

Lieut. Kingman has done all in the way of road-building which he has been able to effect with the small appropriations at his command. Many points of the greatest interest in the Park cannot yet be reached except on horseback by trails. The roads to these points, notably points on the Yellowstone Lake and over Mount Washburn to Tower Falls, cannot be built unless a much larger appropriation is made by Congress than was made by the last appropriation act. A large portion of the Park will remain to the public generally *terra incognita* unless additional roads are constructed, and I trust you will succeed in inducing Congress to vote an adequate appropriation for their construction.

Three objects were sought and accomplished by Congress in the establishment of the Park: First, a pleasure ground for the benefit and enjoyment of the people; second, the preservatibn of the great game of the country; and third, the preservation of the natural forests in a region where so many of the great rivers of the continent find their source.

To attain the first object Congress provided that the Park should be kept free from settlement, in order that private rights should not interfere with those of the public and in order that the region set apart should be preserved in a state of nature.

At the same time it saw that some provision should be made for the accommodation of those visiting the Park, and accordingly it was provided in the organic act of 1872 that the Secretary of the Interior may, in his discretion, grant leases for building purposes for terms not exceeding ten years, of small parcels of ground at such places in the Park as shall require the erection of buildings for the accommodation of visitors.

Under the power thus conferred your predecessor, Secretary Teller, granted a number of leases in various portions of the Park. It is now plain that many of such leases were granted to unfit persons and at localities where they should never have been granted. The discretion conferred by the act upon the Secretary should be sparingly exercised, otherwise the design of Congress to preserve the Park from settlement will be nullified. At the same time every accommodation should be afforded to visitors.

The privileges heretofore granted under leases have been principally for hotel purposes, and the leases have included, incidentally, the right to erect and keep stores and livery stables and the right to transport passengers through the Park.

I am of opinion that no future leases for hotels should authorize the lessees to keep stores or to act as carriers or transportation agents. The privileges should be kept separate and in different hands. The public will thereby be better served, and at the same time at a cheaper rate.

It would be of advantage and a great convenience to travelers, if there were a few stores in the Park at which they might purchase such provisions and articles as they might need, and at the same time it would be a great saving to the Government officials in the Park, who are at present obliged to send outside of its boundaries to make their purchases.

It is also highly important that the public should have abundant transportation facilities. While there are at present a great many persons carrying on the business of transporting visitors through the Park, with one or two exceptions they have no recognized status.

In my opinion the authority of the Secretary of the Interior to grant leases or permits for stores and transportation facilities is clear. By the organic act the Park was placed under the exclusive control of the Secretary, and he was empowered to grant leases not exceeding ten acres for the erection of buildings for the accommodation of visitors.

Your predecessor, Secretary Teller, undertook to grant, by virtue of his powers under the act, exclusive hotel rights to persons afterward known as the Park Improvement Company. Congress refused to confirm the grant, and provided by the act of March 3, 1883, that "the Secretary of the Interior might lease portions of ground not exceeding ten acres to any one person, on which may be erected hotels, and that no hotel or other buildings should be erected within the Park without a lease. And all contracts, agreements or exclusive privileges, theretofore made, in regard to the Park, are declared invalid." 22 Stat. 626.

It is evident that by providing against exclusive grants of hotel privileges Congress did not mean to limit the power of the Secretary contained in the organic act to grant leases of ground upon which to erect buildings, for whatever purpose, for the accommodation of visitors. Proper transportation facilities and supply stores are as important for the accommodation of the public as hotel facilities, and if there existed any question as to the authority of the Secretary to grant formal leases of land for such purposes, his power is ample to license the carrying on of such a business within the Park, and to grant permits to establish store houses, stables and corrals at such points as should be designated by the Secretary.

LEASES.

I found great confusion existing as to the leases which had been granted.

In some instances there had been no attempt on the part of lessees to build within the boundaries of their leases. Some of the lessees seemed to think they could build wherever it suited their pleasure, and that the Department would not disturb them when once their buildings were erected. In other instances the leases conflicted with each other.

Again, I found parties had settled in the Park and erected buildings without any pretense of a grant from the Department.

The Superintendent should be at once directed to remove from the Park all intruders and trespassers and to tear down such buildings as they may have erected.

There have now been filed maps of the localities where leases have been granted and buildings erected, at the Mammoth Hot Springs and at the Lower Geyser Basin, prepared under the supervision of Mr. Arnold Hague, Chief of the U. S. Geological Survey in the Park. An inspection of these maps will show the situation of the leases at those places. The whole matter can best be understood by taking up seriatim the various leases which have been granted. Under each lease I will call your attention to such departures from the terms of lease as may have been made, and generally whether the lessees have performed their agreements with the Government.

MAMMOTH HOT SPRINGS—LEASE OF PARK IMPROVEMENT COMPANY.

This lease was originally made March 9, 1883, to C. T. Hobart and H. F. Douglass and Rufus Hatch. Afterward a company was organized known as the Park Improvement Company, and transfer of the lease was made to the company by the lessees with the consent of the Department.

Prior to that date as Secretary Teller had made an agreement under date Sept. 1, 1882, with the same parties, granting to them exclusive hotel and other privileges within the Park, and a lease was drawn up in accordance with the agreement, but never signed, Congress having by the act of 1883, which I have above referred to, nullified the grant.

It is claimed by the Park Improvement Company that the agreement of 1882 is still in force, except in so far as the privileges thereby conferred are in their nature exclusive.

As this agreement confers many rights not contained in the lease of March 9, 1883, it is of much importance that the Secretary should determine whether the agreement is still in force. My own opinion is that the agreement is no longer operative. The language of the Act of 1883 is very broad: "All contracts, agreements or exclusive privileges made or given in regard to said Park are hereby declared to be invalid."

As the agreement of 1882 was the only contract or agreement which

had been made in regard to the Park prior to the passage of the Act of 1883, it is manifest that it was the agreement Congress had in view, and I am of opinion that Congress by the Act of 1883 nullified this agreement in toto and not merely its exclusive features.

If I am correct in this view, all the rights in the Park possessed by the company or its representatives are held by virtue of the lease of 1883.

That lease grants to Hobart and others, whom we shall afterward designate as the Park Improvement Company, two acres at the Mammoth Hot Springs with specified boundaries. An inspection of the map of that locality, to which I have referred, will show that there has never been a building erected by the original lessees or company upon the ground leased to them. It will show, moreover, that the buildings which were erected by the company are scattered over about forty acres in the vicinity of the Hot Springs formation.

The company has erected a large hotel building, which, although it has been open for visitors for several years, is still in hardly more than a half finished condition.

The question, therefore, is what should be done in the premises? As the hotel was a very costly building and could not be removed, I recommend that the holders of the lease be required to confine their buildings within two acres, including the site of the hotel, and that they be ordered at once to file in the Department a survey, and be required to surrender the original lease upon the granting by the Department of a new lease. In this connection I would say that the company have erected near the hotel a bath house, which is an eye-sore, and that it is a building which the company should be at once ordered to remove. One of the extinct geyser holes is used for a sink for the refuse water. These old geyser holes are objects of interest which should be carefully preserved.

[Here follow various recommendations with regard to certain leases.]

UPPER GEYSER BASIN.

The Park Improvement Company by virtue of the lease to Hobart and others in 1883, held one and one-half acres at this point as described in that lease. Subsequently on December 11, 1884, the location was changed. There is in course of erection a hotel building which is about half completed. The contract price was $3,000. It is built of rough pine boards and will contain thirty-three bedrooms. The house is of a very unsubstantial character and the accommodations for guests inadequate.

I find the hotel as situated is not on the ground embraced in the original or modified lease, and that is within a quarter of a mile of one of the principal geysers—Old Faithful.

This is in the face of the act of 1883, which expressly forbids the Secretary of the Interior from granting any lease of land within a quarter of a mile of the geysers.

It is proper for me to say that the site itself is a suitable one for a hotel. Without making any recommendation, I leave this matter to be dealt with as the Secretary may deem fit.

There are a number of squalid buildings at the Upper Geyser Basin, erected without authority of law, which should be at once removed.

FALLS AND GRAND CANYON OF THE YELLOWSTONE RIVER.

The Park Improvement Company were granted under the lease of 1883, one and a half acres of land at this point, "beginning at a point due east from the head of Canyon or Great Falls, and thirteen hundred and twenty feet distant therefrom, thence east two hundred and fifty-five feet."

This description would carry the lessees to the opposite side of the river and Canon from that on which they must have intended the lease to run, as there are no means of reaching that side.

On March 3, 1885, the lessees procured a modification of their lease so as to have the same commence on the east side of the river,—feet from Point Lookout, which is a point on the finest portion of the Grand Canyon. The lessees have made no attempt to build on the ground leased to them. They have erected a number of tents and ground situated about one mile from that included in the modified lease, which have supplied all the accommodations afforded visitors for the past seasons.

These tents contain twenty-one beds, but the person in charge informed me that they could accommodate forty-two people, and had a few nights before accommodated seventy-one.

I think that the lessees have so plainly and so long failed to provide the proper hotel buildings and accommodations for the public that their lease at this point should be forfeited, and I strongly recommend that course to the Secretary. If, however, he should be of the opinion that this course should not be adopted, then I recommend that the lessees be required to take a lease of one and a half acres, including the ground which they now occupy with the tents, and that the modified lease near Point Lookout should be rescinded. It is too near the finest portion of the Grand Canyon, and buildings erected on the ground leased would greatly mar the beauty and grandeur of the scene. Moreover if the parties are allowed to remain where they are, they should be required to erect their buildings before the opening of the next season.

No lease should be given in the immediate vicinity of the Grand Canyon.

The Park Improvement Company also obtained a lease in March, 1883, at the Yellowstone Lake. Nothing at all has been done by the company at this point.

While in the Park I attempted to ascertain the status of the Park Improvement Company, and also the status of those who are at present managing the affairs of the company in the Park. As near as I could learn it is as follows:

The company becoming insolvent, George B. Hulme was appointed by one of the Wyoming courts, receiver. On the opening of the season last year the Northern Pacific Railroad loaned the receiver twenty thousand dollars, to secure which receiver's certificates were issued to the company. Those certificates, I understand, the railroad still holds. Mr. C. T. Hobart claims that the receiver leased all the rights of the Park Improvement Company to him. I was not able to procure a copy of the alleged lease, nor do I understand that it has ever been filed in the Department or approved by the Secretary. I was also informed that the whereabouts of the receiver was not known, and that an application for a new receiver would be made next month.

The affairs of the company are in great confusion, and I heard much well founded dissatisfaction expressed by travelers at the poor accommodation furnished them at the places at which leases had been granted to the company.

While the unfortunate financial reverses of the company have no doubt had much to do with this state of things, yet the interests of the public are to be first consulted. If the travel to the Park is to continue to any large extent, adequate accommodation must be afforded travelers, and the Department should see that privileges within the Park are accorded to persons of such financial standing that they can carry out at once such agreements as they may make with the Government for the accommodation of the public.

I may here say that every future lease should specify the time within which the required buildings must be completed.

[Here follow other recommendations about leases, permits and privileges.]

* * * * * * *

All of which is respectfully submitted.

W. HALLETT PHILLIPS.

It is hard for a lover of birds to approach "the sparrow question." Sparrows are found to do more harm than snakes or tigers. Nature's thieves and vagabonds they are. This is the verdict of the book before us, as it is of every one who investigates the matter. They drive away birds which do more good and little, if any, harm; for every noxious insect they destroy they consume more corn than one likes to calculate. A Cheshire farmer, indeed, estimates the loss to England due to depredations of sparrows at £770,094 in a year, and this loss is on the increase. No amount of sensationalism can find any countervailing advantage. The careful and long-continued experiments of Colonel Russell in Essex show that sparrows do unmitigated mischief; and the experience of our colonies and of the Americans confirms the facts beyond cavil. There is really nothing to be said for the sparrow. He carries destruction with him wherever he goes, and leaves devastation to mark his increase. From every point of view he must be looked upon as the enemy of man. Either he must give way to us, or we to him; and just now his power is such that he seems in a fair way to become here, as he has already become in Australia, a factor in politics. The Colorado beetle can never commit such ravages as the sparrow is certain to do wherever he is allowed to go on unchecked. Love him as we may for his personality, he ought everywhere to be exterminated with the utmost vigor, for there is no limit—in the course of nature—either to his reproductiveness or to the mischief which he causes. We in England have little conception of the scourge he has proved to be wherever he has been naturalized in foreign lands. It is none too soon to have the question put before us clearly, for every day its importance must become greater. Civilization has a baneful bar to its progress in the apparently inevitable increase of the henceforth to be execrated "Philip Sparrow."—*London Academy.*

BIRDS OF MICHIGAN.

BY MORRIS GIBBS, M.D.

56. *Dendroeca discolor* (Vieill.) Brd.—Prairie warbler.

A very interesting species. Little known by the youthful collector because of its retiring ways and small size. In southern counties the prairie warbler has not been found abundant by me, even during migrations, but in Central Michigan and the more northern portions it is exceedingly abundant from May 15 to Sept. 1. Along our southern border it arrives usually during the first week of May; I have never seen it in April, while occasionally it does not make its appearance until May 10 or even later. It, however, often appears as far north as Montcalm county by the ninth of the month. It summers from 43° north latitude north and is abundant from 43°30′ north in all suitable localities that I have visited. It becomes quite abundant soon after arriving and in those sections where it summers usually appears numerous by May 15. Although not an early arrival it begins arrangements for nesting very soon after locating, and appears in many instances mated on reaching us. It is a very tame bird at first and is also exceedingly curious, often becoming extremely bold in its desire to gratify its curiosity. Many times while taking notes in the pine barrens where the trees had been slashed and burnt over, these little birds have come about me, and by keeping quiet, with an occasional move of hand or foot to excite their attention, I often caused them to come within a yard of me, when they would peer about and skip over the ground or from twig to twig, much in the manner of the chickadee. They are extremely graceful creatures, and with their diminutive size and pleasing colors at once become objects of admiration.

In many respects they resemble in habits the yellow redpoll, both as to selection of territory during migration, and in generally keeping low down among the bushes and brush. But also like the last they are occasionally observed well up in trees, in fact with the prairie it is a common choice during their periods of song, and the pleasing notes are frequently heard issuing from the top of a tall dead pine, where the little fellow sits almost above shotgun range, and fully protected by the branch on which he is perched. Though so tame in early May the prairie becomes extremely timid as nesting comes on, and it is often with difficulty that specimens are secured, because of their shyness. On leaving a bush when scared they will fly a long distance ere alighting, or more probably, if there are dead trees near by, some tall pine will be selected, and if scared from this point a flight is taken to the next tree. In this way they often keep ahead of the collector for an hour at a time, frequently singing their simple lays. If not molested the birds favor the ground and low bushes however, and although often feeding in the dead trees, rarely in a tall live tree, and frequently going well up to sing, they like the underbrush the best. In these situations, if one is discreet, the habits may be carefully studied, and though the observer will not easily find a nest, still the manners of the midgets will prove sufficient compensation for his exposure to the sun's rays. The birds frequently cling to the side of a tree with their little claws supporting them by the rough bark, and in their gambols and search for food they may be seen hanging almost head down as they move about a recumbent trunk or limb. Their manner of clinging to the bark is more like that of the winter wren than the chickadee, but little like that of the other warblers excepting perhaps the pine.

Only one instance of nesting has come within my observation, and as the nests are rarely found in this portion of the country, it may not be considered improper to occupy the space for a short description. While in Ottawa county for a two weeks' collecting trip in May, 1879, we found a number of these pretty birds, and, thinking to secure the eggs, we made most careful searches, but to no purpose. This was in about 43° north latitude and the country comparatively new, with both pine and hardwood lands in the neighborhood. On May 25 a female was shot which contained an egg ready for the shell, and, thinking to secure the nest, I returned to the place the following day, and after a search lasting but a few minutes the nest and male were taken. It was placed in a small black ash bush about three feet high and only twenty inches from the ground. It was situated in a tripod fork, and was composed principally of down of thistles and old seed blows of dandelion (*Taraxacum*) and fibres of milk weed (*Asclepias*), more or less interwoven with bark or external fibres of weed stock, and lined with woodchuck's (*Arctomys*) hair. The eggs were two in number, fresh, pure white and marked with small dots of reddish brown, thickest near the larger end.

This bird is not always found singly or in pairs as many writers claim, nor is it found in small flocks of only three or four. On the contrary, although not abundant in flocks as is the yellow-rump very frequently, it is often found so numerous as to lead one to suppose that it migrated in straggling flocks at least. I have seen as many as fifty within an area of as many acres. The prairie warbler is a very expert insect catcher, and it is safe to say that not one of our warblers, unless it is the redstart, is superior to him. The insects are generally captured near the ground, but I have seen them dash into the air from a dead pine with great effect, after which the song would be resumed. The song is decidedly peculiar and difficult to describe. It is apparently uttered with the utmost difficulty, and as if the performer were badly strained and was scarcely able to carry it through. The notes are readily recognized because of their peculiarity, and total dissimilarity to the songs of any of our other warblers. The notes begin low but end quite loud and shrill with a kind of rattle, screech or gasp through the whole. The song has not been heard by me during migration, and the best efforts, poor at best, are probably only given after the nesting haunts are reached. It may be heard as early as May 8 in Montcalm county some seasons, again not till the 15th of the month in any numbers. The song persists through June and a few are heard as late as July 15, but later than this the notes are rarely heard. During the autumnal journey the birds are rarely seen in Southern Michigan and I am unable to give the latest dates of departure.

57. *Siurus auricapillus* (Linn.) Sw.—Golden-crowned thrush.

An abundant species, common from May 5 to September 20. A retiring bird, and though often seen walking about in the dead leaves of the forest floor and oftener heard uttering its loud but not unpleasing notes in the recesses of the wood, it is still but little known, and its habits have been little understood by most collectors. Very few birds which are as numerous in cabinets are as little observed in the strict privacy of the forest's seclusion as this, and many of its characteristics which I have observed are so peculiar that I must beg leave to offer them in full, if not as new, at least as reminders to others of what they may have seen, and to most of the readers as features of extreme oddity.

The ovenbird, as it is called by many in allusion to its custom of building its nest partially covered, arrive in our southern counties in late April or early May. My earliest recorded arrival is April 26, while one season they did not arrive until May 6. The birds become abundant within a few days after their appearance, and fill the woods with their loud and characteristic chirping notes. They do not all leave us until about the 15th of October. The quarters chosen by the golden-crowned accentor are variable. More frequently partially low woods are selected for nesting sites, but often high and dry white oak woods are resorted to, and in many instances very low, moist woods are chosen. Many nests ars found in beech and maple woods when on high ground, and such woods are selected oftener perhaps than any other if they are in the vicinity of lower ground and slope toward a stream or lake. The nest, so far as my knowledge extends, is invariably upon the ground or just above it on a bunch of fern roots or slight elevation of the ground. The structure is nearly always placed on a nearly level surface, surrounded and partially, often entirely, covered by the dead leaves of the previous season, but is occasionally situated in a depression of the ground, and even beneath a fallen limb or under the spreading leaves of some forest weed. I know of no nest more difficult to find unless the bird is flushed as we walk through the forest, and very often the eggs are discovered only by diligent search even when the bird rises at our very feet. On one occasion, June 20, 1882, I stepped on a nest containing three eggs and one cow bird's egg, which were demolished, the old bird barely escaping, running out like a mouse. The nests are often entirely covered with the material which composes the structure, of coarse grass and dead leaves generally, and cannot be discovered by looking on the ground, and only by seeing the bird leave the nest or in looking sidewise and discovering the opening. Generally, however, the covering only extends half or two-thirds of the way over the interior, and the eggs are often seen from above. In some cases, as we also find in the case of the meadow lark, the covering is so slight that the eggs may be seen through the thin roof. The old bird does not appear very solicitous, as a rule, when her eggs are taken, and only when they are about ready to hatch or the young occupy the nest does she appear on the scene and give evidence of her anxiety by a series of clucks and chirps quite unlike the notes usually uttered. At first she leaps from her eggs and scuttles rapidly away without notes being uttered, appearing like a meadow mouse or young chipmunk making for its hole, and is often mistaken as such, but before she has traveled two rods in this manner she is recognized and the eggs are looked for, and are frequently found several yards back of one, having been passed as we followed the supposed mouse. Later in the nesting season the old bird feigns lameness, and half tumbles over the ground, and at this time she often runs to a great distance before taking flight. I have seen an old ovenbird run all of five rods before flying. She often returns after her flight and either perches on a limb, where she walks about meditatively uttering her alarm notes, or sneaks about among the underbrush, often appearing, if protected, quite near to us. After the young are half-grown or more, they are easily found as a rule, for the old bird often makes considerable disturbance and the young are seen as we search about, they having about wrecked the nest in their movements and almost totally destroyed the covering. It may be that the old birds make it a practice to tear away or crush down the partial covering; but certain it is that nests which contain young birds are often found without covering, and in one instance to my knowledge, where the cover was well marked before the eggs were hatched, it was later found to be wholly removed, the nest containing four good-sized young and a great, overgrown cowbird. My earliest record of eggs is May 23, when incubation was found to have begun. It was during a very early season, however. In fact, I have found but few nests containing full complements of eggs in May, as compared with June. The time for collecting the eggs of this warbler is from June 1 to 15. Many nests are found containing young by June 10, while after June 20 I have been unsuccessful in securing sets of good eggs. My latest taking of a fresh set of eggs is July 13, although as second broods are undoubtedly raised, and I have often observed the birds acting as if there was a nest in the vicinity, I have no doubt that eggs may be found as late as Aug. 1. The birds breed as far north as 44° 10′, but are not recorded from the Upper Peninsula, neither could I discover the species on either the south or north shore, but found it abundant and undoubtedly nesting on Mackinac Island in Mackinaw Straits.

The song of this species has been but little described by writers; in fact it is only within the last few years that mention has been made of its best musical efforts. The common, loud clanking notes so often heard, have been listened to by all collectors, but a superior strain, only occasionally uttered apparently, has been listened to by but few intelligently. I think it safe to say that no bird among us which is so well known has eluded the describers of bird songs as this one has done. I listened to the true song of the oven bird in 1880 for the first time, and before I had read of its discovery by any writer. The first burst of melody reached me in a dense piece of low woods filled with underbrush, in Montcalm county, in May, and the delighful notes were surprising and doubly pleasing to me in such a location. To describe the notes would be next to impossible. It is more difficult than the songs of the warbling vireo and tanager, and with more dash and harmony if it is possible. At first on hearing the notes the idea presented itself that a species new to me was singing, and my extreme care in reaching the glade in hopes of a shot was what secured me a chance of witnessing a most singular performance. Carefully crawling through the almost impenetrable growth of small saplings and brush, I came at last to a partial clearing over which a bird, apparently in the highest transports of joy, was fluttering in irregular flight. It is not surprising that I failed to recognize the bird in its decidedly unusual performance, for there was not one point in which it resembled itself in ordinary habits, and the specimen would have been shot at once in my eagerness to add a new bird to my collection had I not observed another bird, undoubtedly its mate, perched on the ground near, and which appeared to be a golden-crowned thrush and the center of attraction to the delightful warbler overhead. Never had I heard the song before, and never have

I witnessed such a scene. This was indeed making love with a spirit which I had never witnessed among our birds before. The song was almost continuous, and with an occasional interruption to the new song by the common chattering notes so well known and described by Coues as a "harsh crescendo," the notes were all of the most melodious description. The energetic unconscious fellow was meanwhile constantly flying about above his inamorata, describing every form of flight except that of regular sailing; first dashing through space to the edge of the glade, which was probably twenty feet across; then rising to the tops of the bushes, he would half flutter, half fall toward his prospective mate. On a sudden he would flutter directly upward as we often see the English sparrow or house wren do, and reaching a height of twenty feet or more, dash about the clearing in varying circles, ever tending in his flight toward the object of his extravagant attention. She in the meanwhile sat silent and evidently interested in the performance. Suddenly the male dropped beside her, and alternately dashing and wheeling about, but continually on the move and always revolving about her, gave evidence of his adoration by a series of hops, dignified struts, droopings of the head and tail, elevation of the wings and crest, which would have done credit to both the turkey and ruffed grouse. While on the ground the song was kept up with the usual vigor, but the interruption by the coarser, common notes was more frequent and the bird stopped in its struts in order to utter the notes which apparently caused him more effort than did the more beautiful song. The appearance of a third party on the scene, probably also a lover, caused the first performer to dash into the brush much to my disappointment.

That the love-song is not common is evident to all, and the very fact of its having remained so long unknown is proof of its rarity. After my first experience I watched continually for the beautiful song, but did not hear it until the following year, although the woods were filled with the common notes. The following spring, while sitting quietly at the roots of a gigantic elm, a female of this species fluttered near, carrying material in her beak evidently intended for nest construction. While watching her the male suddenly made his appearance, and the scene of the previous year and with, I think, superior musical performance, was enacted in my presence. However, in this instance the male rarely descended to the ground, evidently being fully mated and not considering it necessary to strut about after securing his partner to the extent of nest construction being in progress. Since that time I have never heard the song, although a thousand chatters have reached my ears.

PALE RUFFED GROUSE.—*Editor Forest and Stream:* I send you by to day's mail the skin of a bird resembling the ruffed grouse. Will you be kind enough to identify it for me. This is the second one I have shot, the first having been killed about three years ago. They have so far proved solitary birds, there not being any more birds of any kind in that woods. I have shot a great many grouse, but they have all, with these two exceptions, had black ruffs and the spots on the back, and band across the tail, and large wing feathers, black also. This bird weighed twenty-six ounces. I skinned this bird for the purpose of showing you the entire plumage. If you can have the bird mounted, sometime when I am over there I will call and see it. This is the first one that I have undertaken to skin. This bird was shot Nov. 26, 1885.—G. W. Z. (Butler, Pa., Nov. 27). [The bird is remarkable for the uniform cast of its coloration. What is usually black in *B. umbellus* is here chestnut or pale brown. It is a curious example of pale bleached plumage, but it is a true ruffed grouse. We have sent the specimen to be mounted.]

Game Bag and Gun.

"Forest and Stream" Trajectory Test.

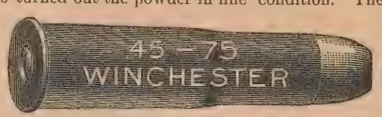
(*Continued from page* 345.)

Marlin .45.

The Marlin .45 at 200 yards was put on the rest Sept. 29, nearly at the opening of the trials, at about half past eleven in the morning. The wind was blowing from the 10 o'clock quarter at seven miles an hour. The barometer indicated 30.120, the dry thermometer 77.4 and the wet-bulb thermometer 67.6, making the dew point 61.4 and the humidity of the atmosphere 58 per cent. The arm weighed 9 pounds 11 ounces, with a barrel weight of 3 pounds 11 ounces, barrel 28 inches in length, octagonal and marked on the top ".45 Govt.," while the shop number was 9449. It had a uniform twist of rifling 20 inches to the turn, 6 grooves .003 in depth and .158 inches in width each. It was loaded with U. M. C. ammunition from a box purchased from the stock of the Marlin Arms Company agency in this city. The box of ammunition was marked ".45-cal., 85 grains, 285 grains

grooved bullet, specially adapted to the Marlin Repeating Rifle." Three of the cartridges were opened and examined, and the powder behind the two grooved bullets found in fine condition. The three charges weighed 84.3, 84.9 and 83.4 grains respectively, while the corresponding bullets were 290.5, 289 7 and 289.4 grains.

The arm acted very contrary in the rest, and do what might, with a consumption of over 25 rounds it was only possible to get one shot through all the screens and on the target. The weapon was several times cleaned and particular attention paid for any traces of leading in the barrel, but none were detected, yet the arm threw the bullets now high, now low, in every and various directions, and at one shot sending a deflected bullet very near our esteemed carpenter's head. An attempt was made to insert a Government cartridge, but the 500-grain bullet refused to go into the chamber or rifling, and we were forced to be content with a single trajectory curve instead of the average of five which was desired. This curve showed:



Round.	50 Yards.	100 Yards.	150 Yards.
1.....	**7.596** in.	**11.236** in.	**9.019** in.

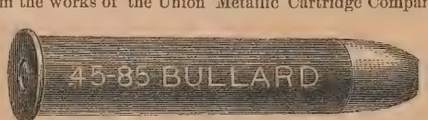
At 100 yards the rifle was tested on Oct. 10, about 2 o'clock in the afternoon, with the wind coming from the 9 o'clock quarter at an 11 miles per hour rate, the barometer stood 30.200 inches, the dry thermometer at 62.5 and the wet-bulb thermometer at 58, making a dew point of 54.9 and indicating a humidity in the atmosphere of 76 per cent. Again the arm acted very obstinately and but one satisfactory round was put through the screens out of the score or more fired. This round showed a curve as follows:

Round.	25 Yards.	50 Yards.	75 Yards.
1.....	**1.131** in.	**2.125** in.	**1.612** in.

Winchester .45.

The arm at 200 yards was tried on Sept. 28 at 4:40 P. M., with a five mile and half breeze blowing from the 6 o'clock quarter. The dry thermometer indicated 65.7, the wet-bulb thermometer 59 and a dew point of 51.8, and humidity, 58 per cent., was calculated from this. The barometer reading was 30.210 inches. The arm weighed 10 pounds 8 ounces and the barrel alone 3 pounds 10 ounces. The barrel's length was 30 inches, octagonal and numbered 48,005. There are 6 grooves having an uniform twist of 30 inches to the turn and a depth of .003 inches with a width of .142 inches. It was loaded with Winchester-made ammunition from box marked ".45 caliber, 75 grains powder, model Centennial, 1876." A bottle-neck shell 1⅞ inches in length, having a three-grooved naked bullet, when examined, three rounds turned out the powder in fine condition. The three

powder charges weighed 77.6, 75.7 and 76 grains, while the bullets, made up of 1 part tin to 16 of lead, weighed respectively 349.3, 349.5 and 349 6 grains. In the rest the arm behaved well and showed a record as follows:



Round.	50 Yards.	100 Yards.	150 Yards.
1.....	8.071 in.	11.272 in.	8.855 in.
2.....	8.657 in.	12.070 in.	8.526 in.
3.....	9.332 in.	13.002 in.	10.097 in.
4.....	8.587 in.	12.033 in.	9.385 in.
5.....	8.312 in.	11.517 in.	8.931 in.
Average.....	**8.592** in.	**11.979** in.	**9.359** in.

At 100 yards the test was made on Oct. 5, with a wind coming from the 8 o'clock quarter at thirteen miles per hour. It was at 12:45 when the rifle was put in the rest, the barometer reading 30.150 inches, the thermometer 60 and the wet-bulb thermometer 52, making a dew point of 43 and the humidity in the atmosphere at 54 per cent. Similar ammunition to that at 200 yards was used. The score stood:

Round.	25 Yards.	50 Yards.	75 Yards.
1.....	2.053 in.	2.696 in.	2.317 in.
2.....	2.044 in.	2.530 in.	2.175 in.
3.....	1.920 in.	2.452 in.	2.107 in.
4.....	1.919 in.	2.382 in.	2.089 in.
5.....	2.048 in.	2.603 in.	2.108 in.
Average.....	**1.997** in.	**2.532** in.	**2.159** in.

Bullard .45.

This rifle, at the 200-yard range, was tested on Sept 29 at about 10 o'clock in the forenoon, and when placed on the stand a lazy wind, going at the rate of three miles an hour, was passing over the range from the 4 o'clock quarter. The barometer stood at 30.250 inches, the dry thermometer at 73.5°, the wet bulb at 68°, making a dew point of 64.5, and the atmospheric humidity at 73 per cent. of complete saturation. The weapon had a 26-inch, half-octagon barrel, and was numbered 724. It weighed 9 pounds 14 ounces, and the barrel alone is given as weighing 3 pounds 6 ounces. There are five grooves, with uniform twist of one turn in 30 inches. The depth of rifling is .004 and the width of groove .160. The loading was from a box marked ".45-cal., 85grs. powder, for the Bullard, Marlin and other rifles," coming from the works of the Union Metallic Cartridge Company.

Three rounds of the ammunition when opened showed the powder in fine condition and the bullet having two grooves. The charge was of FG powder, either Laflin & Rand's or Dupont's, as both are used by the U. M. C. Co., and the bullets had 1 tin to 20 lead. When weighed the charges of powder ran 84.3, 84.9 and 83-4, while the corresponding bullets were 290.5, 289.7 and 289.4.

The weapon acted well in the rest and gave the following record:

Round.	50 Yards.	100 Yards.	150 Yards.
1.....	7.839 in.	11.252 in.	8.817 in.
2.....	7.892 in.	11.377 in.	8.811 in.
3.....	7.729 in.	11.258 in.	8.975 in.
4.....	7.591 in.	10.822 in.	8.484 in.
5.....	7.579 in.	10.925 in.	8.551 in.
Average.....	**7.726** in.	**11.127** in.	**8.727** in.

At 100 yards the trial was on Oct. 5, at 3 o'clock in the afternoon, with the wind coming from the 8 o'clock quarter at a 11-mile per hour rate. The barometer recorded 30.220, the thermometer 60.5, the wet-bulb thermometer 53, making the dew point 45.7 and indicating a humidity of 59 per cent. It is unnecessary to give again the detail of the charge used, which was similar to that at 200 yards. The figures show trajectory heights of follows:

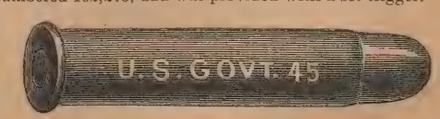
Round.	25 Yards.	50 Yards.	75 Yards.
1.....	1.745 in.	2.210 in.	1.831 in.
2	1.808 in.	2.258 in.	2.015 in.
3.....	1.684 in.	1.975 in.	1.661 in.
4.....	1.902 in.	2.379 in.	2.013 in.
5.....	1.819 in.	2.241 in.	1.936 in.
Average.....	**1.791** in.	**2.210** in.	**1.891** in.

Springfield .45 Military.

This weapon is the regular army weapon of to-day with its three grooves and the later adopted cartridge having the 500-grain bullet. It was one which had long been on the range, brought there, we believe by Major Shorkley, and presented to Gen. Wingate in replacement of one which the Major had shortened down an inch at a time into horse pistol length, while trying some of the interesting experiments in which he finds so much of instructive entertainment. It was put on the rest for the 200 yards testing on the afternoon of Oct. 1, about 3 o'clock, the wind at that time blowing down the range from the 6 o'clock quarter at seven miles per hour. The barometer showed 30.075 inches, the thermometer 73.2, the wet-bulb thermometer 61, showing a dew point of 50.8, and an atmosphere having 45 per cent. of humidity. The weapon itself weighing 8 pounds 11 ounces, with a barrel of 3 pounds 9 ounces weight. The length of the round barrel is 32 inches and the rifling is uniform with three grooves of 22 inches to the full turn. Depth of groove .005 and width of groove .235. It was loaded with ammunition made according to the shell inscription at Frankford Arsenal, near Philadelphia, in February, 1884. The charging then was the same as it has been for four years past, with Dupont's "musket," now called "small-arms" powder. The bullet has a composition of 16 lead to 1 of tin by weight.

The opening of three charges showed the powder pressed hard but in good condition, and the bullet with three broad grooves. The charges of powder when weighed turned the balances at 69 6, 69.3, and 69.7 grains, while the three corresponding bullets weighed 499.2, 499.4, and 499.5 grains.

The rifle seemed at home in the Government rest in which it found itself, and light though the barrel was, there is no signs of anything but very steady shooting. The record standing:



Round.	50 Yards.	100 Yards.	150 Yards.
1.....	8.983 in.	12.224 in.	9.417 in.
2.....	9.654 in.	13.315 in.	10.169 in.
3.....	9.582 in.	13.261 in.	10 079 in.
4.....	9.304 in.	12.925 in.	10.009 in.
5.....	9.509 in.	13 209 in.	10.106 in.
Average.....	**9.406** in.	**12.987** in.	**9.956** in.

At 100 yards the trial was made on Oct. 12, with the wind coming from the 2 o'clock quarter at the rate of 18 miles per hour. The barometer stood 30 290 inches, the thermometer 54 5°F., the wet-bulb thermometer 50.5, making the dew point 46.5 and the humidity 51 per cent. Again the rifle was on its good behavior in the rest, though the figures will bear careful scrutiny, and show that as a military arm it is close enough as a shooter to do very great execution in skillful hands. The 100-yard score stood:

Round.	25 Yards.	50 Yards.	75 Yards.
1.....	2.290 in.	2.834 in.	2.492 in.
2.....	2.291 in.	2.915 in.	2.458 in.
3.....	2.372 in.	2.952 in.	2.488 in.
4.....	2.321 in.	2.882 in.	2.397 in.
5.....	2.353 in.	2.888 in.	2.435 in.
Average..	**2.325** in.	**2.894** in.	**2.454** in.

Sharps .45.

This weapon was a well rusted veteran, and had for eight years been carried by one of the FOREST AND STREAM'S staff in every part of the West. It had done capital service at antelope, elk and mountain sheep, and it had shown itself a hard and a close hitter. It carried a Government cartridge of the 405-grain bullet model, and with this it was tested. The weapon had a 30 inch round barrel and was numbered 162,275, and was provided with a set trigger. It

weighed 10 pounds 3 ounces, and the barrel weighed 5 pounds 4 ounces. It had a uniform rifling, six grooves, with one turn in 20 inches, the depth of rifling was .003 and the width about .120 inch. It was placed in the rest Oct. 19, about noon, with the wind coming 21 miles per hour from the 7 o'clock quarter. The barometer at 30.195 inches, the thermometer at 70.5 and the wet-bulb thermometer at 64.5, giving a dew point of 60.5 and indicating a humidity

of 71 per cent. The ammunition employed was of the Union Metallic Cartridge Company's manufacture, with a composition in the bullet of 1 tin to 14 lead and loaded with FG powder. When opened the powder was found hard pressed but in fair condition, and the bullet had the regulation three broad grooves. The weights of the three powder charges were 72 4. 71.3 and 69 1 grains, while the corresponding bullets were 404.5, 404 3 and 404.5 grains. The record at the 200-yard range stood:

Round.	50 Yards.	100 Yards.	150 Yards.
1.....	8.188 in.	10.968 in.	8.464 in.
2.....	8.540 in.	11.937 in.	8.906 in.
3.....	8.917 in.	11.760 in.	9.098 in.
4.....	8.399 in.	11.706 in.	8.867 in.
5.....	8.623 in.	11.928 in.	9.130 in.
Average	**8.533** in.	**11.659** in.	**8.893** in.

The 100-yard shooting of the Sharps rifle had been tried on Oct. 10, about half-past 4 in the afternoon, with the wind coming across the range from the 9 o'clock quarter with a 5 mile an hour velocity. The other observations were: Barometer 30.220 inches, thermometer 64°F., wet-bulb thermometer 56°, and a dew point of 49 with a humidity of 58 per cent. Again the old Sharps proved itself a tractable weapon, and a single sighting shot put it on the bullseye, and then the five trial shots showed the following record:

Round.	25 Yards.	50 Yards.	75 Yards.
1.....	1.865 in.	2.597 in.	2.336 in.
2.....	2.067 in.	2.585 in.	2.157 in.
3.....	2.068 in.	2.545 in.	2.128 in.
4.....	2.096 in.	2.568 in.	2.185 in.
5.....	2.312 in.	2.805 in.	2.345 in.
Average....	**2.081** in.	**2.620** in.	**2.230** in.

DEER IN VERMONT.

Editor Forest and Stream:

"Stanstead," in your issue of Nov. 2, has made reference to my knowledge of something of the deer whereabouts. Yes, I have seen deer in Vermont near this place, and four at one look once, and at various other times the "white flag," but I have not shot at one in that State. I have seen the dog-chewed hides of some killed there by crust-hunters, and I was told yesterday by a reliable informant in Vermont that he knew of seven deer slaughtered in one yard last spring. That "yard" was only five miles from this village, and some of the "things" live here that were in at the death. There are many deer there now, and some are making a feeding ground of the mountain side, in view from the window in front of me. They were there one week ago to-day, when I saw their first tracks. But man cannot be their only enemy, if I am well informed of the character of the wolverines some of which have a home in the rocks in that dense forest.

North Stratford is the home of several practical jokers, and one of Vermont's crust-hunters and his venison went through a mock trial last spring in that place. The fellow was well scared. But why should we try to enforce deer laws? When will there be an open season to make a game law respected. They are not increasing under a dog in the manger law. An open season from Aug. 1 to Jan. 1 would be far better in all New England States than any law now in existence in the different States. Knowledge of the breeding season of deer, and the character of the people who are to be regulated by game laws should both be taken into consideration; if this is done you can remove all bounties, and the four-footed venison eaters will disappear. NED N.

COLEBROOK, N. H., Nov. 23.

DEER NEAR LAKE GEORGE.

Editor Forest and Stream:

It is the opinion of true hunters generally on the lower part of the Adirondack range that the passage of the non-hounding act has been accomplished just in time. If hounding had gone on for a number of years longer the deer would have been nearly if not all killed. This fall's report show them to be more plenty than for a number of years. Two or three instances have come to my notice when parties have gone from home and back the same day and getting a deer, some of them living from ten to fifteen miles from the hunting ground. The inclosed was clipped from the Troy *Times:*

"Last year Burr Phelps, of Lake George, stood in his tracks and shot three large deer within ten minutes. Tuesday evening last Capt. Lee Harris, Capt. Burr Phelps and Geo. B. Harris, ex-deputy postmaster, left Caldwell at 6 o'clock in a rowboat, reaching Bolton in two hours. There they remained over night. At 4 o'clock the next morning they were joined by Alexander Taylor and George Granger, in another rowboat. The party pulled about eight miles down the lake, and by the time it was daylight the hunters were ascending the mountain opposite Halfway Island. Before 5 o'clock P. M. they had killed four deer, all bucks, and had two down to the lake. Wednesday morning they got the other two down from the mountain, loaded them into the small boats and pulled to Bolton, where they parted company with Taylor and Granger and two deer. Before 6 o'clock P. M. they were at home. The parties were all old hunters except G. B. Harris, it being his first experience. The first and largest buck was shot by him, also the second and smallest. The first weighed more than 200 pounds. The snow on top of the mountain was ten inches deep. Four beautiful bucks and a pull of eighteen miles and return in less than forty-eight hours, without a dollar's expense or the aid of a dog in killing the game, is a pattern for a country more frequented by deer than the Lake George region. Five deer were started, but one evaded the keen eyes of the party. A large bear was also started by the party, but was not seen."

The mountains about Lake George are hunted perhaps as much as any part of the Adirondack chain, as they are very easy of access by taking the cars to Dresden or Chubb's Dock, on the Champlain division of the D. & H. C. road. A number of fine deer have been killed on Dresden Mountain, between the head waters of Lake Champlain and Lake George this fall, and it is expected if the law is vigorously enforced that in a few years deer will again be as plenty as foxes. Now if the jack hunting will only be stopped we shall soon enjoy the pleasures of deer hunting as our forefathers did. The flight of ducks has been very light here this fall and only a few have been bagged, but a number of snipe have been shot in the village limits. NED.

FAIR HAVEN, Vermont, Nov. 21.

THE GEESE OF THE PLATTE.

It has been my habit to annually write an article on goose hunting in the River Platte. This fall I was not able to accompany my friends to the grounds which have heretofore furnished such fine sport, but I have kept myself posted as to the doings of all the parties who have gone up there from here. A few of those who went early in the season made fair bags, but all of them have been disappointed. The geese have been scarce and rather wild. Along the river from Kearney eastward they have appeared only in limited numbers, and at Foote's, back of Kenesaw, where three years ago in five days five of us bagged 313, none to speak of have appeared this year. My friend Jack Lanham, who is a good shot and one of the most indefatigable goose hunters perhaps on the continent, spent three days on the bars near Gothenburg, thirty or forty miles west of Kearney, did not get a single shot at geese, and one day while out in the adjoining fields trying to knock over a stray chicken, some one waded out and added to his misery by stealing all his sheet-iron decoys.

The geese have not appeared much around the inland lakes and ponds, nor in the cornfields of the farmers, as in former years; nor have many been seen in flight over this region going southward. These remarks especially apply to the white brant. Very few white brant have been seen at all, a party of five who spent five days on the Platte saw but one during that time. In other years they have been so numerous that when they settled down on the little bars at a distance they resembled banks of snow.

No one seems to be able to account for this sudden diminution of wild geese along the Platte. It never occurred to me it would happen during my lifetime. There are various theories regarding it. One is that they have taken a different line in their migration southward; another, that as the country has settled up further northward and grain has been grown there, they stop among the lakes in that region and remain because they are not disturbed; another, that they did come down here, but as every farmer had a gun to pop away at them in the fields where they went to feed, and the bars in the river were covered with hunters, they hurried southward to seek peace and rest; and still another that through despoiling of their eggs in their nesting grounds, and the spring and fall killing off the fowls by myriads of hunters, their ranks have become so depleted they can no longer make the big display of former years. I do not know, I am sure. It is nevertheless a fact that it was hard work to make a fair bag on the Platte this year because the geese were not there.

Pretty much the same may be said with reference to ducks. Indeed, the falling off in their case has been greater than that of the geese. I have not heard of a creditable bag, even by the most successful hunters. If they have come this way in any considerable numbers they have done so so slyly and quietly that none of us have been aware of their presence. We people of this part of Nebraska have begun to realize that, like our more eastern friends, if we want to do much successful work among the ducks we will have to seek other regions for the sport. How quickly do the settlement of a country and the modern gun cause the game to disappear.

LINCOLN, Neb., Nov. 21. BURR H. POLK.

AN ILLINOIS QUAIL PRESERVE.

At the age of twenty-five I was much attached to this world and wanted to stay awhile, but was apprehensive of declining health. One day I called on that ardent lover of field sports, the late Dr. James B. Coleman, of this city. Said I, "Doctor, examine my lungs." The Doctor never prescribed medicine when any other course of treatment was practicable. After a careful examination he said, "O, you are all right; only a little run down. Buy a dog and gun. Get a good dog and he will soon inspire you with an insatiable desire for the field; drink plenty of brown stout, and I'll see you later on in life."

I lost no time in procuring this outfit, and soon found myself completely absorbed in dogs and guns, and quail and woodcock shooting. Heretofore I had been wholly devoted to business, but the beautiful work of my dog soon led me to find easy excuses for a day or a week of shooting; and to economize time in July I would often take to bed at dark and be called at 2 o'clock, drive three to five miles in the country, get a few brace of woodcock, and be at business by 8 o'clock. A few years later my business called me frequently to Chicago. One day I stepped into the office of the Illinois Central Railroad and bought eighty acres of land, located about ten miles from Vandalia, and which had been previously described by a friend as having all the surroundings a quail shooter could wish for. After fencing and the erection of a comfortable five-room house—this cost me about $2,000—I subsequently sold this plant to a jolly old Englishman, who had a wife who knew how to keep house, it being understood that my friends and I were to be "at home" there a week or two each fall. Here for fifteen successive years, in company with those kindred spirits Mr. F. W. Roebling and Col. B. Ridgway, have I enjoyed quail shooting in all its perfection of delight, encircled by home comforts and a warm friend in every land owner, as it has been our custom to keep "open house" every evening.

Our stay there has usually been confined to about ten days each season, which seemed to fully satisfy us, as we made full use of every hour of daylight, barring bad weather and Sundays.

In favorable seasons the birds are very plenty in that locality, and the shooting is mostly open. The country is rolling and much cut up with wooded or weedy ravines, which afford attractive cover for the birds and yet not difficult ground for a shooter to work. Our yearly score for eight to ten days shooting has run from 400 to 800 quail, woodcock and prairie chickens to the three guns. The record of six seasons which I now have before me shows 391 for the lowest aggregate, to 827 for the highest, or an average of 594 birds for each of the six seasons. The best single bag of birds made by any one of us was fifty-three quail and three chickens. The best bag of quail to a single gun was fifty-five, and the best day was a total of 139 to the three guns. The years in which our score was not recorded would average quite as good as those enumerated, so that I estimate that in the fifteen years we have bagged nearly 9,000 birds within an area of five miles of that little shooting ranch. This looks like big work, but I think in its execution we must have strewn hill and dale with nearly 18,000 empty shells.

I have heard of men that "kill 'em all," and are good for "nine out of ten." I can beat all of those sort of fellows. But my observation has been in an experience of twenty-five years that a man who accepts all the chances in open or cover at short or long range and bags half his shots is a hard one to follow "day in and day out."

Two years ago a young fellow, who lives on the border of the timber, came over to our ranch one evening "a-sparking." We interviewed him on the quail business, and he said there was "right smart of them over there." So next morning we had our boy hitch up the mules and drive us over, a distance of nearly five miles. When we got near enough to locate his cabin, in the edge of the timber a half mile distant, I said to the Colonel, "This stubble is good enough for me. Let's get out and send the boy and team on to the house." We got over the fence, and before we had gone fifty yards our four dogs were beautifully posed on a covey of birds, and when they were flushed our guns disturbed another covey over near the open timber, and both bunches spread out nicely in the thin underbrush and among the fallen treetops. So it went all day—plenty of birds and just enough cover to make the shooting highly interesting. At 4 o'clock one of us counted out 55 birds and the other 53, total 108, or the best day to any two guns during our fifteen years' experience in that locality. Those 108 large plump birds, spread out breasts up on the clean straw in the bottom of our wagon, was a sight that only a sportsman can properly appreciate.

This season we shall not visit our old resort, it being reported that the severe winter destroyed many birds. But we conclude that the many score of cheap breechloading guns now in the hands of young men in that vicinity, who were "kids" fifteen years ago (when we located there), have had more to do with thinning out the birds than the severe winter. So we have arranged to go in quest of new grounds in the "Old North State," and will leave for Salisbury, N. C., in a few days. We shall move around until we find just the right spot, and after tiring of quail go down to the coast and finish up on duck and deer, of which you may hear more. JOHN TAYLOR.

TRENTON, Nov. 25.

IN THE CACHE RIVER BOTTOMS.

THE Huntingdon Hunting Club returned home on last Monday after a two weeks' camp hunt in the Cache River Bottoms, in Green county, Ark., about two hundred miles distant from this place by rail.

We left the railroad at Gainesville, Ark., where we were joined by Dr. D. K. Parsons, W. J. Parsons, the renowned Captain E. E. Stubbs and Mr. James Halsey, to whom we are under many obligations for courtesies shown. Our principal object was to hunt deer, though we would not have objected to an occasional bear, wolf, etc. We were in the midst of a great game country. The booty of the hunt amounted to ten deer and a considerable number of squirrels. A large yellow wolf was discovered eating a dead deer and fired on without effect by several of our party. Captain Stubbs brought down a fine turkey on the wing with his rifle, and by various feats of agility and wonder demonstrated to the satisfaction of our club that he is the most skillful rifle shot at moving objects in the world. Our deer hunting was almost entirely without dogs, which falls short of the old-fashioned, glorious style of chasing the game and shooting it on the run. We were too early for ducks, which, up to the time of our breaking camp, had only reached this locality in small numbers.

The scene of our exploits was to have been in Buffalo Island, in the Saint Francis bottoms, where bear are plentiful, but the difficulty of reaching that point induced us to change the field of our operations. We received information that in one week while we were in camp Mr. Zack Hollis, who lives on Buffalo Island, killed six bear. The pleasure of the hunt was much diminished by the unfortunate accidental shooting in the foot of Judge Jo. R. Hawkins by Mr. Halsey a few minutes before reaching camp. Mr. Halsey fired with a rifle at a rabbit, which he killed; but the ball bounded and lodged in the Judge's foot. The ball was extracted by Dr. Parsons, who was present, and the wound, though severe, is now doing well.

By the local hunters in Arkansas magazine rifles are in general use, and they care but little to be nearer than 150 yards of a deer, and with a single shot they often despatch a bear. In the St. Francis and Cache River bottoms there is a vast expanse of low, level, wet land, interspersed with both forest and prairie, which in the fall season is a perfect paradise to the hunter. In this region is to be found bear, wolf, panther, wildcat and deer, and among the numerous fowls that are seen here may be mentioned swan, goose, duck, eagle, etc., and in the streams large quantities of fish may be taken by sportsmen properly prepared with tackle. But how long this state of affairs may exist is uncertain, as the wilderness is dotted every few miles with the camps of sportsmen, who come hundreds of miles to luxuriate in the glories of this huntsman's delight. L. L. H.

HUNTINGDON, Tenn., Nov. 19.

NOTES FROM WOOD, FIELD AND SHORE.

LARGE flocks of geese have been observed of late passing over our village, and during yesterday's cold northeast storm I saw eight flocks passing south, numbering about 400 birds in all, as near as I could judge. Owing to the rain they flew quite low and within easy gunshot. One of our over-zealous sportsmen did fire into a flock of them, bringing down a bird; but it had no sooner touched ground than it took to wing again and a moment later was lost from view. Partridges are not over plenty about here, and half a dozen birds are called a good bag. Many of the birds are caught in snares. I have run across large numbers of these snares in the woods. I do not hesitate a moment in picking up all I find, and wish all hunters would do likewise. Quail are quite plenty, but are very shy, and lie pretty low when once flushed. Quite a number of woodcock have been taken in this section, but most of them proved very small and not over fat. F. M. M.

ATTLEBORO FALLS, Mass., Nov. 24.

WOODCOCK IN THE SNOW.—Onondaga Hill, N. Y., Nov. 27.—While fox hunting last Wednesday I shot a fine female woodcock which the hound flushed from a little ravine out in the fields, the snow being nearly a foot deep. Three years ago, on Nov. 16, I killed one in the same locality. The snow was then more than a foot deep. Both birds were in very fine plumage. I have mounted the last one and it presents a very fine appearance indeed. A short time since Dorr, K. and the writer went cooning in the evening with the smartest coon dog in the country. The dog treed five coons in a large swamp elm, which the writer climbed and killed them with a Remington .44-caliber, a navy revolver. The five coons weighed seventy pounds—quite a good haul. Partridges and rabbits are unusually scarce in our locality this fall.—G. A. K.

A "JUMBO" BUCK.

THE largest deer killed in this section for fifteen years was recently shot by Mr. Isaac C. Haas, of Baltimore, Md., a hunter of considerable experience in the mountains and fields. On this occasion the party consisted of the following huntsmen: Mr. James W. Miller and Mr. Jehu Wilson, of Mill Gap, Hardy county, W. Va.; Mr. Levi C. Stewart, of Wardensville, W. Va., and Mr. Isaac C. Haas, of Baltimore, Md. Thursday, Nov. 12, at daybreak, the party hurriedly climbed the craggy cliffs of Mill Mountain, and when they reached a desired point a halt was made for a few minutes. After exchanging a few words in regard to the drive, two of the party entered the dense undergrowth and the other two remained at crossings, where deer generally pass when driven from their haunts in the brush. Probably an hour elapsed when Mr. Haas saw a big buck coming toward him in double-quick time; but in a second the gun came to his shoulder, and as his finger pressed the fatal trigger, simultaneously with the crack of the gun the noble old buck fell backward and died in a minute or so. When Jehu Wilson came he exclaimed, "Great Scott! He's big as a steer!" The deer weighed 208 pounds, and measured 5 feet 7 inches from the tip end of the nose to the tip end of the tail. The most remarkable thing is that this big buck was instantly killed with No. 2 shot at a distance of forty-seven yards, about thirty pellets hitting him in the neck and breast. The gun used was a Greener 10-bore 'choke. A rather singular coincidence in this connection is that Mr. Haas killed a four-prong buck twenty years ago near this same spot, and hit him in the neck with four buckshot, though the deer ran more than 100 yards before he yielded to death.

Unless the States pass rigid laws prohibiting the hounding of deer, it will not be long before this noble game will be completely exterminated. A law should be enacted in every State giving a premium of $2.50 for every hound scalp when caught running deer. Then the mountaineer would feel encouraged in exterminating the hounds. NIM.

LOST RIVER, Hardy County, W. Va., Nov. 20.

Editor Forest and Stream:

Two deer were brought into market last week, one weighing 250 pounds, undoubtedly the largest buck shot in this section in years. They were killed near Bear Lake. It is snowing to-day and several gunners are preparing for rabbits to-morrow. W. B. L.

SCRANTON, Pa., Nov. 23.

WHO TAKES THE DEER?—Little Rock, Ark., Nov. 25.—*Editor Forest and Stream:* If one party is chasing a deer and another kills it, it is the property of the man killing it. Wild animals are the subject of qualified property so long as man retains his dominion over them. Kent. 348. In Pierson v. Post, 3 Caines, 175, the Supreme Court of New York held that pursuit alone gave no property in animals *ferœ naturæ*. In Buster v. Newkirk, 20 Johns. 75, the same court held that the mere pursuit and being in sight of the animal did not create property, because no possession had been acquired. The Roman law provided that property in a wounded wild beast did not attach until the beast was actually taken. I think the rule actually laid down by all authorities is that the animal must be so restrained by nets or otherwise that it cannot escape before the right of property attaches. This rule may be modified by general custom in particular localities, but evidence of such a universal custom in that locality would be necessary to establish any right in the pursuer. The New York Legislature provided that in the counties of Queens and Suffolk that any person chasing deer shall be deemed to be in possession while in fresh pursuit thereof. I know of no other attempt to change the general rule.—CASUAL.

HOW THEY HAVE GONE AND WHY.—Berthoud, Colo., Nov. 18.—*Editor Forest and Stream:* I have just returned from my third annual hunt in Wyoming. We were out thirty-five days and our party of four wagons and six men brought home in all eighteen elk, nineteen deer, four mountain sheep and a number of antelope, white jack rabbits and sage hens. My part of the bag was eight elk, six blacktail deer, one whitetail buck and several antelope and one mountain sheep. The antelope we used mostly for camp meat, so we don't keep much track of how many we do kill; just so long as there is any antelope in camp it is used as camp meat by the outfit. We saw some bear sign and plenty of Bob cat and mountain lion sign, but did not happen to run across any of them. I killed the largest bull elk I ever saw. These hunting trips are not all fun. About the time we started for home we had an eight days' storm so that in some places it took six horses to the wagon to pull through. The hills were full of hunters; and elk in Wyoming will soon be gone, like the buffalo. There are now only small bands of ten or fifteen, where two years ago I saw them in bands of five hundred to one thousand.—A. A. K.

GAME IN THE SOUTHWEST.—Memphis, Tenn., Nov. 27.—I saw to-day at a commission merchant's on Front street, three large white swans. They were killed near Cottonwood Point, on the Mississippi River, near the south line of Missouri. These are the largest birds I ever saw, saving the great American Thanksgiving bird, called by the convivial "Shepard" of "Ettrick Forest," the "bubbly jock." I suppose the swan is a very rare bird, as in all my wanderings I have never seen a live one in the wild state. The Memphis markets are full of game, ducks, geese, wild turkeys, deer and bear predominating. Game of all kinds is unusually abundant this season. Several hunting parties from the upper country have passed Memphis on their way to the swamps of Mississippi and Arkansas. One of these parties, from Cincinnati, traveled in a small light draft steamboat, fitted up for hunting purposes, and seemed prepared to have a very comfortable and jolly time. They were going up the St. Francis, into the region of the "Sunk Lands," said to be a very paradise for hunters.—COAHOMA.

KANSAS QUAIL.—Capt. W. W. Judy, of St. Louis, recently returned from his trip to Council Groves, Kas. During their stay at Council Groves the four guns accounted for 400 quail and one grouse. Capt. Judy says that he never saw game so thick in his life. There were any number of bevies of quail, while the grouse had formed into immense packs, and were, as usual under such circumstances, very wild. One pack must have numbered, the captain thinks, quite 5,000 birds. The shooters only obtained stragglers. The honors of the town and the rights to obtain shooting were very kindly and generously obtained for the visitors by Messrs. Charlie Schaeffer and H. E. Hagger of Council Groves,

A BALTIMORE BUCK'S ESCAPADE.—A deer hunt took place in the streets of Baltimore yesterday. It was more exciting than a chase of the Elkridge hounds after a fox. The deer belonged to the Druid Hill Park herd, and was a young buck, about two years old, with budding antlers. He escaped from the Park between 11 and 12 o'clock in the morning, and entered the city by way of the Hookstown road. From there he ran into Fremont street, and was seen by several small boys and a little yellow cur. The boys and the yellow cur went for him, and the deer let himself out. They all came down Fremont street as fast as their legs could carry them, the deer with head erect, the boys yelling and the yellow dog barking. The deer distanced his pursuers after running three or four squares, and slackened his pace for awhile, but the pursuit was taken up again by more small boys, and he had to go even faster than before, for at each corner his pursuers increased in numbers. Children and grown persons walking along the streets hid themselves behind doorsteps, and by their cries scared the deer so much that he fairly leaped through the air. From Fremont street he turned into Baltimore street, and startled the pedestrians to such an extent that there was a stampede into various convenient retreats. Down Baltimore street he flew, and when near Pearl street was confronted by a man armed with a hoisted umbrella. The man shoved the umbrella toward the deer, and the animal leaped through a $60 plate-glass window at No. 447. There was a tremendous crash, and a moment afterward the deer emerged from the window with blood streaming from his head and sides, where deep gashes had been made by the sharp edges of the glass. The deer was now almost beside himself with terror. His feet barely touched the stones as he went straight ahead toward Eutaw street. A number of persons on Eutaw street, corner of Baltimore street, blocked his way on Baltimore street, but he eluded them and ran down Eutaw street to German street, and from there to Sharpe street, and then to Barre street, from which point he made a bee line for Light street wharf. Men and boys and dogs were after him, shouting and barking. At Light street the frightened animal sped southward. A crowd of young fellows at the corner of York street saw him coming and tried to head him off. His enemies were now behind and in front. The only way to escape was to take to the water. At Lee street he saw his opportunity and took advantage of it. He made a desperate leap and cleared the top of the engine house of a mud machine and reached the water in safety. The leap was fully thirty-five feet, and was so unexpected and so amazing that his pursuers stopped on the wharf and looked at him with admiration as he swam around the basin. Then somebody suggested that he might be pursued in a rowboat, and five minutes thereafter two boats were in hot chase. Robert Slaine was the first person to catch hold of him. He grasped the deer by the tail, and held on so tenaciously that that part of the hide slipped off, and the deer came near getting away. Slaine was pulled partly into the water by the deer, and his clothes were soaked. Daniel Burns and Martin Conley went to his assistance, and by holding the deer's head under water they finally succeeded in capturing him and fetched him ashore, where they were received by nearly 600 persons. They took the deer to Slaine's house, No. 40 Lee street, and tied him up in the yard. He succeeded in breaking loose once or twice, but was soon overcome by exhaustion. Crowds of people called at the house to see the captive, and the hunt was the talk of the day. Captain Cassell will make a requisition for an ambulance and restore the runaway to the park herd. The store on Baltimore street where the window was broken is occupied by Frederick Lang, merchant tailor.—*Baltimore Sun.*

MICHIGAN DEER KILLED FOR EXPORT.—From every side reports continue to reach the *Marquette Mining Journal* concerning the wholesale slaughter of deer in that vicinity. If such reckless destruction is allowed to continue it will not be long before the deer will be as few and far between here as are elephants and boa-constrictors. During the month of October alone there were shipped from the station of Munising 17,500 pounds of venison, to one firm in Detroit. Only the saddles were shipped, the rest of the deer being allowed to go to waste where killed. Nearly 18,000 pounds of venison saddles, shipped to one firm from a small station on the D., M. & M.! It does not require much foresight to show that soon our boasted hunting will be a thing of the past. Many carcasses were shipped from Munising to this city and other points, but these do not enter into the amount given, the grand total would be still more alarming. Up to some time in October, it is stated, over 700 deer had been shipped from Au Train, many of which were killed out of season. Recently a man drove to Munising and dumped ten large-sized deer upon the platform for shipment. Such facts, and nearly every person acquainted with the subject can add to them, go to show that something must be done to stop this illegal and wholesale killing of deer. From Negaunee and Ishpeming accounts come of pit-falls, steel traps, set in runways, set-guns and other unlawful devices being discovered in the woods about those cities. Marquette once had a society for the protection of game; if not dead, it certainly is in a slumber so profound as to be alarming. Everybody is ready to admit that such slaughter as is now going on is shameful, but energetic, determined men are needed to put a stop to it and see that the guilty receive the punishment they richly deserve. It is true that the present is the lawful season for killing deer, but it is not lawful even now to kill them in every way, shape or manner possible.

WHY NOT GIVE IT A CHANCE?—Every once in a while an item like this goes the rounds: "A deer came down Franklin street, Saginaw City, yesterday morning, and, jumping into the river, commenced swimming for the opposite shore. Officers Sheehan and Baskins procured a boat and took after the animal, and succeeded in killing it near the other side of the river. The deer was a doe and about two years old, and had evidently been hunted for some time, as it was very much distressed when it took to the water. It weighed 115 pounds." When a deer, hard pressed and frantic, leaves the woods and takes to town, why not give it a chance? Is there any sport in water-killing such game?

LUCK.—Kent county, N. B., Nov. 24.—I have been down on two different parts of our coast goose shooting this fall at different times, but did not have enough luck to secure a good bag. Geese and brant were very wild and did not decoy well, and unfortunate tides did not suit, being low all day. There were others of the party who rather prided themselves on their shooting capabilities, who got little or nothing, so I console myself. Perhaps my luck may turn. —M.

A DEER NEAR TOWN.—Last Saturday morning Rev. Father Kelly went out on the hill half a mile west of Towanda, Pa., to look for partridges, taking one of his fine dogs with him. Getting tired he sat down on a log to rest, and while resting he heard a slight rustling a few rods away. Looking, he saw a splendid buck within forty feet, standing broadside and still, his head behind a tree where he could not see the hunter. He raised his shotgun, took aim at the deer's tempting side, and then remembering that he had only No. 8 shot, and not wishing to merely wound the noble animal, he put his gun down and left him unharmed. After a few moments the deer scented him and went away leisurely. A Towanda hunter does not often see such game, and a deer is not often in such luck when discovered. A number of hunters have since been out looking for the deer, but none have seen him.—*Reporter.*

FISH AND GAME PROTECTION.—Notwithstanding the inclement weather, the Massachusetts Fish and Game Protective Association held a well attended meeting at the Parker House Tuesday evening, full forty members being present. Many were the stories of the fall campaign in wood and field (evidently not without health and pleasure to many), but it is to be doubted if all the accounts were accepted without some suspicions as to the veracity of the narrators; but they were good stories. After supper the Association was called to order, and proceeded to business. Messrs. Thatcher Magown, Wm. S. Stevens, E. J. Wardwell and M. P. Clough, proposed at the last meeting, were elected members. Letters from different localities in regard to game law violations were read, accounts of prosecution were presented, and various other matters of routine business transacted.

GALVESTON, Tex., Nov. 25.—Duck shooting has fairly begun here, and there will be good sport from now on. Hunters report very good sport with the ducks and geese at Bolivar, Smith's Point, Caranckway Shoals and Dickinson. The birds do not decoy well in consequence of the blockade they have to run before they arrive within fifty miles of this place. Very good shooting can be had at any of the above-named places, especially Smith's Point, for brant and canvas-backs. Indications point to very good sport this winter in consequence of the late fall rains, which filled every slough for miles around, and the acorns were never in better condition for eating. If any of your correspondents ever happen to wander down here I can promise them good duck and goose shooting over decoys, providing the weather is good.—REDBREAST.

QUAIL IN WEST JERSEY.—Notwithstanding over 5,000 quail were liberated in the five counties of New Jersey over which the West Jersey Game Protective Association has jurisdiction, everybody complains of the apparent scarcity of coveys found in the lower counties. It is stated, however, by those that know that there are still plenty of birds there, but the thickets that harbor them are left only at dawn and at sunset, and the birds feed but a short distance from these briar patches, where they cannot be approached by either dogs or sportsmen when they take to them for shelter. Rabbit shooters who scour the woods with beagles state that they put up many coveys. This would prove that there are plenty of quail still, but that they have changed their habits through fear of man.—HOMO.

PHILADELPHIA NOTES.—Canvasback ducks have shown themselves in increased numbers since the cold weather. Many redheads are also on; the latter are becoming very wild. Rabbits are unusually plentiful in New Jersey this season. A large deer was killed at Woodbine, Atlantic county, N. J., last Tuesday. I have heard of twenty-eight thus far being killed in this county since Nov. 1. Hawks are numerous on the New Jersey peninsula, and the bounty for their pates should not have been reduced from fifty to twenty-five cents. Duck shooting at Barnegat and Tuckerton bays has been good during the week; the cold weather is bringing the brant. A few geese were killed from the Bunches on Thursday last.—HOMO.

TORONTO, Canada, Nov. 10.—Hare hunting this fall has been unusually good, some fine bags having been made. Within a radius of thirty miles from here you can get your dozen or more hares if you have a couple of good dogs, trained to the business. About a week ago three of our local sportsmen went to Mono Road, thirty miles from here, returning with eighteen hares and three brace of woodcock to their credit, only being in the bush six hours. Will give you an account of a hunt later on, which is to take place on the 26th inst. (Thanksgiving Day) weather permitting.—DREAD SHOT.

HARE AND WILDCAT.—Hornellsville, N. Y.—A man named Hare shot a lynx or wildcat in the woods near Cameron yesterday and brought the animal up to J. O. Fellows where it now is, in his shop. The cat is a young one, apparently two years old, but would not have been a very attractive partner to balance to in a scrimmage.

A FOX ON THE LINE.—Fair Haven, Vt., Nov. 27.—The first fox of the season was shot on Thanksgiving day by John Harrison near the boundary line between this and New York. Gray foxes are reported quite plenty, and good sport is looked for the coming season.—NED.

AN ALBINO QUAIL was recently shot by F. N. Peabody, of North Stonington, Conn. A snow white quail-shot some years ago by C. C. Treanor, of Deckertown, N. J., is on exhibition in that town.

ONE GATE AN MANY ROADS.—A curious little leaflet, published by the Traveler's Insurance Company, of Hartford, gives a startling collection of varieties of accidental injuries, on which claims have been paid by the Company. Few people realize the varied scope of such casualties. "They have," says this document, "involved every part of the body, from scalp to toes; have occurred through instrumentality, animate or inanimate, from babies to oxen, from tacks to hydraulic presses, from teakettles to locomotives; in every department of life, at home and abroad, at work and at play, day and night, walking and riding, in one's occupation and out of it." It cites cuts, stepping on sharp articles, and running them into the hands and fingers; sticking tools into the flesh, getting limbs or body mashed, bruised, pierced, kicked, bitten, broken sprained or crushed; eyes hurt, falls and slips, riding and driving accidents, burns and scalds, accidents from firearms, from burning buildings, railroad and elevator accidents, etc., etc. Its own part toward the alleviation of these hurts has been to pay out over $5,000,000 for them, $949,000 of which was in 1884. Out of 115,000 men insured in it, it paid claims on 17,850, or over one-seventh of the whole—certainly good evidence of prompt equity in adjusting the claims.—*Adv.*

Sea and River Fishing.

LAWLESSNESS IN THE ADIRONDACKS.

THE Fish Commissioners of New York having established a hatchery at the outlet of Little Clear Pond, and the pond having been placed wholly in their control by the State, they naturally desire to prohibit fishing in their waters in order to stock up with trout, to obtain great quantities of eggs in future years with which they can stock the whole region. Operations have begun there, and a competent man, a graduate of the hatchery at Cold Spring Harbor, placed in charge. Mr. Walters, the Superintendent, has already been annoyed by a worthless gang who live in the woods and who have pulled up his nets set to trap the fish in order to get their eggs. He has been in the habit of visiting these nets twice during the night—at 10 P. M. and 2 A. M.—and again at 6 in the morning. On Friday, the 13th inst., he found his nets cut up between the hours of 2 and 6, and suspecting who did it because he knew who had previously raised them, he went over and talked very sharply to them about it. These men afterward told a guide that they had always fished in Little Clear and its outlet, and that if the Commissioners wished the hatchery to stand they had better not try to stop them.

It is evident that an example must be made of these poachers, whom a round fine and imprisonment would teach what rights the State has in this matter, and if free fishing is to be allowed in the grounds reserved for keeping stock fish then all the work done and money expended is lost. We have no doubt the Commissioners will sustain Mr. Walters in any proceedings he may take, within the laws, against the vagabonds who are annoying him.

CASTING FROM THE REEL.

THERE is some confusion in the minds of English anglers regarding the manner in which Americans cast from the multiplying reel, both for black bass and for heavy striped bass. Mr. R. W. Hobden writes to the *Fishing Gazette* as follows:

"Referring to your notes in last week's *Gazette*, wherein you call attention to the records of the American casting, I do not think we anglers need fear that our American cousins would take away our laurels, if brought into competition with us on equal grounds, to any greater extent than they do from the fly-fishers in the fly-casting competitions, which appear to me to be arranged in America the same as were in London. Not so, however, the bait-casting. I contend that the American bass-casting is not to be compared with our bait-casting. They use the shortest possible rod (?), throwing with one hand; and they use multiplying reels, which cannot overrun like our Nottingham winches. These reels, I should imagine, require to start them for a long cast such power as can only be obtained by a short, single-handed rod, used with considerable force from over the shoulder; a style calling to my mind the manner in which, as a youngster, I used to cast little bits of clay from the end of a short, lissome stick, and it was wonderful the distance the pellets would travel, and the accuracy with which the neighboring windows used to be peppered. I may be wrong in the manner I assume this short rod (?) is used; but I gather it is used thus, and that the bait or sinker is wound up very near the top of the rod. Put one of these American multiplying reels on one of our 14-foot Nottingham rods, and, with 1¼ ounce *bait and trace*, see if it could be thrown anywhere near our best record (52½ yards). I observe that Mr. Dresel cast 42 yards with ¾-ounce sinker; but then he used a short, single-handed rod, and there can be no doubt but that a short and light rod has the advantage in casting, both for distance and accuracy. I am not seeking to defend the reputation which my cast, made at last year's tournament, had of being the best on record, because I have seen longer casts made in the Thames style; but I do contend that it is not to be compared with Mr. W. H. Wood's cast at the last American competition, because the attendant circumstances are so entirely different. While on the subject of casting I should like to mention that I have attended all our tournaments, and have conversed with most of the experts who competed, and from what I hear and what I know I venture to give an opinion that 83 yards never has been and never will be thrown off the reel in our Nottingham style, and I doubt very much if it ever will be in the Thames style, with ordinary and usable tackle; neither do I see any useful result from such long casts. There is more skill and more practical use in being able to cast a live bait in an uninjured condition and with accuracy to, say, 40 yards distance, than in launching it 20 yards further and wide of its mark. In conclusion, Mr. Editor, your five-guinea prize is a handsome offer, but it is hoped the conditions will not be for heavy bass casting in the American style. Fancy playing a good fish with a five-feet rod! I trust these remarks will be taken in good part by all who may be interested in the question of bait-casting, and that they may be the means of obtaining further information of the American reel, and the manner of using it, and also of authentic casts which have been made by our own anglers, in both Thames and Nottingham styles, and which have been measured with a proper rule or tape, and not calculated by 'stepping it.'"

To this the editor remarks: "Mr. Hobden says, 'Fancy playing a good fish with a 5-foot rod!' He seems to forget that Mr. W. H. Wood on this rod has killed the tarpon, or silver king, of over 120 pounds' weight, as described in our columns some little time back. Mr. H. will find that the American reel overruns, and you have to wear a thumb-stall to control the delivery of the line. But do not let us condemn this American style without knowing a little more about it."

We would state for the benefit of all concerned that in the "minnow casting for black bass" with a half-ounce sinker, the rods were required to be not less than 8 feet nor more than 10 feet. Any multiplying reel was allowed, but no clicks, drags, nor any device to control the line was permitted, the thumb only being used. Mr. Dresel's rod was within the limits of length, and all the contestants cast underhand, the elbow being held near the body until the cast was begun.

In the "heavy bass" casting two hands are used and a larger reel. The rod is from 6 to 8 feet, and is such as is used on our sea coasts for bass that weigh up to 60 pounds. We do not remember the exact length of rod used by Mr. Wood, and it is not on record. The rules forbid rods of over 9 feet. The remarks of the editor of the *Fishing Gazette* are correct; it requires much skill to keep the reels from over-running. We do not think the English tournaments have any contests similar to our "minnow" casting; *i. e.*, from the reel with a single-handed rod. Their "Nottingham" style is similar to our heavy bass contests, but they use longer rods, and we think that Mr. Hobden will find that our reels will work equally well on them, even with "1½-ounce bait and trace." We have no trials to correspond with their "Thames" style, which, if we are rightly informed, is cast with a quantity of line coiled on the ground or in the hand and thrown with a stick, because there is no one who fishes in that manner here. Mr. Hobden speaks of measuring distances with a proper rule or tape, and not by "stepping" them. In this country all casting is so measured by the judges, followed by any persons who may wish to see what is recorded on their books.

It is the verdict of all American anglers who have visited England that their reels do not compare with ours, the finest of each we mean, for the cheap reels are not considered in this connection. A first class striped bass reel will cost from $20 to $25, and one for black bass from $12 to $18, or more. We advise Mr. Hobden to send to any of the tackle dealers who advertise in our columns and get a reel, or better yet, get several, one from each house, and test them.

We note that an international tournament will be held in England next year to be managed by the Richmond Piscatorial Society. The competitions will take place on or near the Thames. We hope that some of our experts will attend it.

SALMON IN THE HUDSON.—Several prominent gentlemen of Albany have taken steps to form an organization to protect the salmon fry recently planted in the Hudson River by the United States Fish Commission, and have issued a circular in which they say: "Eight hundred and thirty thousand salmon fry have been planted in the waters of the upper Hudson. The possibility of seeing the river teeming with these noble fish has aroused anglers to the necessity of having the laws properly enforced, and the necessity of concerted action to obtain such additional legislation as may be found necessary to that purpose." Last Friday a preliminary meeting was called to discuss the project, and among those present were W. W. Byington, Ira Wood, Judge F. M. Danaher, Abram Lansing, William Story, Louis D. Pillsbury, Gen. Robert Lennox Banks, Erastus Corning, John H. Quinby and Amasa J. Parker, Jr., all of Albany, and Mr. A. N. Cheney, of Glens Falls. It was decided that an organization should be effected at an early day, and the high character of the gentlemen interested is guarantee that it will succeed and be a power for good.

PHILADELPHIA, Nov. 27.—Good sheepshead fishing can be had at the drawbridge crossing from the mainland to Holly Beach. Many barnacles have grown on the timbers of this bridge, and last summer the sheepshead were attracted by them and made it their feeding ground. Sea bass can always be caught there in season; this place is easily reached.—HOMO.

Fishculture.

BLACK BASS IN GERMANY.—We have before recorded that the American black bass have bred in Germany, but the following note from that enthusiastic fishculturist, Herr von dem Borne, whose establishment at Berneuchen is known all over the world, will be read with interest. He says: "It will interest you to know that I can breed the black bass with the same certainty as we do the carp, and that I have many thousands of young fish from a few spawners. I have only three small-mouthed and ten large-mouthed spawners. The fry of last season, barely six months old, are now growing finely."

FUR QUOTATIONS.

THE following prices, for prime skins only, according to size, color and quality, as realized by the New York commission merchants, have been furnished by Messrs. Wm. Macnaughtan's Sons, commission merchants, No. 3 Howard street, New York:

Antelope—North America, raw, ℔ lb	$ 25@	35
Dressed, as to quality, ℔ lb	1 00@	1 10
Deer—Florida, raw, ℔ lb	20@	30
Rocky Mountain, raw, ℔ lb	20@	30
Pacific Coast, raw, ℔ lb	20@	30
Elk—Pacific Coast hides, ℔ lb	20@	25

FIXTURES.

BENCH SHOWS.

Dec. 15, 16, 17 and 18.—First Annual Dog Show of the Western Connecticut Poultry, Pigeon and Pet Stock Association. Frank D. Hallett, Superintendent, Winsted, Conn. Entries close Dec. 5.

March 16, 17, 18 and 19, 1886.—Western Pennsylvania Poultry Society's Dog Show, at Pittsburgh, Pa. C. B. Elben, Secretary.

March 23, 24 and 25, 1886.—First Annual Dog Show of the New Jersey Kennel and Field Trials Club, Newark, N. J. A. P. Vredenburgh, Secretary, Bergen Point, N. J.

March 30 to April 2, 1886.—Third Annual Dog Show of the New Haven Kennel Club. E. S. Porter, Secretary, New Haven, Conn.

April 6, 7, 8 and 9, 1886.—Second Annual Dog Show of the New England Kennel Club. Jean Grosvenor, Secretary, Boston, Mass.

FIELD TRIALS.

Dec. 7.—Seventh Annual Field Trials of the National Field Trials Club, Grand Junction, Tenn. Entries for Derby close April 1. B. M. Stephenson, La Grange, Tenn., Secretary.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **2908.**

THE EASTERN FIELD TRIALS.

THE ALL-AGED STAKE.

(Continued from page 351.)

BEAUFORT AND LUCIA.

Both of these dogs are well known. Beaufort is a bench show winner, and there was considerable curiosity manifested as to how he would acquit himself in the field. He was handled by Tallman. He was unfortunate in coming down in the middle of a hot day in his first two heats, and his performance in these two heats was not what had been expected by his admirers. In his third heat he was put down with Graphic just at night, and it was confidently expected that he would show to better advantage, but after a run of a few minutes they were taken up, to be put down again the next morning. Graphic was then withdrawn, leaving Beaufort and Mainspring the only dogs in to contest for first prize. In this heat Beaufort ran a good dog, and did some very creditable work, and although he lost the heat his competitor had but a little the best of it. He is very stylish when moving, and goes at a fair rate of speed; he has a long stride and a very easy way of going for a large dog. He carries his head rather low and is not always quite so stylish when on game as we like to see, although at times he did his work in a very stylish manner. When we take into consideration the fact that he is six years old and has had but a few weeks on game, and that for three years he has had little or no work, we must allow that he has passed through the ordeal with honor to himself and credit to his handler. Lucia was in better form than when she ran in the Members' Stake, and worked for her handler, Haight, better than she did for her owner. They were put down just after lunch on a steep hillside and worked up to the top. Lucia then swung down into the valley and made a pretty point to a bevy that Haight to order flushed, and they settled in some woods. Following them up, Lucia ran past two or three that flushed as she went by them. Beaufort then pointed a single that Tallman put up. Lucia soon after pinned one that was flushed by her handler, and, as two or three more got up, he fired at one and missed. A little further on Lucia again pointed, but nothing was found. Beaufort then made a nice point to a bird that flushed as Tallman came up. We then went into some pines where Beaufort got scent and half pointed and Lucia backed. As Tallman came up Beaufort drew on, but the bird flushed before he had located it. We then worked down to a creek where Beaufort half pointed, but soon went on. A long tramp was then taken through the woods, with the dogs at heel, until we came to open fields, when they were again put down. Both ranged wide and at a good rate of speed. Nothing was done, however, and we crossed a road to a good looking stubble field, where Beaufort ran up a single bird and altered his course after it, but at once stopped to order. Following up the bird it again flushed near Beaufort, but the next time he made a nice point, drew on and located it in fine style. Tallman, to order, flushed the bird and missed, Beaufort remaining steady to wing and shot. Then on over a knoll Lucia made a point and Beaufort came round, not seeing her, and also pointed; both drew a short distance and each pointed at about the same time. Haight flushed the bevy and killed one and both dogs were steady. Lucia then retrieved the bird in good form. Following the birds down to a thicket along a branch both challenged at the edge; Lucia was ahead and she turned to the left while Beaufort went a step or two to the right and drew to a nice point and Lucia backed him; the bird flushed as Tallman came up. Lucia then went down the run and Beaufort took a step or two and again pointed and then drew on into the thicket. Tallman tried to work his way through the briers and the bird got up. Meantime Lucia pointed a bird in the thicket and Haight flushed it. The judges did not see this as they were consulting, and the dogs were then ordered up and the heat was awarded to Beaufort. Down one hour and thirty-seven minutes.

DUKE OF BERGEN AND FLASH R.

Duke of Bergen is a good-looking dog with a very nice way of going and quite a turn of speed. He had a swelling on his jaw, the effect of a bite, and was probably a little off in consequence. He was handled by John Lewis. Flash R. appeared to much better advantage than in the Members' Stake and did some very good work. She is fast and was under good control. She was handled by Haight. They were put down at twenty minutes past three in a stubble field. Both started at a clipping gait, with Flash a little the fastest. Working down to a branch we crossed over and turned up into some pines, where the spectators had marked a bevy down. The birds were running, and as Flash struck the trail she pointed, and a second later Duke also pointed a little distance from her. Both then alternately roaded and pointed and drew on, and then both made a cast and came on the birds, both locating them almost at the same instant, with Duke a little in advance. The birds flushed as the handlers came up, and each scored a kill and both dogs retrieved in good form. This was a very pretty piece of work. A little further on both pointed, evidently at old scent, and soon went on and Duke again pointed and Flash backed, but they went on and could make nothing of it. Flash then got in a good point to a single that Haight to order flushed. Flash then moved on a few steps and two or three more got up. She then went on a short distance and pointed, but soon drew on in a thicket and again pointed, and as her handler went to her several more flushed. We then went into some pines, where Flash made a beautiful point that Duke at once honored. Haight went ahead to flush and Flash drew on behind him very carefully until the bird was flushed by her handler. Flash soon had another one fast and Duke backed her, and the bird flushed as the judges came up. Flash soon pinned another

one and was declared winner of the heat. Down twenty-four minutes. Mr. Donner, who bred Duke, did not act as judge in this heat.

MAINSPRING AND BANG BANG.

Both of these dogs ran here last year, doing some fair work, but nothing remarkably good. Each came out this year in capital form and did some very brilliant work. The heat run by them was the best one of the meeting and will long be remembered by those who were fortunate enough to witness it. Mainspring has greatly improved in speed and is nearly free from the habit of false pointing that detracted so much from the merit of his performance last year. Bang Bang has also greatly improved in speed and style. He has become accustomed to the country and game and was hunting instead of aimlessly running, as was too much the case last year. Mainspring was handled by Captain McMurdo and Bang Bang by Luke White. Both handlers are deserving of great credit for the excellent form in which they brought out their dogs. They were put down a few minutes before four in a cornfield and after a run they were worked back into the pines where the last brace was taken up. Bang was soon on point and Spring, as he is called, backed him Bang moved on and both commenced roading. Bang went one way Spring the other, and he proved that he was right, as he soon had the bird fast, and Bang at once honored the point. The Captain, to order, flushed the bird and missed it. When ordered on, Spring, quick as a flash, took a few strides and again pointed, and Bang backed him in beautiful style. As his handler came up Spring went on a few steps and again pointed, and the Captain put up the bird and missed it. Bang then made a stylish point at a brush heap to a single that White, to order, put up and missed. A little further on Spring half pointed, but soon went on and made a nice point, Bang backing him both times. Nothing was found, however, and they were again sent on, and after going a short distance they backed each other in capital style, and soon after they repeated the performance and a little further on Spring pointed false and was nicely backed by Bang. We then went down a road a short distance and the dogs were again cast off in a stubble field in a valley and worked over a knoll, where Spring half pointed, drew on and then made a cast and pointed some larks. Meantime Bang also pointed, probably at the scent of larks, as they were getting up all around us. Bang then swung up a hill and nailed a bevy in grand style. White, to order, flushed them and killed one and Bang retrieved it in good form. Mainspring was some distance away but soon came up and we followed the birds. Spring was the first to find and jumped into his point in fine style, and the bird was put up to order by his handler. Meantime Bang made a nice point, went on and again pointed and commenced roading but could make nothing of it. Spring, while going at speed, suddenly stopped on point and the Captain put up a bird and missed it. Spring still held his point and another one was flushed, but he held his position a few seconds and then drew on a step or two and another one flushed close by him; he was a trifle unsteady when the bird got up but at once dropped to command. Meantime Bang got in a good point to a single that White flushed to order and killed. Spring soon after got too close to a bird and it flushed. White marked a bird down and sent his dog toward it, but Spring got there first and scored a point. Bang came up and also pointed. We then went into the large stubble field near the house on the Model Farm and Bang was worked to the left and Spring to the right. Bang had the luck of the birds and made an elegant point to the scent of a running bevy. As his handler came up he commenced roading, and then made a short cast just as Spring came round and dropped on point. Both dogs had been going at a great pace and were undoubtedly somewhat off in nose; there was also a brisk wind blowing that scattered the scent, making it difficult for them to locate the birds. They gave us an exhibition, however, that was greatly enjoyed by those who saw it. They were in the open and could be plainly seen as they alternately pointed, backed and roaded out the bevy. Finally one flushed wild and then one got up near Bang, and four or five more went. Both dogs then drew on and Spring dropped just as two or three more rose. The Captain held dead on one, but it escaped. They were then ordered up and the heat was awarded to Mainspring. Down one hour. Much of the work in this heat was done at high pressure, and so rapidly did the dogs jump from point to point that at times it was difficult to keep track of what they were doing. Taken all through the work was of a very high order of merit, and but very few mistakes were made.

HALF AND HALF AND SPOT.

This brace has never before appeared in public. Half and Half was imported last spring. He is a good-looking dog and goes at a fair rate of speed, but moves rather heavily. He was handled by Capt. McMurdo. Spot is a native of North Carolina. He is a small, wiry-looking dog with no great pretensions to beauty, but he gets over the ground and has a very knowing way of going to his birds. He was handled by Mitchell. They were put down just at night and taken up again after a few minutes with nothing done except that Spot challenged and Half backed him. Friday was a beautiful day. The air was cool and bracing in the morning, giving promise of a good day for sport. Leaving the hotel a few minutes past eight, the dogs were put down fifteen minutes later in a stubble field, which was drawn blank. We then beat down to a branch and over a knoll of sedge down to some woods, where Spot, after investigating all the likely-looking places, swung down by the fence and pointed a bevy, Half backing him nicely. Mitchell to order flushed the birds, and Spot was a trifle unsteady but dropped to command. Following the birds into the woods, Spot found one and pointed it, and Mitchell to order put it up, and Spot was again unsteady and was dropped to order; meantime one flushed near Half and he stopped and another one went; he then went on a short distance and challenged, but went on. Spot then made a point and Mitchell to order flushed several birds and got in a double, one of which Spot retrieved and Half was sent for the other, but not finding it readily Spot went straight to it and brought it nicely. We then worked over considerable ground without result, except that both dogs challenged and Half at one time backed Spot, and as Spot looked around he returned the compliment. Finally Spot challenged, and then roading a short distance he pointed a moment and then drew on and located a bevy in capital style. They were then ordered up, with Spot the winner. Down altogether fifty-four minutes. This finished the first series. Following is the result:

First Series.

Graphic beat Donald II.
Tammany beat Ned.
Madstone beat Rue.
Bloomo beat Snipe.
Jilt beat Bradford.
Beaufort beat Lucia.
Flash R. beat Duke of Bergen.
Mainspring beat Bang Bang.
Spot beat Half and Half.

Second Series.

GRAPHIC AND TAMMANY.

This brace was put down a few minutes past nine in some sedge and after a short turn in the open they were sent into some woods. Graphic started off well but Tammany did not settle down to business for a while, he then let out and both went at a good pace. Graphic struck the scent of a running bevy and pointed, Tammany could not see him and also pointed, the birds flushing as we came up. Following them Graphic made a nice point but nothing was found. Tammany then pointed the bevy and they flushed as we came up. A little further on Tammany again pointed and his handler to order flushed the bird, and a few seconds later Graphic made a point to a single that Mitchell to order put up, and then several more got up on the side hill above us. The dogs were worked to where they settled and Tam made a high headed gamy point, Graphic did not see him and went ahead and also pointed in good style. White to order flushed the bird. Soon after one flushed near the dogs in the run and a little further on Graphic pointed and Tam backed him and the birds were flushed to order. Tammany then put up one and oneor two flushed near the judges. Tam then got in a good point to a single that White flushed to order and killed and Tammany retrieved it nicely. The ground was not hunted closely as the dogs were urged on straight away most of the time as though the race was a test of speed alone. Each dog ran up a bird and soon after Graphic scored a false point and soon after he flushed one down wind and Mitchell killed it. Tam then half-pointed at the fence and the bird flushed itself. We then crossed the fence into some sedge and Tam made a point but nothing was found, he then went a short distance and one got up near him, he then pointed the bird that Mitchell had killed and retrieved it. Both dogs had run away from their noses and each flushed a bird that they should have pointed. Tammany appeared to have the worst of it and had let down in speed more than Graphic, although he was also going slower. Working up on the knoll Tam made a point to a single that flushed a second later, and then Graphic dropped just as we got up, and soon after he pointed false. Both then pointed and Tam went on but Graphic had a bird and Mitchell flushed it; both dogs were urged on and the pace was again fast for some distance. Working into some pines Tam very gracefully sat down on point to a single that his handler flushed to order. Graphic then made a point and Tam close to him also pointed the same bird which was put up by Mitchell. A little further on Graphic pointed near a fence but nothing was found and soon after he repeated the performance and Tam refused to back him. A little further on a bevy flushed near Mitchell and we followed after them down the run, where the dogs were allowed a few seconds to get a drink and then sent on. Tam whirled around on a very stylish point but soon went on and soon after a bird got up near him. We then beat out the ground where the birds had been marked down for some time. Finally Graphic found and pointed one and Tammany backed him to order and Mitchell put up the bird. The judges then consulted and decided the heat in favor of Graphic, but as he had not retrieved in either heat they decided to see how he would acquit himself in this and did not announce their decision but ordered them on, when Mitchell very foolishly protested, but after a few words sent on his dog. Graphic soon pointed, when a dead bird was thrown and Mitchell to order fired a shot and Graphic was sent to retrieve; he went to the bird and picked it up, mouthing it badly, but Mitchell was close by and took it from him. This was not a retrieve but the judges had decided that he had won without it. They were then ordered up and Graphic was declared the winner of the heat. Down one hour and eight minutes.

MADSTONE AND BLOOMO.

This brace was at once put down. Madstone challenged and roaded some larks and Bloomo half pointed at the same scent. We then crossed a branch and went into some woods and as Madstone came out at the edge she pointed a bevy and Bloomo backed her nice a few seconds and then drew on and dropped to order. The birds were put up by White and one was killed and Madstone, sent to retrieve, brough it part way and dropped it but picked it up at command and brought it in. We then swung round into some sprouts when Madstone half pointed at a heap of brush a second before a brace of birds flushed, and as we went on two more got up. Bloomo was not under good control and hunted on her own hook and the ground was not properly hunted by either dog. We then turned into some woods where Bloomo half pointed and Madstone backed and then both roaded but could make nothing of it. We then beat out a lot of ground without result, finally Bloomo challenged but went on down wind and ran into and flushed a bevy. Following them up we crossed a branch when Bloomo pointed in some dense briers and as her handler came up she jumped in and flushed; both then pointed and roaded but nothing came of it. We then beat out a lot of ground without result except that Madstone scored a flush. We then crossed a branch and in some sedge and weeds Bloomo made a very nice point to a bevy, and as her handler came up she drew on a step or two and again pointed. Mitchell to order flushed the birds and hit one but it went on. At the rise of the birds another bevy flushed wild a short distance beyond and part of them settled in a dense thicket of briers and the rest in some sedge beyond. We crossed the branch and the dogs were worked round to where some of the birds had been marked down. Madstone made a nice point and Bloomo backed her but soon drew on and was dropped by command. White flushed the birds and missed. A little further on Bloomo flushed one and dropped and another one got up. Meantime Madstone flushed and Bloomo when sent on went a few steps and ran a stick up one nostril that Mitchell pulled out, the blood following it freely. They were then taken up to go down again should the accident not prove serious. After the next heat they were again put down, Bloomo appearing to be suffering but little. They were put down in some pines and Madstone at once pointed and Bloomo backed her, they soon went on however and Madstone again pointed and was nicely backed by Bloomo, White flushed the bird as he came up and missed it. A little further on Madstone made a gamy point that Bloomo at once honored. White to order flushed the bird and killed it and Madstone retrieved it fairly well. They were then ordered up and the heat was awarded to Madstone. Down altogether one hour and thirty-two minutes.

JILT AND BEAUFORT.

This brace was at once called, and as Beaufort came up he flushed a bird, but was not under judgment. They were taken back to ground that had been worked over and given a spin, and then back toward the birds. Jilt was not going at all well, while Beaufort went at a good pace. As we came back to where the birds had been marked down, Beaufort pointed a bird that flushed wild as Tallman came up. Then across the branch one got up near Beaufort, but as he did not have the wind he was not to blame. We then beat up a hillside and Beaufort made a capital point. Tallman to order flushed and scored a miss. Beaufort was not quite steady, but at once dropped to order. Working up to some woods we turned back to the branch, where Jilt made a point and was indifferently backed by Beaufort. Thurtle put them up and each handler killed a bird. Jilt brought one of them part way and dropped it, while Beaufort retrieved his fairly well. We then went into the woods and one flushed near the dogs, and soon after Beaufort made a nice point to a single that Tallman flushed to order and hit, but it went on. Jilt was then called in, and as she came up she made a stylish point to a bird that her handler flushed but as the dogs were not under judgment this did not go to their credit. She pinned another one as soon as they were sent on that flushed wild a few seconds later. Both then pointed and then drew a few steps and a bird got up and two or three flushed. Jilt then went on, but Beaufort whirled around and pointed the rest of the bevy almost under the horses' feet. They soon flushed, and as they went over another bevy they also got up. Following them into some woods Jilt made a point and as Beaufort came up one flushed near him. Thurtle then to order put up the bird in front of Jilt. Beaufort then pointed where the birds rose, but soon went on, Jilt then pointed, but nothing was found. We then beat out some weeds, Jilt going at a better pace. It was now after one o'clock and the dogs were taken up and we went to lunch. They were put down again after lunch in some stubble and then we beat out considerable ground without a find until we came to a branch when Jilt made a nice point to a bevy that her handler to order flushed, but did not shoot. Following them into some pines, one flushed near each dog and Beaufort stopped, while Jilt kept on over the fence after one. Beaufort then made a stylish point to a single that Tallman to order flushed but did not shoot. They were then ordered up and the heat awarded to Beaufort. Down altogether one hour and twenty-three minutes.

FLASH R. AND MAINSPRING.

This brace was put down in some woods and worked along the edge. Flash was the first to find and dropped very nicely to a bevy that flushed a second or two later. Following them up, Mainspring made a good point and Flash came up, but refused to back and drew round to one side and also pointed just as her handler spoke to her. The Captain to order put up the bird in front of Mainspring and then Haight flushed the one in front of Flash, when several more got up. A short distance furtner on Spring again pointed and Flash refused to back, but stopped to order. The Captain to order put up the bird and missed it. The dogs then backed each other very prettily. They were sent on and Spring made a nice point to a single that his handler flushed and hit but did not stop. A little further on Flash pointed one. As Spring came round he also pointed, and as both drew on the bird got up. This was in a dense thicket, and we could not see what was done. Spring then pointed, but soon went on a short distance and again pointed, and Flash backed him, but nothing was found. He soon pointed again and Flash backed him a short time, when both went on and Flash pointed a bird that flushed as the spectators came up. Spring then got in a good point to a bird that his handler flushed and missed. As the dogs went on a bird flushed near each, and a few seconds later Spring made a very stylish point to a bird that flushed as the judges came up. This ended the heat with Mainspring, the winner. Down twenty minutes. This heat was a rattling good one and run on the dry leaves. This finished the second series, with the following result:

Second Series.

Graphic beat Tammany.
Madstone beat Bloomo.
Beaufort beat Jilt.
Mainspring beat Flash R.
Spot a bye.

Third Series.

SPOT AND MADSTONE.

This was the first brace in the third series. Spot having a bye in the second series should have run with Graphic, but as both were handled by Mitchell, Madstone, as the next dog, was run instead. They were put down in some stubble half a mile or more from where the last brace finished. Both pointed where some chickens had been, but went on. We then went through a cornfield and turned into some sedge, where Spot pointed and roaded but could make nothing of it. The spectators flushed a bevy and we followed them into some pines. Madstone was the first to find. She pointed a single that White flushed to order. Spot then pinned one, and his handler to order put it up and killed it, and Spot retrieved it very nicely. Madstone then pointed but soon went on, and Spot swung round just beyond and pointed a bevy, which Mitchell to order flushed. As Spot was sent on a few more got up down wind from him, and a little further on he pointed just an instant before another was flushed, and he was a little unsteady, but at once dropped to order, We then went through some pines and a field of sedge to some stubble, when Spot nailed a bevy in fine style. Madstone came up and circled round him and then backed indifferently. Mitchell to order put up the bevy, and one got up close to Madstone that she possibly was pointing. Following them up Madstone pointed one and Spot refused to back, but dropped to command. We then worked down toward a run in some sedge, and crossing a ditch Spot pointed a running bevy and drew on and located them in fine style. Mitchell flushed them and killed one. We then went into some pines where Madstone pinned one and Spot backed her. White put up the bird which he killed and Madstone retrieved it fairly well. Spot then made a point where birds had been and Madstone backed him. A little further on Madstone flushed one that she should have pointed, and as she stopped to wing another one went. They were then ordered up and the heat was awarded to Spot. Down one hour and nineteen minutes.

GRAPHIC AND BEAUFORT.

This brace was put down in some sedge on a sidehill at five minutes before five o'clock. They have nearly the same way of going, although Graphic carries his head higher and is the fastest; both ranged well. It was nearly night and we worked toward the teams with the dogs far apart. Graphic ran into a lot of larks and a few seconds later a bevy of quail flushed near him. We went with Beaufort some distance away and did not see what occurred, but were informed by one of the judges that he saw the quail. The dogs were taken up for the night soon after this to get down again in the morning, but the owner of Graphic decided to withdraw both of his dogs from the race This action we think was ill-advised; even allowing that Graphic was not at all to blame the matter could be safely left to the judges. A flush under the circumstances would be entirely excusable; indeed the judges informed us the dogs would start on even terms in the morning and with a clean score.

Following is a copy of Mr. Heath's letter of withdrawal:

HIGH POINT, N. C., Nov. 21, 1885. Mr. Washington A. Coster, Secretary E. F. T. Club. Dear Sir—I beg herewith to notify you that I hereby withdraw Graphic and Spot from the All-Aged Pointer Stake, and Pendennis and Diana III. from the Derby. My reasons for doing so are that the judges scored a flush against Graphic last evening when the birds put up were larks, and I am unwilling to further continue the contest or run any dogs at your trials under such conditions. Respectfully yours, CHARLES HEATH.

Mr. Mitchell also handed in the following withdrawal of his Derby entries:

HIGH POINT, Nov. 22, 1885. To the Secretary and President of the E. F. T. Club.—I hereby withdraw Grouse III. and Sharpless from your Derby, as I am unwilling to run them under your present judges. Respectfully, W. T. MITCHELL.

The withdrawal of Graphic gave the heat to Beaufort and finished the third series with the following result:

Third Series.

Spot beat Madstone.
Beaufort beat Graphic (withdrawn).
Mainspring a bye.

Final Tie for First.

MAINSPRING AND BEAUFORT.

The withdrawal of Spot and Graphic left only Mainspring and Beaufort in to run for first money. On Saturday morning we left the hotel at about half-past 8. It was clear and bright and the morning was simply delightful. The dogs were put down at 8:40 in a cornfield. Both handlers manifested some excitement, and this appeared to be shared by their dogs, so that both were somewhat unsteady all through the heat. The work done was very nearly equal, Beaufort finishing the heat but little behind the winner. After beating out the cornfield we turned into some sedge, where Beaufort ran into and flushed a large bevy, and another bevy got up a short distance below and flew in the same direction. Following them into some sprouts, Mainspring pointed one that his handler flushed and missed. Soon after this one flushed a short distance ahead of Beaufort, and he did not drop to wing, but kept on after it without altering his course or pace. Mainspring came round where the bird got up and pointed, and soon after he pointed and roaded false quite a distance, and a little further on he again pointed, but nothing was found. A little further on he dropped very nicely to a single that his handler to order flushed, but did not shoot at. Beaufort did not turn to the whistle so readily as he ought and Tallman gave him a little

taste of the whip and he then went better, and soon after he pointed, but at once went on. Mainspring then flushed one and did not drop to wing, but kept right on, and was dropped to order. The birds had somehow escaped us and we failed to find any more of them and took a long turn without result, until we came to the ground where the Members' Stake finished, when Mainspring half pointed and drew on, while Beaufort, a little distance above him, made a point, and then drew on in grand style. As Tallman went to him a bird flushed, and then the rest of the bevy was all around him. Following them up Beaufort made a nice point, and as his handler came up he drew on, and the bird got up and Tallman missed it. Beaufort then got too close to one and flushed it. Mainspring then pointed, and a second later Beaufort also pointed a single that Tallman flushed to order. Beaufort was not quite steady and broke in, but at once stopped to order. Meantime Spring roaded out his bird and located it nicely, and his handler to order put it up and missed it. Then Beaufort made a nice point, and Tallman to order flushed the bird. Mainspring then got too close and flushed one. Both then pointed, but soon went on. We then went down to the branch and turned up in some sedge, where Beaufort made a gamy point, but soon went on, and then Spring pointed and drew on. Both then did some very pretty work, alternately pointing and roading, but they could not make it out, although the spectators flushed a bird near them as they came along. The dogs were then taken up, and we went down the valley and crossed through some woods to a stubble field, where Mainspring made a beautiful crouching point, and the Captain to order flushed and killed a bird, and Spring retrieved it well. This ended the heat, and Mainspring was declared the winner of the heat and first prize. Down one hour and thirty-four minutes.

Final Tie for First Prize.

Mainspring beat Beaufort and won first prize.

Ties for Second Prize.

DONALD II. AND TAMMANY.

As the withdrawal of an unbeaten dog cannot prejudice the chances of any dog that he may have defeated, Donald II. and Tammany, both beaten by Graphic, were called upon to decide which was the best, the winner to run against the best dog previously beaten by Mainspring, which was to be decided by running Bang Bang and Flash R., and the best one of the four to run against Beaufort for second place. Donald II. and Tammany were put down in a stubble field and worked through to some sedge and an old field, when Tam pointed and Donald backed him. Tam then drew on and located his birds nicely. White to order put up the pevy and scored a double, one of which Tam retrieved in good form. We then went into some pines and one flushed near the judges, and as Tam came round he put up another one and dropped to wing. Donald then came round and pointed where the birds got up, but soon went on. Then turning back into some sprouts, Donald made a stylish point and Tam backed him very nicely. Haight to order flushed and hit the bird, but it went on. Tammany then pointed but nothing was found, and a little further on he again pointed, and a bird flushed behind him as the judges came up. This did not look like his bird but possibly the bird had run. We then took quite a turn without result, finally a bevy flushed under the horses' feet, and Donald marked them down and deliberately started for them but was called back to give both dogs an equal chance. We then swung round to get the wind and worked the dogs toward them. Tam struck them first and made a nice point and a few seconds later Donald also had one fast. White put up Tam's bird, and then Haight flushed the one in front of Donald. This was very nicely done. A little further on Tam whirled on a gamy point, and as his handler went up he drew on a few steps and located the bird in fine style. White put up the bird and killed it and Tam retrieved a live bird very nicely. The judges consulted and ordered the dogs on when Tam jumped into a stylish point and Donald backed him handsomely. They were then ordered up and the heat was awarded to Tammany. Down one hour and six minutes.

BANG BANG AND FLASH R.

This heat was short, but the work done was very fine. As soon as the dogs were put down Bang took half a dozen strides and jumped into a stylish point, and almost at the same instant Flash dropped to the same bird just in front of the horses. The bird was flushed and two or three more got up and both handlers scored a kill. Flash retrieved one nicely and Bang pointed the other, and as his handler went to him he picked it up and gave it to him. Bang then pointed, but went on and again pointed and Flash backed him, and the birds flushed as we came up. Bang still held his point and another bird was flushed in front of him. This was very well done. We then turned back and Flash put up one going down wind, and as she dropped another one flushed. Bang then made an elegant point to a single that White to order flushed. They were then ordered up, with Bang Bang the winner. Down eleven minutes.

TAMMANY AND BANG BANG

were at once put down in the pines and worked through into some sedge and stubble. Both went at a clipping gait with heads well up and beating out the ground in capital style. They were evenly matched in speed and style and made a fine brace. Tammany found first and jumped into a very gamy point and as his handler came up he drew a few steps and located his bird nicely. White to order flushed, but did not shoot. We then went into some pines where Tam pointed once or twice, but soon went on. We then swung back where the bevy was found and Bang pointed at the scent, but soon went on and made a stylish point at the edge of a gully and Tam backed him to order. Bang then roaded out the bird nicely and a second or two later the bird flushed itself. Then in some sprouts Bang pinned another one and held it in good style. Tam came up and backed a short time and then went round and drew on, but got too close and scored a flush. This ended the heat with Bang Bang the winner. Down twenty-three minutes. We then went to lunch.

BEAUFORT AND BANG BANG.

This was the final heat of the stake. The dogs were put down in some stubble and worked round to a valley and then up a hill, when a bevy flushed near the dogs and flew back across the valley. Bang dropped to wing and Beaufort to order. As Tallman moved up an outlying bird got up and he killed it and Beaufort retrieved it. The dogs were then sent into some sedge, where some of the birds had settled, and Bang whirled clear around and made a very gamy point to a single that White to order flushed and missed. We then beat out the sedge and turned back to a small thicket of pines, where Beaufort pinned one, and Tallman put it up but did not shoot. Beaufort then flushed one and Bang pointed just as another one got up, but he held his point and two more were flushed in front of him. We then went to an oak thicket and Bang got in another good point, and White to order flushed the bird. A little further on Beaufort made a nice point and Bang came alongside and also pointed, but both went on. We then beat out some sedge and turned back to the woods again and then went north in some weeds and sedge, where Beaufort, going down wind, ran up one. A little further on both dogs pointed, but nothing was found to either. We then beat up in some sedge along a hillside, where Bang, with his head high in the air, crossed a fence and went quite a distance and pointed, and then drew on a few steps and made a magnificent point to a bevy that White to order flushed. The birds got up some distance above Bang and he probably did not see them, as he was behind a bush, and he held his point while the judges awarded him the heat and declared him the winner of second prize, after a heat in which he had done some very brilliant work. Just as the heat was decided Beaufort made a nice point a short distance above, but Tallman took him off. This finished the stake.

Following is a complete

SUMMARY.

First Series.

Graphic beat Donald II.
Tammany beat Ned.
Madstone beat Rue.
Bloomo beat Snipe.
Jilt beat Bradford.
Beaufort beat Lucia.
Flash R. beat Duke of Bergen.
Mainspring beat Bang Bang.
Spot beat Half and Half.

Second Series.

Graphic beat Tammany.
Madstone beat Bloomo.
Beaufort beat Jilt.
Mainspring beat Flash R.
Spot a bye.

Third Series.

Spot beat Madstone.
Beaufort beat Graphic (withdrawn).
Mainspring a bye.

Final Tie for First Prize.

Mainspring beat Beaufort and won first prize.

TIES FOR SECOND PRIZE.

First Series.

Tammany beat Donald II.
Bang Bang beat Flash R.

Second Series.

Bang Bang beat Tammany.

Final Tie for Second Prize.

Bang Bang beat Beaufort and won second prize.

THE CHAMPION STAKE.

The Champion Stake did not fill. Foreman and Mainspring were ready to run but Gath's Mark had not fully recovered from his attack of dysentery and his handler did not think it prudent to run him.

THE DERBY.

Fourteen of the eighty-three nominations for the Derby filled their entries. Five of them, however, were withdrawn before starting. As retrieving was not required, only shooting enough was done to see the behavior of the dogs under fire. Some of the work was very good indeed, the honors going to two season dogs. The dogs withdrawn were Grouse III., Sharpless, Pendennis, Diana III. and Gath's Mark, the latter on account of sickness. Those that remained in were run as follows:

Neversink against Nelly Bly.
Bang Grace against Nannie S.
Belle against Glenclaire.
Prince Imperial against Dame Petrel.
Carlotta a bye.

First Series.

NEVERSINK AND NELLY BLY.

This was the first brace to start. Neversink is a large puppy. At times he moved very well, but appeared to be drawn rather too fine. He was handled by Thurtle. Nelly Bly, handled by Capt. McMurdo, is a very pretty, stylish little bitch, with quite a turn of speed and a quick way of getting round that will tell when she has had more experience. They were put down on Saturday afternoon after the finish of the All-Aged Pointer Stake at half past two in a field of sedge. Neversink was soon on a nice point and as his handler went ahead of him he drew on. Meantime Nelly came up a little to the right of him and located the bevy, making a stylish point. The Captain flushed the birds to order but did not shoot. Neversink undoubtedly had the birds but drew on after his handler. Both dogs were steady to wing. We then worked along a hillside, where both pointed larks, and a little further on a quail got up near Neversink and he kept on after it but came back to whistle. Nelly then made a beautiful point, but soon drew on and then roaded out and pointed a bird in fine style. The bird was flushed to order but not shot at. This was a pretty piece of work. We then swung into some sprouts where birds were heard to fly, and as Nelly came round she made a nice point. Neversink also pointed, but both soon went on. Neversink then made a good point but started to break in when the bird was flushed, but dropped to command. He then pointed and roaded a cripple, and Nelly came around and also roaded, but they were called off. Soon after Neversink again pointed and roaded, but could not make it out. We then crossed a road to some sedge, where Nelly made a point but soon went on. Then, where the last bevy in the Pointer Stakes had settled the handlers flushed two or three, and as Nelly came round she made a capital point, and her handler to order put up a bird and shot, and Nelly held her point staunchly. They were then ordered up, with Nelly Bly the winner. As her handler went to her another bird was flushed in front of her. Down three-quarters of an hour.

BANG GRACE AND NANNIE S.

Bang Grace is a little fellow but he gets around very lively and is full of style. He appears to have considerable hunting sense and is very well trained. He was handled by Luke White. Nannie is a very nice mover, full of style, and has a very handy way of getting to her birds. She was handled by Tucker. They were put down in some sedge at twenty minutes past three, both started at a clipping gait and beat out their ground like veterans. Working up to the top of a hill Nannie challenged, but was soon off again like a flash. We then beat through some woods and sprouts and then swung back to the woods again, where Bang, while at full speed, whirled on a very gamy point which Nannie instantly honored; this was very pretty but nothing was found. We then worked out a small thicket and then up to some woods where a bird flushed in front of the horses and flew close to Bang, and he at once stopped to wing. A little further on Nannie made a stylish point and Bang instantly backed her. As Tucker went in to flush, Nannie drew past him and dropped on point, and Bang also pointed alongside. This was repeated, with Bang a trifle in advance. Tucker then, to order, flushed and shot, and both dogs remained steady. This was very pretty work. A little further on Nannie pinned another one, and Bang also pointed or backed, we could not determine which, as the bird flushed when the handlers went up. Bang then made a good point and Nannie backed him. The bird was flushed to order, when Nannie turned back to a bird that she had caught scent of and pointed it, and her handler to order flushed it. This was very neatly done. Bang then went on to a gully, and a bird flushed near him. Nannie then made a nice point to a bird that was flushed to order, and several more got up. We then crossed a ditch and worked into some pines, where Nannie challenged, but the bird went before she had located it. She then dropped on point to another, and was nicely backed by Bang. Tucker flushed the bird to order, and the heat was finished with Nannie S. the winner. Down forty minutes. This was a capital heat, and would have been a very creditable one for older dogs.

BELLE AND GLENCLAIRE.

Belle is a light-weight black and tan, with considerable Irish blood in her veins. She is quite fast, with lots of hunting sense, and is well trained. She was handled by Haight. Glenclaire is a rollicking Irishman. He has quite a turn of speed and appears to have a good nose. He has had but little work, and is not yet over his puppy ways. He was handled by Tallman. They were put down in some sedge a few minutes after 4. Belle was off like a rocket, ranging wide and well, with over an eye to the likely looking places. Glen also started off well, but did not settle down to business like his competitor. Working through a cornfield, Belle made a cast for a hedgerow at the lower end, and getting the scent of a bevy she half pointed and then commenced roading. Glen joined her and also roaded. Belle then made a short cast up to the hedge and pointed, and Glen backed her. Belle then drew on and Glen went ahead and made a nice point. Haight went in and put up the birds and killed two, Belle retrieved them both in good form. Glen then made a capital point in the cornfield and Belle instantly backed him. Tallman flushed the bird and both dogs remained steady. This was well done. Belle then dropped on point and as Glen came up he also dropped just as the birds flushed. They were then sent across a branch to a steep hillside of timber, but the birds had not gone so far, and as we came up to the branch one walked out from under our horse and stood looking at us not a dozen feet away, and one or two more flushed near. The dogs were then ordered back, and Glen made a point and Tallman to order flushed the bird and shot, and Glen was steady. Belle then swung round close by us and pointed the bird that we had seen, and it got up a few seconds later. Glen then pointed, but soon went on, and a few seconds later he repeated the performance. Belle, meantime, pinned one that her handler flushed to order. We then turned up a valley along the branch, where Belle swung out into some stubble and gracefully sat down on point. Glen came round and backed indifferently, and as Belle drew on Glen made two or three strides and jumped into a nice point just as Belle had located them. Haight flushed the birds to order, and the heat was finished in favor of Belle. Down thirty-one minutes.

PRINCE IMPERIAL AND DAME PETREL.

Prince is a well made dog with considerable speed and an easy way of going. He was handled by John Lewis. Dame, handled by Mr. Ohl, is an easy mover, but not fast. They were put down where the last bevy was flushed and both at once pointed at the scent. We then followed the birds into some pines, where Prince made a nice point to a single, that Lewis to order flushed. Dame then came round and one got up near her, and she instantly dropped to wing Prince then dropped just as one rose. Dame then went on and another one flushed near her. Prince then pinned one that his handler flushed to order. Prince then pointed at the edge of a plum thicket and Dame came around the other side and stopped just as the bird flushed wild. We then went down to a branch and worked up it and Dame made a very pretty point and Prince backed her but nothing was found. It was now nearly dark and the dogs were taken up to go down again on Monday morning, but on Sunday Dame was lame and Mr. Ohl withdrew her. This gave the heat to Prince Imperial. This finished the first series with the following result:

First Series.

Nelly Bly beat Neversink.
Nannie S. beat Bang Grace.
Belle beat Glenclaire.
Prince Imperial beat Dame Petrel (withdrawn).
Carlotta a bye.

Second Series.

CARLOTTA AND NELLY BLY.

Carlotta is a very pretty little bitch. She is quite speedy and a very easy mover. She is very quick in turning and is quite stylish. She was handled by Tucker. We left the hotel on Monday morning at a quarter past eight, and fifteen minutes later the dogs were put down in an open field and worked through to some stubble. Nelly pointed a lark and Carlotta backed her, dropping very prettily. We then turned back through some woods to a stubble field, which was drawn blank, and we went to another one where Carlotta challenged and commenced roading. Nelly was some little distance from her and pointed just as one rose near her; two or three more then got up and then the rest of the bevy went. Carlotta roaded them out nicely and dropped on point where they had flushed. We then worked out some sedge and Carlotta dropped on point, and as Tucker went ahead of her she roaded on her belly very nicely. Nelly was some distance beyond her and struck the same trail and pointed, and then roaded and again pointed just as Carlotta came up and also pointed or backed we could not determine which, as birds were near both dogs. We then went into some woods where Nelly soon had one fast and Carlotta backed her nicely. The Captain, to order, flushed and shot, and both were steady. A little further on Nelly made a beautiful point to a fresh bevy and Carlotta backed her handsomely, the birds flushing as the Captain went up. This ended the heat, with Nelly Bly the winner. Down thirty minutes.

NANNIE S. AND BELLE.

This brace was at once put down in the stubble; they were nearly matched in speed although Belle had a trifle the best of it. After a turn in the open they were taken back into the woods among the scattered birds. Belle found them first and made a nice point to a single. Nannie came round near her but out of sight behind a rise of ground. As she came over the rise at full speed she caught sight of Belle and at once backed her, but she was going so fast that she could not stop until she got too close and the bird flushed. Soon after this, while going at full speed, Nannie ran into Belle and both fell flat. No harm was thought to have been done, but Nannie was quite sore the next day. A little further on Belle pointed and Nannie, not seeing her, was dropped by order, but nothing was found, although a woodcock had been flushed near there once or twice, and she may have been pointing at the scent left by it. We then crossed a fence and Nannie made a nice point which Belle instantly honored and the bird was flushed to order. We then beat out considerable ground without result until in some woods a bird was flushed by one of the judges, and soon after Belle ran up one, and a little further on she made a nice point to a single that flushed as Nannie, not seeing Belle, came up at full speed. Both dropped to wing very nicely. We then worked down to a branch where the spectators had marked a bevy, but nothing was done as one flushed near the judges and then the rest went. We then turned up a hill into some woods, where Nannie made a false point and Belle backed her. None of the birds were found, except two or three that were flushed by the handlers. We then beat down the hill, and when near the valley the dogs backed each other very prettily, and soon after Nannie came to a fence, and looking through she spied a black bunch of weeds and thinking it was Belle on point she backed it in fine style. We then crossed a branch and went through some woods to open fields, where Belle made a wide cast, and as she came round she sat down on point to a bevy that Haight to order flushed. We then crossed a creek into some sprouts, where Belle half pointed and Nannie backed her, and as Haight came up Belle drew on a few steps and located her bird in good style, the bird flushing itself a second or two later. Nannie then dropped to one just as it rose. Belle then made a nice point and almost at the instant Nannie also pointed, and the birds flushed as the handlers came up. They were then ordered up, with Belle the winner. Down one hour and forty-four minutes. Just as the decision was announced Nannie came up to the judges and pointed in her best style, but it was too late. This was a capital good heat and a lot of nice work was done.

This ended the second series with the following result:

Second Series.

Nelly Bly beat Carlotta.
Belle beat Nannie S.
Prince Imperial a bye.

Third Series.

PRINCE IMPERIAL AND NELLY BLY.

This brace was at once put down in the stubble field just

above where the last bevy was found. Prince took a step or two and cautiously drew and pointed and then drew on, but soon got to going. After beating out the field and a sidehill of weeds we turned down along the edge of some woods a long distance without result, except that both dogs alternately pointed and roaded a long time but finally lost it, and a little further on they repeated the performance, and a hare was seen to go from them. Then another long tramp until in the woods on the Model Farm Prince ran into a bevy and flushed two or three and stopped to wing, and then the rest got up. Following them up Nelly pointed and then roaded a short distance and again pointed. Prince came up but did not back and went on, and Nelly then drew on and soon both pointed, with Prince a little in advance, and the bird flushed as Lewis came up. Nelly then made a nice point to a bird that flushed as the judges came up. Meantime one got up near Prince, but this was on dry leaves, and considerable noise was made, and the birds could not be expected to lie well. A little further on Prince pinned one nicely that his handler to order flushed. Nelly then made a point, but drew on and went the wrong way. Prince, however, got it right and roaded it out nicely and pointed the bird, which Lewis flushed to order. Nelly was not under good control and did not like to work out the ground as she was ordered to do. Soon after Nelly pointed just as one flushed. She stopped to wing, and as her handler came up she drew on and two more got up, and then several others went. Following them into some dense sprouts, Nelly dropped just as one rose. Prince then got in a good point to a single that flushed as the judges came up. This ended the heat with Prince Imperial the winner. Down an hour and nineteen minutes. This finished the third series, with the following result:

Third Series.

Prince Imperial beat Nelly Bly.
Belle a bye.

It was now after 12, and we went to lunch at Model Farm.

Final Tie for First Prize.

BELLE AND PRINCE IMPERIAL.

This brace was put down after lunch in the stubble field near the house a few minutes past 1. Belle challenged and Prince, a little ahead of her, pointed, and Belle backed him. Prince soon went on and again pointed, but went on. Belle then made a cast and struck the scent and pointed, but her tail was going. She held her position, and as her handler came up a large bevy flushed down wind behind her. Belle showed very good judgment in this, as she was close to the birds, and had she moved they would probably have gone. These birds had been disturbed several times, and they flew a long distance and but few of them were found. We beat out the briers and failed to find them. Finally Belle nailed one in some sedge, and Haight to order flushed it. Belle then pointed some larks and Prince backed her. She then dropped to a hare, and as Prince came round it flushed and he gave chase, and Belle followed him, but both came back to whistle. A little further on Prince put up a bird while going down wind. We then went into some pines where Prince made a nice point near a fence, and as Belle came round she also pointed. Lewis, to order, put up a large bevy. Following them into some woods Belle made a nice point to a single that Haight flushed to order. She soon pointed again and Prince drew by her and both went on and one flushed near Prince. Belle then made a nice point to a bird just under her nose and Prince backed her nicely. Haight saw the bird and creeping up he tried to catch it but failed. This unsteadied both dogs, as they undoubtedly thought that the bird was a cripple and both gave chase but stopped to command. Belle then got in another nice point and won the heat, and was declared winner of first money. Down thirty-seven minutes. Following is the result:

Final Tie for First Place.

Belle beat Prince Imperial and won first place.

Ties for Second Place.

NANNIE S. AND GLENCLAIRE.

This brace was put down to decide which should run with Prince Imperial for second place. They were put down in some sedge and worked round to the brier patch where the bevy first found by the last brace was thought to be, but finding nothing they were taken back through the sedge into some pines and after beating over considerable ground Glenclaire flushed some birds that he should have pointed. Nannie a little further on dropped on point, but as her handler came up, she drew on some little distance and located her bird in capital style and Tucker to order flushed it. She then went a few steps and repeated the performance equally well. A little further on she flushed one, but was out of sight of the judges. We then crossed into the woods where Belle was and took a turn for the birds we had left there. As Glen was going at full speed a bird flushed close to him and he made a jump four feet in the air after it, but scored a miss. Then a large bevy rose just beyond and we followed them. They went but a short distance and Nannie soon had them fast. Tucker to order flushed them and the heat was ended with Nannie S the winner.

Final Tie for Second Place.

PRINCE IMPERIAL AND NANNIE S.

This was the final heat for second place and proved to be the last heat of the meeting. They were put down in the sedge where the last brace was taken up and worked in the direction that the birds had gone; we went but a short distance when two or three were flushed by the judges. Prince then swung back and pointed near where the bevy was flushed and was called back. We then went into some sprouts where Nannie made a point to a single that her handler flushed and missed. Prince broke shot but dropped at command. Prince then made a point and Nanny backed him indifferently, but nothing was found. We then turned back to Model Farm. Prince was going nicely but Nannie was tired; she gamely went on however, but not with much spirit. After a long tramp a bevy was reported to have been flushed and we turned into some pines after them and one or two were flushed by the handlers. Prince then challenged and roaded into a thicket and a bird was heard to fly from his direction, but it was so dense that nothing could be seen. Soon after Prince made a point to a single and Nannie backed him and Lewis to order flushed it. A little further on Nannie made a point and Tucker to order put up the bird and missed it. They were then ordered up and Nannie S. was declared winner of the heat and second money.

Final Tie for Third Place.

PRINCE IMPERIAL AND BANG GRACE.

This brace was called to run for third place, but the handlers agreed to divide the honor equally, Bang Grace receiving three-fourths of the money and Prince Imperial one-fourth, and the Trials of 1885 were finished.

Following is a complete

SUMMARY.

First Series.

Nelly Bly beat Neversink.
Nannie S. beat Bang Grace,
Belle beat Glenclaire.
Prince Imperial beat Dame Petrel (withdrawn).
Carlotta a bye.

Second Series.

Nelly Bly beat Carlotta.
Belle beat Nannie S.
Prince Imperial a bye.

Third Series.

Prince Imperial beat Nelly Bly.
Belle a bye.

Final Tie for First Place.

Belle beat Prince Imperial and won first prize.

Ties for Second Place.

Nannie S. beat Glenclaire.

Final Tie for Second Place.

Nannie S. beat Prince Imperial and won second prize.

Final Tie for Third Place.

Prince Imperial and Bang Grace divided third prize; the honor equally, Bang Grace receiving three-fourths and Prince Imperial one-fourth of the money.

GRAPHIC'S ALLEGED FLUSH.

Editor Forest and Stream:

I see it stated that Mr. Coster saw the flush scored against Graphic by the judges at the Eastern Field Trials, and that Graphic scored a flush at the fence at the end of the field on an outlying bird of a bevy of quail and then went on and flushed the remainder of the bevy. In answer to this I wish to say that I cannot believe that Mr. Coster could have made any such statement, for the reason that Mr. Coster and myself were riding together at the time of the occurrence, and (1) there was no fence within many hundred yards; (2) the flush, if it occurred at all, was in the middle of a large field and near and beyond a ditch; (3) Mr. Coster did not see it at the time and not until a flock of birds got up, for he turned to me and asked me what the birds were. I replied that at the distance I could not tell, but that they flew like larks. There were very many of them—I should say forty or fifty. Both Mr. Coster and myself were a long way in the rear and not in the immediate proximity of the dog or of the handler. I marked the birds down on the side of the hill to the left, and subsequently Mr. Gregory and Mr. Haight coming along the edge of the hill, their dogs pointed and they put up the same flock I had marked down and the same birds it was claimed Graphic flushed. They were all larks and no quail. Mr. Coster knows my statement to be true in every particular as to what occurred between us, and that he asked me the question I have named. The other judges acknowledged they saw nothing. Mr. Mitchell had previously called point, which directed both Mr. Coster's attention and my own to the locality of the dog and the handler. Now if birds got up they did so after point was called and when Mr. Mitchell walked in, and if quail, the dog should have had a point. The fact is there were no quail but only larks, and Mr. Mitchell finding that to be the case, called out "larks" and whistled his dog on. The above are facts. I saw what is recited myself, and so did Mr. Coster if he saw anything. If he did not see it, or some other judge did not see it, then nothing should have been scored either for or against the dog. If such judging is permitted I for one will never run another dog at the Eastern Field Trials. A man who will score a flush against a dog under such circumstances had better think twice before judging again.

JAS. L. ANTHONY.

NEW YORK, Nov. 26.

THE PHILADELPHIA SHOW.—*Editor Forest and Stream:*—Will Mr. Wade kindly name the dog he entered and sent by express to the Philadelphia show, also the premium won? After reading your issue of Oct. 29 I tried in vain to find any dog entered in Mr. Wade's name in the catalogue. Mr. Wade in his letter to the *Stock Keeper* names Mr. Watson as one of the noble army of men who are not afraid to speak their minds over their own signature. Mr. Watson is announced as judge of all classes but pointers and setters at the Winsted show next month. Will he favor your readers with that rare treat, a report by a judge over his own signature, and so begin the new regime for which so many are longing? Can you not persuade him to do it? It would be appreciated by many others as well as this—READER.

WINSTED SHOW.—The first annual bench show of dogs held by the Western Connecticut Pet Stock Association will begin Dec. 15 and close Dec. 18 at the Winsted Rink. This is one of the best uses a rink can be put to. The entries will close Dec. 6. They should be addressed to Mr. Frank D. Hallett, the Superintendent. There are the usual classes; the first prize winner in each class to receive two-thirds entire entrance money, second to take the remainder, third he. Specials also will be offered for each breed. Entry fee, $1. Judge of pointers and setters, J. M. Tracy; all other classes, James Watson.

GRAPHIC.—New York Nov. 25.—*Editor Forest and Stream:* Will you kindly announce in your paper that the sale of champion Graphic to Mr. Chas. Heath of Newark, N. J., in no way affects my public offer made through your columns for his free services, and that all bitches heretofore promised his services by me will be permitted to visit Graphic free of charge, but under the conditions named, Mr. Heath having purchased the dog subject to all his engagements.—JAMES L. ANTHONY.

KINO.—Philadelphia, Pa., Nov. 22.—*Editor Forest and Stream:* Can any one give any information concerning the pedigree of the beagle Kino or Keno, exhibited at Philadelphia in September, 1884, by D. O'Shea, as imported?—WM. H. CHILD.

NEW HAVEN SHOW.—The third annual bench show of the New Haven Kennel Club will be held in New Haven on March 30 and 31 and April 1 and 2, 1886.—E. S. PORTER, Secretary.

NEWARK BENCH SHOW.—Newark, N. J., Dec. 1.—*Editor Forest and Stream:* The New Jersey Kennel and Field Trial Club claims March 22, 23, 24 and 25 for bench show at Newark.—CHAS. HEATH.

KENNEL NOTES.

KENNEL NOTE BLANKS.—For the convenience of breeders we have prepared a series of blanks for "Names Claimed," "Whelps," "Bred" and "Sales." All Kennel Notes must be sent to us on these blanks, which will be forwarded to any address on receipt of stamped and directed envelope. Send for a set of them.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

King Dan. By Geo. W. McNeil, Jr., Jersey City, N. J., for liver, with white markings, pointer dog, whelped Jan. 29, 1885, by Jimmie (A.K.R. 1689) out of Temptation (A.K.R. 1690).

Mickey Free. By W. A. Stauf, Baltimore, Md., for lemon and white pointer dog, whelped July 24, 1885, by Robin Adair (champion Faust—Madge) out of Daisy Bravo (champion Bravo—Lilly II.).

Zimp. By F. C. Stauf, Baltimore, Md., for lemon and white pointer dog, whelped July 17, 1885, by champion Bravo (Bragg—Kate) out of Rose.

Chancellor. By A. C. Wilmerding, New York, for solid chestnut spaniel dog, whelped July 11, 1885, by champion Black Prince (A.K.R. 62) out of Newton Abbot Lady (A.K.R. 2691).

Black Cap. By A. C. Wilmerding, New York, for black spaniel bitch, whelped July 11, 1885, by champion Black Prince (A.K.R. 62) out of Newton Abbot Lady (A.K.R. 2691).

Madcap II. By A. C. Wilmerding, New York, for black, with white frill, spaniel bitch, whelped July 21, 1885, by champion Black Prince (A.K.R. 62) out of Marion (A.K.R. 2639).

Polka Dot. By A. C. Wilmerding, New York, for black and white ticked cocker spaniel bitch, whelped July 15, 1885, by Sport (Jet—Daisy) out of Suwanee (A.K.R. 658).

Bug. By Dr. Chas. McBurney, New York, for black cocker spaniel dog, whelped July 15, 1885, by Sport (Jet—Daisy) out of Suwanee (A.K.R. 658).

Maida. By Dr. J. W. Greene, New York, for black cocker spaniel bitch, whelped July 21, 1885, by champion Black Prince (A.K.R. 62) out of Marion (A.K.R. 2639).

Suzette. By A. C. Wilmerding, New York, for solid black cocker spaniel bitch, whelped July 15, 1885, by Sport (Jet—Daisy) out of Suwanee (A.K.R. 658).

Marion II. By A. E. Foster, New York, for black cocker spaniel bitch, whelped July 21, 1885, by champion Black Prince (A.K.R. 62) out of Marion (A.K.R. 2639).

Duke of Tioga. By L. Brandeis, Brooklyn, N. Y., for red and white Irish setter dog, whelped Jan. 24, 1885, by Glencho (Elcho—Noreen) out of Biddy (Elcho III.—Mag).

Dorothy. By A. E. Foster, New York, for black cocker spaniel bitch, whelped Sept. 2, 1885, by champion Benedict (Bachelor—Negress) out of Sara B.

Governor. By L. Brandeis, Brooklyn, N. Y., for black, white and tan collie dog, whelped July 24, 1885, by Argyle (Brack—Dora) out of Jean (Marcus—Flora).

Zulu II. By L. Brandeis, Brooklyn, N. Y., for fawn and black mastiff dog, whelped July 17, 1884, by Zulu (champion Colonel—champion Diana) out of Monmouth Meg.

Ko-Ko, Katisha and Peep Boo. By City View Kennels, New Haven, Conn., for silver fawn pugs, one dog and two bitches, whelped Oct. 7, 1885, by Bradford Ruby (Lovat—Jenny) out of Beauty (A.K.R. 1360).

Duke of Hamilton. By H. Drain, Baltimore, Md., for white, black and tan English setter dog, whelped July 29, 1885, by Count Noble (Count Windem—Nora) out of Ruby (Rake—Fanny).

Hero. By Henry Müller, Clifton, Staten Island, N. Y., for orange and white St. Bernard dog, whelped Aug. 21, 1885, by Scotch Barry (champion Barry—Dido) out of Eiger (Beppo—Hilda).

Rex. By Hugo Reid, Haydenville, Mass., for black Newfoundland dog, whelped Oct. 21, 1885, by Major out of Juno.

Leo. By Captain Weiss, for black Newfoundland dog, whelped Oct. 21, 1885, by Major out of Juno.

Brahminetta. By Chas. S. Fitch, New York, for solid black cocker spaniel bitch, whelped Oct. 1, 1885, by champion Brahmin (Easten's Bob—imported Clew) out of Fitch's Daphne (A.K.R. 1632).

Rosa. By J. G. Tod, Harrisburg, Tex., for red Irish setter bitch, whelped Sept. 10, 1885, by champion Glencho (Elcho—Noreen) out of Flame (Von—Floss).

Tostig. By Thos. W. Mills, Montreal, Can., for white, with brindle and white head, bulldog, whelped Aug. 2, 1885, by Guillermo (A.K.R. 671) out of Princess Ida (A.K.R. 2154).

Ginger. By Horace Ketchum, Albany, N. Y., for white, with tan head, fox-terrier bitch, whelped Aug. 19, 1885, by Mixture (A.K.R. 2697) out of Nettle (A.K.R. 1704).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Queen—Black Prince. Fred Smith's (Hoboken, N. J.) liver and white cocker spaniel bitch Queen (Charley—Powder) to A. C. Wilmerding's champion Black Prince (A.K.R. 62), Nov. 22.

Daisy—Bradford Ruby. J. F. Schorer's (New Haven, Conn.) pug bitch Daisy (imported) to City View Kennels' Bradford Ruby (Lovat—Jenny), Nov. 10.

Stella—Hermit. Buena Vista Kennels' (Kensico, N. Y.) rough-coated St. Bernard bitch Stella (Thor—Augusta) to Chequasset Kennels' Hermit (A.K.R. 23), Nov. 15.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Black Gem. G. H. Haseltine's (Boston, Mass.) cocker spaniel bitch Black Gem (Brush II.—Blackie II.), Aug. 17, nine (five dogs), by J. H. Willey's Obo II. (A.K.R. 432); all black.

Favorite. W. J. Ehrich's (New York) rough-coated St. Bernard bitch Favorite (Courage—Belline), Nov. 20, eight (five dogs), by his Nero (Apollo—Diana).

Little Nell. T. R. Varick's (Manchester, N. H.) bull-terrier bitch Little Nell (Little Victor—Daisy), Nov. 12, three dogs, by Dutch, Jr.

Daisy. John Obrien's (New Haven, Conn.) pug bitch Daisy, Oct. 3, four (two dogs), by City View Kennels' Bradford Ruby (Lovat—Jenny).

Beauty. City View Kennels' (New Haven, Conn.) pug bitch Beauty (Major—Daisy), Oct. 7, three (one dog), by their Bradford Ruby (Lovat—Jenny).

Theon. Chequasset Kennels' (Lancaster, Mass.) rough-coated St. Bernard bitch Theon (A.K.R. 94), Nov. 14, ten (six dogs) by their Hermit (A.K.R. 23).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Obo II.—Black Gem whelps. Black cocker spaniels, whelped Aug. 17, 1885, by G. H. Haseltine, Boston, Mass., a dog to Geo. W. Leavitt and a bitch to Mrs. C. G. Fisher, same place, and a bitch to Daniel Helm, Providence, R. I.

Sport—Suwanee whelp. Black cocker spaniel dog, whelped July 15, 1885, by A. C. Wilmerding, New York, to Francis O. de Luze, same place.

Jewel. Silver fawn, black points, pug bitch, whelped July 18, 1885 (Bradford Ruby—Flossy, A.K.R. 2250), by City View Kennels, New Haven, Conn., to F. D. Gadsby, Mansfield, O.

Gem. Silver fawn pug bitch, whelped July 18, 1885 (Bradford Ruby—Flossy, A.K.R. 2250), by City View Kennels, New Haven, Conn., to Geo. Gillivan, West Jefferson, O.

Prince Dave. White, black and tan English setter dog, whelped July 29, 1885 (Count Noble—Ruby), by H. E. Hamilton, New York, to H. Drain, Baltimore, Md.

Asphodel. Orange tawny, white markings, smooth-coated St. Bernard bitch, whelped July 29, 1884 (A.K.R. 1607), by Chequasset Kennels, Lancaster, Mass., to W. W. Tucker, New York.

Leif. White and orange St. Bernard dog, whelped June 25, 1885 (Alp II.—Brenner), by Chequasset Kennels, Lancaster, Mass., to W. W. Tucker, New York.

Barry. St. Bernard dog (A.K.R. 2150), by St. Bernard Kennels, Clifton, Staten Island, N. Y., to Henry Müller, same place.

Abbess. St. Bernard bitch, by St. Bernard Kennels, Clifton, Staten Island, N. Y., to Henry Müller, same place.

Leigh. Orange and white St. Bernard dog, whelped June 22, 1885 (Alp II., A.K.R. 705—Brenner, A.K.R. 706), by Henry Müller, Clifton, Staten Island, N. Y., to G. W. Williams, Buffalo, N. Y.

Rex. Black Newfoundland dog, whelped Oct. 21, 1885 (Major—Juno), by Henry Müller, Clifton, Staten Island, N. Y., to Hugo Reid, Haydenville, Mass.

Leo. Black Newfoundland dog, whelped Oct. 21, 1885 (Major—Juno), by Henry Müller, Clifton, Staten Island, N. Y., to Captain Weiss, vessel Bylgia, for exportation to Japan.

Colonel. Fawn, black muzzle, mastiff dog, whelped Oct. 28, 1885 (Hero II.—Norah), by Henry Müller, Clifton, Staten Island, N. Y., to Ashmont Kennels, Boston, Mass.

Czar. Black, white and belton English setter dog, whelped July 30, 1884 (A.K.R. 1613), by Chas. S. Fitch, New York, to E. S. Hauks, Cummington, Mass.

Fly. Red Irish setter bitch, whelped Sept. 10, 1885 (Glencho—Flame), by John G. Tod, Harrisburg, Tex., to J. C. Harris, Nacogdoches, Tex.

Faun. Red Irish setter bitch, whelped Sept. 10, 1885 (champion Glencho—Flame), by John G. Tod, Harrisburg, Tex., to Jas. Vandenbrook, Palestine, Tex.

Crook. White and black ticked English setter bitch, whelped June, 1879 (A.K.R. 281), by Dr. Henry F. Aten, Brooklyn, N. Y., to J. M. Bloomfield, New York.

Spright. Black, white and tan English setter bitch, whelped Feb. 26, 1884 (A.K.R. 1619), by J. M. Bloomfield, New York, to Dr. Henry F. Aten, Brooklyn, N. Y.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

A. S., New York. For worms in dog try areca nut freshly powdered. Give the dog nothing but milk for 24 hours, then administer a teaspoonful of the powder made into a large pill or bolus with lard. Depress the base of the tongue and slide the pill into the pharynx. In three hours give a large dose of castor oil, one or two tablespoonsful, according to the age. Do not feed solid food for twenty-four hours after giving the medicine.

G. A. F., Boy Blue Plantation.—My setter has had mange for a year, sores on him now. Feet between toes very sore. Used arsenic and other remedies. Is two years old. Suppose he was not attended to at first. Ans. Keep on with the arsenic and get two boxes of salve, an ounce of balsam of Peru ointment and one of zinc oxide ointment. Use them on the sores on alternate days after washing the parts with warm water and castile soap and drying.

WILCOX, Jersey City.—I have a mastiff bitch and she is continually drooling at the mouth. It is not so bad since the weather became cool, but any exercise brings it on. She had one fit when she was about 8 months old. She is now thirteen months. Ans. Keep the bowels free with syrup of buckthorn in dessertspoonful doses, and give night and morning ten drops of the tincture of belladonna in sweetened water, and stop treatment as soon as the drooling ceases, which should be in two or three days.

"BOB," Houston, Texas.—1. What is the best treatment for mange on long-haired dogs? 2. What is the best way to treat distemper among puppies. Ans? 1. Give 3 drops of Fowler's solution of arsenic twice daily in the food and increase one drop daily up to 10 drops, then decrease by a drop daily down to three again. Then discontinue for two days and commence again at the expiration of that time. For external application, equal parts of zinc oxide and iodoform ointment may be applied after the hair has been clipped from the parts affected. 2. At the outset of the disease the puppies affected should

be quarantined, new bedding should be supplied two or three times weekly and great cleanliness observed. The food should be fluid and nutritious—milk with lime water, beef soups without fat, flour porridge made with milk, etc. While fever is present give 2 drops of tincture of aconite every three hours. If great weakness exists with heart failure, give a teaspoonful of brandy three, four or five times daily. Inhalations of carbolic acid solution (teaspoonful to the pint of water) are very beneficial, quinine and iron are called for during convalescence.

T. H. M.—I have a thoroughbred mastiff eighteen months old which has never been taught anything, but has picked up some bad habits, as running away and killing fowls. Is it too late to teach him? and if not, how shall I set about it? Is there any manual of dog training? Ans. We could not tell you, unless we knew more particulars, how to keep the dog at home. To break him of chicken-killing, take him, holding by a strong cord, into the chicken yard, and every time he breaks for a hen pull him back and explain to him that he is doing wrong, and then punish him after the style set forth on page 68 of Hammond's "Training vs. Breaking."

J. W. H., Philadelphia, Pa.—Setter sixteen months old, slobbers very much and has done so some ten months. Is very thin because of hard work, and poor feed, I think, while in breaker's hands, where he still is. Health appears good in other respects, appetite like a buzz saw when I last saw him. If dangerous drugs are required to effect a cure perhaps I had better let him alone. His coat is not very bright in appearance, but there is now no trace of mange, of which he was cured some months ago, by Glover's preparation and Fowler's solution. Ans. You can give eight drops of tincture of belladonna morning and evening in the food with safety, and probably it will effect a cure.

J. McK., Ogdensburg, N. Y.—Be so kind as to inform me if there is any treatment that will insure a crop of hair over a scald. My setter has been scalded across the top of his shoulders and back by hot water, and the skin is now in scabs covering suppuration, the hair still adhering. The scald was given about ten days since. Advise me, if you can, without referring me to books or treatises on the subject, for I am in a hurry to save the animal's coat. Ans. If the scald is deep and has destroyed the hair follicles, they will not be reproduced, but a scar will always disfigure the dog; but unless the scald is very severe the hair will grow again. The best dressing for a healing ulcer after burns is balsam of Peru ointment, which should be applied thickly on a piece of lint and laid on the wound, after removing scabs and cleansing with warm water and castile soap.

G. N., Savannah, Ga.—I lost a litter of fine pups by worms. They were born Oct. 7. On Oct. 28 they were whining, as if in pain. I gave them a dose of castor oil and ten drops of laudanum. Next morning four of them were dead, and I gave the other two another dose; they could not swallow it, something seemed to be in their throat. I dissected the dead ones and found them full of worms, and several in their throat. These pups were only twenty-one days old and never had anything but their mother's milk. They were fine looking and very fat. Does any one know how they got worms? Ans. Your puppies were born with the worms probably. It is very difficult in such cases to save them. It is also impossible to say how the eggs of the worms got into the puppies, the mother being healthy. Had you given small doses (five grains) of areca root or some other vermifuge you might have saved the strongest puppies, though the risk in giving such medicine is very great.

Rifle and Trap Shooting.

Address all communications to the Forest and Stream Publishing Co.

THANKSGIVING RIFLE MATCHES.

LOVERS of the rifle to the number of fifty or more visited the range at Walnut Hill on the 26th and banged away in the face of a driving snowstorm, with results satisfactory considering the conditions. The decimal handicap match and the rest match were settled, and the names of prize winners, were as appended:

Decimal Handicap Match.

N F Tufts	79	79	79	78=315+40	—355
W D Palmer	87	83	73	85=338+12	—350
F J Rabbeth (mil.)	79	82	78	80=319+4=323+24	—347
R Reed	83	81	83	83=330+12	—342
E F Richardson	89	84	88	89	—341
R G Warren	80	84	77	76=318+21	—311
E B Souther	77	75	75	79=306+32	—338
O M Jewell	83	84	87	83	—337
A C White	84	81	85	87	—337
J N Frye	78	77	77	80=312+20	—332
W Charles	80	85	80	84	—328
J B Fellows	76	68	80	83	—307
R D Archer	75	67	67	76=285+29	—305
J P Bates	61	65	69	64=259+40	—299
W Fisher	62	73	61	70=266+32	—248

Rest Match.

J N Frye	99	99	100	100	100—498
F J Rabbeth	99	98	98	98	99—492
D L Chase	93	98	98	98	98—490
S Wilder	98	98	98	98	98—490
C H Brown	87	100	95	98	97—487
B G Warren	96	96	96	97	95—480

NEW BEDFORD.—The New Bedford City Guard had its annual shoot for prizes, 27 in number, 40 members and 4 honorary members competed, no commissioned officers were present, wind and snow interfered with good shooting. Following are the leading scores: Sergt. E. F. Dale 38, J. E. Barnum 38, E. T. Gibbs 36, H. C. Churchill 34, C. L. McBay 34, C. A. Gray 34, Sergt. A. L. Howland 34, Corp. G. H. Devol 33, O. S. Johnson 33.

NEWTONVILLE.—The Claflin Guard 5th Regiment, had a team and company shoot at its range in Newtonville, Mass., and notwithstanding the storm, some good scores were made. The score made in the regular team shoot was as follows: Private William Warren 23, Private F. E. Turner 22, Private J. S. Williams 21, Private A. E. Easterbrook 21, Sergt. J. I. Farwell 21, Lieut. G. H. Benyan 20, Private C. A. Purdy 20; total 148.

KEENE, N. H.—A picked team of the Keene Light Guards, Capt. Russell, shot a match with the Springfield Rifle Club, Capt. Bishop, to-day, the members of both teams using the Winchester rifle and globe sight. The latter gave the former odds, but won.

MANCHESTER, N. H.—At the Manchester Range to-day Benjamin Cline, on a decimal target made six straight tens and a nine, or a total of 69 out of a possible 70.

THE BRATTLEBORO, VT., RIFLE CLUB enjoyed a shoot for turkeys on Thanksgiving Day, three were presented to the club for competition, one each from Col. Fuller, Capt. W. M. Farrow and H. M. Wood. The shooting was 200yds. off-hand, on the new Farrow target. The following scores were made out of a possible 100:

Hannon	6	10	8	5	4	9	10	8	7	10—77
Cobb	10	10	4	8	7	9	7	7	7	7—75
French	7	5	7	8	7	9	9	6	9	7—74
Wood	6	6	9	7	9	7	8	5	10	7—74
Read	7	7	8	10	5	7	8	4	7	9—72
Nichols	9	8	8	8	6	6	6	5	7	7—71
King	6	7	9	6	8	6	9	9	9	6—69

The first turkey was finally won by Mr. French with the following fine score:

French	6	9	7	8	7	10	8	9	10	9—83
Hannon	7	5	6	7	9	7	7	6	5	8—77
Nichols	6	4	10	9	7	7	7	10	8	9—77
Cobb	6	9	7	9	5	4	8	10	9	10—77
King	10	4	9	5	7	9	7	8	8	7—74
Wood	5	7	10	7	8	9	5	5	10	7—71
Read	6	5	9	9	5	5	9	7	7	6—68

The postponed turkey match of the Brattleboro Rifle Club was continued on Saturday. The turkeys were put up singly, and had to be won twice before becoming personal property. C. L. Cobb was final winner of the second one. The last turkey was won with the following score at 200yds. off hand, the Farrow target being used. It has three divisions in the 8-inch bullseye counting 8, 9 and 10. Clear weather, with one point allowed for a 7 o'clock wind.

Farrow	9	9	9	7	8	9	10	9	8	8—87
Cobb	8	9	9	10	7	9	9	8	7	9—85
Knight	7	9	8	7	9	9	8	7	9	10—83
Nichols	4	10	8	7	10	7	10	8	7	8—79
French	9	9	4	8	8	7	6	9	7	8—75

MILWAUKEE RIFLE CLUB, Thanksgiving Day.—The club not having practiced for three months the scores were not up to the average. Creedmoor target, 200yds.

Possible 75—Drake 69, Campbell 65, Green 64, Welles 63, Fielding 63, Ormsby 62, Thurston 62, Wright 62, Yale 61, Johnston 60, Markham 55.

Possible 50—Drake 45, Ormsby 45, Yale 44, Welles 43, Thurston 42, Green 42, Fielding 41, Wright 40.

Possible 25—Yale 24, Drake 23, Thurston 21, Green 21, Ormsby 21, Wright 21, Fielding 20, Welles 19.

RANGE AND GALLERY.

THOMASTON, Conn., Nov. 21.—At Bridgemoor range to-day the marksmen were favored with a very good light, but a chilly and rather uncertain wind tended to generally low scores:

E Thomas	11	12	9	12	10	10	8	12	11	11—106
G P North	9	11	8	11	10	11	10	10	11	8—99
C F Williams	9	11	10	10	10	7	10	11	8	10—96
G C Gilbert	11	10	10	9	6	12	9	7	10	12—96
Fred A Perkins	11	8	9	9	10	10	10	8	8	10—95
W H Dunbar	7	9	9	11	10	11	10	8	10	8—94
F Carr	10	10	7	10	6	10	9	10	12	10—94
C L Alling	9	5	10	8	11	8	9	10	6	12—88

THOMASTON, Conn., Nov. 7.—Weather conditions were adverse to high scores at badge shoot Empire Rifle Club, being so dark that bullseye could hardly be discerned through sights, 200yds. off-hand Massachusetts ring target:

G A Lemmon	10	11	12	11	10	9	11	12	7	11—104
G C Canfield	11	10	11	12	7	11	10	10	11	10—103
W H Dunbar	9	9	9	12	9	10	11	12	9	12—100
Fred A Perkins	12	11	10	10	9	12	7	8	9	9—97
C F Williams	8	8	12	11	10	8	12	8	10	9—96
G P North	12	9	10	7	10	11	12	7	10	8—96
E Thomas	9	8	10	10	10	9	9	11	8	9—93

BALTIMORE, Nov. 27.—The rifle contest between ten teams of State militia closed yesterday. The range was 200 yards. As was expected, the Easter Flower team of the Garrett Guards, Oakland, won the match. Their score at the 200-yards range was 162; the aggregate for both days' shooting was 331, and their average shooting was 41⅜. The gold medal to the best marksman was won by Corporal Browning, of the same team, with a score of 45 out of a possible 50. The rank of the teams was obtained by adding the totals made by each team at both ranges and dividing the sum by eight, the number of men in each team. This gave the average shooting of each man. Thus determined, the match has resulted in a clean victory for the Western Maryland boys, the four first teams coming from that section. The following is a list of the teams and their averages in the order of rank: 1. Easter Flowers, 41⅜; 2. Independents, 39½; 3. Potomac, 36 4-8; 4. Douglass, 36 2-8; 5. Fifth Maryland, No. 2, 35⅛; 6. Fifth Maryland, No. 1, 33 4-8; 7. Cumberland, 32 4-8; 8. Linganore, 31⅞; 9. Howard, 28; 10. Mountain City, 27⅜. The "aggregate" is the sum of the totals made by each man on both days at the 100-yard and the 200-yard range, with a possible 50 of 5 shots at each distance. Of the ten medals offered by the State, for the best aggregate in each team, one is of gold and the rest are silver. The design is a large Maltese cross, with the inscription, "Maryland National Guard, 1885." The gold medal has in the center the State coat of arms in silver, and the silver medals have a similar center of gold. The following is the score of the teams in the order of shooting:

Easter Flower Team—Lieut. Jameson 41, Sergt. Crim 39, Sergt. Painter 40, Corp. Browning 45, Private Stoyer 42, Private Friend 41, Capt. Wardwell 40, Lieut. Chisholm 43; total 331.

Douglas Team—Private Murray 36, Sergt. Lindsey 39, Corp. Tice 33, Private Spangler 42, Lieut. Buchanan 39, Corp. Corby 38, Private Montgomery 25, Sergt. Crader 38; total 290.

Independent Team—Capt. Lane 42, Lieut. Roulette 37, Lieut. Cost 37, Sergt. White 39, Private Bassford 43, Corp. Sands 38, Private Schaff 39, Private Hochman 38; total 313.

Fifth Regiment, Team No. 2—Private Scharf, Co. G, 41, Sergt. Taylor, Co. G, 32, Private Scott, Co. C, 37, Sergt. Bartholomai, Co. I, 33, Corp. Kasemeyer, Co. I, 34, Private Carroll, Co. A, 34, Private Brasheares, Co. E, 34, Private Owings, Co. E, 36; total 281.

Linganore Rifle Team—Corp. Albaugh 31, Corp. Burrall 31, Corp. Boone 35, Private Butler 35, Private Lugenbeel 20, Private Butler 38, Lieut. Glissan 32, Private Long 33; total 255.

Mountain City Team—Sergt. Shipley 27, Sergt. Veit 11, Sergt. White 32, Corp. Schwering 30, Corp. Grove 41, Private Grove 29, Private Knight 36, Private Kettler 23; total 319.

Potomac Team—Private Combs 39, Corp. Athey 33, Corp. Johnson 11, Corp. Gray 37, Private Richards 40, Private Koegle 32, Private Trout 39, Private McKenzie 31; total 292.

Fifth Regiment, Team No. 1—Lieut. Hite, Co. K 37, Lieut. Search, Co. D 35, Private Burchall, Co, F 32, Private Leamey, Co. F 35, Private Ehlen, Co. H 33, Private Leinkuhl, Co. H 32, Sergt. Milkins, Co. G 30, Sergt. Bell, N. C. S. 34; total 268.

Howard Team—Corp. Smith 34, Private Connor 37, Private Sweeny 37, Private Knee 8, Private Gerloch 23, Private Wade 26, Private Williams 32, Private Garrett 26; total 224.

Cumberland Team—Capt. Gordon 25, Private Troxell 32, Private Smouse 35, Private Landers 37, Private Twigg 38, Private Siebold 31, Private Hughes 22, Private Mason 40; total 260.

Team Total.

BOSTON, Nov. 28.—The shooters in the matches at Walnut Hill had a perfect day for their sport to-day. There was a good attendance, and some very remarkable scores were made. D. L. Chase made a clean score of 100 in the rest match, and J. Francis, with an open-sight military rifle, made a 95, followed by a 92 and a 90. His scores to-day have never been equalled so far as a record shows with a military open-sight rifle. H. Cushing scored a 49 in the Creedmoor practice match. Following is the record of the day's shoot:

Decimal off-hand Match.

H Cushing, A	5	9	9	8	8	7	9	8	10	8—81
B G Warren, C	5	9	6	6	9	10	9	8	7	8—77

Creedmoor Practice Match.

H Cushing	4555555555—49	C Williams (mil.)	4545554444—44
E Burleigh	5455445445—45	F Carter (mil.)	4444555543—43

First Regiment Match.

D L Chase (F.)	10	10	10	10	10	10	10	10	10	10—100
H Cambridge (F.)	10	10	9	10	9	10	9	10	10	10—97
S Wilder (F.)	9	10	9	10	10	10	10	10	10	9—97
J Francis (mil. F)	9	10	10	9	10	10	10	10	8	9—95
Pillsbury (A.)	10	9	10	10	8	10	9	10	8	9—93
B G Warren (F.)	9	9	9	10	9	9	10	9	9	8—90
F Carter (mil. F.)	8	10	6	10	5	5	6	9	7	8—74

New matches open under the following conditions: Rest Match—Massachusetts decimal target, distance 200yds., any rifle, without restrictions regarding weight, sights (telescopic sight allowed), or trigger pull, with the exception that hair triggers must be provided with safety lock, and that all rifles of over 10 pounds weight will be handicapped 1 point on a score in favor of those under that weight, military rifles with open sights will be allowed 40 points, and other open sight rifles, including special military, 25 points in the aggregate of 5 scores counted as one. Military rifles must be shot without cleaning through each score. Any position or rest will be allowed, provided the rifle be held against the shoulder. 5 scores to count. No scores may be counted at one competition. Entries unlimited. Entries to members 25 cents, to non-members 50 cents for first entry, and 25 cents for re-entry each day. An equal number of points on an aggregate of 5 scores will be considered a tie, and will be decided by the next best score, or scores, if necessary. The match will close the last shooting day of January, 1886. Prizes 6 in number. First 12, second 11, third 9, fourth 8, fifth 6, sixth 4 per cent. of total entry fees.

Decimal Off-Hand Match.—Massachusetts decimal target; distance, 200yds., rounds 10, any rifle within the rules, position standing, military rifles. Springfield pattern as issued by the State, will be allowed 28 points, and other open sight rifles, special military included, will be allowed 20 points in the aggregate of four scores. Military rifles must be shot without cleaning during each score, four scores to count in the order made, with handicap added. Entries unlimited at 25 cents to members, 50 cents for first score and 25 cents for re-entry each day to non-members. In case of a tie the competitor having the least number of points allowed for handicap will rank and when the allowance is the same in each case and a tie exists, the next best score (or scores, if necessary) will decide the tie by actual count. Prizes fifteen in number, consisting of 50 per cent. of total entry fees of 10, 8, 7, 6, 5, 4, 3, 3, 3, 2, 2, 2, 2, 2, 1. This match will close with the last shooting day of January, 1886.

NORRISTOWN, Pa., Nov. 27.—Three matches were shot yesterday on the Bridgeport Range, 100yds., each shot measured from the center of the target. Any position without artificial rest was allowed. The following strings were made:

First Match.

E A Leopold	0.25	1.12	1.21	3.10	2.47—8.15
Geo Ritter	0.87	2.40	4.56	0.76	0.20—8.79

Second Match.

Geo Ritter	0.25	1.23	0.64	0.56	1.34—4.02
E A Leopold	2.16	1.08	0.37	0.59	0.88—5.07

Third Match.

E A Leopold	1.41	0.65	0.50	1.11	1.09—4.76
Geo Ritter	1.13	3.06	0.97	1.90	1.07—8.13

Mr. Ritter's string in the second match is the best ever made on this range in a match. The best was made Feb. 22, 1881, by E. A. Leopold, and measured 3.69 inches.

CARSON CITY, NEV.—The Carson Guard, in all their practice and matches, use the Sharps military rifle, .45 caliber, Bouchard's patent, open sights, six pounds trigger pull, 70 grains FG rifle powder and 440-grain bullets. The foregoing was used when the score of 829 was made, and the men are fully satisfied that had the weather been favorable at least 840 would have been scored.

MAINE VS. MASSACHUSETTS.—The second team match between the Biddeford (Me.) Light Infantry and the Sherman Cadets, of Lawrence, Mass., was shot on Nov. 21, each team shooting on its respective range and sending the result by telegraph. The Biddeford team won the first contest some six weeks ago by one point. The second match proved more even than the first, the totals being an exact tie. The Lawrence team shot on a paper target. The scores were as follows:

Sherman Cadets' Team.		Biddeford Team.	
Musician Daulton	4454555554—45	W F Cummings	5444445545—44
Private Frost	5855544455—45	E J Cram	4554445454—44
Sergt Sargent	3354544434—39	I D Adams	3444345445—40
Private Recker	4453453434—39	W G Parker	4443454434—39
Capt Duchesney	4423543433—39	J D Staples	3343444444—37
	204		204

Though there is a tie on the grand total, victory under the Creedmoor rules would go to the Biddeford team, since they have no outer, while there is one in the score of the Lawrence team.

THE TRAP.

Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

CARTERET GUN CLUB.—A large delegation of the members of the Carteret Gun Club participated in the annual Thanksgiving Day pigeon shoot at the club grounds near Bergen Point, N. J. Although the grounds were somewhat wet, the weather was good for the sport, with a fresh breeze that had a tendency to make a majority of the birds incoming quarterers to the left or direct incomers. The shooting, as a whole, was scarcely up to the club's standard, except as between Messrs. Redmond and Wallace—the former losing his first bird dead a few inches out of the bounds at score, while Mr. Wallace killed his first eight and missed his ninth, which made the result a tie between them on the tenth bird. In shooting off the "miss and out," Mr. Redmond missed a fast quarterer to the left and Mr. Wallace killing an incomer, it made him the winner of the first prize, a copper and silver cup, leaving the second prize, a clock set in armor and antique weapons, to Mr. Redmond. The conditions and full score were as follows: Handicap shoot at 10 birds each, three misses out; ties, miss and out; 50yds. boundary; entrance, $5 each. Referees, Messrs. Hoey and Bryar.

Wallace, 26yds	10	Heyward, 25yds	4
Redmond, 28yds	9	Blood, 23yds	4
McBarry, 26yds	7	Lee, 28yds	3
Lawrence, 26yds	6	Gladwin, 26yds	3
James, 25yds	5	Jacobs, 26yds	1
Stone, 26yds	5	Rowland, 25yds	0

ONONDAGA, N. Y.—The gold medal, for which the members of the Onondaga Sportsmen's Club have been shooting for the last twelve years, was won finally Saturday, Nov. 21, by Edward Hudson, and will remain in his possession. In 1873 the club paid $55 for the medal, which was inscribed, "Onondaga County Sportsmen's Club." At first the medal was shot for monthly, the winner holding until another won. Five years ago it was decided that the member who should win the medal three times should have permanent possession of it. Since then Lodder, Fage and Hudson each won twice, and Luther and Lefever each once. The final contest was very close and exciting, but Hudson won for the third time. The score was:

Lefever	0111111111111111—14	Chapman	1111111111100111—13
W B Kirk, Jr.	0110110011111101—10	Walters	0111100111111111—12
Courtney	0110111010110111—11	Montgomery	1011111111111101—13
Hudson	1111101111111111—14	Luther	1110110111111111—13

The tie resulted: Hudson 4, Lefever 3. Sweepstake shooting followed. In the first Brown took first money and Courtney second; in the second, Montgomery first and Ayling second; in the third, Chapman and Courtney divided first and Montgomery took second.

HOT SPRINGS, Ark., Nov. 20.—The members of the Arkansaw Gun Club had their regular weekly shoot near Gum Spring this afternoon, using Peoria blackbirds at 21yds. rise, one barrel:

W J Little	8	8	6	8—30	P J Ledwidge	6	8	8	—22
L D Cain	2	8	8	5—29	A R Smith	7	6	8	5—26
F Gross	5	6	7	6—24	A Whittington	7	8	7	—22
Dr Collings	4	4	2	—10	G G Latta	0	2	0	—2
G W Baxter	8	8	5	—21	C N Rockafellow	8	4	8	—20
G W Watson	7	7	9	9—32	P Bentz				3—3
W W Wiggs	8	9	8	7—32					

WELLINGTON GUN CLUB, Nov. 28.—The regular weekly shoot was held at Wellington this afternoon. Following is the result of the several sweeps: 1. Five blackbirds—Shumway and Snow divided first. 2. Five clay-pigeons—Nichols and Schaefer divided first. 3. Five blackbirds—Shumway and Snow divided first. 4. Five clay-pigeons—Schaefer and Steele divided first. 5. Five clay-pigeons—Snow first. 6. Five blackbirds—Shumway first. 7. Ten clay-pigeons, medal match—Schaefer and Stanton divided first. The medals were won by Schaefer with nine, Shumway with eight and Nichols with seven out of ten. 8. Miss and out—Taken by Scragg and Schaefer. 9. Seven blackbirds—Snow first. 10. Three pairs clay-pigeons—Schaefer and Steele divided first. 11. Five blackbirds—Lawson first. 12. Seven clay-pigeons—Schaefer first.

NEW HAVEN, Conn., Nov. 25.—The sixth and last State shoot for prizes offered by various gun makers and dealers took place to-day on the grounds of the New Haven Gun Club. The shooting commenced with a sweepstake, 5 clay-pigeons, 18yds. rise, 3 traps. C. H Sterry, of Talland, Conn., won first, and throughout the day he and E. A. Langdon won the lion's share in the sweepstake shooting. The prize shooting, 25 clays each man, and his average, taken for the whole number of times he had shot, was commenced about noon and resulted as follows: E. A. Folsom, of Windsor, took the first prize, a handsome Spencer gun, making an average of 21; V. A. Blakeslee, of Winsted, and G. Minor of Windsor, divided the second prize, both gentlemen obtaining an average of 19. The third prize, a Winchester rifle, went to C. E. Langdon and T. J. Beers, both contestants securing an average of 18; G. F. Hendrie, of Stamford, took the fourth, a gun presented by the Sterling Firearms Company, on an average of 17; J. F. Ives, of Meriden, and G. B. Platt, of Milford, were awarded W. W. Greener's book of the gun, both gentlemen securing an average of 16; F. B. Clark, G. H. Saunders, E. H. Beardsley, of Meriden, C. E. Higby, of New Britain, and M. J. Downes, of Wallingford, divided among them 200 metallic shells, all of them securing an average of 15; C. B. Bristol, I. L. Baker and C. H. Sterry averaged one less and divided 1,000 paper shells; T. Platt, of Milford, made an average of 13 and took 500 paper shells; F. A. Goodyear, L. W. Widdman, C. Merriman, M. J. Cook and C. Potter averaged all alike in the contest for the pistol: M. J. Ames was awarded a set of loading tools and C. Hill, of Wallingford, also a set.

GREENWICH GUN CLUB.—The Greenwich (Conn.) Gun Club held their annual Thanksgiving Day shoot at "Ten Acres." The special event was a team shoot between the Greenwich Gun Club and the Cos Cob Gun Club, 10 glass balls, 18 yards rise. A very strong breeze was blowing all day, which accounts for the poor scores:

Greenwich Gun Club.		Cos Cob Gun Club.	
H Marshall	1111100101—7	J Huffington	0001000100—2
H Brush	0011011000—4	W Peck	1011111001—7
Mistem	0000000000—0	F Lockwood	0110001100—4
L Finiels	1010000101—4	S Chard	1101011010—6
James Malia	1001001111—6	C W Cosier	0010011100—4
Compton	1100100101—5	W Huffington	1011000011—5
H Wood	1111101111—9	D W Merritt	1100000000—2
	35		30

President Rendle's prize: Five balls each, 18yds. rise, 60 per cent. to first, 40 per cent. to second, third prize two pictures of noted dogs: S. Chard 5, H. Marshall 4, W. Peck 2, F. Lockwood 4, L. Finiels 3, H. Brush 4, J. E. Peck, Mistem, Compton, Merritt and W. and J. Huffington withdrew. Ties for second won by Marshall. Brush and Lockwood shot off for third. Won by Brush.

Mr. W. Huffington's Prize: Five balls each, 18yds. rise, 60 per cent. to first, 40 per cent. to second. F. Lockwood 4, L. Finiels 5, H. Brush 3, S. Chard 4, J. Peck 4, W. Peck 3, H. Marshall, Compton, W. Huffington and Mistem withdrew. Second won by S. Chard.

Treasurer J. M. Tracy's Prize—5 balls, 18yds.; previous prize winners debarred: Compton 3, J. Huffington w., W. Peck w., J. M. Tracy 3, F. Lockwood 2, J. Peck 2, W. Huffington 2. Tie won by Tracy.

Sweepstakes—5 balls, 18yds.: F. Lockwood 5, L. Finiels w., H. Brush w., Compton 5, S. Chard w., W. Huffington w., H. Marshall w., W. Peck w., J. Peck w., J. Mistem w., C. W. Cusier w. Tie won by Lockwood, Compton second.

Sweepstakes, 5 balls, 28yds.—W. Huffington 3, J. Peck 0, F. Lockwood 2, L. Finiels 3, Compton 4, S. Chard 2, J. M. Tracy 2. Finiels won. The Greener trap gun, offered by President Arthur E. Rendle to the member making the highest aggregate score during the eight monthly shoots during the year, was won by W. Huffington, of Cos Cob G. C., who is also a member of the G. G. C. Our club has about decided to discard the glass ball shooting and take up clay-pigeons, blackbirds or some other target.

MILES JOHNSON VS. J. H. OUTWATER.—The match between these old trap-shooters came off on the 23d ult., at Erb's, Bloomingdale Road, N. J. There was a large attendance of sportsmen from New York and Jersey. Miles had the call at first, but the birds fur-

nished him by Outwater were too much for the old man. Johnson, like others of the veterans of the trigger, we imagine, have had their day. Their record is good, but they must give way to younger men. Outwater, as the score shows, shot in excellent form. John Ryan was chosen judge for Johnson and J. J. Maher for Outwater, with Sam Castle as referee. Outwater is a member of the J. C. H. G. C., and this is another triumph for this crack club.

J H Outwater	1110111100111101111110010—19
Miles Johnson	0001001110001100101010110—11

JACOBSTAFF.

NATIONAL GUN ASSOCIATION TOURNAMENTS.—Special Notice.—Members desirous of organizing tournaments in their vicinity, under the auspices of the Association, are requested to notify the undersigned. All the expenses of the same will be paid by us. Make your arrangements for 1886. We propose to establish a circuit of tournaments annually. Claim your dates now. General office and headquarters, Macon, Ga.—MATT R. FREEMAN, Vice-President and General Manager; F. C. ETHRIDGE, Secretary, Macon, Ga. Send 10 cents for hand book containing rules, constitution, etc. "Fairly started and its future depends entirely upon the manner in which the sportsmen throughout the country respond."—C. M. STARK, April 18, 1885.—*Adv.*

Canoeing.

Address all communications to the Forest and Stream Publishing Co.

CANOEISTS *are invited to send us notes and full reports of cruises, club meets, information about canoeable waters, and other communications of interest.*

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signals, etc., of their clubs, and also notices in advance of meetings and races, and reports of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

SECRETARY—Dr. C. A. Neidé, Schuylerville, N. Y. Candidates for membership must forward their names, with $3 for initiation fee and first year's dues, to the secretary, who will present names to the the executive committee. Money should be sent by *registered letter* or money order.

LIGHT CANOES AND THEIR USES.

THE least among canoeists to "Seneca." The dexter pectoral of camp-ma-tical brotherhood and forest fraternity, to thee, oh, "Seneca!"

> "I do not know you, and may never know
> Your face. But you have acted, on the whole.
> Most nobly; and I own it from my soul."

And you will catch it. You have said some things that I have been aching to say ever since the improved canoes came to the front; but I dared not. I seemed to remember with much distinctness a lesson that I learned more than fifty years ago in connection with a first-class hornet's nest. It was in early September, and the third brood of hornets had attained to the proper age for military duty. They had worked on that fortification until it was as large as a half-bushel basket; and, having in my mind's eye a Sunday school lesson wherein a big Philistine and a light-weight Israelite figured conspicuously, I became possessed with a burning desire to storm that paper fort with smooth pebbles from the brook; and I did it. Selecting a scriptural stock of pebbles I intrenched myself behind a clump of alders thirty feet distant and tried the initial shot, just to get the range. I got it the first time. Owing to a lack of initial velocity the trajectory was a trifle high, perhaps; but the aim was perfect. The shot took the fort right in the bulge, and as the soft crash of mashed paper struck my boyish ear, the return shot hit my fool eye and I went over backward with pain and astonishment. Their practice was good and their shots came nearly point blank. I immersed myself hastily in the nearest swamp, swinging an old straw hat until the rim fetched away. Then I hurriedly broke a bush for each hand, jumped into the brook, sat down with the water up to my neck, and fought it out on that line. When I emerged on the other side of the swamp, holding up one eyelid to see the trail, I felt that I had rather done a brave thing; and if I could have got into a hollow log or under a haystack—I wouldn't have done it. My mother, who was apt to make remarks, observed that I didn't look much like the clean faced little boy she had started off to school that morning. How should I, with one cheek puffed out and the other trying to get under my off ear, and both eyes swelled shut? But I felt that when it came to solid wisdom—practical knowledge, as it were—I could discount the schoolmarm; and I got even.

When the warriors had repaired damages, making their fortress as good as new, with only an open sally port at the lower end for ingress and egress, I stole on them at night, plugged the sally port with a corncob, cut the whole business loose and sunk it in three feet of water, when, after soaking a day or two, it was taken and hung up in the sun to dry. The outside walls made a season's supply of excellent wadding for the old flint lock, and I sold the inside works, consisting of larvæ, cells, black wax, fixtures, etc., to an Indian doctor for fifty cents. The doctor used the stuff to cure gravel. He made a black looking infusion with it which his patients drank daily, and he effected cures where the regulars have failed. I mention this because I have since been able to relieve some cases of intense suffering by the same simple remedy. This is digression. The moral is: Don't stone hornets.

I am not going to intimate that the members of the A. C. A. and the army of gentlemanly fellows who own and cruise the modern "paddle-able sailing canoe" are hornets, by no manner of means. But I reckon they are a safe crowd to let alone. They can, bless them, handle the pen as well as the paddle, and are about as intelligent, genial, and self-reliant as any class of men I happen to know. When I see the lateen, batten lug or double blade bearing down on me I know I am going to meet a gentleman, and I am as much interested in his complicated sailing craft as he is in the simple little open canoe. When he offers me his watch key for an anchor and a few yards of fine linen hue by way of cable, I take it as complimentary, and can hardly reciprocate by admiring his beautiful craft. But I do not call her a canoe. She is very canoey in form, however, and an elegant means of enjoyment and healthful recreation; but not, *per se*, a canoe. The canoe, at least to the eye of an old woodsman, must be alike at both stems, with no rudder, no cleats, sheets, tabernacle, or centerboard, and no masts or sails. The canoe, pure and simple, as I recognize it, is the birch, or well-made dugout, and the kyak, with canoes of other make and material which are mainly modeled on these.

And here comes FOREST AND STREAM, two numbers which have been delayed; and something of what I was going to say is already said in good shape by better men. Only, friend "Seneca," as you have pushed me to the front, I want to "raise my hau' an' tell my crack afore them a." I am in good company, but get a rap over the knuckles all the same. Perhaps I am one of the best known of American canoeists. I didn't know it. And the only significance of placing me in the trio with Dr. Neidé and H. N. Bishop is the fact that as a trio we represent the extremes of canoeing. My cruises are never long, measured by miles, but are rather beamy at times, breadth rather than length. The other two gentlemen cruise long distances by sail, in a craft not easily carried; and they seem to take pride in a cruise according to the distance gone over between two given points. My favorite cruiser weighs 10lbs. I go by the double-blade, or, in fishing and shooting, the little 6-ounce single blade, and the distance made in a three or six month's cruise does not amount to a factor with me.

But the pleasant, unfrequented, beautiful camping spots that I find, where the sneakbox and heavy canoe cannot come. The bright, unmarked streams, the cool, gurgling springs, the blessed calm of lonely places, where the bright-eyed, wary wood folk come almost to your feet as you sit quietly smoking; where the arch rascal man does not intrude; where one may camp for months without seeing a human face or hearing the buzz of civilized racket; this and these are factors that will remain photographed on memory when the hirpling step and failing arm forbid the double blade and light canoe. I am not, I never shall be, a long cruiser in any sense, unless in the matter of long time spent on short but wide cruises. I have never started out for a long cruise from one point to another without thinking of a roguish uncle, who was wont to flatter me into running around a 20 acre lot at my best speed, just to see how quick I could do it. And my long cruises always began to peter out in the first 100 miles or less, if I happened to strike a model camping spot. It took me many years to learn—but I did learn at last—this lesson: Hunt for fairy spots and bright waters. Eschew mud, marsh and saw grass.

"Seneca," "Surge" and "Jersey Blue" each and all write from different standpoints, and each speaks ably. And when the latter says, "Nessmuk" is content to cruise in the most primitive form of canoe, and has never made the least improvement in it," I agree with him cordially—as to "form of canoe." To me, my first Mic Mac birch, which I paddled forty-five years ago, was so perfect, so satisfactory in every respect, save weight, that it never entered my mind to attempt any improvement. She was a trifle heavy on me over the carries, and it sometimes occurred to me that her weight could be reduced nearly one half without impairing her ability. I made several canoes that were meant to be very light, but they were all too heavy, and I finally sent an order to a well-known builder for a cedar canoe to weigh not over 20 pounds, and as much lighter as he could make her with due regard to strength. She came to hand weighing just 17 pounds 13⅞ ounces; she was staunch and able to carry a man of 200 pounds with better trim than with my light weight. The next season I ordered another canoe to weigh as near as might be 15 pounds. She was to be six inches longer than the Nessmuk, and a greater carrying capacity. The result was the Susan Nipper, weighing just 16 pounds. And a summer's cruise in the North Woods convinced me that a 10-pound canoe could be made that would prove a comfortable cruiser for a light-weight of 115 pounds or less. This resulted in the Sairy Gamp, weighing just 10½ pounds, and which proved sufficient for my weight with 20 pounds of duffle. I cruised in her for some three months in the Northern Wilderness of New York, taking her through the Fulton Chain, Raquette Lake, Forked Lake, Long Lake, Raquette River, Spectacle Pond, etc., to Paul Smith's on the lower St. Regis, and back to the Forge House by a somewhat different route, finding her very steady and well behaved on rough water, but rather small for carrying a gun in addition to rod, blanket, knapsack and rations. I brought her home to Northern Pennsylvania, sent her to New York without protection, and then she went to her builder at Canton, who sent her to the New Orleans Exposition, and—I don't know where she is now, but the last I heard of her she was staunch and tight.

My next canoe was the Bucktail, built on dimensions that I thought nearly right for the average open cruiser, and with no special attempt at lightness, save that her weight was to fall under 25 pounds. Her ribs of white cedar only 1in. apart, her upper streaks were mahogany, and she was strongly made every way. As an open 24-pound canoe I do not see how she can be improved; and she is able and lively with a freight of 225 pounds, which trims her about right. My last canoe, the little Rushton, reached me last June, and I have come to like her best of all. I scarcely float the Bucktail once a month, finding the little one quite as steady when I am once seated, more easily propelled, and no more trouble to carry than a heavy umbrella. With her I can find a good many sunny spots that I should never see within a 35-pound canoe. And though she is a little skittish under a heavily loaded 12 bore, I have managed to scuffle along with her for the last four months with only one ducking. Too small for outside cruising, though I have cruised her scores of miles inside the keys, and have also tried her up the open coast as far as the mouth of the Cootie. But it was exhausting to watch every wave and lift her over with the broad blade just in the nick of time, let alone that I got washed and driven ashore in a stiff breeze. In cruising on the Gulf coast I judge the Barnegat cruiser to be the boat.

And I protest against calling McGregor or any modern man the father of canoeing. Mr. Lo of the birch or Nitchika of the kyak would have a fairer claim to that title. But they are too recent. If I knew the fellow who, with stone axe and the aid of fire, fashioned the first respectable dug-out, I could go near to name the "Father of canoeing." As for the double blade, I believe that to be pre-historic.

On reflection, I am disposed to amend my plea.

If I have done something to demonstrate that the open cruising canoe can be reduced from one-third to one-half in weight and yet retain all needful capacity for the average canoeist, it is an improvement, and in the right direction. It will aid many a genuine lover of nature and true canoeist in visiting unnoted and interesting spots where a heavy canoe would hardly go. And are there not scores of canoeists who are only prevented from seeking these lonely, unnoted grounds by the weight of their canoes?

Ten miles southeast from this place is the new town of Keystone, containing, in a square of six miles, some eighty lakes, by actual survey. Some of these are small and the largest is only four miles long, but they abound in trout, black bass, bream, goggle-eyed perch and other fresh-water fish, while the surrounding forest affords excellent shooting. Many of these lakes are connected by inlets and outlets, navigable for small boats, and the waters are described as wonderfully clear, with mostly high, dry, sandy banks. The canoe of the white man has never floated on these lakes, and a sailing canoe would hardly be available there. But a light open canoe would find plenty of work for an entire season in exploring a score of them, and would not such a cruise be far more interesting than thousands of miles hurried over along the hackneyed highways of commerce? I hope to try it before many days.

I have no claim to be ranked among the three best known canoeists of the land. Perhaps, in the large army of American canoeists, I may be accorded honorable place on the left flank of the rear rank, as one who for more than fifty years remained stubbornly loyal to the light open canoe and double blade.

NESSMUK.

OAK AND PINE CAMP, Oct. 29.

TWO AMATEUR CANOES.

A STRAY Racine catalogue decided me in favor of a modern cruising canoe, but as the beauty and convenience of the Racine canoes (and, as I afterward found, of almost all good canoes) were only equalled by the altitude of the prices asked for them, the canoe project seemed hopeless until I finally hit upon the idea of building my own canoes, which I finally did from plans by Mr. Stephens, modified somewhat with a view to the work required of them, and very satisfactory canoes they proved to be, answering the purpose admirably.

As our outfit was unusually complete and satisfactory, perhaps an extended description of it might be of interest. The Belle was the Frankie of last year's Shenandoah experience, a canvas canoe rebuilt and improved. Her dimensions are: Length, 14ft.; beam, 30in.; and she has an unusually broad, flat floor, her midship section being quite like that of the Herald canoe. She is, in consequence, remarkably stiff, but paddles a little heavy. Her well is octagonal in shape, 8ft. long and 20in. wide, tapering at each end to 14in., and fitted by hatches at each end to a length of 4ft. She was thus built at D.'s request with a view to his utilizing her for future boating purposes in company with his best girl, and, as subsequent experience proved, "carried double" very nicely and safely.

The Frankie is 14ft. long, breadth 26in., and her model is quite like the plans as prepared by Mr. Stephens, except that she is 9in. deep (as is the Belle also) at the gunwale, and 12in. deep in the middle, and has more sheer. The well is square, 4ft. long, and 18in. wide, the covering to the well is made of two hatches, as illustrated in the *Canoeist* for May, 1883, in the article on hatches, by Mr. Tredwen, differing from his in being covered with heavy muslin oiled and painted, instead of cedar, and fastening to the front of coaming by leather straps buttoning over large round-headed screws, instead of iron hinges. The muslin, after covering both pieces of the hatch, continuing aft far enough to cover the entire well, and tuck up under the waist of the crew, and I do not believe it possible to get up a simpler, better or more perfect hatch or apron for well covering.

The Belle was, of course, similarly supplied, her apron differing a little in construction so as to fit the hatches over her tapering ends. The motive power of the Belle was the same 7ft. paddle. I paid thirty cents for a North River last year, finished up a little neater and finer, while the Frankie was driven by a magnificent 9ft. paddle, which I took the earliest opportunity of exchanging with the captain of the Belle for his smaller and lighter 7ft., which answered my purpose much better. Both boats carried a lateen dandy sail, which, when a sail could be used, was stepped forward in place of a mamsail. As might be expected in inland cruising, we had very little use for them during the trip, and, when used, they answered our purpose as well as a larger sail, and possessed the advantage at all other times of taking up much less room than a mainsail, they were buttoned alongside the well just above the gunwale on deck with light leather straps.

The Frankie carried a light and pretty little Mohican tent, while the Belle carried the larger tent used by me last year, and illustrated in the *Canoeist* for April, 1885. In the absence of masts the Frankie tent was supported the same as was the Belle's, on notched standards which rested on each side of the gunwale, forward and aft of the well and outside the tent (the Belle's standards being inside). An exceedingly handy feature of the Belle's tent was the fact that it could be readily converted into an ordinary wall tent by means of a couple of light bamboo tent poles, 6½ft. long, on which it was erected on the ground instead of over the boat. When thus erected it stood 3ft. off the ground all around at the bottom; a strip of tenting 3ft. wide was then buttoned all around inside the lower edges of the tent by means of a simple system of loops and buttons, thus forming a wall which, after being fastened to stakes at the corners, gave us a snug, tight little wall tent *ad lib.*, standing 6½ft. high at ridge pole, 5ft. deep from front to back, and 7ft. long. We used this tent in this shape when the ground permitted it; on other occasions we slept in the boats. A grub box, 12×17in., containing tin cans for various provisions, as well as canisters of coffee, tea, salt, pepper, etc., and plenty of room for our knives, forks, spoons, etc.; a dozen muslin sacks of various size for potatoes, onions, eggs and other sundries; a sheet iron camp stove, the usual supply of tinware and cooking utensils; tools, such as saw, hatchet, nails, screws, etc., completed our outfit, not forgetting to mention a plentiful supply of blankets and rubber sheets. Also large rubber navy bag for clothing, etc.

FLORIDA CANOE HEADQUARTERS.

Editor Forest and Stream:

The fleet of canoes and other small cruising boats from the North in Florida waters this winter is going to be larger than ever before. What an interesting rendezvous it would be if there could be a general gathering of them sometime in the course of the winter on some salt water cruising ground chosen with a view to the convenience of the greatest number—say somewhere on the Halifax or Indian rivers. There need be no organization nor anything to beget expense, but merely a sort of swarming of the mosquito fleet as though brought together by converging winds and tides. There have already arrived in Florida several men whose names are widely known through their devotion to this sort of recreation, and to them I commend this suggestion.

I have been knocking around on the St. Johns and its tributaries for more than a year in a 15½ feet sharpie, and if I haven't become an old salt I can modestly claim to be at least an old syrup—or there is no virtue in the characteristic color of these waters. My sharpie has been to me all that a ship could have been, and I have cruised in her when the weather has been so hot I couldn't hold my hand on the deck outside the awning, and when it has been so cold I had to anchor and turn in to keep warm. A rendezvous on the Indian River or the Halifax would be rather out of the way for those of us on the St. Johns, but I for one would be there even if I had to sail the sharpie across country some morning on a heavy dew. Yours, afloat,

WAIF.

GREEN COVE SPRINGS, Fla., Nov. 23.

BRITISH CANOEING.

FOR a long time past the state of canoeing in England has been far from encouraging, and not what might be expected in the birth place of the sport. With one large and powerful club to advance its interests, besides smaller ones in various places, it has gradually dwindled down to a few sailing and paddling races between half a dozen men, while cruising has seen lost sight of entirely as a club feature.

The smaller clubs and some individuals still keep the sport alive outside of London, but it has made no progress for some years, in fact, has retrograded. Races and entries are few, cruising is neglected, little is said about canoeing, and the sport is really in a deplorable condition. One reason of this seems to be that under the present rules a class of canoes has been developed that are costly, cumbersome, unfitted for cruising, and only suitable for racing, while the races are virtually limited to a few who have time and money to perfect these boats. The country clubs have various rules and do nots of more or less merit, but there is a total lack of unity and concerted action among them that hinders the growth of the sport. The progress made in America shows what these may accomplish; and what is possible here, with a sport that was little known but unpopular at one time, shows what similar means might effect in a country where outdoor, and especially aquatic sports, have always been held in high estimation and where the sport originated and was once firmly established.

Complaints have been heard lately from many of the condition of British canoeing and its remedy, and it has been proposed to form an association similar to the A. C. A. What is needed is a general revival, which can best be effected, as our experience has proved, by concerted action on the part of all clubs and individuals, in the holding of a meet at which an association can be formed and common rules adopted. Such a meet would bring together men from different localities, it would give an opportunity for trials of their boats, and it would arouse a spirit of competition which now seems wholly lacking. A healthy spirit of rivalry, not merely between club members but between the various clubs, has proved here a most important factor in the improvement of boats and rigs, and also of skill in handling; but this feature is entirely absent from English canoeing.

Another important point is the alteration of the rules, not merely to allow but to actively encourage a more popular class than the first-class R. C. C. canoes; one that will be open to the average canoeist and not merely to the finished expert. A step in this direction will soon be made by a proposal to adopt the rules of the A. C. A. that will be presented at the general meeting of the R. C. C., together with restrictions on sails, boards and fittings. Curiously enough our rules were taken directly from the Royal C. C.; but the friction of hard racing for five seasons has eliminated many of the objectionable points and introduced others, favoring the lighter boats. We hope this year that the energies of British canoeists will be concentrated on a visit to our camp and that what they see there will aid and encourage them in the formation of a similar association that will once more put canoeing on a proper footing in the waters where it first found birth.

A BOAT CRUISE DOWN THE ST. LAWRENCE.

FRIDAY, Aug. 7. Got under way about 11 o'clock with a very light south wind, and arrived at Phœnix at 4 P. M. Here we had to change river for canal, and did not arrive at Oswego until 5 A. M., Aug. 8.

Aug. 8. After a good breakfast we started out across the lake with a light N.E. wind which soon swung around to the north, and at last died away and we had to pull to the nearest shore, which was near Port Ontario.

Aug. 9. After a hasty breakfast we started off with a good wind from the S.S.W. At the Sackett's Harbor Light, all the inhabitants turned out, and handkerchiefs were waved; then we surveyed each other with our glasses, waved adieu and went on to Cape Vincent, where we arrived about 4 P. M., in the middle of a good shower. After trying in vain to send a telegram home of our safe arrival, we struck out again and made camp on the island that lies close to the shore just beyond Carleton Island.

Aug. 10. Visited Clayton, Round Island, Thousand Island Park, cruised around the islands in Alexandria Bay and camped on Hill Island, just at the entrance of the Lake of the Isles. Here we had our first and last experience with mosquitoes, who seemed to be worse in a thick smudge than out of it.

Aug. 11. Spent all the forenoon with Prof. North, at Westminster Park, and about 2 o'clock started on the north of Grenadier Island, and camped off Chippawa Point.

Aug. 12. Got a good start at 7 A. M., and after a splendid two hours' run with a west wind arrived at Brockville. We stopped here and wandered around the town which impressed us as being the finest place which we saw. Especially noticeable were the jewelry stores and stores for the sale of the images, etc., for the use of Catholic churches. Made sail again at 11 A. M. and 6 o'clock found us in Ogdensburgh. Here we replenished our stock of provisions and struck camp on an island about half a mile down the river.

Aug. 13 was a day which we will not be liable to forget, as the one of our first experience in running rapids. We left camp about 6:30 and after an hour's run struck our first rapid. After landing and looking them over we concluded to try them. Our feelings and caution at these rapids was amusing. When we saw how easy it was we did not stop at the others but went right ahead. Fortunately we took the raft channel at the Long Sault and got through them with only half a boatful of water. Arrived at Cornwall we were informed that we were the second boating party which had run the rapids successfully this season, and that the best riverman in that section had been drowned in trying it. If any one of the readers of FOREST AND STREAM can beat our record of running the Long Sault in a 15ft. open boat, I should be glad to hear from them.

We had had enough of rapid running for one day, and took the steamer Algerian for Montreal, where we arrived at 9 A. M. the following morning, the steamer being obliged to lay at Coteau all night on account of the darkness. After staying in Montreal about five hours we again set sail, and for that afternoon and nearly all the next day cruised through the most uninviting country imaginable. A continuous flat country, with its one-story houses and thatched-roofed barns, and when we reached Sorel we were, to say the least, glad. But we were not yet out of French land, nor did we get away from it until we reached the border, and never did "My Country" ring with more fervor than when we entered Lake Champlain at Rouse's Point.

Our cruise on this lake was the most pleasant of all. Good camping places are in abundance and the scenery is grand. But everything must have an end, even a cruise, and on Monday, Aug. 24, we were obliged to ship for home from Fort Ticonderaga, our time being up, and hoping at some future time we might be able to complete our cruise, going through Lake George and down the upper Hudson.

JUANITA.

THE A. C. A. CUP.—Subscriptions of $1 each may be sent to Mr Wm. Whitlock, 37 and 39 West Twenty-second street, New York, chairman of the committee.

CANOEING IN FLORIDA.—Boating and canoeing have both increased greatly in Florida within a few years past as so many sportsmen, yachtsmen, canoeists and tourists make their winter headquarters there. Most of the boats used are built in the North, especially the finer grade, and the trade has now grown to such an extent that Mr. J. H. Rushton has established an agency in Jacksonville, where a large stock of his canoes, rowboats and fittings will be on exhibition. The agency will be in charge of Dr. C. A. Neide, whose varied experience as a cruiser has well fitted him for the position. Persons going to Florida will henceforth be able to secure their outfit on the ground, and exactly fitted to their purpose.

THE ASSOCIATION PAPER.—Some very handsome stationery has lately been made up for Com. Rathbun, and at the request of some members it has been placed on sale. The design, the A. C. A. pin, is stamped in red or red and gold, on fine linen paper. The prices are as follows: Envelopes, stamped in red and gold, per 100, $1.55; note paper, single sheets, in red and gold, per 100, $1.25; note paper, double sheets, red and gold, per 100, $1.50; envelopes, stamped in red only, per 100, 75 cents; note paper, single, in red only, per 100, 50 cents; note paper, double, in red only, per 100, 65 cents. Orders may be sent to the editor of the *American Canoeist*, No. 5 Union Square, New York.

NEW YORK C. C.—This year the New York C. C. will return to their first home and will dine at the Hotel Hungaria, on Union Square, on Dec. 12. All the early dinners of the club were held at the Hotel Hungaria, the little back room of which is memorized in Canoeing in Kanukia. It is expected that many of the older members of the club will be present.

KNICKERBOCKER C. C.—The annual dinner of the Knickerbocker C. C. will take place at Morello's, No. 4 West Twenty-ninth street, on Dec. 16.

Yachting.

Address all communications to the Forest and Stream Publishing Co.

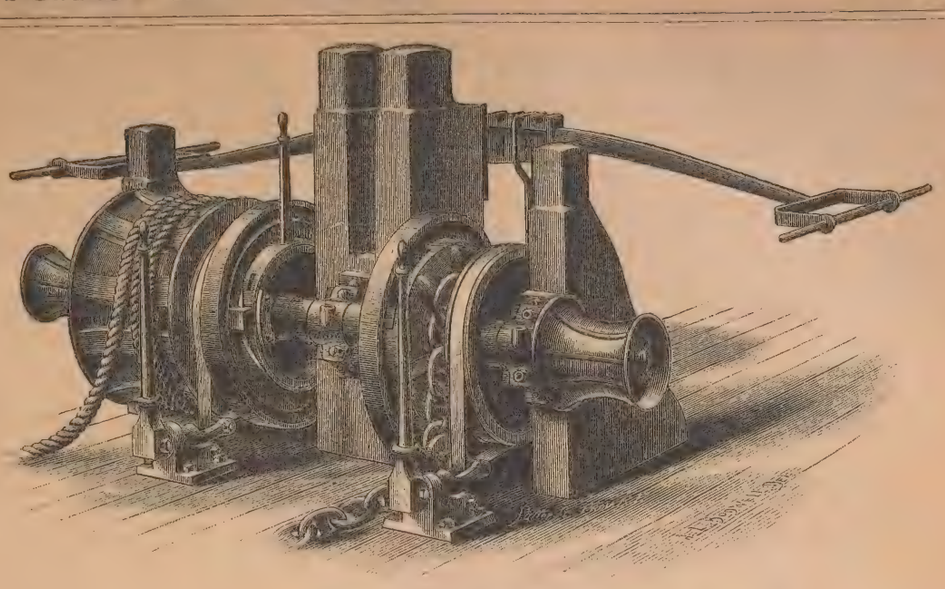
PURITAN VS. ARROW AND POCAHONTAS.

Editor Forest and Stream:

Now that the excitement over the trial and Cup races has somewhat passed away, and the jubilation over and laudation of the performances of Puritan have quieted down somewhat, and people can look on those races with cooler heads and better judgment, it is well to look back of these and see and study what has gone before, so that we may be able to discover whether any real progress has been made, in the way of speed, in the new sloops Puritan and Priscilla. The question then arises—are they really faster than anything that has gone before them? To judge from the public prints and individual opinions, it is quite certain that the masses take it for granted that they are, simply because they do not know what has been done before, or have failed to keep in mind the performances of former boats. Without doubt they are faster running with wind free, because of their greater size. They are so much larger than any sloop that has been built before them, save the old Maria. But in windward work, my answer to the above query is, emphatically, no. They are not near so fast to windward as some smaller boats that have been built before them. In a blow they might overpower the smaller boats, but in any such wind as the second and third trial races were made in they would have been easily beaten to windward by either Arrow or Pocahontas, as they were rigged when first turned out, and before they were crippled by being cut down and altered.

Neither is it far to go to find the proof of what I say. No one can know more of this matter than myself, because I was either in or close by the Arrow and Pocahontas in all the races they ever had, save one of the Arrow, and know whereof I speak. Now the way I get at it is just this: Gracie was in the three trial races with Puritan, Priscilla and Bedouin. Arrow sailed six or seven races with Gracie, from or in New York Harbor, and Pocahontas sailed one. Now by comparing the speed per hour to windward between Puritan and Gracie, Arrow and Gracie, and Pocahontas and Gracie, it will be seen that Arrow beat Gracie double or more than Puritan did, and that Pocahontas did the same in the one little brush she had with Gracie when they could sail on anything like even terms. In the first of the trial races the wind blew so strong that the yachts housed their topmasts, one side of the triangle being windward work. Although blowing so strong, it will be seen that Puritan beat Gracie but little over ten minutes per hour's sailing. Now take the second one of the trial races. The second side of the triangle was to windward, and by looking as before at the time of Puritan and Gracie, it will be seen that Puritan beat Gracie but a trifle over four minutes per hour. Now take the third one of the trial races. From the start to see Southwest Spit the wind was partially ahead, mostly on starboard tack, with a few minutes on port tack. In this run, according to the record, Puritan beat Gracie 6 minutes and 44 seconds, or about 5 minutes and 52 seconds per hour, that is supposing the two started together, which they did not do, for Puritan started ahead, but how much FOREST AND STREAM record does not show. Then on the run in during the same race, from Lightship to Spit buoy, the wind was partially ahead, mostly on port tack, with a short starboard tack. In this run Puritan beat Gracie but a little over two minutes per hour.

Now let us compare this record with that of the Arrow. We will take but two of her races, her other races about New York harbor being but a counterpart of these. First we will take the race of June 8, 1876. I made an effort to get the official figures of this race from the records of the New York Y. C., but failed to do so. In consequence I shall have to trust to memory, but cannot remember the elapsed time over any of the courses. In this race Arrow was the last to start, just saving herself from being handicapped. Fourteen yachts started ahead of Arrow, and one, the Palmer, even with her, yet she rounded Southwest Spit first boat, lightship third, and finished fourth, and all the way free wind for Arrow, but for none of the rest. Gracie started 6½min. ahead of Arrow, but Arrow rounded the Spit buoy 1min. ahead of her, beating her 7½min. in this run. The run must have been made by Arrow in but little if any over an hour, as the wind was very fresh, and Arrow made it in one straight run, save a tack to the westward of about a couple of hundred feet, to get out from under a schooner that had gone about on her. It may be proper here to speak of Arrow's performances with the schooners in that race, as so much has been said of Puritan beating the schooners. In the *Herald*, a short time ago, Idler's time in that race was given as nearly or quite the quickest time ever made over the course. It could not have been very much quicker than Arrow's. I think there were but three schooners in ahead of Arrow—Palmer, Idler and another one. Palmer, as I said above, started side by side with Arrow, and only got in 6½min. ahead of her. In most of the races sailed by Arrow she came in ahead of all schooners as well as sloops. All this Arrow did without the advantage of lead ballast. Gracie stuck her nose outside the Hook, then turned tail and came back. Some idea of the strength of the wind in this race may be had when three of the largest schooners became crippled, Madeline breaking off her mainmast head, Alarm carrying away foretopmast, Tidal Wave carrying away flying jibboom, etc. It is of the greatest importance that the wind was so fresh in this race, because those schooners were two or three times the size of the Arrow, and it shows what she could do with them in a blow.



The other race between Arrow and Gracie that I shall speak of, is the centennial race to Cape May Lightship and back, in 1876. In this race the wind was dead ahead all the way to Cape May, and gave an excellent chance for Arrow to show her speed to windward. In this race Grace started 7½min. ahead, between 2 and 3 o'clock in the afternoon, and Arrow passed her in 50min., which is 9min. per hour. This she did with her board partly up, as we were making some experiments with it. After passing Gracie we let Arrow go, and before night Gracie was out of sight to leeward, with glasses. Being out of sight of Gracie and her lights, we could not know where she was, so as to keep to windward of her. This induced us to hug the beach in short stretches all night, hoping for the best. But at half-past 5 next morning we sighted Gracie just abreast of us, we judged, and some five miles off shore, she having got some favorable wind off there which enabled her to get even with Arrow during the night. Here, then, we started even, and at 12 o'clock Arrow rounded the Lightship. At 2:12 o'clock Gracie had not yet rounded the Lightship, when we lost sight of her. Here, then, Arrow beat Gracie 2hrs. 12mins. (and how much more we do not know) in 6½ hours' sailing, which is beating her more than 20min. per hour. Taking the records of the second and third of the trial races and the two races mentioned between Arrow and Gracie, the figures show that the most that Puritan beat Gracie was about 5min. per hour, while the least she beat her was but a trifle over 2min. per hour; while Arrow's record shows that the least she beat Gracie was not less than 7½min. per hour, while the most she beat her was over 20min. per hour. Even in a blow and in a hard sea, as in the first trial race, Puritan beat Gracie but little over 10min. per hour.

Pocahontas and Gracie had but a short run together when on anything like even terms, and that was from the start at Stapleton to about half way to Southwest Spit. Both had carried away their topmasts, but Gracie rigged a jury topmast and got her topsail up when about half way to spit buoy, while Pocahontas could not set one. Pocohontas was just making her course, but Gracie was not, when just here the wind shifted more to westward, making both start sheet. Pocahontas had outfooted and outwinded Gracie a long distance, but this shift of wind made her lose all she had made to windward of Gracie, and had left only what she had outfooted her. Yet she rounded Spit buoy 7½ minutes ahead of Gracie, all made while the wind was ahead, and in going half way to Spit buoy with one straight run. Pocahontas did not appear to beat Gracie any after she had got her topsail set, as Pocahontas had none.

Now, as Puritan is about twice the size of Arrow, it is difficult to see where the improvement in speed in Puritan comes in. From the above record it is certain that Puritan would stand no chance with a boat of her own size embodying the principles combined in the model, rig, etc., of Arrow and Pocahontas, and great improvement might be made in the speed of even these, as some things were defective, particularly that of ballasting. D. KIRBY.

RYE, N. Y., Nov. 20, 1885.

[It is too late, at this date, to prove anything by the performance nine years since of a boat that has been so altered and improved as Gracie has been in that time. What Arrow could do with Gracie as she was in 1876, with 65ft. waterline, no lead ballast and a different model, has nothing to do with Gracie after two alterations to her hull, making her 71 feet long, the addition of lead ballast, and a better suit of canvas than she has had in a long time, with many minor improvements. Gracie has sailed better this year than she has for two seasons, if not better than ever before, and she has been well handled in the trial races. In spite of it all, in the only real windward work, in a good breeze in which topmasts were lowered on the latter part, she was badly beaten by Bedouin, and Puritan came in 45 minutes ahead at the end—not of the race, but of the windward leg of twenty miles. There was a little sea, but not enough to overpower the two smaller boats. The first race was not triangular as Mr. Kirby states, but the second was, the second leg, 13½ miles, being to windward. As there was no wind on this leg, and the boats almost drifted around, taking 3½ hours to cover 13 miles, it is a waste of time to argue from the times. The third race was little better, as the windward work amounted to little in distance, and still less in reality, in consequence of the light wind. If the Genesta of 1885 were the same as the Gracie that raced with Arrow in 1876, and if Gracie had shown the equality with Puritan which our correspondent claims, it might prove something, but the Gracie of to-day is not only a far bigger and better boat than the Gracie that raced with Arrow, but her whole performance this season with the two new boats, to say nothing of Genesta, show that she is far behind her time allowance in racing with them, and it will require a great amount of figuring to convince yachtsmen that either Arrow or Pocahontas can sail with Puritan.]

AN IMPROVED WINDLASS.

AN IMPROVED WINDLASS FOR FISHERMEN.

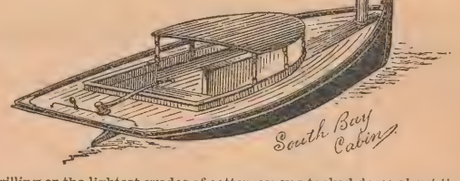
UP to 1856 the mercantile marine of this country handled their chains with a wooden windlass with three turns around it, operated by a beam. The chain had to be overhauled forward of the windlass before making port, and where the range was uncertain or unknown a vessel was liable to go ashore before the matter could be rectified. Wooden pumps were in use and a modern steering wheel was a novelty. In 1856 James Emerson brought out his iron windlass, which revolutionized the old method. A vessel could anchor with any range, with one or both anchors, without previous arrangement, and one or both anchors could be taken at once. Mr. Joseph P. Manton has since brought out many real improvements in this line, such as iron side bitts, improved deck pipes, pump brake windlasses, locking gear, taking anchor by direct steam windlasses, also from donkey, etc., etc.

To meet the requirements of the fishing fleet a windlass has been designed expressly for them which is stronger than any wooden windlass, and the anchor can be taken in one-half the time. The drum for the rope cable, and wildcat for the chain, are independent of each other. As the drum revolves and is easily controlled by a friction band, the cable will last much longer. In anchoring with the chain, it is only required to shackle the chain to the anchor, and the whole range is under control.

Some of the advantages that the new windlass possesses are, that it can be unlocked when under strain, its operation is entirely noiseless, there being no pawls; it is light, but strong, and has a large range from speed to power, the change being quickly made.

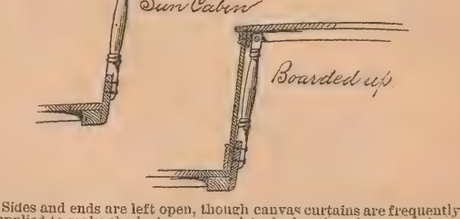
By its use the life of cables is largely increased, a saving of some moment when their cost is considered. Special forms are made for steam or for using soft cored wire rope.

SEAWANHAKA CORINTHIAN Y. C.—The fifth and last annual meeting of the Seawanhaka Corinthian Y. C. was held on Monday night, at Delmonico's, with Com. Rogers in the chair. After the minutes of the previous meeting were read and approved the board of trustees made their report, after which the secretary read a letter to the club announcing the death of Mr. S. Nelson White, one of the oldest and most popular members. On motion of Mr. Lee it was resolved that the commodore appoint a committee to prepare and present to the family of Mr. White resolutions of condolence; and it was also resolved that on Decoration Day next the flags of the fleet and club house be half masted. A letter from Mr. J. Beavor-Webb, in behalf of Sir Richard Sutton, thanking the club for their hospitality, was then read. The secretary also read the resignations of Messrs. F. W. Adee, R. T. Farnham, and Samuel Roosevelt, and also a letter from Mr. Charles H. Leland acknowledging the resolution of thanks from the club for his gift of the Venture. The question of raising the dues of the club from $15 to $20 per year was then discussed informally. The finances of the club are now in a prosperous condition; but it is desired to extend the facilities of the club, to hold more races and increase the number of prizes, for which purposes an increased income is required. Notice was given that an amendment to this effect would be introduced at the January meeting. Messrs. Lee, Cornell, Eidlitz and d'Oremieulx were appointed a committee under Mr. Lee's motion previously passed, after which the meeting adjourned. Since the last meeting the following members have been elected by the Board of Trustees: Messrs. Wm. Gardner, Wyllys Hodges, W. H. Motley, Wm. Caldwell, J. Leslie Cotton and Percy R. Pyne, Jr.



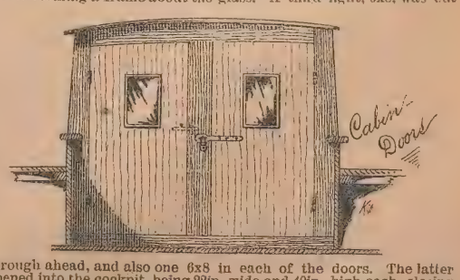
A NEW YACHT CLUB.—On Nov. 25 a new yacht club was organized in Syracuse, N. Y., under the name of the Onondaga Y. C. The officers elected were: Commodore, John W. Truesdell; Vice-Commodore, Wm. Wescott; Captain of fleet, Frank L. Stevens; Secretary, John C. Klube; Treasurer, Chas. N. Brown; Measurer, Norman S. Holroyd; Executive Committee, Otto F. Klube, Chas. D. Dibble, Calvin J. West; Regatta Committee, Joseph Mantz, Wm. Hopstein, Chas. Yorkey. The rules of the Oswego Y. C. were adopted. The club starts with nearly twenty-five members and several boats, among them being the Wyshoon, 12 tons; Diaka, 6 tons; Maud, 3 tons; Silver Star, 3 tons, and Mistletoe, the latter a yacht built from the lines of the Mignonette, as published in the FOREST AND STREAM. She has 2,125 pounds of lead on her keel, and is cutter rigged. The club promises to have a large membership shortly, as there is quite a lively interest in yachting about Onondaga Lake.

CRUISE OF THE COOT.



II.

AS the happy possessor of a boat, troubles immediately began. No end of work stared me in the face. The Coot, as she was, represented only the raw material, which called for thorough renovation, sundry primary improvements, and a complete outfit for life on board and her proper navigation. With the demands of a prolonged voyage I was luckily familiar, and therefore enabled to prepare a detailed list of work and supplies in advance down to the smallest article. So well did this list cover the needs of boat and crew that upon departing scarce an item was found lacking.

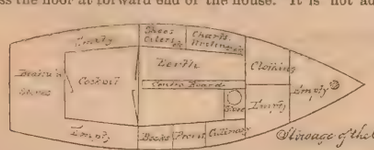


The yacht was hauled alongside the fine boat landing of the Knickerbocker Y. C., whose headquarters are at Port Morris, just above the swirling tides of Hell Gate. An arrangement was made with Mr. John Coughtry, the local builder, to cover in the forward half of the cockpit with a cabin of such height as to secure the most headroom below without interfering with the free travel of the boom as it usually swung. To this end the "roof" and supporting columns of the South Bay summer cabin were utilized. It is customary on catboats hailing from the south side of Long Island to supplant a regular cabin with a temporary shifting contrivance known as a sun cabin. It is composed of a light top to match the shape of the forward portion of the cockpit, and supported at the desired height by three turned standards a side, and one forward amidships. The top is usually put together of ½in. matched pine, and covered with stout

drilling or the lightest grades of cotton canvas tacked down about the edges, a hardwood chafing batten being nailed round for protection and finish. The canvas receives a good coat of paint, making a watertight job, unaffected by shrinkage of the wood. The columns are usually of mahogany, their squared heels being jogged and screwed on to the cockpit coaming, and their heads similarly secured to a beam underneath the top.

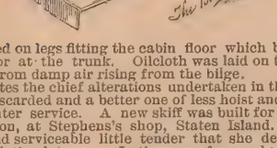
Sides and ends are left open, though canvas curtains are frequently supplied to make the inclosure complete during the night or to keep out the sun. These curtains are brailed up in short leather straps to the top when not wanted. As to length the cabin will reach to after end of centerboard trunk, the height being governed by the mainboom. In a typical boat of the kind, 22ft. long on deck, the forward end is 18in. above deck level, and the after end 26in. It was with a rig of this sort that the Coot came into my possession. To alter to a standing cabin was simple enough. Matched pine boarding 1in. thick was set up all round, outside the coaming, on the bottom and the frame band on top, being held to them by galvanized boat nails and finished off with a panel strip along the deck and roof. This strip was ⅜in. stuff, beaded and bent round the cabin in two lengths, meeting forward amidships. To facilitate bending to the quarter turns forward a few cross cuts were made half through the strips, and to meet the increased width at top a large chafing batten was substituted, after giving the roof an additional covering of canvas. To avoid soaking up a useless amount of paint this canvas was dampened with water before applying the brush, thus enabling the paint to run freely. Without this precaution double the quantity would hardly have sufficed, as it was, it required nearly a pint and a half of Pierce's marine pigment for the Coot's top, applied in cold weather. One pint might serve on a warm day. The area covered is 38 sq. ft. Lights were cut in each side of the cabin for 8x12in. double thick glass, which was held in place on the outside by rabbetted pieces forming a frame about the glass. A third light, 6x8, was cut

through ahead, and also one 6x8 in each of the doors. The latter opened into the cockpit, being 22in. wide and 40in. high each, closing on a vertical center jam, 6in. wide, run from roof to cockpit floor. There was also a sill 6in. deep. The doors were not paneled, but of



boards 1in. thick, cleated together on the interior. A bolt inside across the center jam secured the port entrance and a clasp, staple and padlock the starboard side, the fastenings being coach bolts with the nuts screwed up on the inside.

While the carpenter was busy with the foregoing, the old gravel ballast was thrown overboard, the bilges and limbers cleaned out and flushed time and again to render them wholesome. The floor boards were sent ashore and the boat towed on the beach where she was left dry at each tide. Her bottom was exceedingly foul, a mass of barnacles and grass which must have impeded speed and maneuvering to a marked degree. Yet every one seemed to have a good word for the Coot, until my hopes rose that in improved condition she would turn out quite a smart thing of her kind. It required three tides to scrape the growth off underneath, and a fourth to apply a good coat of copper paint. Of this just one gallon was used, laid on thin with a large brush. In an hour the dressing was dry, and with the next flood the Coot was again floated and towed out to Rex's buoy, which was kindly placed at my disposal by the club's measurer, Mr. E. P. Mowton, who also tendered me the use of his skiff during my stay. While on the beach the yacht had to be blocked up clear to reach her keel. This was accomplished by first sliding a board under her fore foot for a sure basis in the soft mud. Then a block and long balk were brought into requisition as a pry and lever, by means of which one



hand lifted the bow while a second slid a block under the keel. A fresh nip was taken with the pry and another lift permitted a second block to be shoved in on top of the first. The operation was repeated under the stern. At every tide these rests would float out from underneath and the process had to be gone through anew, as the club's marine railway was being repaired at the time. After one side had been scraped the peak halliards from the masthead were taken out to a large sloop near by, and the Coot was hove over on the other bilge, being eased down with care on a plank laid fore and aft on the mud for the purpose. Painting was next in order. A hasty coat was laid on, the finishing touches being reserved for Southern latitudes. For interior of house and centerboard trunk and exterior of house, the ground coat took a little over one quart of white, the cockpit one pint, the deck one quart and for the sides a pint and a half of black.

The interior stowage of the Coot was one of her strong points. If she lacked in other respects no one could find fault with her room for cramming away all the paraphernalia and stores of a long voyage. All the space forward of the cabin was lightly floored over, and a board 8in. deep, run across just forward of the centerboard, turned the whole bow into a shelf-like locker. In this were stowed a portmanteau containing long togs and fixings for shore use, and also a waterproof canvas bag holding spare underclothing and a suit of "store clothes." Besides the market basket, a roll of oilcloth and a rubber haversack with sea clothing were packed in the same place. Then there was still any quantity of room left. In the wings of the boat, that is along the sides under the deck, 30in. out from the centerboard trunk, a board 10in. deep was run fore and aft each side, turning the wings into long, gutter-like receptacles. On starboard side the forward portion was devoted to cooking utensils, the center to canned goods and provisions which would not spoil, while books and papers were packed aft, the division being made by wooden partitions. On port side the forward half was given up to charts, drawing and writing materials, and the after half reserved for shoes, oil skins and general use. In the stern a large locker was reached by a door in the cockpit. Here the boatswain had his department. Tools, paints, gear, swabs and kerosene, with scores of minor articles, found plenty of space and to spare. This left the wings in the cockpit empty, to be drawn upon as the future might advise. As it was the lockers were only half filled. Bread, spices and perishable goods were stored in two tin cake boxes, 18x12in., kept on the cabin floor near the galley. For cooking I obtained an oil stove with cast iron bottom, and three wicks 6in. broad. This was set upon a low shelf across the floor at forward end of the house. It is not advisable to

have wicks broader than 3½in., as they are under better control than long ones in turning up or down, and an even flame is assured. In place of trimming the broad wicks, they should be allowed to burn to a crisp, which can then be scratched off even with the top of the burner. There was some trouble before my stove was in good order. The slot for filling was covered with an iron flap, working horizontally on a pin, and as the oil sloshed about it would escape through the cracks. A thin piece of rubber introduced underneath the flap made a tight joint.

For a berth the space on port side between trunk and wing locker was utilized. The berth consisted of a platform 6ft. 6in. long and 23in. wide, being hinged along the center to admit of folding. The

platform rested on legs fitting the cabin floor which brought it 12in. above the floor at the trunk. Oilcloth was laid on top to preserve the mattress from damp air rising from the bilge.

This completes the chief alterations undertaken in the Coot. Her old sail was discarded and a better one of less hoist and boom substituted for winter service. A new skiff was built for me by Mr. McWhirter and son, at Stephens's shop, Staten Island. This proved such a nice and serviceable little tender that she deserves a more detailed description later on. In the way of ground tackle the Coot had a 25-pound anchor of the usual pattern, with 20 fathoms ¾-inch manilla line, and a Chester folding anchor of 30 pounds, with 25 fathoms ⅝-inch manilla; also, a small "sand anchor" of 10 pounds to serve as a kedge. Iron pig weighing 650 pounds had been stowed over, the frame heels in place of the gravel removed. By the time the Coot was ready to sail she was a very different boat than when I first set foot on board. From an empty hull she had been transformed into a yacht, as far as opportunities permitted.

Much interest was manifested in the Coot's proposed voyage, and her skipper was favored with many kind words and actions from friends and strangers. Fitting out was much facilitated by the free use of the club conveniences at Port Morris, for which thanks are due from the chronicler of this log. One gentleman presented an oilskin coat, another a pair of gloves. Some brother sailors transferred me a portion of their iron ballast, another contributed a bunch of cigars, and binoculars, fishing gear and the folding anchor were likewise proffered from willing sources. From Mr. Morton Toulmin, of Washington, I received a handy little bow-pen and dividers.

Constant travel up and down the Elevated Railroad was a serious loss of time. A better plan would have been to collect all the outfit at one spot and ship it up to the yacht in a single lot. As it was, two weeks were consumed in getting everything on board. Day after day I might have been seen in the capacity of a pack mule, climbing the stairways which lead into the maw of the ticket vendor at the City Hall station. The frequent apparition of a conglomeration of bundles and packages with a pair of legs sticking out beneath and a hat bobbing over the top of the pile, did not fail to attract the eagle eye of the official Cerberus who guards the approaches to the platform. No doubt owing to my utter unapproachableness behind the bulwarks in paper wrappings must be ascribed the indulgence granted by the functionary in blue and brass buttons. Once he eyed me askance and "sized up" what little there was to be seen of perambulating humanity inside the bundles. But he gave up the task as hopeless, so I slipped through the portals while Cerberus turned all his official fire upon an old woman with a market basket from which garlic and sausages protruded. On the platform conductors and brakemen soon learned to receive me with a "here-he-comes-again" air, stepping briskly aside to give the oscillating mass enough sea room.

Provisions were left to the last moment. They comprised an assortment of canned meats, vegetables and preserves, with butter, coffee, sugar and spices; also a tin of pilot bread, "mild cure" smoked beef, almost equal to fresh beef, and of which you do not tire. Water was taken along in a ten-gallon breaker, and kerosene in a gallon can. The Coot's outfit in detail may follow here with propriety, the cost of many articles being mentioned as information to others who may contemplate cruising in a small boat:

To cover in the cabin called for an outlay of $18, including new canvas on top. Lights for same 50 cents; hinges, lock and fastenings $1.30. Paints averaged 65 cents per quart and brushes 50 cents each.

1. SHORE CLOTHING AND TOILET.

Suit of clothes.	Thin socks.
Pair of shoes.	Underclothing.
Felt hat.	White shirts.
Neckties.	Collars.
Umbrella.	Cuffs.
Gloves.	Handkerchiefs.
Soap.	Collar and cuff buttons.
Shaving soap.	Tooth powder.
Razor.	Towels.
Razor strop.	Scissors.
Shaving brush.	Needles and silk.
Looking glass.	Buttons, etc.
Blacking brush.	Pins.
Hair brush.	Whisp broom.
Tooth brush.	

2. YACHTING TOGS.

Two pair pantaloons.	Rubber sea boots.
Two jerseys.	Insoles for same.
Two neckerchiefs.	Oilskin coat.
Buckskin gloves.	Southwester.
Pea jacket.	Rubber gauntlets.
Canvas shoes.	Suit overalls.
Leather slippers.	Woollen drawers.
Leggings.	Woollen undershirts.
Worsted cap.	Thick socks.
Cloth cap.	Cheap handkerchiefs.
Old vest.	Jack-knife.

As it is next to impossible to keep a small boat dry inside, such articles as would be damaged by water were enveloped in pliable oilcloth, such as is used to cover tables in cheap dining houses. The charts were cut up into sections and the one in use inserted for the time being in a common glass-covered picture frame. This enabled it to be set up in the cockpit and preserved it from the wet. Presumably weapons of some sort are not out of place aboard a small yacht. But the crew of the Coot had taken chances all the world over—in the pathless heart of South America's primeval forests, in the by-ways of Honduras, among the Rockies of the West and the "back counties" of the Alleghany Mountains. The crew had been a hostage among untamed Indian tribes, had "slummed it" in London, Paris, Berlin and the Bowery—and never yet required a more dangerous weapon than his physiognomy, which has hitherto sufficed to make the evilly-disposed quail.

THE LAUNCH OF THE EUREKA.—The mystery surrounding the curious vessel that has been on the keel blocks all summer at Poillon's yard is now dispelled, as the nature of her propelling mechanism is generally understood. The power developed is in the form of a gas which explodes in a cylinder opening through the bottom of the boat, the force of the explosion acting directly on the water without, to drive the boat forward or astern. The cylinder or rather globe, of steel is placed well aft, at the commencement of the run, and below it are four rectangular ports—two opening forward, one on each side of the keel, and two opening aft. Each of these may be opened or closed at will. Beside the steel globe there is a small steam engine with a vertical boiler, an air condenser and a tank for petroleum, and a small dynamo. In operation the globe is filled with condensed air from the condenser, into which a spray of petroleum is injected and ignited by an electric spark, exploding with great violence against the water in the opening. With forty or more explosions per minute it is expected to drive the vessel at a very high speed. The vessel itself, which was launched on Nov. 25, is 100ft. long, 11ft. wide and 7ft. 6in. depth of hold, drawing 4ft. 6in. The new propeller was invented by John Secor, whose father, Samuel Secor, is so well known in connection with the Secor Iron Works. A company has been formed to test it and to build the new motors.

DETROIT YACHTING.—The honors in the second class have gone to the Jennie J., a keel sloop, who won the Ives cup, the Westcott cup and the champion pennant. Another prize winner has been the new third class cutter Nona, 24ft. over all, 19ft. waterline, 6ft. beam, 4ft. 3in. draft and 4½ tons displacement, with 1½ tons of iron on keel and the same amount inside. Launched this spring, she has not been beaten this season, and now holds the championship flag. Both Jennie J. and Nona were designed by Mr. E. B. Wendell, of Detroit.

THE DEATH OF MR. WHITE.—Mr. S. Nelson White, one of the oldest members of the Seawanhaka C. Y. C., died lately after an illness of two weeks, from typhoid fever. Mr. White has long been identified with the Sailing Committee of the club, and to his personal efforts much of the success of the regattas is due. Personally he was known and liked by all of his fellow members and his death will be a serious loss to the club.

GALATEA.—Lieut. Henn's cutter is now at Payne's, Southhampton, where her inside ballast has been removed. *Land and Water* says: "This vessel will undergo considerable alterations of trim, and it is believed that next year she will make a bid for the America Cup.

DISMASTING OF A SCHOONER YACHT.—On Nov. 3 the schooner Fortuna, Mr. Adrian Hope, bound from England to the Mediterranean, was dismasted in a gale off Gozo. The foremast carried away, crushing the life boat. The bowsprit was cut away and both anchors dropped. A telegram was sent to Malta and the steam cruiser Hellespout came to her aid, towing her to Malta for repairs.

STOVES FOR SMALL BOATS.—Newport News, Va., Nov. 14.—*Editor Forest and Stream:* Can you tell me what is the best stove for a 14ft. sneakbox, and where to get it? I see "Seneca" uses an oil stove, but I find it dirty.—Fred'k G. Warburton.

YACHT FOR SALE.—Yachtsmen will find on another page an advertisement of a schooner yacht for sale, suited for cruising and sporting purposes.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

S. O. G.—The lead and powder were 1 to 1 in weight.

M. L. V., Savannah, Ga.—Try the article advertised as such in this paper.

S. X., Newark.—Mr. Stoddard, of Glens Falls, N. Y., has a number of views of the last canoe meet.

G. C. E.—The pedigree of Jule is: Jule (A. 1042), by St. John (Snapshot—Belle) out of Folly (Rock—Whisper).

H. H. B.—The moment when the recoil commences coincides exactly with the moment of the initial movement of the projectile.

C. W. C.—We cannot just now refer pou to any kennel of the breed you require. The dogs are occasionally advertised in our columns.

R. W., Canton, N. Y.—It would depend on relative area and position of sails. Ordinarily a sloop would require the jib to pay her off.

H. B., Barrytown, N. Y.—For information about Florida see the Florida Annual, which we can send you (price 50 cents), or consult Dr. Henshall's "Camping and Cruising in Florida," price $1.50.

W. M. C., Corning, N. Y.—Wet the canvas and coat with boiled oil, with a little terebin dryer mixed in. When it is thoroughly dry use white lead and boiled oil paint; 10-ounce duck is heavy enough for ordinary use.

F. N., New York.—1. Having designed the boat to outside of the plank, you can "take off" the plank in your drawing and give the builder the moulded breadths to lay off from. In some cases the builder would prefer to take off the plank himself from your drawings. 2. There is no set price per foot. Give your specifications to the builder and let him estimate on them. 3. We have been promised the lines, but have not yet received them.

ON A THAMES STEAMER.

A SHORT time ago I went for a trip down the Thames on one of the company's steamers, and during the journey found considerable amusement in watching the characters on board. Two persons in particular attracted my notice. One was a middle-aged gentleman, stout, rather surly and taciturn, who paid no attention to any living being on board, except a huge Newfoundland dog that sat panting and lolling out his tongue, or roaming among the passengers, pushing them out of the way, frightening children, and convincing nervous ladies that he was going mad by the vigor with which he struck out his legs while rolling on his back upon the deck. His master eyed these pranks with a sly smile, and seemed to enjoy the terror occasioned by the antics of his burly friend.

The other person whom I especially noticed, was a pretty and well dressed lady, and she had with her a little girl about 7 years old, who called her "mamma." The lady was evidently possessed of nerve. Indeed she seemed to be possessed by them, and their name was legion. Endless were the petty annoyances to which they subjected her; infinite the dilemmas in which they involved her. But her keenest sufferings in this small way were caused by the unwieldy gambols of Tiger, the Newfoundland dog, and her incessant and puerile exclamations of terror, indignation and spite against the good-natured brute kept up the sly, malicious smile upon the lips of his apparently unnoticing master. The little girl, on the contrary, had, to the increased alarm of the weak mother, made friends with the monster, and for a long time amused herself with throwing bits of biscuit for him to catch, which feat, notwithstanding the incorrectness of her aim, he managed to accomplish, by making a boisterous plunge to one side or the other; and when at last she timidly offered him a piece out of her hand, and he acknowledged the compliment by licking her face, the little darling fairly screamed with delight. Her mother screamed, too, but it was one of the hysterical screams in which she was fond of indulging, and was followed by an outburst of anger at Tiger's familiarities.

"Good gracious!" she exclaimed. "If that horrid creature should be mad he'll have killed my child! And how dirty he is, too! Look at your dress, Mabel; see what a state it is in! How dare you play with that animal?"

This transition from hydrophobia to a soiled dress was too much for Tiger's master, and he burst in to a long, loud laugh.

"I wish, sir," said the lady snappishly, "that you would call away that dog, instead of setting him on to annoy everybody who is not accustomed to have such dirty animals about them."

The gentleman said nothing, but bowed and walked forward; and I soon after saw him smoking a cigar, while Tiger played the agreeable in his own rough fashion to people who knew how to read the expression of his honest and intelligent physiognomy.

Little Mabel, deprived of the attraction which had fixed her attention to the interior of the boat, began to seek amusement in watching the foaming water as it rushed from the paddle wheels and danced in long lines lazily behind them. She knelt on an overcoat which a fellow passenger had kindly lent as a cushion for her little knees and leaned quietly over the side, watching the roaring water; so her mother was for a time relieved from the thousand-and-one vexations which had hitherto beset her.

We were now within a few miles of Gravesend. The tide was just at the full and the broad expanse of the river lay around us in all its majesty; and to those who have never beheld the Hudson or the Mississippi, old "Father Thames" is majestic, aye, and if we place in the balance the historic, political and commercial importance of the transactions of which his broad breast is and has been the highway, our "time honored" river will not lose its dignity even when compared with those giant floods of the West.

Such thoughts as these, however, did not trouble Mabel's little head, which began, I could see, to grow giddy with the continual whirl beneath her. A large seaweed that was dashed up by the paddle caught her attention. It sank, then rose, whirled round in a short eddy and then darted out in the long eddy and was left behind the steamer. She leaned forward to watch its progress; further, further, till her little neck was stretched; presently she lost her balance and toppled over into the roaring flood. In a moment all was confusion on board. Men were shouting for ropes and boats; to stop the steam; cries of "A child overboard!" "Who can swim?" and a thousand other cries and questionings. But above all arose the poor mother's heart-rending shrieks, too painfully in earnest now; and she alone, forgetting in the fond, instinctive devotion of maternal love that even could she reach her child she could only sink with her, endeavored to leap into the water to save her.

Suddenly Tiger, followed closley by his master, came tearing along the deck, knocking the people to right and left; they sprang into the boat that hung at the stern, everybody giving way before the determined energy of both man and dog. Tiger looked anxiously in his master's face and uttered a short low bark.

"Wait," said the latter in reply, "where was she seen last?"

"There, sir," replied a sailor promptly, "there, beside that piece of plank."

"How many times has she risen?"

"Twice."

The gentleman drew a long breath and said to his dog, in a low voice, "Look out!"

And Tiger did look out, with wild, flashing eyes and limbs that trembled with anxiety. What a moment that was! Every one else was passive; every other attempt was laid aside, and all stood in mute expectation, those who were near enough watching for the rising of the child, and those who could not see the water keeping their eyes fixed upon Tiger. In an instant a cry was raised, as a golden-tressed head was seen to emerge from the water. The noble dog had seen her first though, and ere the warning cry reached his ears, he had dashed from the boat with wonderful activity and was swimming toward the little sufferer as though he knew that life and death depended on his efforts.

His master marked his progress anxiously. His face was pale as death, and it was only by rigidly compressing them that he could control the nervous quivering of his lips. "He has her!" he exclaimed, as Tiger rose to the surface after a long dive, holding little Mabel by the back of her hair in such a manner that her face was out of water. "He has her and she is saved." Down with the steps, and on them stood a couple of active sailors, encouraging the brave dog by shouts and gestures, and ready to receive his precious burthen when he should approach them. Slowly he came on, wistfully eyeing the steps, and now and then gancing up at his master, who was leaning over the side and encouraging him with his well known voice.

"Here you are!" cried one of the sailors, seizing the little girl. She was handed from one to another, and at last deposited in the arms of an active looking gentleman, whom everybody seemed instinctively to recognize as a surgeon, and by him carried below.

"Now, come up, there's a brave fellow!" said a sailor, retreating to make way for Tiger to climb upon the steps. But the poor creature whined piteously, and after one or two fruitless struggles to raise himself out of the water, remained quite quiet. "Help him! help him! he is exhausted!" cried his master, fighting his way through the crowd to go to the rescue of his brave favorite. By the time, however, that he had reached the top of the ladder the sailors had perceived the condition of the dog, and with some difficulty dragged him from the water. With their assistance he crawled feebly up, then languidly licked his master's hand and stretched himself on the deck. It would be difficult to say which received the most attention—the little girl under the hands of the surgeon, and all the women, who had squeezed themselves into the cabin under the firm conviction that they were exceedingly useful, or the noble dog from the kind but rough attention of the steamer's men, under the supervision of his master.

Both the invalids were soon convalescent, and Tiger was sitting up receiving with quiet dignity the caresses of his friends, when Mabel's mother came running up-stairs; and throwing herself on her knees before him and clasping him affectionately in her arms, laid her cheek upon his rough head and wept.

"He's a dirty animal," said the gentleman, who could not forget her former slighting remark. "He'll make your dress in such a state! besides, he may be mad!"

She cast her eyes with an expression of meek reproach (they were very fine eyes, and I think he felt it, for his features softened immediately). "Oh! pray, pray, give him to me!" she began.

"Give Tiger to you!" he repeated, in derision. "Why, what would you do with him? I'll tell you, you'd pet and pamper the poor beast till he was eaten up with disease, and as nervous as a fine lady. No, no; you'd better give little Mabel to me. Tiger and I could take much more care of her than you can."

"Perhaps so, sir," she replied, with the gentle manner that had come over her since the accident, "but still I could not spare her. She is my only child, and I am a widow."

"I must go," muttered the gentleman to himself. "Whew! a widow! Has not the immortal Weller assured us that one widow is equal to twenty-five ordinary women? It's not safe, morally safe, to be in the same boat with her." He walked away. But who may wrestle against fate? When the boat returned to London Bridge, I saw him carrying Mabel ashore, with the pretty widow leaning on his arm.—*Chriss Willson in Detroit Free Press.*

Capt. W. Schaeffer starts to day for a fish and shoot at Creve Cœur, but leaves his dog at home. A few days since he and Judge Manning patronized that water, taking along an animal so intelligent that it was to show them quail, squirrel and the best croppie holes as well. They also (at starting) took a rabbit pie and no end of a lunch, the dog also (at his convenience) took the rabbit pie and made an end of the entire lunch. On their return, a hungered, to their temporary store-room, the dog looked fat and well-liking, but sad, a mood the fishermen attributed to its regret that it had no use for whiskey or cigars. It had left nothing else and matters grew nearly serious enough to threaten a meal on the dog or a repetition of the experience of the survivor of the Nancy brig during their long hungry wait for the train.—*St. Louis Republican.*

PUBLISHER'S DEPARTMENT.

WELL EXPRESSED.—New Jersey *Temperance Gazette* says: FOREST AND STREAM, the best, cleanest and neatest paper devoted to the interests of the gentlemen sportsmen, is good enough to go on the table of the most fastidious and scrupulously exacting. If there is a woodsman who doosn't take the paper, we advise him to send ten cents for a copy and see just what he has been missing all these years.

"FOREST AND STREAM SERIES."

DEER HUNTING.

BY JUDGE JOHN DEAN CATON.

BY and by it will be time to hunt antelope and deer. It is always time to read about them. Judge Caton's book on the antelope, elk, deer, moose and caribou of America discusses in a readable way the life history of these animals and the methods of their capture. It is the work of an enthusiastic sportsman who has had a wide experience and has devoted the leisure of years to studying these interesting game animals. The volume is very fully illustrated, and is a perfect storehouse of information and entertainment. The first edition was sold by the Boston publishers at $4. Price $2.50.

WOODCRAFT.

BY "NESSMUK."

A COMPACT pocket handbook of condensed, boiled-down, concise, clear, comprehensive, sensible, practical camp gumption. "Nessmuk" has been "in the woods" in Michigan, New York, Pennsylvania, and South America, and this is a book for outers, wherever they kindle their camp-fire. The author believes in "smoothing it." He has learned how; now he tells others. It is much easier to learn from "Nessmuk" than from Dame Experience. We should not be surprised if "Woodcraft" completely revolutionized the methods of camping out. If you are going to the woods, read "Woodcraft" before you go. It may add to your trip a hundred fold. Price $1.00.

DOG TRAINING.

BY S. T. HAMMOND.

HE was a promising puppy, and when you turned him over to the breaker to be educated, you thought he was bound to make "the best dog in the world." And you'll not soon forget how disappointed and disgusted you were when the dog, the breaker and the big bill—all three turned up together, and you saw that the animal's spirit was broken and it would take a steam calliope to make him mind. Now, this could not have happened if you had been wise enough to buy a copy of Hammond's book, and in your odd leisure moments *train* the dog yourself instead of having him *broken* by some one else. We are selling edition after edition of this book, and it is revolutionizing the system of preparing dogs for work in the field. Price $1.00.

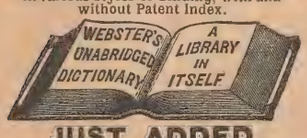
SHORE BIRDS.

A PAMPHLET for those who "gun" along the shore. Tells of: I. Haunts and Habits—Where the bay birds live and what they do at home. II. Range and Migration—Where they go to breed and where to spend the winter. III. A Morning Without the Birds—An episode of shore shooting. IV. Nomenclature—A list of our American species of *Limicolæ*, with a description of each species. V. Localities—Where to go to shoot them. VI. Blinds and Decoys—How to shoot them after you have reached the grounds. 45 pp., paper. Price 15 cents.

ANGLING TALKS.

BY GEORGE DAWSON.

AS a political writer of conceded power, Mr. Dawson wielded a trenchant pen; when he terned from the conflict of parties to the praise of the favorite pastime of "simple wise men," his essays, limpid as the crystal streams, are aglow with the soft summer sunlight and melodious with the songs of birds. When angling was the theme, he wrote from a full heart and in closest sympathy with the scenes and pursuits described. These "Talks" are brimful of manly, wholesome sentiment; there is in them all not a particle of cant. Their sincerity and overflowing spirit at once win the reader, and he perforce shares the author's enthusiasm. The effect is magical, like that of the mimic players in Xenophon's *Memorabilia:* he who reads, if he be an angler, must go a-fishing; and if he be not, straightway then must he become one.—*Extract from Publishers' Preface.* Cloth, price 50 cents.



CANOE "AURORA."

BY DR. C. A. NEIDÉ.

A CHARMINGLY written and always entertaining account of a canoe cruise from Lake George, New York, down the Ohio and Mississippi Rivers to the Gulf of Mexico, by the Secretary of the American Canoe Association. To read the cruise of the "Aurora" is the next best thing to having made it; and the reading is decidedly more pleasant than would have been participation in some of the misadventures related. 216 pp., cloth. Price $1.00.

PATENTS. 15 years' experience, 4 years in U. S. Patent office. Send model or sketch for free opinion as to patentability and new book on patents. Expert searches. Patent litigations. E. B. SLOCKING, Attorney, opp. Patent Office, Washington, D. C.

With the approach of a new year it is not necessary to announce any change in our manner of conducting this journal. Just what the FOREST AND STREAM has been in 1885 we hope to make it in 1886. It will be run on the same old principles, tested by experience and approved by prosperity. It will be just as entertaining, just as instructive, just as frank and outspoken, and just as helpful.

We are sometimes asked to explain the reason of the FOREST AND STREAM'S constantly widening influence and prosperity. Well, there is no

Trade-Secret

about it, and we do not mind telling you. It is this: We have not expended our energies in preposterous spread-eagle proclamations of tremendous attractions in the dim and distant future, but have pinned our faith to present performance, each week, and fifty-two weeks in the year. This in the kind of journalism that is bound to succeed. Nothing very occult about it, you see.

Another element of strength is the jealousy with which we have maintained the inherent dignity and entire respectability of the pastimes discussed in these pages, and the extreme care we have taken to keep the tone of the columns such as renders the paper fit for any man to receive into his family. We are assured by men, whose good opinion we value, that they do not think it necessary to make

A Weekly Scrutiny

of the contents of the FOREST AND STREAM before venturing to lay it on the family table, We determined, years ago, that a clean paper must win its way among sportsmen (not "sporting men"). The fact that it has done so is now cited, not that we may boast of our own prescience, but as a most gratifying evidence of the high standing of the field-sports to which this journal is devoted.

In other words, the reason why the "Forest and Stream" is liked by sportsmen is that the "Forest and Stream" is the kind of paper that sportsmen like.

GOOD THINGS IN STORE FOR 1886.

Among the papers and sketches to appear are the following:

To the Walled-in Lakes.

Sketches of exploration and hunting in the Northwest with the Blackfeet and Kootenays. By "Yo."

Cruise of the Coot.

An account of a voyage alone in a single-hander from New York along the Atlantic seaboard to Florida. By C. P. KUNHARDT.

Hunting in the Himalayas.

Scenes and incidents in the life of an Indian forester. By "SHIKAREE."

Falcons and Falconry.

An introduction to the sport of hawking, with illustrations, drawn from nature. By R. W. SEISS.

Game Preserving in Britain.

A comprehensive series of papers on practical game preserving in Great Britain, with descriptions of the game birds of the British Islands, and sketches of sport. By "MOORMAN."

Scrimshawing.

A popular account of how a whaler spends the idle hours aboard ship. By JAS. TEMPLETON BROWN.

The Lower Forms of Life.

A continuation of the admirable series of essays on the beginning of animal life. By JAMES STOLLER.

Studies in Botany.

New chapters on plants and plant life, written and illustrated from nature. By A. W. ROBERTS.

Land and Water Experience in Florida.

New chapters of experience on the Gulf Coast. By "NESSMUK."

Cruise of the Pilgrim.

A delightful description of a summer voyaging on the Atlantic in the cutter yacht Pilgrim. By W. H. WINSLOW.

Days with the Barmacide Club.

A vivacious account of angling luck, good and bad, in Adirondack waters, whose name, latitude and longitude the author refuses to disclose. By MILLARD

Camps of the Kingfishers.

A further relation of what befel the Kingfishers in their sojourn at Carp Lake, Michigan.

Camp Flotsam.

A new series of the chronicles of the outers at Camp Flotsam, with accounts of bass fishing in Canadian waters. By WAWAYANDA.

The weekly issues of the FOREST AND STREAM form two volumes each year of twenty-six numbers, or 500 pages each, and the file constitutes a library of permanent worth. Twenty-four volumes have already been published. We furnish handsome file binders (price $1,50) which hold twenty-six numbers.

Subscriptions may begin at any time. Per year, $4; $2 for six months. Remit by post-office money order, draft or registered letter. Give name, town, county and State. Address

FOREST AND STREAM PUB. CO., 39 Park Row, N. Y.

ITHACA GUN CO., Ithaca, N. Y.

CANOE HANDLING.

By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners: and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

NEW YORK: FOREST AND STREAM PUBLISHING CO., 39 Park Row.

SMALL YACHTS.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice.

By C. P. KUNHARDT.

THE FOREST AND STREAM PUBLISHING COMPANY takes pleasure in announcing the publication of a magnificent quarto volume, bearing the above title. This book covers the eld of Small Yachts, with special regard to their design, construction, equipment and keep. The opening chapters are devoted to a consideration of the model and the draft, their relations to one another, and the purposes which they subserve. Full directions are given for producing the plans of a yacht with reference to the chief points in design, and the method of taking off the lines of a boat already built is likewise described in detail.

All elements entering into design, such as Resistance, Stability, Balance of Rig, Handiness, Displacement, etc., are dealt with in separate chapters. The rules necessary for the mathematical computations, and a review of theory and practice close the first division of the book.

The second portion comprises the description of the Plates, covering the whole range of type in small yachts, from the shoal catboat and American centerboard sloop to examples of the narrowest and deepest British cutter yet built. These yachts have their lines, build and fittings depicted in the Plates, which are drawn to scale. With their aid and the specifications presented, the reader is placed in possession of accurate information concerning the mould, accommodations, rig and characteristics of all styles of yachts which have received favorable recognition. Sporting boats, combination row and sailboats, and various examples of special form are introduced.

The third division offers a comprehensive review of single-hand sailing, to which small yachts are especially adapted. Directions are given as a guide in selection of type and sail plan, and subsequent equipment and proper management.

The iron work of yachts, their gear, yawls, stearing apparatus, boat building and much other closely related matter is entered upon. The new International Rules of the Road, Signal Service, and a bibliography appear in the Appendix.

The work is profusely and handsomely illustrated with 150 illustrations inserted in the text, besides the sixty-three plates as follows:

LIST OF PLATES.

I. The Sloop Yacht Schemer.

VOL. XXV.—No. 20. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices $1.00 per line. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by the Saturday previous to issue in which they are to be inserted.

Transient advertisements must invariably be accompanied by the money or they will not be inserted.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. Newsdealers in the United Kingdom may order through Davies & Co. General subscription agents for Great Britain, Messrs. Davies & Co., No. 1 Finch Lane, Cornhill, London, and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, $5 per year; $2.50 for six months.

Address all communications,

ANSWERS TO CORRESPONDENTS.

THE LONG ISLAND DEER SUPPLY.

NEVER of late years very large, the number of deer on Long Island was seriously diminished last autumn by hunting. It seems very clear that unless immediate steps are taken to check the killing of these animals they will soon become extinct here. The popularity of Long Island as a summer resort, and the great increase of its population during a portion of the year, has lead to the clearing up and putting under cultivation of a large part of the deer range, and as this goes on the tracts in which they are found become more restricted and the animals are more easily captured.

We have advocated and still urge the passage of another law providing that for five years it shall not be lawful to hunt deer on Long Island. This would enable the deer to increase again, and at the end of that time a week or ten days' hunting might be permitted each autumn, without any serious risk of immediate extermination to the deer.

Such a measure would be enormously aided by the partial stocking with deer of such portions of the east end as are at present unoccupied by these animals. The best information at present attainable gives the range of the deer as from the neighborhood of Islip on the west, to Patchogue on the east, and chiefly along the central portion of the island on the heads of the little streams which run down to the Great South Bay. They are also found as far to the east as Lakeland, on the main branch of the Long Island Railroad. East of this tract there are very extensive regions which are admirably fitted for deer ranges, being overgrown with impenetrable forests of scrub oak and pine, and which were, until the animals had been exterminated, the home of the deer. Such regions might easily, and at comparatively small expense, be stocked with deer. A buck and three does put down at half a dozen different places and protected for five years would give a fair stock of deer over this great tract, where now there is not one.

Nothing of the kind is worth undertaking or attempting unless a five-year law should be enacted, for no one wishes to pay for putting out deer which will be slaughtered within a year. If the suggestion is worth acting upon, an organized effort must be made through the Long Island Senators and Assemblymen to procure the passage of a law guaranteeing immunity to the deer for a term of years.

CIRCLING AT FIELD TRIALS.

SOME years ago we took occasion to administer a richly deserved rebuke to a field-trial handler for having circled his dog in ahead of another dog, whose point was thereby stolen from him. Because on that occasion a just penalty was not imposed upon the offender, the evil method has been adopted by others on certain occasions; and we have more than once seen the dog that had first found scent of game, perhaps by intelligent and very praiseworthy effort, interfered with by his competitor in a dishonorable manner. That should not be tolerated for an instant.

Rule 16 of the Eastern Field Trials Club says: "If an opponent's dog points game, the other dog must not be drawn across him to take the point, but if not backing of his own accord he must be brought around behind the backing dog."

This is well enough so far as it goes, but the rule should be made broader and protect the dog that first finds the scent from interference by his competitor until he can work it out and establish his point, or until the trail is lost. How many sportsmen would go afield the second time with a companion who allowed his dog to crowd ahead of his own dog that was carefully roading out the running bird?

This has occurred in a public trial, and yet we are told that one object of the trials is to educate the sportsman so that he may be enabled to conduct himself faultlessly afield, as well as to handle his dog in a proper manner. Aside from the disagreeable features of the practice, great harm ensues to the dogs, especially to those of a high-strung, nervous temperament, causing them to become unsteady in backing and often untrustworthy in roading, especially in a poor day for scent. The evil has grown to be a very serious one, and there is pressing need of reform. We believe that the handlers, one and all, would welcome the abolition of what will, unless promptly checked, become a gross evil, and we know that many of the most prominent supporters of our field trials would gladly see this change inaugurated.

THE NEWARK DOG SCARE.

IN default of other highly-seasoned newspaper sensations, a mad dog scare does capital service; and for a week past the New York dailies have made specials of the alleged case of hydrophobia in Newark, N. J. On Wednesday of last week, Dec. 2, a large black dog, foaming at the mouth, ran through the streets of Newark. A number of children were bitten by it, and another dog which attacked it was savagely torn. The supposed mad dog finally sprang upon a stoop, and, it is reported, gnashed at a door, breaking off a portion of the moulding and grinding the wood to splinters. One man with a shotgun and another one with an ax finally dispatched the animal. The bitten children were taken to a physician's office, where their wounds were cauterized. The occurrence created intense excitement. A number of dog owners immediately killed their dogs, which, it was feared, had been bitten by the alleged rabid animal; and seven other dogs, said to have been bitten, have since been secured and are now locked up in the city stables pending developments. The Mayor of the city lost his head and issued a proclamation empowering the police to shoot all unmuzzled dogs found running at large. On this principle, if a Chinaman should commit a murder in Newark the Mayor would probably issue a proclamation calling on the police to hang without delay all other Chinamen found in the laundries of the city.

Of the children who were bitten it was determined to send the four most severly wounded to Pasteur in Paris, for the treatment he has so successfuly applied to other patients presumably subjected to hydrophobia. The children, in charge of a physician and a nurse, left this port yesterday, and will proceed with all expedition to Paris. The result of their journey will be awaited with intense interest.

There is not sufficient proof that the dog which created all this havoc had rabies. The probabilities are that it did not. That may be determined by the developments in the cases of the bitten dogs. There has been much guessing done and it is guessed that the dog was mad. Now it happens to be a fact that ninety-nine out of every hundred dogs that are shot for mad dogs are actually only suffering from harmless fits, produced from a variety of simple causes.

By thinking people very much of the action taken by the Newark people regarding the dog-bitten unfortunates, must be unhesitatingly condemned. The publicity given to the affair has caused the most unwholesome excitement. There are thousands of nervous persons who have become absolutely terrorized. Many will not venture into the streets. Parents have kept their children at home from school, and the dogs of many careful owners are quarantined in cellars and backyards. Already the secret poisoning committee has gone to work and several valuable setters have been ruthlessly destroyed. All this could have been avoided. There are hundreds of able physicians in this country capable of inoculating the bitten boys with the rabical marrow, just as well as M. Pasteur could do. It would therefore have been far more humane to victims, their parents and the public if M. Pasteur had been quietly cabled to to send whatever rabical marrow or virus he possessed to this country. His system of treatment is well known here and it could have been followed out to the letter. The scheme of sending young children on a three-thousand mile journey, when they are already wild with fear, will probably cause the death of several of them or cause them to become insane.

CRUISE OF THE COOT.

THE opening chapters of Mr. C. P. Kunhardt's account of the "Cruise of the Coot" have awakened so great an interest in that expedition, as manifested by inquiries as to its purpose and duration, that a word of explanation regarding it may be acceptable. Some weeks ago, when Mr. Kunhardt announced his intention of a voyage of exploration along the Atlantic seaboard, the FOREST AND STREAM, foreseeing the valuable results of such a cruise and appreciating [illegible] the rich store of material likely to be developed and [illegible]ardt's ability to relate his experiences in an enter[illegible] secured from him the promise of the series of [illegible] must have already appeared.

The cru[illegible] thern waters is undertaken with a view to t[illegible] of an inside route to suitable winter cruising [illegible]chts, and the opportunities for sailing and [illegible] vast stretches of inland waters which consti[illegible] of the sea-girt coasts of Maryland, Virginia a[illegible] lina, as well as the channels, sounds and devious pa[illegible] which lie between the marshy lowlands of South Carolina and Georgia and the string of sea islands forming a natural breakwater to the swells of the ocean. The Coot will seek to reach these regions and possibly extend her voyage to Florida waters during the months of winter. Her skipper assures us that she will sail the entire distance on her own bottom, and be worked in accordance with the precepts of "single-hand" yachting. How she has been fitted especially for that purpose by her crew of one hand has already been told.

Passing into the Delaware at Trenton, the route will be down the bay to Delaware City, where the short Sassafrass Canal will take the yacht into the headwaters of the Chesapeake. Thence the course will be plotted to Norfolk, below which the canal into Currituck Sound or North River will float the traveler into the broad inland seas of Albemarle and Currituck. Rivers, reaches and outlying beaches of these sounds are to be explored with special regard to the sport they afford and the character of localities alongshore and their people. Proceeding southward the Coot will follow up the navigable channels as far as possible, noting all that is of instruction and interest to those who may some day wish to profit by her example. Thus the rigors of a northern winter will be circumvented until the first signs of returning spring move the navigator to turn his vessel's prow home again in search of cooler breezes in high latitudes.

The log of the cruise, in the columns of FOREST AND STREAM, will be most fascinating reading.

NORTH CAROLINA FIELD TRIALS.—Upon the receipt of fuller information respecting the North Carolina field trials, we are very glad to learn that the representations made to us regarding the dissatisfaction alleged to have existed over certain of the decisions may have been exaggerated. We have reason to believe that this dissatisfaction arose in large measure from a misconception of the facts upon which it was founded; and it is a pleasure to believe that the circumstances as related to us, and upon which a part of our comments were based, were unintentionally colored by our informants.

BUTCHERS IN THE PARK.—Recent advices from the Yellowstone National Park state that Assistant Superintendents Wilson and Weimar followed and captured five hunters in the Park early last month. They had with them five deer and one elk. The meat and five magazine rifles, which the men had, were taken from them, and they were brought in to the Mammoth Hot Springs, where they were put on trial before the justice, convicted and sentenced to pay fines of $25 each, and their guns and ammunition were declared forfeited.

TO THE WALLED-IN LAKES.

I.—UP MILK RIVER VALLEY.

IT was in the early days of September that we left the Piegan agency for the Walled-in Lakes. So the Piegans have named the bodies of water which form the source of the St. Mary's River.

Our party was not a large one. It consisted of Appekunny, Yellow Fish and the writer. Mr. J. W. Schultz is well known to the readers of FOREST AND STREAM as the author of the extremely interesting and scientifically valuable series of papers on "Life Among the Blackfeet," published in FOREST AND STREAM a year or two ago. Yellow Fish—also known as Rose—is a French half-breed, but one who has always lived with his mother's people. He is thus in manners, education and feeling a thorough Indian, and can speak only a very few words of English. We were starting on a short trip to the St. Mary's Lakes, which are distant less than one hundred miles from the agency. Our wagon held a fourteen-foot skiff, for use in case the one left on the lakes by Appekunny the previous autumn had been stolen or destroyed. A boat is a necessity on these large lakes, where much of the fishing must be done in deep water. A 10x10 wall tent and a sheet iron cook stove, with our bedding and provisions, completed the load in the wagon. Our arms comprised a rifle apiece, and Mr. Schultz had also a shotgun with which, at various times during the trip, he did remarkably good execution. I had a light split bamboo fly-rod.

For the first forty-five miles of the distance from the agency to the lakes there is a wagon road, but at Milk River it is necessary to turn off from this and follow up the stream for some distance toward the mountains, and then, leaving it to the south, to travel northwest toward the St. Mary's. Six miles from Badger Creek the road crosses Two Medicine Lodge Creek, on which the Indians have built some houses, now temporarily deserted. The bottom is level and covered with good feed, and is intersected by many sloughs, from several of which little flocks of mallards rose, quacking noisily, as we rattled by. A few plover were seen, and one brood of sharp-tailed grouse, from which we killed a couple that did not rise with the main body. Just after passing over the hill beyond Two Medicine we came to two shallow prairie lakes, on which were a multitude of ducks and grebes. The shores are low and sloping and without cover, and we did not stop to shoot.

At Cut Bank Creek, about eighteen miles from the agency, is a house occupied by two Indians, whom I know only as John and Billy. They have a well-built cabin of four or five rooms, a barn and corrals, and quite a patch of cultivated ground, on which they raise wheat, potatoes and a variety of vegetables. A good-sized stack of hay will furnish food, in case the snow should lie deep during the winter, for a dozen cows and about a hundred head of horses that are on the ranch. John, the elder of the two brothers, is a marvel of energy, always at work about the ranch, and is thus very unlike the ordinary Indian. He is contented only when he is busy, and seems likely, with the start he now has, to make a successful farmer.

So far we had driven in the wagon which contained our outfit, but at Cut Bank we were to get a couple of saddle horses. Mine was an old buffalo horse, tough and wiry, and steady under fire, and Appekunny's was a little blue, quite spirited, but somewhat run down by hard work. After turning out the team horses I set up my rod, and with Appekunny, who carried his shotgun, strolled off up the creek, and began to cast for trout. The boys keep the creek pretty well fished, and we had gone half a mile before I had any rises. At length, however, we reached a deep hole where the narrow stream sweeping around a rocky point had burrowed in under the vertical bank. Here through the green water could be seen indistinct moving forms, which might be fish and might be shadows, or perhaps were only the play of the ripples. As the fly fell lightly on the water on the further edge of this pool, there was a simultaneous movement on the part of several of the shadows, which made it certain that they had life, and a second later a fine trout was fast to the tail fly, and making the rod bend as I tried to keep him out from the sunken root which he at once tried to reach. Here we took half a dozen fish, none of them over a pound in weight, and, as is so often the case with fishermen, lost one which we imagined was larger than all the rest. He had made a noble fight, and thinking that he was about tired out I had led him up to a gravelly bar. Appekunny had the leader in his hand, and was just about to slide him out of the water, when the fish gave a side wrench and snapped the snood off just where it joins the hook. There was a flash in the water, and the big fish had disappeared.

During our stroll along the river, Appekunny killed a couple of young hooded mergansers and we saw several kingfishers and one or two specimens of *Buteo borealis calurus*. Just before the sun set the clouds lifted for a moment, and we had a brief glimpse of Chief Mountain. It was, even at the distance of seventy miles, very impressive, looming up grandly through the mist. Its shape was that of an enormous truncated cone rising out of the plain, and it reminded me somewhat of the so-called Liberty Cap at the Mammoth Hot Springs in the National Park.

Near John's house were a couple of lodges occupied by two Indians named Bear Paw and Curly Bear. The former had been rather successful in his hunting, and we saw the skins of four antelope and two beaver which he had killed within a few days. That night we dined on boiled beaver meat.

The next morning we made a fairly early start, and by 7 o'clock the wagon was climbing the high bluffs which border the bottom of Cut Bank. The road follows up a little creek, which at this season of the year consists of a series of water holes and sloughs without current, in which a great many ducks were feeding, and here enough of these birds were killed to serve us for several meals.

The utter dearth of large game throughout the plain country is remarkable and shows how thoroughly the country was hunted by the Piegans during the starvation period of 1884. Everywhere one may see the white bones of the buffalo, but scarcely a four-footed living creature will be observed in a day's journey—even the jack rabbits and cotton-tails seem to have been all killed off, and there is hardly a prairie dog or a ground squirrel to be seen.

Leaving the McLeod road we turned off to the west about five miles before reaching Milk River. The South Fork of this river is a considerable stream, flowing through a wide bottom. To the north rise bluffs, low at first, but gradually increasing in height until they form the high divide known as Milk River Ridge, which separates the waters flowing into the Gulf of Mexico from those which run into Hudson's Bay. The bottom is flat and damp, and is intersected by many sloughs, on which, during the spring and autumn migrations, great numbers of ducks pause to rest and feed. There are also many sharp-tailed grouse to be found there. There is no timber in the valley, and only here and there is found willow brush large enough to be used as fuel. It is therefore not a very desirable place to camp. We had no difficulty in finding a very fair road for the wagon, and crossed the stream a mile or two above where we came to it, following the north bank for the rest of the day.

About the middle of the afternoon several large animals were seen hurrying down the bluffs a mile or two above us on the river, and we were unable to determine what they were. Evidently they were not buffalo, for there were none in the country, and besides they were not the right color, so we concluded that they must be either elk or horses, and probably the latter. Ten minutes later a band of about twenty horses, herded by two men, burst out of the brush about half a mile ahead of us and dashed across the wide bottom and up the bluffs on the north side of the valley. There were no packs on any of the horses, and it was very apparent from their desire to avoid observation that the herders were two horse thieves. We could very easily have captured the band, but if we had done so it would have been necessary to turn back at once and give up our projected trip. To have taken the horses would have been one thing, to have kept them quite another. The horse thieves would undoubtedly have followed us, and would have attempted to steal the captured animals the first night. Very likely they might have succeeded in doing so, and might have taken our stock with the rest. We watched the band out of sight, therefore, and then rode over to the camp of the thieves. They were white men, as we could easily tell, and had evidently been out a long time, for they had little or nothing to eat. In fact they were poorly provided in all respects, for they had no blankets except those under their saddles, and had built themselves a little shelter of willow twigs, like a sweat house. In this they slept on the bare ground. They had had no bread or coffee. When we came in sight they were just cooking their dinner. This was part of some small black animal, either a bear or a dog. Bits of the hide with the hair singed off were found about the fire, and on one piece were the stumps of the ears, the ends having been burned off.

About 4 o'clock we found a place where there was some dead willow brush large enough to burn, and camped there on the north side of the river opposite a high sandstone bluff, the face of which was curiously painted toward the top with a red lichen, which gave the rocks the appearance of being colored with oxide of iron. The stone is soft and has weathered out into holes and crannies, with here and there a projecting point or a narrow ledge. Such places are occupied by hawks as nesting places, and soon after we had pitched the tent several of these birds (*Archibuteo ferrugineus sancti-johannis*) came in from the prairies and perched on the rocks, whence they watched our preparations for dinner with an air of some interest. They must have been young birds, or else very much attached to the spot, for one or two of them sat still while the Indian fired half a dozen rifle shots at them, and even when at last frightened away they would return again and again.

For several days the air had been very thick and hazy and the sky overcast, but it rained a little during the night, and the next morning, while we were getting breakfast, the clouds lifted and the smoke had so far cleared away that for a few moments we had a fine view of the mountains lying beyond the St. Mary's Lakes. They are extremely bold and impressive, with square faces and occasional patches of snow. Some of them appeared very high. This height, however, is more apparent than actual, for it must be remembered we were still upon the prairie, and probably not more than 3,500 or 4,000 feet above the sea level; so that, while the highest of these mountains might seem to us very lofty, its actual altitude above the sea level was not necessarily very great when compared with the highest peaks of the Rocky Mountains.

Our road still lay up the valley of Milk River, and the numerous little streams which flowed down from the bluffs and cut steep-walled channels through the soft bottom obliged us to pass as close to the hills as possible, so as to find easy places to cross these tiny tributaries. We had traveled only four or five miles up this stream when we turned off to the right over some low ridges and into another valley, overgrown with willows, which ran directly up to the mountains. In this valley there were many broods of sharp-tail grouse, and in the stream some ducks, while the soft soil among the willows showed a few fresh elk tracks. We killed several of the grouse as we passed along, but saw no four-footed game whatever. In fact, a big gray wolf trotting along the hillside five or six hundred yards away was the only quadruped seen during that day. After following this stream up nearly to where the pines came down from the mountain we struck a broad and heavy trail made by half-breed carts, and taking this, climbed a ridge and passed down into the valley of a nameless creek which is the north fork of the south branch of Milk River. When we were within a mile or two of this it began to rain with a violence that bade defiance to all attempts to keep oneself dry. We had carelessly left the trail on the right, and the two men on horseback now began to ride up and down the creek to try and find a place where the wagon could drive through the dense alder thicket which filled the stream bottom. It took twenty minutes or half an hour to discover a crossing which was practicable, and by the time the wagon was on the north side, and a spot had been selected for the camp, the cold storm had thoroughly drenched us all. It did not take long to get the tent up and a fire going in the stove, and after this was accomplished and the preparations for dinner were under way, we all felt more comfortable.

That night after dinner we loaded up a lot of shells for the shotgun, and after that was done, stretched out on our blankets we smoked many pipes, and I tried to start the half-breed to talking. It was not a difficult matter to do this. Yellow Fish inherits something of the volubility of his father's race, and before long was chatting away glibly enough.

One subject on which he spoke was very interesting. He said that the Pegunny have a tradition that somewhere away to the southward there is a tribe which speaks their language. Once, long ago, the Pegunny were traveling southward in winter when they came to a large river which they began to cross on the ice. In those days the tribe was very numerous, and where there are now hundreds of them there were then thousands. Part of the tribe had crossed the river, but the greater number were still on the north bank, when a child saw a pretty buffalo horn frozen in the ice, and cried for it. Some one began to knock it loose, and while this was being done the ice broke up and went out, carrying away many of the Indians and separating the tribe into two portions. Neither party could cross the swollen stream, and the Piegans on the south bank were never seen again by the tribe. It was long supposed that they had all perished, but now it is thought that they still exist as a tribe off somewhere to the south. For once, when the Piegans were visiting the Crows, they met a man there—also a visitor—who spoke a language nearly like theirs, so that they could easily understand him.

It is of course impossible to say what foundation there may be for this tradition, but to me it was extremely interesting, because there are known two authentic cases of tribes having been separated by accident, and having remained apart for so long a time that they have come to be regarded as distinct nations. One of these cases is that of the Gros Ventres of the Prairie, a tribe located on the same reservation with the Piegans. They are a part of the Arapahoe tribe, and long ago became separated from the main body of that people, and were driven on to the Upper Missouri. Several times they attempted to go south again, but the Mountain Crows, who were at war with the Arapahoes, but had no quarrel with the Gros Ventres, told the latter that if they tried to join their tribe they would kill them all. The attempt was never made.

Much more full is the account of the separation of the Arickarees from the Skeedees or Pawnee Loups. This tale, which I heard years ago from the lips of an old Ree, and which was afterward confirmed and enlarged upon by several Skeedees, is substantially as follows:

The Skeedees were once out buffalo hunting and had made a great surround. One day they had killed many buffalo. Many fat cows were lying on the ground and the women were taking off the robes and cutting up the meat. While they were thus engaged they were unexpectedly attacked by a large war party of Sioux. The Skeedees made a good fight, but the enemy were too numerous for them. They became separated, a part retreating toward the village, and others drawing off toward the north. This party the Sioux followed, constantly fighting and harassing them and driving them farther and farther away from their home, until at length they reached the Missouri River near where the town of Mandan now stands, at the mouth of Heart River. Here their enemies left them, and here the Skeedees, worn out with much fighting, spent the winter, for it was now too late in autumn to attempt the long march back to the village. They have never gone back, and the small remnant of the tribe which still survives have for years been located at Fort Berthold on the Missouri. If we could but learn the history of the many similar, but now forgotten, migrations that have taken place among our western Indians, how much the problem of their ethnology would be simplified, and how

ON AN OHIO DAIRY FARM.

Editor Forest and Stream:

Several weeks ago my chum and I were invited by an old friend to spend a few days upon his extensive dairy farm in this State. As an inducement, he stated that now and then an occasional snipe, woodcock or partridge was to be found, besides a large pair of cranes and numerous other birds. I took my large staghound Fly, just to give her a chance to stretch herself on woodchucks and rabbits.

About sundown of the first day Grib and I took our guns and started out for woodchuks, Grib taking one side of a wide ridge and I the other. It was not long before I saw that Fly's quick eye had detected something moving on the knoll opposite. Looking over I saw a big "chuck" nibbling grass. I gave Fly the word to go, and away she went, opening and shutting like a jack-knife. Reaching the top of the other knoll, she took 'chuck entirely by surprise, and was soon shaking him thoroughly; but she had no sooner finished him than Grib's gun spoke out and she was off to see what that meant. When I arrived upon the scene she laid down 'chuck No. 2. Proceeding a little further we sat down beneath a large chestnut tree, when, happening to glance toward a large piece of flat land, I saw a big crane rise from behind a fence three hundred yards distant. Calling Grib's attention to it, we concluded to get it the next day, if possible; and, watching where he flew, we laid our plans accordingly. As it was getting late we were about starting for home, when, turning around, we were confronted by a young bull and five or six cows, and how they did watch that dog. They followed her so closely that it annoyed her, so she turned and took after them.

The bull, being more courageous than the rest, wouldn't move faster than a slow trot and you can imagine our surprise when we saw Fly seize the end of his tail. 'Twas then he thought it time to run, but she still retained her hold, and quick as a flash when his hindquarters rose into the air she darted forward and to one side, twisting the bull around a little and as a natural consequence over he went broadside. He lay there for some little time but finally got up and stalked off. This may appear hardly credible to some but I think the Western readers will recognize the trick. Fly was born and brought up in Southwestern Kansas, and had been taught to do almost anything, from catching an antelope or jack rabbit to throwing a steer.

The next day we were out bright and early for that crane. Our farmer friend informed us that the cranes could be found by that fence in the flats almost any morning, so we decided to take our chance. The direction it had taken the day before had been up the course of a large creek which flowed in a valley between two pieces of woods. It was decided that I should make a detour through the woods and come out in the valley about a quarter of a mile from the fence and secreting myself behind some bushes, wait until Grib, by walking boldly up to the fence, had started the crane up the valley, and when the bird came over I was to let him have it. Our plan worked to perfection. It was not long after I blew my signal whistle that I saw the crane coming straight toward me. Not wishing to spoil his skin by a breast shot, I waited until he had gone a reasonable distance past me, then raised and fired, and hearing a thump I knew I had got him.

Upon reaching him I found that I had ruffled scarcely a feather, but upon further examination found that one of his legs had been slightly cut by a stray pellet, but that would amount to nothing when mounted.

I soon afterward removed the skin and expressed it to a friend, a lady, who has a fine collection.

That visit paid us very well indeed in the game line, our bags showing a great variety. We saw two small bevies of quail but did not fire into them because they are so scarce here we were too glad to see a few alive to kill them.

WATT.

CLEVELAND, O., Nov. 31.

WISCONSIN DEER DESTRUCTION.—*Editor Forest and Stream:* For a little over two years the M. L. S. & W. R. R. have spared no pains to advertise the grand country—the sportsman's paradise—through which the road runs. But if the railroad companies will not lend a helping hand, the present reputation of that country will soon be lost to view. A visit to it the past season revealed the fact there was an abundance of deer, regardless of the fact that the law was openly defied last winter, and thousands of deer were unlawfully killed. Many were packed as butter, etc., and shipped out of the State, while hundreds were left to waste, shot only to gratify the desire to kill by those who care for nothing else. And now reports reach us of a party who have been in the neighborhood of Gogebic hounding deer for some weeks past. Go a little further down the road and you can find the "tips" of over one hundred which were hounded to the water and then shot. We heard of a party in camp on one of the many lakes in Wisconsin who by good luck shot a deer. As soon as the report reached the nearest town the hounds were turned loose, and for two days they ran the deer until none were left in that vicinity, and this was done for no other reason than that those who had paid the railroad company their fares, the skinners their fees, could not get a shot at a deer for the camp table even. The railroad companies cannot be too watchful of the laws regarding the protection of fish and game in their country; they owe it to their patrons as well as to themselves, and that they may lend a helping hand is the prayer of—NIMROD.

BLACK BEAR HABITS.—Bethel, Me., Nov. 30.—Mr. V. S. Davis has a logging camp near the head of Ariscohos Lake, on the Magalloway River, in Oxford county, Maine. Henry Sweatt and Walter West were out looking out roading chances to haul their logs, and as they were separated a short distance Sweatt, who carried an ax, saw a pine stub which looked bearish to him (he was an old hunter), so he interviewed the stub with his ax, and hearing a scratching overhead, looked up and was greeted with a growl from a bear's head, with open mouth and fire in his eyes. Sweatt sung out lustily to West, who had the gun, and he rushed to the rescue and fired three shots into bruin's head before the beast succumbed. They then twisted withes and tied his legs together, and strung him on a pole between them and lugged him to camp—about a mile. The bear was very fat and his skin measures, stretched, 6ft. 3in. by 5ft. 6in., and is a very fine pelt—very nice fur and shiny black. This kills the theory that bears never den until driven in by deep snows, as this was done on bare ground (no pun intended). There are doubtless lots of other bears still roaming around loose in the forest at this time—Nov. 30—and they will hibernate when it suits their fancy, regardless of the snow.—J. G. R.

A SHOT CONCENTRATING DEVICE.—*Editor Forest and Stream:* A few weeks ago one of your correspondents was inquiring about the effect of wire cartridges upon the gun barrel. Now I have a wrinkle which I would like to unfold to your readers in regard to a device with which I do away with either thread-wound or wire cartridges. It may already be known to many, but I have never seen it used, nor read of its use. I never liked either of the above named cartridges for various reasons, expense being one of them, and I now make my own as follows: Take a first quality paper shell and load it to suit yourself, with any desired size of shot, only being sure to put two pink-edged, or felt wads (I prefer pink-edged) over the powder. After the shell is loaded and well crimped, take a sharp pocket knife and cut around the shell on a line between the two pink edged wads, nearly, but not quite, severing the shell in two parts. Leave just enough of the fibres of the material of the shell uncut to hold it together. You can ascertain the exact point to cut through by measuring one shell after the first wad has been rammed down upon the powder. Then smear the front end of the prepared cartridge with a mixture of tallow and beeswax—four parts of the former to one of the latter—and you are ready for business. You can intermix bonedust, sand or any desired substance with the large shot, if you desire it. No injury can accrue to your gun, and you know just what you are shooting. There is no extra trouble and the charge is as well held together as by the wire or thread-wound cartridges. The only care required is to be sure to cut between the two wads, as the last wad expands enough to sweep everything before it as soon as freed from its own portion of the shell. Try it, brother sportsman, and report.—AREFAR (Auburn, Cal., Thanksgiving Day).

TWO BIRDS AND A LIVE RABBIT.—Washington, D. C., Dec. 1.—William Woolls, Thomas Taylor and myself were guests last week of Mr. Peter Wolfe, of King George county, Va., forty five miles down the Potomac. Of course we had our guns and were accompanied by Tom's old Drift and his youngster, Flossie Belle, with my Dandy. Floss is only nine months old, and it is very surprising what Tom has already taught her. Birds were plentiful and I had a good opportunity to judge of the qualities of the youngster, she was as eager as it was possible for any dog to be, besides being quite staunch, and her staying qualities are remarkable. Now, mark that some day not far distant she will be well known in the field. We bagged one hundred birds, one wild goose and a few rabbits. The rabbits were remarkably numerous. Once the dogs were standing and Tom and myself were waiting for Billy to come up to get a shot, when he started a rabbit which ran against Tom's shin and stunned itself so that Tom put his foot upon it, and after knocking down two of the birds he stooped and picked up the cottontail.—SPOT.

PHILADELPHIA NOTES.—Philadelphia, Dec. 5.—Mallards, both greenheads and dusky, and other marsh ducks are remaining on our river late this season. My informant, who came up the Delaware to-day per steamboat from Salem, N. J., reports the cove below Battery Point, and the river between Fort Delaware and Fort Penn, full of fowl, mostly mallard and black ducks. As a rule these species have left us before this time, and their late stay this month would seem to indicate an open winter or a not very early one. There has been quite a shipment from the Northwest to this market during the past week of both pinnated and sharp-tailed grouse. Dealers tell me "when it is cold enough we expect a great deal of Western game." Everything is arranged and we only want freezing weather." Five more deer were killed in Atlantic county, N. J., during the past week. Six men of one hunting party accomplished this. The bill to protect the deer for three to five years will doubtless be brought up and passed at Trenton at an early date.—HOMO.

A GROUSE SNARER CONVICTED.—Wellsville, N. Y., Dec. 5.—We have had our game law offender punished. John Langdon has violated the game law during the last few years by snaring partridges for market. Our game constable failed to catch him, though he had an understanding with the Erie Railroad agent here and at Andover to give notice when Langdon shipped birds. Last summer Langdon moved to Whitesville, N. Y., twelve mile from here; and each Monday morning in the past fall would send a box by stage to the railroad. One morning the constable appeared and opened the box, found nine partridges and took Langdon before Justice John Q. A. Woodcock. One partridge was proven to have been snared and Langdon was fined $10 and costs or ten days in jail. He served his sentence.—C. L. P.

WESTERN ONTARIO.—A correspondent reports quail unusually scarce. In fact, scarcely a single bird is to be found, and it is thought they must have perished during the severity of last winter. Black squirrels, the small boy's favorite game, are also scarce. Partridge, woodcock and snipe are reported plenty, and some good bags have been made. Ducks and waterfowl of all kinds are in good supply, and from Enniskillen and Sombra deer are reported abundant. Rabbits have been completely destroyed by the severity of the past two winters, and not one is now to be found in localities where two years ago they threatened to become a destructive nuisance.

GALVESTON, Nov. 11.—In the fall of 1872, while we were camping in the southwestern part of Texas, on Red River, one morning the youngest of our party went down to the river for water, and saw there a large buck behind a tree. He had the "buck ague" pretty bad, but without stopping to remove the rifle cover he pointed the rifle and fired. To our astonishment the deer did not move, and on examination we found that the bullet had entered the left eye and penetrated the brain. "M. E. G." got the deer, but ruined his rifle cover. However, he says he would ruin twenty covers to get another chance like that.—REDBREAST.

WHITE CREEK, N. Y., Nov. 30.—Game in this section is quite scarce. Ruffed grouse are very shy and flush long before one gets within range of them. Raccoons, rabbits and foxes are quite plenty. Gray squirrels are not so numerous as in years past, yet if you have a good dog you can have fine sport hunting them. I went out four times with my dog Jack and bagged thirty. That is not a large score, yet I enjoyed myself as well as though I got more.—L. M. A.

SCRANTON, Pa., Dec. 5.—A black bear weighing 415 pounds was shot last week by Mr. Houck near Tobyhanna Mills, and was exhibited here in the market. Last winter several were shot in the same vicinity.—W. B. L.

WHO TAKES THE DEER?—Number Four, Adirondacks.—*Editor Forest and Stream:* Whether the deer belongs to the person killing it or to the owner of the dog driving it, is merely a matter of custom, differing in different places. In the eye of the law the deer belongs to the person killing it, no matter how driven to him, unless the person driving it had previously given it a fatal wound. Here in the Adirondacks it has been the custom to concede to the dog driving the deer the skin only, and the carcass to the person killing the deer.—MUSSET.

WIRE CARTRIDGES.—St. Louis, Nov. 19.—In your issue of Oct. 1 "N." asks for information regarding the use of the Eley cartridge. I have for thirty years used the Eley wire cartridge in my Purdy, Reily and Greener guns, all open bore, and have found them the most effective of any cartridge in use, and without the slightest injury to my barrels. But I have not deemed it advisable to use the wire cartridges in my Daly chokebore, as I feared they would in time shoot the bore out.—C. H. T.

AN ODD FOX CAPTURE.—Cleveland, O., Dec. 1.—While reading a fox story in an old number of the FOREST AND STREAM this evening I was reminded of a party who last winter caught one old fellow that had a heavy leather collar around his neck, and dangling from a ring in the collar was nearly a foot of chain. He was identified by a resident of Newbury as one which he had partially tamed eight years before.—WATT.

TALLAHASSEE, Fla., Nov. 11.—Two gentlemen came in with fifty-two quail the other day, and I have found no difficulty in getting snipe and plover in numbers. Some ducks have been shot, but it is almost too early for them, while squirrels and quail could scarcely be more plentiful.—BBE.

Camp Fire Flickerings.

"That reminds me."

174.—Addendum.

CAMP-FIRE FLICKERINGS 174 had a good story about Billy Crosby and Cale Loring, and I can vouch for its correctness, having been there at the time. Mac (Mannassch Smith, I guess) did not quite finish, for Cale, when he went after water that evening, took along his gun as usual, and actually knocked over the odd teal, thus getting the entire twenty. I showed the article to Crosby, who at first insisted I wrote it. "But at any rate," said Billy, "all I wanted to do, and told you so at the time, was to keep the 'critters' out of Cale's garden [the place in front of the shanty where we dig clams], for I knew the crowd would come home hungry and was afraid there would not be enough clams to go around." REIGNOLDS.

176.

NEARLY thirty-five years ago, when I was a lad of ten, there lived in my father's neighborhood in Canada, near the Vermont border, an old man, known in all those parts, who went by the name of "Uncle Nate." He was seventy years of age when I first knew him, owned a good farm which he had cleared with his own hands, was the father of a large family of well-to-do sons and daughters, and was universally liked by all who knew him.

In the early days he had come up from the Bay State and was the first settler in that neighborhood, and had for years helped out the scanty income of his new farm by the aid of his rifle and traps. In the course of time the large game and nearly all the fur-bearing animals disappeared from the surrounding country, and in my youthful days the still vigorous and hale old man used to gratify the hunter's instinct which still stirred his blood every autumn, by hunting foxes with dog and gun, and lining wild honey-bees to their trees.

Foxes were very plentiful in those parts then, whatever they may be now, and every favorable morning Uncle Nate would sally out to the hills with his trusty hound Bose and his old single-barreled gun, which had been changed from flint-lock to percussion. This ancient arm he clung to with all the conservatism of a loyal nature, and it seldom failed to procure him either feather or fur when brought to shoulder.

One day he had been indulging in one of his hunts, and Bose had run the fox to earth near by my father's, and Uncle Nate came over to borrow tools to unearth him. Of course I was all on fire to go and help, and, getting permission, I shouldered a part of the tools and accompanied him. Arriving at the spot, we found the hound working away faithfully, but owing to the ground being hard frozen—it was late in November—he had made but little progress. Uncle Nate started in, and after three or four hours of hard work reached the fox, by the assistance of Bose, and having dealt it a vigorous blow on the head with a small crowbar, threw it upon the ground near by. The hound immediately returned to the burrow with unabated eagerness, and the old gentleman said this meant another fox. Although it was now getting dark, Uncle Nate started digging again with renewed vigor, in anticipation of this addition to a good day's work. After a few moments he stopped to wipe the perspiration out of his eyes, and Bose took up the work. After the old man had mopped his face and bald head for a moment his eye was caught by the absence of the fox which had been thrown upon the ground as dead. I had not missed the creature, as I was too fully occupied and anxious about the proceedings in the pit to waste my time watching a dead fox. Well, the dead fox had come to life, and when Uncle Nate missed him he could just be seen making off at a very uncertain gait for the friendly obscurity of a small swamp. The old man stooped, and, seizing Bose, whose whose hind legs and tail only were visible, by a vigorous effort swung him out of the pit, shouting, "Go catch him, Bose!"

And right here was where the joke came in. Bose had reached and grasped the second fox, and when pulled so unceremoniously out of the burrow held on to his quarry like grim death and brought it with him. They landed some feet away, and came down with a "dull thud" upon the frozen ground. In the melée the fox escaped from the dog's jaws, and made fast time out of that place, with Bose yelling at his heels, and all three disappeared simultaneously. Uncle Nate jumped upon the edge of the pit, and placing his hand over his eyes, peered with a vexed and foolish expression into the gathering darkness. As the hound's voice gradually died away he burst into a hearty fit of laughter and exclaimed: "Well! Gosh darn my fool carcass! I've been huntin' off an' on for over sixty year, but that is the fust time I ever tried to kill one fox by throwin' another at him!"

KINGFISHERS NOT JAILBIRDS.

Editor Forest and Stream:

Believing it my turn to say a few words about the "Kingfishers" as law breakers and their accusers, I thank the FOREST AND STREAM kindly and sincerely for its efforts to hunt down the slander on us of having shot deer out of season while camped on the shores of Black Lake, Michigan, during the summer of 1883, as set forth in an editorial, embodying the correspondence making the charges, in the issue of Sept. 24. Since the appearance of the editorial mentioned I have been waiting to see if Mr. Miner, some of the "well known merchants of Cheboygan," or "the officer that held the warrants," would have the manliness to come out from their cover and do us the poor justice to say there had been a mistake in the identity of the party, but not a word nor line has been sent forth by them, hence I am moved to write down a few facts that may act as a backset to Mr. Miner or any other "vigorous prosecutor" who may take it into his addlepate hereafter to make a charge of lawlessness against a party of anglers who go to the woods and waters only for honest and legitimate sport.

First, as a matter of strict truth, in all our camping and fishing in Northern Michigan in the past six or seven years, to my certain and positive knowledge, not one of the "Kingfishers" have ever shot a deer or even fired a gun at one. In his first letter, dated Sept. 3, 1884, Miner says: "I send you the record of the party while at Black Lake last summer," which would imply that we were there in the summer of '84, but in his next, Sept. 15, 1884, he says: "I was at Black Lake at the time of the party being there," etc., and I take it he meant 1883, although his first letter making the charge was written more than a year after we had been there, as we broke camp and arrived in Cheboygan on our way out on July 31, as the Spencer House register will show.

It would seem from this that the "member of the gun club at that place (Cheboygan), who is a merchant there," and Mr. Miner were a good while making up their minds to show us up—with no foundation to build a charge on—as a party of lawbreakers. During this time had Miner or the "gun club man" been possessed of plain horse sense they would have procured the names of the parties mentioned in the warrants and sent them to FOREST AND STREAM, when they would have learned that none of them would fit a single member of the "Kingfisher" party, and Miner would have saved himself the humiliation of having to come down from the lofty perch he took at the end of his first letter as "a vigorous prosecutor of parties who violate our game laws."

But I do not blame Miner in the matter as much as I do the "gun club man." He acted the sneak in giving Miner the information on which he made the charge, and then refusing him the use of his name to help him out of the "category" he got him into. It would appear to any one of average vision that he left Miner to hold a bag with a big hole in each end, and it is to be hoped that M. will profit by the experience. I am charitable enough, however, to believe that Miner thought he was doing a good work at the time; he would clinch his claim as a "vigorous prosecutor of violators, etc.," but he started out with rather much of a flourish to last, and he was brought to grief by the "vigorous punching" of FOREST AND STREAM after facts, and moved to write, "I shall write to him (meaning the gun club man) about the facts, in justice to myself as well as the party, and request him to substantiate the charges against them," and finally, "If nothing is heard from Cheboygan, I will retract my charges and consider it as an idle rumor, and tender the party an apology for making the charges I did." As no apology has been tendered, it may be presumed he has not yet heard from Cheboygan, and the honorable member of the gun club. We can afford to wait, as apologies don't count for much as long as we are conscious of no wrong doing.

This gun club man was pleased to say, "The 'Kingfisher' party are a set of snides." I will simply say to the g. c. m. that, if treating our neighbors with courtesy and respect wherever we make our camp, meeting all our obligations without a whine, leaving the latch-string always hanging out for an honest brother sportsman to pull and be welcome to come in; if going to the woods because we love them, if pursuing the sport of angling in a legitimate way, and demeaning ourselves as gentlemen, whether in the woods or out, place us in the list of "snides," then is the "Kingfisher" party a set of snides. But (and I trust the hint may comfort him) there is one trait that the "Kingfishers" are not possessed of in common with the gun club man—they never stab a man in the back, or start a slander on a brother sportsman and then hide behind a friend, leaving him to get out of the scrape the best way he can. This is a kind of "cussedness" we've not got the hang of, if we are "snides."

Now, a few words that may perhaps put the matter in its proper light and fix the blame where it really belongs. More than a month after we left Black Lake, a party of Cincinnatians—and, I believe, two or three from Hamilton, O.—went to the same lake for a hunt, with perhaps some fishing. Some time after their return one of them told one of our party, the Deacon, all about their trip; how they had killed some deer, how badly they had been treated by old Merrill, how on their refusal to pay him a certain sum he had warrants issued for their arrest, and how, through the intercession of the ex-sherriff of Cheboygan, whom one of the party happened to know, the officer holding the warrants was prevailed on not to serve them, etc. This is the shape in which it was told to the Deacon, and he was asked to get me to write up Merrill as a rascal, an old wolf, etc. (I was writing of our Black Lake trip at the time); but I declined on the ground that it was not our quarrel; that we had no special grievance against Merrill, as we had been treated at least fairly by him and had dealt squarely with him in return. Merrill might be an old wolf, but he had not "wolfed" our party to any alarming extent.

Some months afterward it came to my knowledge that the "Kingfishers" had been charged with shooting deer out of season while at Black Lake, and I naturally concluded that the other party had represented themselves as the "Kingfishers" in order that we might be blamed for their misdeeds; but within the past month I have had a talk with two of the party, and I am convinced now that such was not the case. These two, however, admit that their party killed deer while they were camped at Black Lake (their camp was on the east shore, ours on the west), but could not say just how many. They deny emphatically having paid Merrill $5 a head for driving deer into the lake for them to shoot, but do say they paid him $2 a day for hunting for them. The majority of the party, it seems, left for home after a two weeks' stay, leaving four in camp who remained till the 1st of October. Merrill had been promised all the eatables and "camp stuff" that would be left over when the party broke up, and when only the four were left it seems he concluded it was about time to grab on the promised stuff or be left with a very slim share by the time they got through with it, and accordingly, when three of them were out hunting, leaving the other as camp-tender, he presented himself at the camp and began loading the things into his boat to take home. A vigorous remonstrance did not stop him, but he was finally "persuaded," at the muzzle of a revolver, to let the things remain, and was driven off and told to stay away, at the risk of bodily harm befalling him should he return.

When they finally broke camp, and while on their way to Cheboygan, they were met by the ex-sheriff, who told them there was trouble in store for them; that warrants had been sworn out for their arrest for killing deer in the close season. He went back with them, saw the officer who held the warrants—the real sheriff, as I understand it—and told him that he knew theso boys; that they had been guilty of no great wrong; that they had been lied about, and that they had only killed a few deer for meat for the camp, etc., and he was finally convinced that they were a party of innocents and "bully fellers," and they were let off scot free; and then some sneaking cur laid it at the door of the "Kingfishers." That is the way the Kingfishers shot deer out of season.

Cheboygan may certainly boast of a model officer. If you are a "bully feller" you can kill deer in September for meat throughout the territory under his jurisdiction, and run no risk of having a warrant served on your return from the woods; and the "gun club man" will no doubt see to it that W. E. Miner writes to FOREST AND STREAM charging it on some innocent party.

This is briefly the substance of the story told by two of the party (names not given by request), and if I have made any misstatement, let the sheriff or whoever held the warrants, or any of the party, make it known and I will correct it with neatness and dispatch. Let the officer who held the warrants, Mr. Miner or the "gun club man" write me (through FOREST AND STREAM), giving the names in the warrants, and I will send him the names of our Black Lake party (for we are not ashamed of our names, nor of our conduct in the woods or elsewhere), and if there is one Kingfisher's name written in any one of the warrants we will break up our rods and never sniff the odors of the woods again. Or they can write to the editor of FOREST AND STREAM, as he has a complete list of the names of both parties.

It is plain we have been confounded with the other party, whether maliciously or not I am not quite prepared to say, and what I have written is as I believe, only a plain duty in defense of our good names as sportsmen.

Mr. O. S. Merrill could give a plain statement of the whole affair, and within the past year I have written him two or three times asking him to do so, but up to date he has paid no heed to them, for reasons best known to himself, and it is no more, probably, than might have been looked for, keeping in mind the fact that a clean statement would criminate himself and place him in the same light with the others. He might, however, do us the justice to say which of the two parties is the guilty one. But the "Kingfishers" are not worried over the final verdict, and we rest our case with the brethren of the rod and the gun who know us, conscious in our integrity as honest and law-abiding sportsmen.

Touching the last paragraph of the editoral alluded to, I may say to FOREST AND STREAM that I do not profess one thing in print and practice the reverse in the woods. I preach honest sportsmanship and cold water at home. I practice the one and stick to the other in the woods, as I believe my comrades in many a pleasant camp will avouch.

I thank Mr. Tomlin for the good words for the "Kingfishers" and the invitation to come where twenty-pound lakers are waiting to make the acquaintance of Bob and Kit. I beg to remind him, however, that the Black Lake trip was not "an entire failure," only in the matter of bass fishing. Otherwise it was a complete success, even to being accused of shooting deer out of season, and besides a trip to the woods is never a failure, "it is not all of fishing to fish." Concerning his "hope that the Carp Lake letters will be resumed," I explain to him and to other readers who may have taken an interest in them, that I will finish them up and send them on at as early a date as possible. Should we ever meet again the "old bass fighter" will give him a grip that will in reality "start the blood from his finger ends." Meanwhile I send fraternal greeting from the "Kingfishers" to "the family of anglers."

"S. E. B." from away across the water at Menominee, Mich., makes the emphatic assertion: "The charge that the 'Kingfishers' had broken our game law I know to be false and without the slightest foundation," etc. We do not remember meeting "S. E. B.," but he has the ring of good metal, and if he ever runs across our camp, as old Ben might say, "jist pull the latch string and walk right in without knockin' an' we'll warm the cockle o' yer heart fur ye." ("Old Knots" usually presides over the cockle-warmin' department) and it won't be with "Roscommon county mutton" shot out of season, either.

Last comes "Kelpie," from Central Lake, Mich., whose testimony is extra valuable because our party is better known, perhaps, in his neighborhood than in any other part of the State, and because rather unlooked for by reason of the little "pen scrimmage" we had a few years ago in the columns of FOREST AND STREAM anent the annual "pilgrimage" of the herrings of Central Lake. But I can assure "Kelpie" that I hold no "scunner agin" him on that account, having about forgotten it, as I consider I got rather the best of the tilt—that is to say, I learned something—and after all it doesn't matter much whether the herrings run up on the 10th of November, the 4th of July or Washington's Birthday. And I have this to say about the swamps of the Cedar River: I plead guilty to having hastily constructed a good many very vehement, insect-killing sentences while floundering through the tangles along the banks of that frigid stream at odd times, and I have about made up my mind that if there is a person "on the face o' this livin' airth" that can fish the Cedar a mile without audibly and vehemently expressing his feelings, he is too utterly good for this vale and ought to shape up his temporal affairs and take his immediate departure. But old Ben says, "Cussin' muskeeters, an' black flies, an' punkies, an' bresh that poke ye in the eye, don't count;" and I agree with Ben in most trifling matters of this kind. With this little digression in "Kelpie's" case (he may peradventure find his name in my first letters to FOREST AND STREAM in 1881), I thank him cordially for his disinterested testimony in our behalf, and assure him I am pleased that he, whom I know to be a true, clean-handed sportsman, has put us in his first class—the sportsman's class—and not with class 2—the "dudes"—or class 3—the "dead beats."

And I may say without laying claim to more than our just due, that I have reason to believe our record is just as good elsewhere as it is along the Intermediate region. We meet all our obligations; we owe no neighbor a nickel that we know of; we indulge in no illicit practices, and we are not ashamed to look an officer of the law in the eye if we chance to meet one. We assume no airs of superiority over the farmer folk, believing them to be as good—or better, in a sense—that we are. We go to the woods because we feel it is good to be there, and we seek the waters for honest sport and rest, that we believe make better men (and women) of us. Conscious of our intent to do right wherever we build our camp-fire, all we ask is that truth be said of us and we will be content.

This paper has grown much longer than first intended. I again thank our friends who have had faith in us and expressed it in kindly words; and I say to FOREST AND STREAM that it will be our aim in the future to merit its confidence and the good will of the brothers of the gentle craft, as we trust we have in the years gone by.

KINGFISHER (for "The Kingfishers").

CINCINNATI, O., Thanksgiving Day, 1885.

ROCKY MOUNTAIN WHITEFISH.—The Meeker (Colo.) *Herald* says: There has been a great deal of discussion among White River sportsmen during the past summer concerning a species of fish caught in White River and by some called a whitefish and by others a grayling. In order to have the fish properly classified Major Foley, of the cattle firm of Foley and Brasher, who spent several weeks hunting and fishing on White River during the summer, placed one of the largest "whitefish" caught during the season in alcohol and sent it to the Smithsonian Institute. According to the report of Prof. T. H. Bean, Curator Department of Fishes, Smithsonian Institute, we can in future call the much-named fish the "Rocky Mountain whitefish," or, for short, plain "whitefish." The following letter, forwarded by Major Foley to L. B. Brasher, comes from the Smithsonian: "Concerning the 'whitefish' sent by Mr. J. L. Foley and referred to in his letter to you dated Oct. 28, I desire to make the following report: The species is *Coregonus williamsonii* (Girard), the common species of the region between the Rocky Mountains and the Sierra Nevadas. Concerning the game qualities of this fish, we know very little except that it has occasionally been taken with the fly. There is a full description of the species in the zoölogy of the Wheeler survey, pages 632 and 683, in which reference is made to the capture of this fish with hook and line. Elsewhere in this volume (page 638) we are told that the species bites readily during the fall of the year at a hook baited with leather-side minnows. There is a rather poor figure of *Coregonus williamsonii* in Part IV. of the 'Pacific Railroad Survey Report,' plate LXVI. The species is described in this volume, pages 326 and 327. The original description of the species is in the 'Proceedings of the Academy of National Sciences,' Philadelphia, Vol. VIII., page 136. In Bulletin 16 of the National Museum the species is described, page 297, and in the 'Transactions of the American Fish Cultural Association,' 1884, pages 33 and 37. The fish is known in some parts of its habitat as the 'Rocky Mountain whitefish,' and in others as the 'Chief Mountain whitefish.' The distribution of the species is as follows: Clear streams and lakes from the Rocky Montains to the Pacific, northward to Oregon; found also in the tributaries of the Saskatchewan and of the Upper Missouri.—T. H. BEAN."

CAMP COMFORT.—Casselton, Dakota, Nov. 26.—The Casselton Fishing Club met and organized Nov. 16 with the following membership: H. P. Ufford, President; J. M. McLeod, Secretary; A. F. Neyhart, Treasurer. Isaac Wood, F. S. Langdon, Will Rutledge and W. F. Holmes. Membership restricted to twelve. Objects: Fun and fishing. The club are in negotiation for a tract of land on Detroit Lake, Becker county, Minn., where they will erect cottages next summer and inaugurate "Camp Comfort." A fishway is about to be put in at the dam between lakes Melissa and Pelican which, when accomplished, will give a stretch of over 200 miles of fishing waters, through one of the finest chains of lakes in the United States. If "Nessmuk," "Wawayanda," "the Kingfishers," "Jay Bebe," A. N. Cheney, or any others of the FOREST AND STREAM brotherhood find themselves in the Northwest next summer, and will call at "Camp Comfort," the Casselton Fishing Club will give them a most cordial welcome, and, with wind and water willing, show them as fine bass fishing as ever fell to their lot. Three things the club have absolutely tabooed: Fishing out of season; catching more than can be utilized; and whisky drinking.—H. P. UFFORD.

EASTERN NEW YORK FISH AND GAME ASSOCIATION.—Albany, N. Y., Dec. 1.—*Editor Forest and Stream:* At an adjourned meeting of the gentlemen interested in the preservation of fish and game, held last Friday evening, a constitution and by-laws were adopted, and the following officers elected: President, Dr. Samuel B. Ward; First Vice-President, A. N. Cheney; Second Vice-President, Gen. John F. Rathbone; Secretary, W. W. Byington; Treasurer, John Quinby; Executive Committee, Ira Wood, J. H. Manning, Gen. R. Lenox Banks, James Ten Eyck, W. W. Hill. The title chosen for the association is the "Eastern New York Fish and Game Protective Association. Judge F. M. Danakar, counsel for the Anglers' Association of the St. Lawrence River, will be the counsel for this association also. The list of officers is sufficient guarantee that the association means business, and they will be heard from.—SALMON.

ADIRONDACK FISHES.—The twelfth report of Supt. Colvin, of the Adirondack Survey, has been so long delayed in publication by the red tape of the circumlocution office that Mr. Colvin has decided to issue a pamphlet edition of the special report on the Adirondack Fishes, made by Mr. Fred Mather in 1883. The demands for this report have been quite numerous, and the superintendent has ordered 200 copies of the extract printed for Mr. Mather's use, in advance of the main report. The notes on the fishes will be accompanied by a plate illustrating two new species, and will be ready soon.

THE NATIONAL ROD AND REEL ASSOCIATION.—New York, Dec. 4.—The following circular has been issued: Owing to some informalities in the organization of the meeting at the close of the late tournament, it has been decided to hold the regular annual meeting for the election of officers on Tuesday, Dec. 15, at the office of Mr. E. G. Blackford, Fulton Market, New York, at 3 P. M. Your presence is requested, as business of importance is on hand. By order of FRANCIS ENDICOTT, President.—FRED MATHER, Secretary.

SUICIDE OF TROUT.

Editor Forest and Stream:

I have, both in your columns and before the American Fisheries Society, told how on several occasions an epidemic of suicide seemed to possess my favorite brown trout, the eggs of which came from Germany. In the morning great numbers of them would be found dead on the banks where they had jumped during the night. This statement was translated for the reports of the German Fishery Association and ridiculed by my friend Schuster, Oberburgomaster of Freiburg in Baden, from whose ponds the eggs came and who is an extensive fishculturist. Nothing like it had ever happened in his experience, and he thought there must be some mistake about it. Although nothing like it had ever happened in mine, I knew too well that there was no mistake in the fact that hundreds of my beautiful brown trout were dead, and that they jumped from the pond, not singly, but in droves. This is recalled now by a letter from Col. M. McDonald, of the U. S. Fish Commission, and also Commissioner of Fisheries for Virginia, in which he recites a similar incident. As he does not say where the pond is located, I presume it is one at the station at Wytheville, Va. He writes under date of Nov. 27, as follows:

"I would like to know the experience of others in regard to the curious impulse to jump out of the water at certain times which characterizes the different species of trout. We have recently lost 628 one-and-a-half-year-old California [rainbow] trout from this cause, and all made the leap, which was unfortunately fatal to most of them, inside of thirty minutes. They jumped over a twelve-inch board at the head of the pond and near where the water enters. Occasionally, which we may characterize as accidental, jumping out of the pond occurs all through the season, but an epidemic of this kind is a phenomenon which I am at a loss to explain."

To this I can only say: It now seems that this, which I have called suicidal mania is not confined to the brook trout of Europe (brown trout) when brought to a strange land. My fish were confined in a square rearing pond made of boards, twenty-five feet long and six feet wide with vertical sides. The water was three feet deep and the sides extended fourteen inches above the water. We noticed that if we put a net in the pond in the daytime to show our favorites more plainly to some visitor, the jumping occurred the night after. It took two or three occurrences of this before we connected the jumping with the disturbance the day before, the last time being on the occasion of a visit of Gen. R. U. Sherman, of the Fish Commission, to whom we wished to show the growth of the fish. Once they jumped when no disturbance that we knew of had occurred and we thought perhaps a mink or muskrat had gone through the pond at night, but had no proof of it. We removed the fish that remained to a bottle-shaped pond sixty feet long, fifteen feet wide and five feet deep, and although the banks are no higher than those of the rearing pond this jumping has not occurred in a single instance since.

In the "bottle-shaped" pond the fish in going up stream swim into a spawning race which forms the neck of the "bottle" and which has an upright screen across the entire end and is covered with boards, so that it is impossible for a trout to jump out. In the square rearing pond the water entered in the middle of one end through a hole one foot square, which was protected only by a screen 2½ft. square a few inches in front of it. Not knowing any other cause except fear which produced the jumping, I still think the fish were disturbed by some arrival at night at the time when we had not troubled them. If our netting in the daytime was the cause on the other occasions, it is curious that they waited until night to jump. If other fishculturists have had any similar experience I wish they would record it in FOREST AND STREAM.

FRED MATHER.

COLD SPRING HARBOR, N. Y., Dec. 7.

LAWLESSNESS IN THE ADIRONDACKS.—We recently published an account of the cutting of the nets belonging to the State Fish Commission at the Adirondack hatchery, and the fact that threats against the building had been uttered by those who having always fished the waters now preserved, in season and out of season. It has been the custom of these men to fish Little Clear Lake and its outlet at all times of the year when the labor of cutting through the ice was not too great. We are pleased to see that the Commissioners have had a poster printed which recites the law, setting apart this lake for purposes of propagation, and defining the penalties for trespass and threats. Appended to this is a notice from the superintendent of the hatchery, Mr. Frederick A. Walters, stating that these laws will be enforced. The deluded creatures who live in that part of the woods and are opposing the shutting up of one small pond as a preserve, whereby the trout in other lakes may be increased, have no idea that this is for their benefit as well as that of others, and having for years tried to kill the trout that lays the golden eggs they resent the action of the State as an encroachment on their privileges. The same state of affairs existed about Meacham Lake when Mr. Fuller first took possession there and tried to increase the fish. The natives now look on Mr. Fuller in a different light, and Mr. Walters will no doubt teach the people about him that he is really their friend instead of an enemy. Some of the more public-spirited men of that region rejoiced when the hatchery was located there, and the Commissioners have notified the hotel keepers and others that if public sentiment will not protect the property of the State it will be useless to do more for them. We have no doubt but that a firm hand can in time restrain this lawless feeling and all will go smoothly.

MEETING OF COMMISSIONERS AT PHILADEPHIA.—Philadelphia, Dec. 4.—The Pennsylvania State Commission of Fisheries met this A. M. at the rooms of the Anglers' Association, in conference with the Commissioners from the States of New Jersey, Delaware and Maryland, to consider the subject of similar jurisdiction over the fisheries of the Delaware, to take action relative to the injurious methods employed in the catching of menhaden, and finally to consider the question of cheaper fish for the public. Every member of the State Commission was present. Mr. A. M. Spangler, of Philadelphia, said that he had discovered a law passed by the Legislature of 1803 in regard to fishways. The law, which had never been repealed, prohibited the erection of dams in any stream unless provision was made for the passage of fish up and down. The attention of the Attorney-General will be called to this law. A report of the new whitefish hatchery at Corry was read. This establishment is pronounced to be the finest in the world of its kind. After a discussion as to the distribution of the carp, the conference adjourned.

CARP IN INDIANA.—Oakland, Ind.—*Editor Forest and Stream:* Last spring I wrote you regarding the death of a large number of carp in a pond near here, and hoped to hear some comments on it and perhaps an explanation of the cause. Since writing I have learned that notwithstanding the fact that there was a "whole windrow of dead fish washed up last spring," as a neighbor expresses it, there appear to be many left. I am still interested to know the cause of this mortality. Was it caused by the ice on the pond and the closing of the air-holes?—R. N. PURDY. [If the pond was small and shallow it is possible that the freezing did it; but at this distance and with no knowledge of the surroundings and conditions, it is impossible to hazard a guess as to the cause of death.]

PROGRESS AND PUNISHMENT.—The new Adirondack hatchery has on its trays 725,000 salmon trout, 115,000 brook trout, and 9,000,000 of frost fish eggs, all doing well. A pretty good start for a new concern. The Bisby hatchery has 120,000 brook trout on its trays, all taken in the club's own waters. The party from Caledonia which went to the upper lakes for salmon trout spawn has returned with 4,000,000 eggs—the largest take they have ever made. The Caledonia hatchery expects to turn out this season 10,000,000 of fry of the trout kind. Work on the Fulton Chain hatchery is progressing vigorously, under the direction of H. Dwight Grant, one of the most experienced of the Brown's Tract guides. It is expected that in a month's time the hatchery will be ready for use. The building is 35 by 20 feet, and is to have fourteen troughs, capable of containing two million of trout eggs. It will be too late to gather spawn from local sources this year, but spawn is expected from some of the State hatcheries. Protector Lindley, of the 13th district, reports the destruction, during the month of October, on Oneida Lake, of twenty-seven nets, of the aggregate value of $1,350. Protector Steele, of the 12th district, reports seven nets destroyed, of the value of $425. Daniel Staring, of Alexandria Bay, special assistant to Protector Steele, of Clayton, under the employ of the Anglers' Association the St. Lawrence River, has been of great assistance to Steele in removing nets from Cape Vincent, Chippewa and Millen's Bay and other points on the river. He is undoubtedly the right man in the right place. Protector Sheridan, of the 14th district, reports the destruction, on Keuka Lake, of four nets, valued at forty-seven dollars. Protector Schwartz, of the 15th district, destroyed four fyke nets of the value of thirty-nine dollars. Protector Leonard, of the Seventh District, captured and destroyed on Black Lake, St. Lawrence county, twenty-one nets valued at $225. Twenty of them were gill nets. Protector Schwartz, in the vicinity of Sodus Bay, accompanied by Albert White, of Rochester, and Alonzo Davis, of Clyde, started out in a row boat on the pretense of going after ducks. He had not been on the water more than half an hour before he came upon four men in the act of hauling a seine. After some resistance these men were placed under arrest. Their names are Charles Howard, Fred Ridgeway, William Carson and Henry Andrews. The captured seine is one of the very finest ever taken by Game Protector Schwartz and was 100 yards in length. It is said that the Sheriff of Wayne county owned half an interest in this net. For capturing Howard, who is a very desperate man, the game protector will receive a reward of $50. At Sodus Point, Schwartz also arrested Daniel Tompkins, Daniel Clumpp and Robert Scott for fishing with gill nets. It is the intention to present the names of all the above parties to the Grand Jury for indictment. Mr. Schwartz destroyed all of the captured nets and has received the greatest praise for his efforts to clear Sodus Bay of illegal fisherman by the citizens who reside in that vicinity.

FIXTURES.

BENCH SHOWS.

Dec. 15, 16, 17 and 18.—First Annual Dog Show of the Western Connecticut Poultry, Pigeon and Pet Stock Association. Frank D. Hallett, Superintendent, Winsted, Conn. Entries close Dec. 5.

Jan. 19, 20 and 21, 1886.—Annual Exhibition and Bench Show of the French Creek Valley Poultry and Pet Stock Association. A. L. Braden, Secretary.

March 16, 17, 18 and 19, 1886.—Western Pennsylvania Poultry Society's Dog Show, at Pittsburgh, Pa. C. B. Elben, Secretary.

March 23, 24 and 25, 1886.—First Annual Dog Show of the New Jersey Kennel and Field Trials Club, Newark, N. J. A. P. Vredenburgh, Secretary, Bergen Point, N. J.

March 30 to April 2, 1886.—Third Annual Dog Show of the New Haven Kennel Club. E. S. Porter, Secretary, New Haven, Conn.

April 6, 7, 8 and 9, 1886.—Second Annual Dog Show of the New England Kennel Club. Jean Grosvenor, Secretary, Boston, Mass.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **2908.**

THE ROUGH-COATED RUSSIAN GREYHOUND.

Editor Forest and Stream:

Mr. M. Karegeff, in a long letter to the London *Field*, gives an interesting description of this type of greyhound, a breed of dogs seldom, if ever, seen out of Russia. They are scarce in that country, and in the hands of a few who value them so highly as never to part with them. The narrator's family have kept this breed for over one hundred years. I give you part of his letter in a condensed form.

The Russian greyhound is larger than his English cogener, the average height for both sexes being 29¾ inches, weight about 170 pounds. The length should be about the same, perhaps a little longer; it is measured from the chest to the root of the tail. The head should be narrow in the forehead, and a straight line should be from the top of the head to the end of the muzzle. The narrower the head is, and the less flesh there is on it, so that it is quite firm, with veins standing out, the better the breed is considered to be. The muzzle should be thin and long. The eyes should be dark, and when the head is slender the eyes are seldom large. The ears are like those of an English greyhound, pendant or hanging down, so that the hearing organ is open, and the less distance there is between the ears the better, so that the dog can almost fold them together. The smaller the ear the better the breed is considered to be. The neck is short, and when the head is stretched out straight from the neck the nape does not rise from it at all.

The back, which is reckoned as one of the points in a dog, ought to show a rising of the backbone above the shoulders, forming, as it were, a semi-circle, extending to the hindquarters, but this semi-circle should commence exactly between the shoulders. Should it extend an inch or two further this would indicate a defect in the breed. In the bitch the back should be perfectly straight. These points do not affect the temper of the animal, the arching of the back gives height and beauty. The hindquarters should be low, the tail long and straight, large and round. It is measured by drawing it between the hindlegs and round the hindquarters, so that the end should reach to the top of the spine between the hindlegs. When at rest the end is not curled, though sometimes when the tail is raised to the right or left it takes a curve. This is not a fault, but is on account of the length and weight of hair on the tail. An actual curve of the tail and a curling at the tip is a defect caused by inter-breeding with Crimean or mountain dogs.

The chest should be well developed. The shoulders should be flat against the ribs, the ribs also should be flat and fall low. Their definite height should be on a level with the shoulders and at right angles with the spine. The foreleg should be straight, the bone in front rather sharp and with but few muscles; the veins prominent. The paw is not always bald, owing to the quantity of hair between the toes, the whole sole of the foot being covered with hair, and it would not be natural to stand on the tips of the toes. The hindleg should be slightly bent at the hock, and not straight, as is the case with Crimean dogs, which would be considered a defect. The greater the length from the hock to the foot the better. The muscles in the hindquarters are not large, but are firm: the soles, like those of the forepaws, are covered with hair growing between the nails.

The head of the Russian greyhound is covered with short hair, like the English greyhound, but falling in long curls from under the ears; the whole of the neck being covered with long hair, falling on either side like a mane. This hair should be soft and silky. When the dog is well grown the head seems, as it were, to look out of a muff. The back is also covered with thick, silky hair, lying straight and falling on both sides. The legs are covered with long hair on the inside in the same way as a setter. On the under side of the ribs the hair is sometimes seven inches in length; the hindlegs are thickly covered with long hair, falling below the hock. The hair on the hindquarters is often fourteen inches long, and should only curl at the extremity. If the hair is tight and curly, or bristly, it is regarded as indicating want of breeding. The tail should be covered with long, thick hair, not less than seven inches in length.

Stonehenge gives a brief description of this dog, which, according to Mr. Karegeff, must be inaccurate. Stonehenge also states the animal is deficient in courage, as it will only hold wolves at bay till the hunter comes up with his gun and dispatches them. Mr. Karegeff tells us they attack the wolves fiercely, seizing them by the throat or ear, and will not then let go their hold. Hunters have been known to ride up and by accident break the legs of the dog, who even then would still hang on.

While they rarely indulge in play, they are gentle around the house, obedient, and never bite.

They are said to be a handsome animal, and with proper feeding and care could no doubt be made as imposing looking and as companionable as the mastiff. V. M. H.

CLINT'S LAST COON.

ALONG lanky weather-beaten man with weedy, scraggly hair, a wild iron-gray beard, and features as sharp as an Indian tomahawk, strode through the village to-day. He lifted his feet very high as he walked—a habit contracted from climbing steep mountain sides. He was followed by a starved-looking hound, which appeared as if it had not pluck enough to face a chipmunk, yet the dog has the reputation of being the best foxhound in Warren county. The man was old Clinton Fatherfelt, of Dark Moon.

"Say, Clint," called out some one, "is that your coon dog?"

"Yer mighty right, he is," replied Clint, blowing up, "it's Bounce McLaughlin, th' bes' critter fur varmint in all Warren. When he were a sucklen purp he were give to me by Domnee McLaughlin, an' in this way I come tu give th' dorg his lawful name."

"Been cooning much this fall?" asked some one else. The mountaineer stopped short, and shambled across the road, looking wistfully at the door of the repository for fine old apple spirits, and replied:

"Up ter las' Friday gone two weeks, then I quit. Then I quit, I say fur good, no more tromping in th' swamps fur me, I've knocked an' closed th' game."

"Stuff, Clint, stopped coon hunting, who no one would have thought you'd stop until there were no more coons to hunt. You're kidding us."

"Be I, boys? Not much. What I say is trew, trew as gospill. Old Clint has quit, an' Bounce McLaughlin 'as treed his las' coon fur ole Clint. Gowy! If yer'd been with me th' time I speak yer'd quit too, as sartin as yer stan'en out here in th' cold. I wonder if ole Hazen will sot 'em up if we step in. I'm kinda high-headed meself, an' can kinda sniff his rum."

There was no dodging this decided hint, so the party went in and took "a little apple all round," and then looked at Clint to tell why he had retired from the coon hunting business.

"Well, thar ar'n't much on a story," said the old hunter, "but what I says goes. It makes me creep tu think on 't; but, boys, I sup'ose y'll pester about tu yer larn how it come fur me to quit coonin', so I'll tell yer. I was up on th' mounten above th' Shades of Death a hunten a cussed she red fox as has her den thar. Bounce McLaughlin were on ahead, a sniffin' round carless like. Somehow, I weren't watchen much, an' Bounce McLaughlin giv' me th' slip. So I sot down on a rock an' listened, an' after a spell I heerd Bounce McLaughlin down in th' Big Swamp a hollerin' like mad. Gowy, boys, I skinned down th' ledge an' till I almos' broke me neck. But Bounce McLaughlin were a hollerin' so cussed horrible th' ole man didn't hav' time tu study ontu insurance risks. Well, when I fotched th' swamp, ther' were th' ole dog a diggin' an' a yelpin' an' a squeakin' at th' bottom of an ole tree. It weren't a tree, neether, but a kinda snag like. I struck the trunk a thump, an' it were as holler as a drum. Then I cut a spicewood gad an' run it in th' hole ole Bounce McLaughlin were a jabberen at, an' sure 'nuf I tetched some varmint a leetle way up, an' gowy, boys, it went. 'Fur-up! pur-up!' Be gowy, I knowed it were a' ole he coon. If I'd monely an axe, I sez, Mister Ki-hi coney in th' holler, I'd hev yer out so darned quick it make yer hed swim. But I didn't hev no axe, so I reckoned I'd hav to smoke th' critter out. So I gethered up some dry leaves an' chunks an' stuff, an' poked 'em in th' hole an' tetched 'em off. Then I stipped aback an' sure I see th' smoke curl outer a leetle hole away up in th' snag, about thirty foot from th' ground. I sez, Now, Mister Coon, taker yer time; me an' Bounce McLaughlin can wait for yer, can't us, Bounce? The ole dog knowed every darned word I sed, an' he sot down on his end an' blinked a' eye. Gowy, I felt a kinda tired, so I sot down tu, with me back agin th' tree. I hadn't sot thar one minet 'fore I heered th' dernedest scrapin' an' a scratchin' in th' ole butt. Gowy, I had tu laugh tu messel tu think as how th' coon's eyes was waterin'.

"Now, boys, comes th' dreadfullest part yez iver heered on. I kep' on a sitten, when all on a suddint somethin' come down curflump on me hed an' near stunned me. It warent no coon I knowyed when it streck, but 'peered like a dead limb o' a tree. I jest riz up like lightnen, when agin a nether kinda limb streck me, be gowy! I skipped back, an' then fur th' fust time I seed it was a rainin' blacksnakes. Th' way they was a comin' out o' th' hole away up th' snag were fearful. Great thunder an' Hackettstown! one streck ole Bouncy Boy longside th' chops an' he squalked an' took a bee line out threw th' swaamp. I were so all-fired skeered I couldent even crawl away. I were entirely foot-boun', an' stood a teeteren like an ole shad poke knee-deep in ole swaamp racers.

"Gowy! It's all trew, boys, every derned a word on it an' more. Then I seed th' everlastenest longest snake a comen outer th' hole eny man ever seed outer Barneyum's show. Be gowy! on he come, head first, down th' side o' th' tree till he streck th' ground, an' then he began to quirl up. He were all kinda colors. All o' sudden I seed it weren't all one snake, but a cussed lot o' 'em, all kinds, holden on to each ether's tails. Fust come a pilot, thin a milksnake had 'im by th' tail, thin a racer had the milksnake's tail in his mouth, an' thin a adder had th' racer, an' so on. Yer see, arter th' fust scare th' smoke made th' knowin' sarpents knowed it were no good jump—thirty foot. So they put up up a job to lower theirsels down. Gowy! it were a boss idee. An' they did it for all they was worth, boys, or I hope I may never stir no more from here. Seventy-three yards o' assorted snakes is my calculation, boys, as come playen out o' th' hole. An' las' o' all, out come th' coon with a hoopsnake hangen like a necklace round his neck. Gowy! No more coon hunten fur me, with sich things goen on. Ole man Clint an' Bounce McLaughlin has quit th' business fur good."

THE LAVERACK PEDIGREES.

Editor Forest and Stream:

In the *Century* for the present month Mr. Burges says the Laveracks "had also a cross of Gordon from Lord Lovat's kennel, to which, it has been proved, Mr. Laverack resorted, notwithstanding repeated assertions that his breed was free from all crosses." Again, he speaks of "those who have investigated the Laverack history without prejudice, and who are not imposed upon by Mr. Laverack's preposterous table of pedigrees."

Some three or four years ago you published a good deal of matter relating to this subject. It was about the time of Mr. Llewellin's protest against Comet as winner in a class for "pure Laveracks." I suppose you published the substance of all the information on the subject then accessible to the public, and I wish to inquire whether any other information tending to impeach the Laverack pedigrees has since become available. My judgment then was that, so far as appeared in your pages, Mr. Llewellin's protest was not sustained by the evidence; which, nevertheless, showed that Pride of the Border's paternity was doubtful, Mr. Laverack having at different times attributed it to both Fred II. and Dash II.

This, however, was far from proving intentional misrepresentation on the part of Mr. Laverack. And neither Mr. Llewellin's charges nor Mr. Burges's language, above quoted, were consistent with Mr. Laverack's honesty and good faith. Mr. Burges writes very confidently, even contemptuously, on the subject; as if the Laverack pedigrees were, on their face, too "preposterous" to deceive any unprejudiced person. Wherein consists the preposterousness? If Mr. Burges does not mean that they are absurd, but only untrue, how has their falsity been shown? SAMUEL HUNTINGTON.

Nov. 16, 1885.

NEW FIELD TRIAL GROUNDS.

Editor Forest and Stream:

I wish to present the claims of our town to the Eastern Field Trials Club should they change their grounds from High Point. During my stay at the trials I visited the grounds upon which they were run, and I must say they were very poor and birds very scarce. In this county and along the line of the W. N. C. R. R., that can be reached by rail, leaving here in the morning and returning in time for supper, game can be found in abundance, and the courteous Superintendent, Capt. V. E. McBee, promises every accommodation to visiting sportsmen and the club upon that road. Within twelve miles of Salisbury there can be leased for the club as many acres of land as they may wish, with an abundance of birds, with a good railroad station and comfortable accommodations for man and beast. The club can leave Salisbury in the morning and return in time for supper. Three tracts of land in close proximity to Salisbury, each containing from 2,000 to 3,000 acres of land, well supplied with birds, can also be had, giving the dogs fresh land to run over each day, and the handlers would not be walked down before they could have the pleasure of saying "Point." Should the club consider our application on grounds, we ask them to also consider the accommodations that a town of our size could give them. We have two good hotels with ample room, with plenty of private boarding—the Boyden House, a large hotel, and the Mt. Vernon, with large capacity and an accommodating landlord, Mr. P. A. Frercks, who obligates himself, if the trials will come here, to build a handsome and comfortable lot of kennels to make room for all the dogs that may come, the kennels to open on a large grass lot for a place to exercise the dogs. We offer all these advantages, and, besides, promise all the private shooting that the members and friends may want, and I think we merit some recognition and I hope for your assistance, both in presenting our petition and advocating our claims. We mean what we say, and you can trust us to carry out our part of the programme. C. E. MILLS.

SALISBURY, N. C., Dec. 2.

DOG SHOW REPORTS.

Editor Forest and Stream:

Your correspondent "Reader" quotes Mr. Wade as saying that I am one of those not afraid to speak their minds over their own signatures, and then asks me to report Winsted show over my own signature because I judge there. I don't see the analogy between the statement and the request. The indiscriminate reporting of shows by judges even over their own signatures would in my opinion be a very decided change for the worse on the part of FOREST AND STREAM. On the other hand the makeshift sportsmen's journals would doubtless be much benefitted thereby, on the principle of the traveler who called the waiter at the country hotel and said: "If this is tea bring me coffee, if it's coffee bring me tea, I want a change." For my part I should decidedly object to writing for these journals, and should decline judging *in toto* if it formed part of the judge's duty. I also have a professional objection to doing so. I am a member of the fourth estate and decidedly object to any one taking the bread out of the mouths of my fellow journalists by furnishing reports free.

On the other hand, FOREST AND STREAM, as long as it follows out the programme of independence which has raised it to the first rank of our sportsmen's journals, has a very important "say" in this matter. As any one can see by the unequalled reports of dog shows which appear in its columns, they are the work of experts, actuated by no desire other than to give a faithful and unbiassed opinion upon the judges' awards. The editor of FOREST AND STREAM knows how valuable such reports have been to his paper, and I am sure would be decidedly averse to being reduced to the position of having to accept reports from persons who in his opinion may not be competent to write them, to say nothing about being competent to judge.

If asked by FOREST AND STREAM to write a report of a show at which I judged, I should accept it as a high compliment, and would willingly undertake the duty, but if left to my judgment I should ask that any classes judged by me should be criticised in the usual manner. I have never professed to be an all-round expert and have yet much to learn of many breeds, and I should be sorry to be deprived of the opportunity of reading what qualified critics consider to be my mistakes, so that I may be more particular on future occasions when asked to judge at shows which cannot afford the expensive luxury of a complete outfit of specialists.

JAMES WATSON.

PHILADELPHIA, Pa., Dec. 7.

GAME ABOUT CANTON.

WE ARE permitted to publish the following extracts from a private letter written by a gentleman well known to all who were present at the Canton Field Trials:

I have been so busily engaged so far this season that I have not had much time to devote to the most pleasant of field sports, quail shooting. However, I have had two or three days good shooting. On the morning of the 17th inst., armed with my new No. 12, 7½-pound hammerless, and accompanied by my faithful old dog Jack (who you will remember) and Mr. Coleman with his English setter dog Jim Hill, we took the train at 6 o'clock A. M. and arrived at Calhoun Station on the I. C. R. R. about 8 o'clock. We had sent our horses to Calhoun the evening before with the intention of hunting back to Canton. In a short time after arriving at the station we mounted our horses and commenced our day's sport. Birds were not very plentiful in the morning, and up to 1 o'clock we had only bagged twenty. We then rested our dogs for an hour, and sitting down by a cool pool of water, refreshed ourselves with the excellent lunch our wives had prepared. Mounting our horses once more we began the evening's sport. In a short time Jack came to a stand, and on the rise we killed four. Our sport from that time until half past five o'clock was fine. We arrived home at six, poured the birds out on the floor and counted out 89, a pretty good bag. Capt. Tom Priestley (whom you met here last winter) was out the same day with his young Gladstone dog, John K. Renard, and killed fifty-seven.

I see a letter from Mr. Stark headed "Light Guns for Trap Shooting." Now, my experience is that it makes but little difference in trap shooting whether you have a 10 or 12-bore gun. I have always used until this season a No. 10, 11-pound Clabrough, full choke gun, and I think as hard a shooter as I ever saw, but this winter I disposed of it and have been shooting the No. 12 Harrington & Richardson for trap; squirrel and quail shooting. I find the 12 gun shoots as hard, and I believe harder than the 10, and I am sure will do as much execution if properly handled in the field or at the trap as any No. 10 of any make. Last winter while here you wanted to kill a turkey, but I believe failed to get one. If you come on this season I assure you you shall have several shots most any day, as they are very numerous this winter. K.

THE NATIONAL FIELD TRIALS.

[*Special to Forest and Stream.*]

GRAND JUNCTION, Tenn., Dec. 9.

THERE were twenty entries in the All-Aged Stake of the National Field Trial Club. The first heat was between Mainspring, winner of the pointer stake of the Eastern Field Trials Club this year, and the English setter dog Baden Baden, that ran here three years ago. After an hour the closely contested heat was awarded to Baden Baden. The second heat was between Belle of Piedmont, also a winner at the Eastern Field Trials this year and the Messrs. Bryson's well-known Lillian. The heat was a very close one and was won by Belle of Piedmont after two and a half hours. The third heat was between Rebel Wind'em, a runner at the Eastern Field Trials last year, and Queen Bess. After nearly an hour of capital work by Rebel Wind'em and but little by Queen Bess, as she had no chance, the heat was awarded to Rebel Wind'em. The fourth heat was between the well-known Gladstone's Boy and Bob Gates, a half brother of Lady C., winner of second at Canton last year. After a little more than an hour the heat was decided in favor of Bob Gates.

The next brace, Gus Bondhu and Bessie A., both well known, were run a while and taken up, to go down again in the morning. Lady C. and Sportsman were the next to run. Both won at the trials held at Canton last year. After two hours of excellent work by both dogs the heat was decided in favor of Lady C. This finished the work for Monday. On Tuesday the weather was about as unsuitable for shooting as could well be, but the running was continued. Gus won the heat after a long and exciting contest.

Gath's Mark, winner at the Eastern Trials this year, and the pointer Richmond, runner up at the Western Trials, were next on the card. Both did very fine work, notwithstanding the race was run in the rain. At the end of three-quarters of an hour the heat was decided in favor of Gath's Mark.

American Dan, a well-known field trial performer, and Trinket's Bang, winner at the Western Trials, were next put down. After an hour of good work Trinket's Bang won.

The last brace was Roderigo, that ran in the National Derby last year, and the red Irish setter bitch Dora. After over an hour's work the heat was decided in favor of Roderigo. This finished the first series as follows:

Baden Baden beat Mainspring.
Belle of Piedmont beat Lillian.
Juno A. beat Count Nutt.
Rebel Wind'em beat Queen Bess.
Bob Gates beat Gladstone's Boy.
Gus Bondhu beat Bessie A.
Lady C. beat Sportsman.
Gath's Mark beat Richmond.
Trinket's Bang beat American Dan.
Roderigo beat Dora.

The first brace in the second series, Baden Baden and Belle of Piedmont, were put down, but did not finish their heat, and will go down again in the morning.

PACIFIC COAST FIELD TRIALS.

THE secretary of the Pacific Field Trials Club, H. C. Brown, sends us the list of entries for the All-Aged Stakes, competition for which will take place at the third annual trials, to be held near Olema, Marin county, commencing on Tuesday, Dec. 15. The grounds selected are on the ranch of Judge Shafter, and as the birds have been protected for years past from predatory pot-hunters, they are quite numerous. The character of the grounds on which the trials are to be run is said to be very favorable to the successful working of the dogs, and the members of the club anticipate an unusually interesting meeting. Owing to the difficulty experienced in finding three gentlemen sufficiently well up in the theory of field work, and also possessing a practical knowledge of the rules under which competitions of this kind are held, the club has not yet been able to announce definitely its judges for this year. Last year the judges were Hon. Joseph McKenna, of Solano; H. C. Brown, of Sacramento, and Mr. Platt, of Oakland. It is more than likely that Hon. D. M. Pyle, of Santa Clara, will be one of the judges this year. Judge C. N. Post, of this city, is president of the club. The All-Aged entries are:

BION, liver and white English setter dog, 3yrs., by Regent (Royal Duke—Gift) out of Leavesley's Juno (Belton II.—Belle); owned by G. W. Bunnell, Oakland.

MOUNTAIN BOY, lemon and white pointer dog, 2yrs., by Grouse (champion Rinnie—Juno) out of Nell; owned by W. Schreiber, San Francisco.

LASSIE, lemon and white pointer bitch, 2yrs., by Prime (Trent—Lady Pearl) out of Forest Lily (Duke II.—Old Nell); owned by W. Schreiber, San Francisco.

ROYAL DUKE, black, white and tan English setter dog, 3yrs., by Regent out of Dolly (Carlowitz—Bess); owned by J. G. Edwards, Oakland.

SURF, lemon and white pointer bitch, by champion Bow (Bang—Luna) out of King's Maid (King Phillip—Sleaford's Maid); owned by W. S. Kittle, San Francisco.

TRIX, red Irish and Gordon setter dog, 2yrs., by Count Rouge out of Queen; owned by C. L. Ecklon, Folsom. [Trix won the puppy stake in 1884].

JANET, black, white and tan Llewellin setter bitch, 2yrs., by Count Noble (Count Wind'em—Nora) out of Dashing Novice (Dash II.—Novel); owned by California Kennels, Sacramento—Post & Watson.

BEAUTIFUL QUEEN, liver and white pointer bitch, by Dilley's Ranger out of Queen; owned by J. M. Bassford, Vacaville.

LEMMIE B., lemon and white pointer dog, 2yrs., by Prince Ranger (Ranger Boy—Jessie) out of Gracie Bow (King Bow—Gracie); owned by J. M. Bassford, Jr., Vacaville.

SOLANO B., liver and white pointer dog, 1yr., by Glen (Ranger Boy—Beautiful Queen) out of Josie Bow (King Bow—Josie); owned by Henry A. Bassford, Vacaville.

The Derby, or Puppy Stake was closed on May 1 last and the entries published at the same time. The number was seventeen, but since that date many of the youngsters have gone to the canine happy hunting grounds, while others have been neglected and not educated for their proper sphere in life; hence it is quite likely that the number of Derby starters will be very limited.

It would be well for persons who desire to attend these field trials to send their names to the secretary. The fare from San Francisco to and from Olema will be $1.50, and hotel accommodations $1 per day. The trials will last from three to five days. Members of the club and visiting sportsmen will leave on the 11:30 A. M. boat on Monday, Dec. 14.

BEAGLE MEASUREMENT.—New Market, Frederick county, Md., Nov. 25.—*Editor Forest and Stream:* Having been asked through your paper my opinion on the subject of "Beagle Measuring," I will briefly give it. To get a beagle's exact height there should be used a rule with a sliding bar—say some eight or ten inches long; and the bar should slide up and down at right angles to the rule. The dog should stand on a perfectly horizontal base, and be very careful to have the rule perpendicular; for if it should lean out of plumb to or from the dog its height would be falsely registered by the sliding bar. The dog should stand in a natural position, not pushed against the side of its stall, for naturally the dog will crouch; and then the judge to put his hand under its throat and raise it up until he thinks the dog is in a natural position. It is all guess-work, for a dog is as apt to be pushed a half-inch too high as it is to be left a half-inch too low. To use the sliding rule be careful not to let the dog see it, pat the dog until it is in a natural position, and then, while patting, place one hand over its eye next to the measuring rule. Be careful to have it perpendicular and not let it touch the dog. Then slide down the bar with the fingers until it rests upon the dog's shoulder. Then I think you will get about its exact height.—POTTINGER DORSEY.

A BREEDING CONUNDRUM.—Wilkesbarre, Pa., Nov. 27.—*Editor Forest and Stream:* I have a breeding conundrum for Mr. Schellhass, as follows: John Smith is mean, miserly, short of stature and a blonde; these characteristics have been pronounced in his ancestors. Sallie Brown is frank, open-hearted, generous, tall and a brunette; these characteristics she too has acquired from ancestors remarkable for their possession of the same good qualities. The two are wedded and have a child. The child is red-headed, short, and, as he grows older, rapidly develops certain characteristics which stamp him among the neighbors as a "chip of the old block." He "takes after the Smiths." Mathematically he is one-half "Brown strain," but, actually, how "strong" is he in Brown blood?—F. W. WHEATON.

DANDIE DINMONTS.—Chicago, Ill.—*Editor Forest and Stream:* In your issue of Oct. 22 I saw a notice that Mr. Hay had imported a fine young Dandie Dinmont. This I am glad to hear as they are one of the breeds I admire. The gentleman who sent you the notice declares them the best in America. Good Dandies are scarce in America, but there is a far less number of Dandie judges. I have often thought that I owned a few good Dandies, and am sure none have better breeding, for instance, out of the celebrated old champion Linnett, winner of forty prizes, open and champion, and now with her nine or ten years to carry can give them a warm reception. I shall be glad at any time to meet Mr. Hay for the blue ribbon, and hope whichever is defeated will take the medicine like a man, and especially before a competent judge of Dandies.—JOHN H. NAYLOR.

THE PHILADELPHIA SHOW.—*Editor Forest and Stream:* I entered the Glencoe Collie Kennels' bob-tail sheep dog at Philadelphia, paid the entry fee, shipped the dog by express, received him on his return, and received the premium. I have the utmost contempt for an attack on any one's veracity when sheltered under a *nom de plume*, but as I dislike to seem to evade a charge against me, I feel I ought to depart from the sound rule of treating anonymous snappers with the contempt their lack of courage deserves. However, this is the last time, and the next fellow who wants to prove that I lie must give his name to secure any notice from me.—W. WADE (Hulton, Pa., Dec. 5).

DEATH OF CHAMPION BOB.—Mr. A. H. Moore, of Philadelphia, has lost, by death, his Gordon setter dog champion Bob. He was whelped in May, 1877, and was by champion Lang and out of champion Floss. His winnings in England are second, Birmingham, 1878; first, Alexandra Palace and first, Birmingham, 1879, and first at Brighton, 1880. In this country he won first at St. Louis, 1880; champion at Pittsburgh and New York, 1881; champion at Pittsburgh, New York and Cleveland, 1882. He also won several special prizes for the best Gordon setter. He died Nov. 25, of fatty degeneration of the liver and kidneys.

THE BULL-TERRIER COUNT.—Mr. F. F. Dole, of New Haven, has received from the kennels of Mr. Fred Hinks, of Birmingham, the well-known bull-terrier Count. The dog arrived in excellent condition, and is a valuable addition to the list of importations. Count is by Marquis, sire of The Earl, out of Kitt, by Prince. Marquis by champion Tarquin out of Puss. His list of prizes include the following at first-class shows: Second, Aston, 1883; first, Birmingham; first and cup, Exeter; first, Buxton; first, Crystal Palace; first, West Bromwich, and first, Bangor, 1884.

THE IRISH SETTER SPECIAL.—Thomasville, N. C., Dec. 1, 1885.—*Editor Forest and Stream:* Messrs. Donner, Hitchcock and Coster, judges at the Eastern Field Trials, requested by me to decide which of the Irish setters shown were entitled to the Irish setter special of $50 given by Mr. Wm. Dunphy, of Peekskill, N. Y., and Dr. Wm. Jarvis, of Claremont, N. H., awarded it equally to Elcho, Jr., Blarney, Glenclaire and Rose of Killarney. I donated the share of Rose of Killarney toward an Irish setter special for 1886.—LUKE W. WHITE, Secretary Irish Setter Club.

A FOX HUNT.—The followers of hounds in South New Jersey propose having a grand fox hunt in the vicinity of Absecom shortly. Four red foxes have been secured and will be set loose on the grounds of the Agricultural Society, near that place. After reynard has been given an hour's start seventy-five hounds will be put on his trail. Almost everybody that can secure any sort of a mount round about Atlantic City will attend. It is hoped the foxes will run, trapped foxes generally fag soon.—HOMO.

MR. FRED W. ROTHERA has returned to England, his native place, and will resume his practice of the law at his old office in Nottingham. Mr. Rothera has been a successful exhibitor of dogs in this country the past few years, and leaves a host of friends. His dogs will remain here except the St. Bernard bitch Daphne, and the collie bitch Lassie, that he will take home with him.

WEST CHESTER HUNT.—There is more fox hunting done around West Chester, Pa., in the course of a season than in all the other counties of the State combined, and it is policy to keep on the right side of the farmers of that neighborhood, for one chase in soft weather when the fields are in bad condition does more damage than a hundred hunts when the ground is frozen and dry.—HOMO.

REPORTED DEATH OF SUE.—A dispatch to the New York *Herald* reports the death of the celebrated English setter bitch Sue, owned by Messrs. P. H. and D. Bryson, of Memphis, Tenn. Sue is a well-known field trial winner, and was the dam of Gladstone's Boy, Sportsman and Lillian, also field trial winners.

A LEGAL OPINION.—Office of Thompson & Son, attorneys-at-law, No. 28 North Main St., Butler, Pa., Nov. 30, 1885.—*Editor Forest and Stream:* "Training vs. Breaking," by Hammond, received, and there is no question but that it is the best dog-training book published. Yours, W. C. THOMPSON.

GRAPHIC'S ALLEGED FLUSH.—New York, Dec. 7.—*Editor Forest and Stream:* When my letter referring to the flush scored against Graphic by Mr. Coster shall have been answered by him, I will take up the running and judging in detail and give "facts, not fiction," for which facts I have the data. I will say now that the judge who gave the facts as to the alleged flush to the reporter of your paper and to others must have been in a peculiar state of mind, as the statements in the different papers are widely different, and do not dovetail with that accuracy usually shown in different narratives of the same occurrence when made by the same person. I may also add that in many statements of fact I entirely disagree with your reporter. If, as he says, "the judges informed us [him] the dogs would start on even terms in the morning, and with a clean score," I most emphatically pronounce Mr. Heath's withdrawal of his dogs not only not "ill-advised," but highly proper. Judges who can score a flush against a dog in the evening and then start him "on even terms in the morning and with a clean score," may do for the Eastern Field Trials Club, but "not any for your humble servant." Either Graphic scored a flush or he did not. If he did, he should have been penalized for it, and no judge or judges had any right to start him "in the morning with a clean score" or at any other time. If Graphic did not score the flush, then the charge against him was an outrage. A very easy way out of the whole matter was for the judges to have consulted Mr. Heath, the owner of Graphic, and to have stated to Mr. Heath what your reporter says they stated to him; but as neither Mr. Heath, Mr. Mitchell or myself expected or asked any favors for Graphic, the dog would only have been started after a complete withdrawal by Mr. Coster of the statements on which the alleged flush was entered up against him. The judges had every opportunity on Saturday morning to correct the record, had they so desired, for Graphic and Spot were both in the wagon at the door of the hotel with Mr. Mitchell, ready to start, had any satisfactory explanation or evidence of the alleged flush been offered to Mr. Heath, and Mr. Heath and myself purposely remained in waiting at the hotel until the judges consulted together and publicly ordered up Beaufort and Mainspring without intimating that they would like to confer with any one on the subject. I have no doubt in my own mind but that your reporter was authorized on the part of the judges to make the statement that the dogs would start in the morning and with a clean score.—JAS. L. ANTHONY. [There is one very serious error in the conclusions drawn in the above letter, an error which we are glad to correct. No flush was charged to or scored against Graphic on the judges' books, and the withdrawal of the dog seems to have been due merely to the fact that Messrs. Anthony and Heath took common report for a statement of fact, and on the faith of this common report the latter withdrew his dog. Under these circumstances the withdrawal, for the reason stated in Mr. Heath's letter, was clearly ill-advised, because the ground for withdrawal which he alleged had no existence. Why Mr. Heath was not informed of this we do not know. Mr. Coster stated that quail got up near Graphic, but that he was unable to see why they got up or whether the dog was in fault.]

TRAINING OF SPANIELS.—We shall shortly publish an extended article giving full directions for the training of field spaniels.

KENNEL NOTES.

KENNEL NOTE BLANKS.—For the convenience of breeders we have prepared a series of blanks for "Names Claimed," "Whelps," "Bred" and "Sales." All Kennel Notes must be sent to us on these blanks, which will be forwarded to any address on receipt of stamped and directed envelope. Send for a set of them.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Dottie Stubbs. By C. S. Davol, Barrington, R. I., for liver and white cocker spaniel bitch, whelped Feb. 7, 1884, by Colonel Stubbs (A.K.R. 302) out of Daffodil (Sean, A.K.R. 315—Daisy Dean (A.K.R. 304).

Princess Maud. By Thomas W. Mills, Montreal, Can., for white, with brindle head, bull bitch, whelped Aug. 2, 1885, by Guillermo (A.K.R. 671) out of Princess Ida (A.K.R. 2454).

Lord Ysiad, Count Ysiad and Queen Ysiad. By Howard Hartley, Pittsburgh, Pa., for black and white English setters, two dogs and one bitch, whelped Oct. 2, 1885, by Druid, Jr., out of Daisy Queen (Rock—Meg).

Lord Ecila and Queen Ecila. By Howard Hartley, Pittsburgh, Pa., for black, white and tan English setters, dog and bitch, whelped Aug. 3, 1885, by Count Noble (Count Wind'em—Norna) out of Queen Alice (A.K.R. 2280).

Teddie. By N. V. Ketchum, Savannah, Ga., for blue Skye terrier dog, whelped July 5, 1885, by champion Jim out of Queen Mab.

Robert LeD. and Maud. By Detroit Kennel Club, Detroit, Mich., for liver and white English setters, dog and bitch, whelped May 15, 1885, by Lexington (Nixey—Princess Louise) out of Kelp (A.K.R. 110).

Rock. By Detroit Kennel Club, Detroit, Mich., for black and white English setter dog, whelped May 15, 1885, by Lexington (Nixey—Princess Louise) out of Kelp (A.K.R. 110).

Craftstone. By E. C. Alden, Dedham, Mass., for solid black pointer dog, whelped June 13, 1884, by Joe Pape out of Nellie Pape.

Bayardo. By E. C. Alden, Dedham, Mass., for black pointer dog, whelped May 15, 1885, by Pete, Jr., out of Daisy (Bob—Sal).

Daisy A. By E. C. Alden, Dedham, Mass., for black and white ticked pointer bitch, whelped May 15, 1885, by Pete, Jr., out of Daisy (Bob—Sal).

Burke. By Edwin Waite, Boston, Mass., for red Irish setter dog, whelped March 10, 1885, by Chief (A.K.R. 231) out of Fashion (Arlington—Flora).

Sparrow Hawk. By Elm City Kennels, New Haven, Conn., for black and white greyhound bitch, whelped July 15, 1885, by champion Memnon out of champion Fan (A.K.R. 10).

Onota Kennels.—Editor Forest and Stream: We wish to relinquish our claim to the name Berkshire Kennels for our kennel of Irish setters in favor of Messrs James and Maurice Callahan, who made previous claim to it, and claim instead the name Onota Kennels.—W. D. SMITH AND F. L. CHENEY.

Stratfield Kennels. By Messrs. Jas. Seeley (Diamond Kennels) and Geo. D. Macdougall (Lachine Kennels) for their breeding, boarding and breaking kennels at Stratfield, Conn.

NAMES CHANGED.

Genesta to Sweet Brier. Lemon and white pointer bitch, whelped December, 1884 (Pete, A.K.R. 398—Belle, A.K.R. 1434), owned by A. Clinton Wilmerding, New York.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Lady Bright—Gun. Charles York's (Bangor, Me.) English setter bitch Lady Bright (Rink II.—Aida) to his Gun (Gladstone—May B.), Nov. 5.

Ritta—Kiddlewink. A. F. Hausmann's (Binghamton, N. Y.) cocker spaniel bitch Ritta (Hornell Dandy—Luna) to Mignon Kennels' Kiddlewink (A.K.R. 967), Oct. 16.

Syren—Glencho. Herbert Flint's (Haverhill, Mass.) Irish setter bitch Syren (Elcho—Rose) to W. H. Pierce's Glencho (Elcho—Noreen), Nov. 5.

Dudene—Dude. Geo. DeHaven's (Philadelphia, Pa.) English setter bitch Dudene (Gladstone—Coomassie) to his Dude (Thunder—Cornelia).

Princess Phœbus—Rockingham. F. Windholz's (New York) Laverack setter bitch Princess Phœbus (A.K.R. 1287) to his Rockingham (Beltbus—Bess), Nov. 27.

Kalmia—Otto II. Coughcura Medicine Co.'s (Eau Claire, Wis.) St. Bernard bitch Kalmia (A.K.R. 2481) to their Otto II. (A.K.R. 2480), Dec. 1.

Black Diamond—Sambo. Stephen Daly's (Milltown, N. B.) cocker spaniel bitch Black Diamond to John Daly's Sambo.

Jenny—Beau. M. B. Mooney's (Lynn, Mass.) spaniel bitch Jenny (Sancho—Bell) to Warren H. Beede's Beau (E. 9,276), Nov. 23.

Sade—Prince. Warren H. Beede's (Lynn, Mass.) foxhound bitch Sade to Robt. McBrien's Prince, Dec. 1.

Edith—Beau. Chas. E. Taylor's (Bath, Me.) black cocker spaniel bitch Edith (Brush II.—Olivia) to Warren H. Beede's Beau (Rolf—Belle), Nov. 28.

Countess Warwick—Prince. E. I. Martin's (Wilmington, Del.) English setter bitch Countess Warwick (Warwick—Ollie) to his Prince (Pride of the Border—Petrel), Oct. 28.

Daisy Laverack—Don Juan. E. I. Martin's (Wilmington, Del.) English setter bitch Daisy Laverack (Taunder—Peeress) to his Don Juan (Tam O'Shanter—LaReine), Nov. 2.

Carrie H.—Pendragon. E. V. Hale's (Cleveland, O.) English setter bitch Carrie H. (Roy—Gretchen), to Reserve Kennels' Pendragon (Count Noble—Fly), Nov. 17.

Little Eva—Prime. H. A. Saunders's (South Norwalk, Conn.) English setter bitch Little Eva (A.K.R. 2662) to Rev. R. G. Hamilton's Prime (Dine Dick—Pilgrim), Nov. 8.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Virginia. C. W. Littlejohn's (Leesburg, Va.) pointer bitch Virginia (A.K.R. 1357), Nov. 15, eight dogs, by his Fritz (A.K.R. 1351).

Music. H. F. Schellhass's (Brooklyn, N. Y.) beagle bitch Music (A.K.R. 1411), Nov. 20, four (three dogs), by his Trailer (A.K.R. 2525); all white, black and tan.

Golden Floss. E. Holley, Jr.'s (Rhinebeck, N. Y.) cocker spaniel bitch Golden Floss (Colonel Stubbs—Pet), Dec. 5, seven (four dogs), by Dr. Hart's Prince Albert (Chance—Fly); all orange and white.

Gretchen. Eugene Powers's (Cortland, N. Y.) cocker spaniel bitch Gretchen (A.K.R. 996), Nov. 18, five (two dogs), by Mignon Kennels' Kiddlewink (A.K.R. 997); one dog since dead.

Genevieve. Grand River Kennels' (Galt, Ont.) English setter bitch Genevieve, Nov. 2, nine (four dogs), by their Paris III. (A.K.R. 1376).

Mischief. Jos. H. Brady's (Pawtucket, R. I.) beagle bitch Mischief (A.K.R 2592), Nov. 18, seven (three dogs), by H. A. Wakefield & Co.'s Little Duke (A.K.R. 1994).

Nellie Gray. F. W. Kaye's (St. Johns, N. B.) collie bitch Nellie Gray (A.K.R. 3724), Nov. 9, eight (three dogs), by Ben Nevis (A.K.R. 2391).

Forest Dora. G. E. Osborne's (Birmingham, Conn.) English setter bitch Forest Dora (A.K.R. 600), Nov. 17, nine (five dogs), by Blackstone Kennels' Plantagenet; all black and white.

SALES.

☞ **Notes must be sent on the Prepared Blanks**

Gun (A.K.R. 1538)—Pearl Blue (A.K.R. 1542) whelps. English setters, whelped Aug. 14, 1885, by Charles York, Bangor, Me., black, white and tan dog to A. J. Wight, Rockland, Me., and white, black and tan bitch to Dr. C. E. Stanly, Middletown, Conn.

Earl—Scooty whelp. Solid black cocker spaniel dog, whelped Sept. 1, 1885, by Ideal Kennels, New Haven, Conn., to Charles Brayman, Providence, R. I.

Dottie Stubbs. Liver and white cocker spaniel bitch, whelped Feb. 7, 1884 (Colonel Stubbs—Daffodil), by Ideal Kennels, New Haven, Conn., to Chas. A. Davol, Warren, R. I.

Don Juan. Black cocker spaniel dog, whelped Oct. 30, 1884 (Chirp—Gretchen), by Mignon Kennels, Cortland, N. Y., to E. W. Rollins, Boston, Mass.

Zitta. Black cocker spaniel bitch, whelped May 5, 1885 (Kiddlewink, A.K.R. 967—Gretchen, A.K.R. 996), by Mignon Kennels, Cortland, N.Y., to L. H. Boardman, Calais, Me.

Ellen Terry. Liver and white cocker spaniel bitch, age not given (Brag—Feather), by Herbert Flint, Haverhill, Mass., to Walter W. Kenison, Boston, Mass.

Young Obo—Hazel Kirke whelps. Cocker spaniels, whelped Aug. 31, 1885, by Herbert Flint, Haverhill, Mass., brown dog to D. H. Flint, Chicopee Falls, Mass., and a brown and black dog to Wm. Osborne, Byefield, Mass.

Obo II. (A.K.R. 432)—Althia (A.K.R. 842) whelps. Black cocker spaniel dogs, whelped Aug. 30, 1885, by Herbert Flint, Haverhill, Mass., one to Mrs. Dr. Mason, Calais, Me., and one to W. C. Welch, Salem, Mass.

Karl Bonivard. Orange tawny and light brindle, correct white markings, St. Bernard dog (A.K.R. 481), by Wm. T. Whitman, Pittsburgh, Pa., to W. Bickford, Rochester, N. H.

Prince. White and orange St. Bernard dog, whelped April 17, 1878 (A.K.R. 485), by Fred W. Rothera, Simcoe, Ont., to Mill Brook Kennels, Bergenfield, N. J.

Otho. Orange and white St. Bernard dog, whelped Aug. 9, 1882 (A.K.R. 483), by Fred W. Rothera, Simcoe, Ont., to Hospice Kennels, Newark, N. J.

Lady Bang. Lemon and white pointer bitch, whelped April 21, 1882 (A.K.R. 698), by Clifton Kennels, Jersey City, N. J., to Dr. H. H. Kane, New York.

Teddie. Blue Skye terrier dog, whelped July 5, 1885 (champion Jim—Queen Mab), by Wm. P. Sanderson, Philadelphia, Pa., to Nelson V. Ketchum, Savannah, Ga.

Palmer. Liver and white pointer dog, whelped June 29, 1885 (Donald II., A.K.R. 2545—Lady Bang, A.K.R. 698), by Clifton Kennels, Jersey City, N. J., to Dr. H. H. Kane, New York.

Reeta II. Red Irish setter bitch, whelped Aug. 11, 1883 (Glencho—Reeta), by E. I. Martin, Wilmington, Del., to Geo. W. Bush, Jr., same place.

Sade. Black and tan foxhound bitch, age and pedigree not given, by Robt. McBrien, Lynn, Mass., to W. H. Beede, same place.

Punch. Fawn, black markings, pug bitch, 4yrs. old, pedigree unknown, by N. C. Patterson, Peabody, Mass., to W. H. Beede, Lynn, Mass.

Bawdy. Black, white and tan Byron foxhound bitch, whelped April, 1883 (Plunder—Bett), by Thos. Goode Tucker, South Gaston, N. C., to Mr. Cantey, Camden, S. C. Price $100.

Grant. Tan and white foxhound and beagle dog, age not given (Rouse—Grab), by Thos. Goode Tucker, South Gaston, N. C., to Mr. Cantey, Camden, S. C. Price $25.

Geraldine. Fox-terrier bitch, age not given (Mixture—Venom III.), by F. C. Wheeler, London, Ont., to David S. Collins, Providence, R. I.

Ollie. Black, white and tan English setter bitch, whelped July, 1876 (Dan—Petrel), by H. W. Ganse, Wilmington, Del., to E. W. Jester, St. George's, Del.

Rex—Edith whelps. Black cocker spaniels, whelped May 23, 1885, by Chas. E. Taylor, Bath, Me., two dogs to W. S. Russell and one to C. H. Clifford, same place; a dog to D. S. Bonney, Farmington, Me.; a bitch to W. H. Beede, Lynn, Mass., and one to E. F. Starkey, Fitchburg, Mass.

Gen. Beaufort. Lemon and white pointer dog, whelped Jan. 1, (Beaufort—Nellie Bird), by Jos. R. Trissler, Lancaster, Pa., to Herbert Anderson, same place.

Genesta. Lemon and white pointer bitch, whelped December, 1884 (Pete—Bella), by H. J. Bennett, Trenton, N. J., to A. C. Wilmerding, New York.

Floy. Black, white and tan English setter bitch, whelped May, 1877 (Rob Roy—Blanche), by Reserve Kennels, Cleveland, O., to E. V. Hale, same place.

Vanguard. Lemon and white pointer dog (A.K.R. 2750), by Floyd Vail, Jersey City, N. J., to Devonshire Kennels, Attica, Ind.

PRESENTATIONS.

Lassie. Black, tan and white collie bitch, whelped June, 1878 (A.K.R. 443), by Fred W. Rothera, Simcoe, Ont., to C. E. Howit, Guelph, Ont.

Dude. Lemon belton English setter dog, 2½yrs. old (Thunder—Cornelia), by A. Fuller, Philadelphia, Pa., to Geo. DeHaven, same place.

Dudene. Blue belton English setter bitch, 2½yrs. old (Gladstone—Coomassie), by A. F. Fuller, Philadelphia, Pa., to Geo. DeHaven, same place.

Buckingham. Lemon belton English setter dog, whelped Dec. 17, 1881 (Dude—Dudene), by A. F. Fuller, Philadelphia, Pa., to George DeHaven, same place.

Queen Annie. Blue belton English setter bitch, whelped Dec. 17, 1884 (Dude—Dudene), by A. F. Fuller, Philadelphia, Pa., to George DeHaven, same place.

DEATHS.

Daisy Bravo. Lemon and white pointer bitch (A.K.R. 562), owned by Clifton Kennels, Jersey City, N. J., Dec. 3, from congestion of the lungs.

Lady Abbess. Orange and white St. Bernard bitch, 8yrs. old (A.K.R. 482), owned by Fred W. Rothera, Simcoe, Ont.

Gaily. Black and white English setter bitch, whelped March 26, 1879 (Hesper—Polly), owned by Howard Hartley, Pittsburgh, Pa.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

S. O. L. D.—Yes, take the puppies away; but the milk had better be drawn from her udders for a few days by manipulating gently. You may also give ten drops of tincture of belladona night and morning, which will dry up the secretion.

H. M. W., Baltimore.—A friend has a setter that he values, who is continually straining while hunting—every few minutes—but passes nothing. Could he have worms? He is very fat. Would not a dose of castor oil do him good? Ans. Yes. Give the dog a tablespoonful of castor oil, and repeat if necessary. Do not feed so much, and give no meat or a little that is cooked. Give plenty of exercise.

E. L., City.—My puppy, 4½ months old, is a Skye terrier. He now will eat nothing but meat, except thin part of rice or barley soup if I put in some meat to tempt him. Natural consequence, thin and miserable looking. Ans. Give your dog plenty of exercise and feed on Indian meal mush, boiled with a few bits of meat and soup and served cold. We see no signs of dyspepsia, but simply a capricious appetite.

A. C. A.—Your dog has indigestion. It will take time and care to effect a cure. In the first place, the diet must be very simple and easily digestible. Give mostly fluids—milk with lime water (tablespoonful to pint), soups without fat, flour porridge or mush and milk, and once daily a small quantity of raw meat grated or minced and mixed with the white of an egg. Give eight drops of Fowler's solution of arsenic twice daily in the food. This always acts excellently. Report results.

SNEIDER, Boston, Mass.—My dog suffers as follows: From the end of tail to middle of back the hair is very thin, and one day the skin will be very much inflamed and the next dry and scaly. His breast is bare and he scratches and bites until he bleeds. Ans. You must persevere with the arsenic, giving as directed before, but increasing to ten drops three times daily. For an external application get the following: Of camphor, two drachms; of sulphur, half an ounce; of bismuth subnitrate, half an ounce; of rosewater, eight ounces. Apply with sponge three times daily. Report results.

H. C. B., Boston.—The mouth and lips of a bull-terrier are completely covered with warts. I have failed to find any book that treats of warts in the mouth of a dog except Youatt's and I am trying his prescription now, but it seems to me to be a rather slow process, even should it prove effectual. Ans. Cauterize with nitrate of silver stick (lunar caustic) twice daily, touching two or three warts only until they have disappeared. A more sure method is with nitric acid on the end of a pine stick. They may also be dusted with powdered calomel applied by means of a camel's hair brush.

G. B., Cincinnati.—My English water spaniel pup, four months old, trembles when lying down and not asleep, at intervals of three or four seconds, and for about two or three seconds at a time. When asleep or exercising he does not tremble at all. He doesn't wish to play or exercise; appetite variable, but usually low; very copious urine and of a light color; eyes look languid and unhappy, a slight flowing from the corners as in distemper. Ans. We think your dog is only out of condition. We would advise giving Fowler's solution of arsenic, ten drops night and morning, in the food. After giving for three weeks stop the medicine. Keep the dog's bowels in order with syrup of buckthorn in teaspoonful doses. Report results.

G. F. A.—Pointer pup had three fits, about three hours apart. During the fits he would flounder about and hammer his head on the ground. He would then lie on his back and kick with all four legs at once. These spells would last about two or three minutes; then he would get up and stagger about in a dazed sort of manner for a few minutes, and then he would be all right till the next attack. He has had no fits since Sunday, but he has no life and does not eat. He turns his head around to first one side and then the other, and his nose is rather warm. He is constipated, and I have given buckthorn three times in the usual dose with no result. Ans. The first thing to be done is to purge your dog and get his bowels in proper condition. Constipation and stoppage are often a cause for these fits. You must also be careful of the diet. Feed little or no meat, or if it is given let it be cooked and mixed with other foods. Purge your puppy with castor oil in tablespoonful doses. Probably they will cure him; if not give ten grains of bromide of potash three times daily hidden in a bit of meat.

Or Ashmont's new book, "Dogs; Their Management and Treatment in Disease," the Boston *Rifle* says: "The work will prove of value to many owners of dogs, and will bring to Ashmont great credit for his noble, humane labors; and we suspect if the poor, dumb canine race knew their benefactor, they would all assume the expression of Landseer's wounded hound."

RANGE AND GALLERY.

BOSTON, Dec. 3.—The attendance at Walnut Hill to-day was small, on account of the bad weather. The atmospheric conditions were not favorable during the first part of the day, but improved later. Appended are the records of the day:

Decimal Off-hand Match.

N F Tufts, A	9	9	6	9	7	5	6	8	10	8—77

Dec. 5.—The shooters at Walnut Hill to-day had a rainy, disagreeable day for their sport. The wind was tricky and the light poor toward night. Among remarkable performances of late is Salem Wilder's record of 75 consecutive shots, only one of which was out of the main ring of 5¾in. The programme and revised handicap list will be issued in the course of a few days. The victory medal match of 1885 will be continued until Feb. 1, 1886, by the order of the executive committee.

TORONTO, Nov. 25.—The third annual pigeon tournament arranged by George H. Briggs commenced to-day on the Woodbine track. The first prize offered was the Briggs Challenge Cup, valued at $125, to be shot for by teams of five of any organized gun club that competed in teams at this shoot. The cup has to be won three times before becoming the property of the winners. There were seven teams entered, viz.: Four teams from the Toronto Gun Club, one each from the Owl club, Toronto Ottawa Gun Club and Hamilton Gun Club.

Individual Competition—15 Birds.

Williamson 10, J. Winters 10, D. Blea 10, Wakefield 10, J. Humphrey 12, G. Smith 11, A. Wyness 13, P. A. Trudeau 11, J. Moore 12, W. R. Wakefield 10, Forsyth 12, Bourn 12, Wilson 11, Grant 13, Ward 12, Reardon 12, T. Louden 11, W. Bugg 13, J. Bell 15, J. Taylor 14, J. Townsend 13, W. L. Cameron 12, Reed 12, R. Stroud 13, Cline 13, C. Team Competition.—Toronto Gun Club, No. 1—M. Sharmar 9, J. Bell 8, F. Martin 6, C. Small 7, W. Bugg 5; total 35.

Toronto Gun Club, No. 2—J. Taylor 8, J. Worden 7, R. Hunter 6, J. James 8, D. Blea 8; total 37.

Owls, Toronto—C. Pickering 6, J. Humphrey 8, H. Humphrey 6, J. Douglas 8, J. Townsend 6; total 34.

Toronto Gun Club, No. 3—R. Morrison 2, J. R. Millson 8, G. Pearsall 5, W. McDonald 10, R. Dickson 8; total 33.

Ottawa Gun Club—J. Deslauriers 6, P. A. Trudeau 7, Coursolles 5, M. G. Smith 3, W. L. Cameron 7; total 28.

Hamilton Gun Club—Forsight 7, M. Reardon 5, Ward 5, R. Stroud 7, Cline 7; total 31.

Toronto Gun Club, No. 4—Van Vlack 9, W. Villiers 7 G. H. Briggs 5, R. Pearsall 4, G. Smith 6; total 31.

The weather was fine and the birds A1. The tournament was held under the Toronto Gun Club rules.

WELLINGTON, Mass., Dec. 5.—The regular weekly shoot of the Wellington Gun Club was held this afternoon, and there was a good attendance considering the rainy weather. Following are the results of the several sweeps: 1. Five blackbords—Sanborn and Stanton di-

vided first. 2 Five clay-pigeons—Swift and Stanton divided first. 3. Five clay-pigeons—Wardwell first. 4. Five blackbirds, straightaway —Snow first. 5. Five clay-pigeons—Wilson first. 6. Five blackbirds —Samson first. 7. Five clay-pigeons—Wardwell and Henry divided first. 8. Five clay-pigeons—Wardwell and Stanton divided first. 9. Five blackbirds—Lawson, Swift and Palmer divided first. 10. Medal match, ten clay pigeons—Snow took the first medal with 9, Stanton the second with 8 and Wardwell the third with 7 out of 10. 11. Five blackbirds—Wardwell first. 12. Five blackbirds—Wardwell first.

NATIONAL GUN ASSOCIATION TOURNAMENTS.—Special Notice.—Members desirous of organizing tournaments in their vicinity, under the auspices of the Association, are requested to notify the undersigned. All the expenses of the same will be paid by us. Make your arrangements for 1886. We propose to establish a circuit of tournaments annually. Claim your dates now. General office and headquarters, Macon, Ga.—MATT R. FREEMAN, Vice-President and General Manager; F. C. ETHRIDGE, Secretary, Macon, Ga. Send 10 cents for hand book containing rules, constitution, etc. "Fairly started and its future depends entirely upon the manner in which the sportsmen throughout the country respond."—C. M. STARK, April 18, 1885.—*Adv.*

CRUISE OF THE COOT.

III.

ADAPTABILITY to surroundings is a chief requisite to life aboard a small yacht. Without such gift a constant war between boat and man renders existence in the limited cabin space like durance vile. Things must be taken as they are, not as they might be. This philosophical reflection had to be drawn upon from the outset aboard the Coot. She was represented to me as a perfectly tight boat. No doubt she was, from the standpoint of a person *en rapport* with the foibles and vanities of sloop yachts in general. Leaky centerboard trunks are all but universal, and so accustomed have people become to the failing that it would be hard to take to task any one who had overlooked what has become a natural attribute through long standing. Indeed every well regulated centerboard trunk ought to leak and one which does not would probably give rise to suspicion. The Coot belonged to the numerous class above suspicion. The leaks were traced and it was resolved to reduce her to a lower order by stopping up the leaks with cotton, a tight trunk being all the Coot's crew aspired to.

Of course the trunk split up the cabin into two oblong halves, and was always in the way. A mild piece of deception had been attempted by covering the trunk with a mahogany top to serve as a table. But after going out of one cabin door and in at the other to get from side to side, it seemed like a cruel joke and the Coot's crew sought a short cut. This was discovered by lying flat on top of the trunk and rolling off to the desired side. Bruises and contusions soon suggested that the boat could stand it, if you only could. Then I cast about for an improved method of transition from the living apartment to the divan across the way. Suddenly I found myself plump into the bunk with a "Why, how did you do that?" By doubling in a ball and vaulting over the dance in the middle, ready ready adaptability to circumscribed dimensions could bring about this convenient substitute for more seemly but roundabout processes.

The builders of the Coot must have been of an economical turn of mind. They cut limbers only on the port side, probably with the thrifty idea that it would be quite sufficient for the boat to leak on that side only. Oddly enough the pump was placed on the opposite side. There were other peculiarities about the boat. At the risk of drawing disdain from other centerboard sailors, I may confess that the board was always such a nuisance that it often remained up when it should have been down, and way down when it should have been housed. At the start I religiously attended the board, imbued with a sublime faith in the inexorable necessity of a board to make the Coot go straight about her business. When all the old wood in the boat had been split up into sticks to jam the board down and a silk umbrella had been impressed for like service—for, like all truly good boards, it stuck fast every time—I grew less persistent in my attentions. Finally the board was allowed to take care of itself. It suited me best, and the Coot did not seem to mind it a bit either. She went about her business pretty much the same, board or no board. A compromise was struck by dropping the board half way and leaving it there for all time. Since then we get along together with much less friction. All of which inclines me to the belief that in a boat of the Coot's draft, 28in. aft, the value of a board is overrated, and an 8in. rocker keel would do for cruising, giving more room in the cabin, a lighter and stronger boat, and no inconvenient increase of draft. But you could not "sound" with the board! That reminds me.

Having my own misgivings about such a proceeding, I ventured to purchase a lead and line. It was with some hesitation that I entered the chandlery store with that end in view. I felt guilty of needless extravagance, for was not the Coot invested with that great blessing, a centerboard, to do all the sounding in an automatic way? Would it not fly up, protesting, did I presume to cheat it out of its lawful allowance of water? Up she pops, and round goes the boat off shore! What nicer and neater than that? Surely a lead and line were superfluous elaborations aboard the Coot. But once in the clutches of the storekeeper, a trade had to be made. I picked out a little one—just a little three pound one to swear by.

"And will 10 fathoms be enough, you think?"

"Enough! Sir, I have a centerboard boat!"

"Ah!"

And the wily old 'longshore shark shook his oakum curls and backed off his wooden leg as he blinked his approval with the same kiln-dried blink he bestowed upon all customers, and then chopped off the line at 10½ fathoms. That line has grown beautifully less by degrees. First, a stop was cut off; then a painter for the dingy; then a rope for the bucket—till now my leadline is but a remnant of good intentions, and the Coot may yet be hung up by falling back upon the slovenly custom of waiting for notice from her board.

All boats have a character. The Coot had hers. She was funny at times, and occasionally obstreperous. She had a wondrous liking for buoys. If there was a buoy within range of her swing, she was dead certain to coddle up to that buoy with a fondness as persistent as it was disagreeable. It matters not how tide might flow or wind might blow. Let the Coot catch sight of anything floating with some resemblance to a buoy, and she at once set at naught all established precedence of action. She would shoot and surge restlessly about her anchor, from one side to the other, then in circles, then she would back and fill, until by degrees she worked up close to her fondling, when a sudden crash would announce the attainment of her desires and fetch me out of the cabin as a bound to find the wretched object of her affection bumping away under the harpins, rubbing gleefully up and down the Coot's side and punching her playfully in the ribs to my distraction. And the spiteful Coot appeared to enjoy the diversion, for she would hug the buoy and never let go till anchor was lifted. The pair were inseparable. So pronounced was this predilection, and so forcibly had I been impressed therewith through numerous shirt-tail encounters with the thermometer below freezing point, that after vainly fighting, then arguing, and finally pleading with the Coot and her chums, I gave up all attempts to keep them apart, and preferred sailing five miles further to the next harbor when one of those detestable buoys was near around. They became objects of hatred and vilification.

The Coot was always headstrong in getting under way, particularly in a crowd of other boats, or with the beach handy for grounding or a pier convenient for collision. Like all catboats, she was a most unseamanlike vessel to handle, though simple and amenable enough when once in hand by the steersman. With the mast up in the eyes, it was a feat of gymnastics to swig off on the halliards in making sail and to break out the anchor by hard heaving. Once the sail was up, the Coot would go gyrating about the anchor at a terrific rate, enough to upset all calculations for making a "cast" or planning maneuvers in advance. She was for the time being beyond control, and she knew it. Like a frisky mule, she refused to be brought into harness. With sheet in, she would lie down to the puffs and drive over her anchor with such force that the line could not be thrown off the stemhead for fear of losing the ground tackle altogether. With boom wide off she refused to be eased, but would take the wind astern, cavort down hill with all possible haste, get the line athwart hawse, jibe over with a crash and keep on repeating the trick. It was the fault of the rig. With sloop or cutter the mainsail will keep the yacht head to wind and give you a chance, after which you hoist headsail and pay off at will. But there was no paying off about the Coot. It just resolved itself into a fight and bull luck every time. I tried getting the anchor first and making sail afterward. But the Coot was quite up to such a game. Although she would never lie to wind or tide, but always across at some unaccountable angle, the moment you eased the forereing feat, she would back her hackles up to the wind and drift down to leeward at a great pace, never coming round nor obeying the helm. Then you had to hoist sail off the wind, and if there was no searoom the predicament was worse than confounding. After much objurgation I played a trick on the Coot which makes her do all the work and answers fairly well, if not in too close quarters. Sail was made, the boom squared off and the anchor line carried aft to the cockpit. As the Coot broke her anchor I would haul it in over the counter, steering the boat with one foot on the tiller and bringing her up into the wind, the anchor in the meanwhile being taken aboard abaft and stowed in the cockpit. In coming to the cat was swung into the wind, the anchor thrown out from the cockpit and the slack of the line run forward and made fast over the stem head with a clove hitch. Then sail was lowered with all possible speed, as the Coot refused to lay in the wind like a self-respecting sloop, but instantly romped off tull tilt on the wind with the risk of breaking the anchor out of its new hold. If the peak did not happen to come down, and it seldom did, as the sail would fill away in a second, then there was trouble ahead until the canvas had been snugged down. For a thoroughly unseamanlike and uncontrollable rig, communed me to the cat. But with all its faults it has some good points as an offset for short work in river sailing when single-handed. It is something gained to have no head sheets to tend. But that is all, going wide the yacht yaws in a frightful way and takes the helm hard up one moment and hard down the next, if there be any sea. In smooth water the strong weather helm which cannot be let go for an instant, and the fuss and check of the rudder are annoying. It is but rough and crude work, this sailing of a catboat yawing three points either way, compared to the fine touch of guiding a steady keel boat, swerving not a quarter point from the mark you have ahead.

The Coot, like all of her class, was a very unsteady boat at an anchor. She fretted and fumed and tore about, and she pulled with a vicious snub at her line to every blast of sea. Being light in draft with a large cabin house, the wonder was that she never tailed to wind. The Coot refused to tail to anything. She was at cross purposes with everything. She pitched and rolled like all shoal boats, with a quick, jerky, mixed up motion. In short she had no stability of character, but always seemed out of sorts with her lot. In these respects she fully lived up to the reprehensible traits of the whole family of American centerboard vessels. Knowing the contrary and unsteady behavior of the breed I made light of the Coot's failings, and the tomboy and her crew got along well together. One thing was awkward for the lone sailor. If caught out after dark or in want of something below, it was dangerous to leave the stick to fill or light lamps or to get a bite or a fresh chart. In light weather with searoom it could be done. But in a channel with passing vessels or in puffy winds the risk was great. Not that the Coot was necessarily in danger of capsizing, but she would round up and pay off on the other tack with such speed that collision, beaching, a knockdown after losing way or sternboard in irons and a circus in general was the programme to be dreaded. Nor was lashing the helm an escape, as the yacht was not steady enough on her course to be under control. Heaving-to a catboat is supposed to be effected by easing away sheet and fastening down the helm. But that requires deadening the way and is not to be depended upon. The Coot, for example, would at once turn tail to wind after losing steerage way, and sweep up in a quarter-mile circle, go about and repeat on the other tack, frisky demeanor not tolerable in narrow waters. In spite of being stiffer than the common run of her kind, a light breeze would lay the Coot rail-to, and a wind of nice sailing strength would send the water pouring along the lee gangway, while the dust would fly over the weather bow and aft into the helmsman's face at every bit of sea encountered. As soon as the boat began to pitch, sailing became a nuisance, for the yacht would come almost to a dead stop at every bound. At such work she fell very much short of efficiency compared to a hull fashioned more on cutter principles. In fact, when the Coot would have to lie at her moorings from sheer inability to accomplish anything to windward, a heavier, deeper and narrower boat could be putting in good licks to her next destination without hardship to vessel or crew. The Coot would come down into a sea with a blow and a squash, shattering the wave and scattering soap suds far and wide, bringing up with a thud, at the same time tossing her boom about in the most ungainly and unprofitable manner, when a cutter model would simply bow gracefully, though perhaps deeply to the oncoming roller, but continue about her business in steady fashion as though nothing had happened. It was the difference between a boat evolved from smooth water sailing and one devised to cope with unruly conditions. There was no help for it but to make the best of the bargain and tickle the Coot along on her voyage as fine weather warranted. In her light draft she had the advantage for spending the night or a gale on a mud flat, where she was at all events safe under a snug lee.

C. P. K.

CHAIN CABLES.

THE use of chain cables is now so universal, that it is somewhat difficult to realize the fact that they were unknown before the present century. In the chapter devoted to the history of the subject in Mr. Traill's interesting work on "Chain Cables and Chains," we are informed that the first recorded instance of chain being used for cable was in the year 1808, in the Ann and Isabella, of 231 tons, built at Low Lynn. The chain was made by Mitchell street, North Shields, by Robert Flinn, of rectangular Welsh iron, welded round the link by hand hammer on the anvil. The date is probably fixed by the remarkable incident which occurred soon after in the Tyne, and which exemplified the importance of the new departure. A great flood occurred while the river was full of ice, and not only was the Ann and Isabella held by her cable, but a whole tier of ships made fast to her were also saved, their hempen cables having been cut by the ice. Flinn also constructed a machine for testing cable, and the firm which he originated continued to manufacture cable till within the last seven years. The second noticeable name in connection with chain cable is that of a lieutenant in the Royal Navy, Samuel afterward Sir Samuel, Brown. To him may be attributed the introduction of the shackle and swivel, so indispensable to the safe use of chain for cable. Brown's shackles were placed at intervals of 25 fathoms, and his cable was formed of short twisted links. In 1809 the first of them was tried in the Penelope, a vessel which had been captured from the French, and which he himself commanded on a voyage to and from the West Indies. He considered that through having the chain cable he was able to bring her into the Thames three weeks before the arrival of any of the vessels with which he had been in company in entering the Channel. They had to keep under sail on the ebb tide, whereas he had been able to stand in from mid channel on the last quarter of the flood, and ride out the ebb at anchor, which only possible with an iron cable. Samuel Brown also succeeded in introducing iron cables into the Royal Navy. In consequence of a report written by him to the Navy Board, a committee was appointed, and as a result of their investigation two ships of the line, the Namur and the Monarch, the frigate Crescent, and the sloop Alonzo, were each supplied with two bower iron cables of 100 fathoms each. In 1811 a further step was taken by a general order being issued for the supply of iron cables to all vessels stationed in open roadsteads at Yarmouth, Leith, Liverpool, Portsmouth and the Thames, where hempen cables might be liable to injury from ice, or from passing ships. The general adoption of iron cables in the Royal Navy was, however, a matter of time, and hempen cables were carried, if not used in the navy until wooden ships gave place to iron.

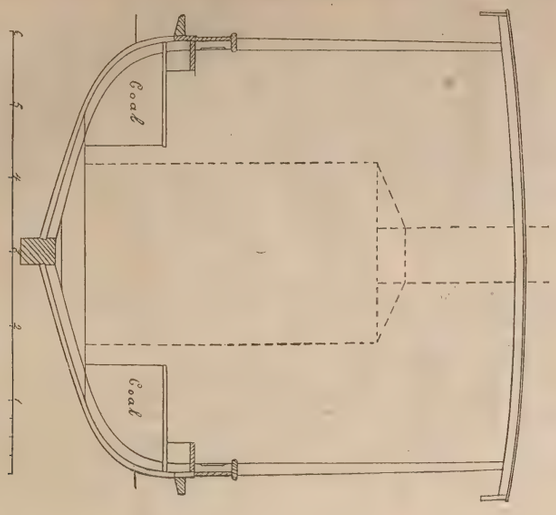
In 1813 further improvements were made in the manufacture of cables by Thomas Burton of London. The stud link, pretty nearly as it now exists, is due to him; and he divided with Samuel Brown the chain cable trade of the River Thames for some years.

About the same time with Burton's invention, a well-known Tyne firm, at present known as Hawks, Crawshay & Sons, had been so far concerned in the manufacture of chain cable as to put down a testing machine able to work up to 90 tons strain. They also commenced to make stud link cables, the consequence being a suit for an infringement of Burton's patent, ultimately compromised. The particulars collected by Mr. Traill of reports from masters of vessels in which chain cables were first used are interesting, as showing the disadvantages attending the employment of the old hempen cable, and also the reluctance of both the government and private owners to trust the new material. It was not till 1823 that some vessels built on the Wear had their entire outfit of chain, and two years later some ships were sent away from that port with no hempen cables.

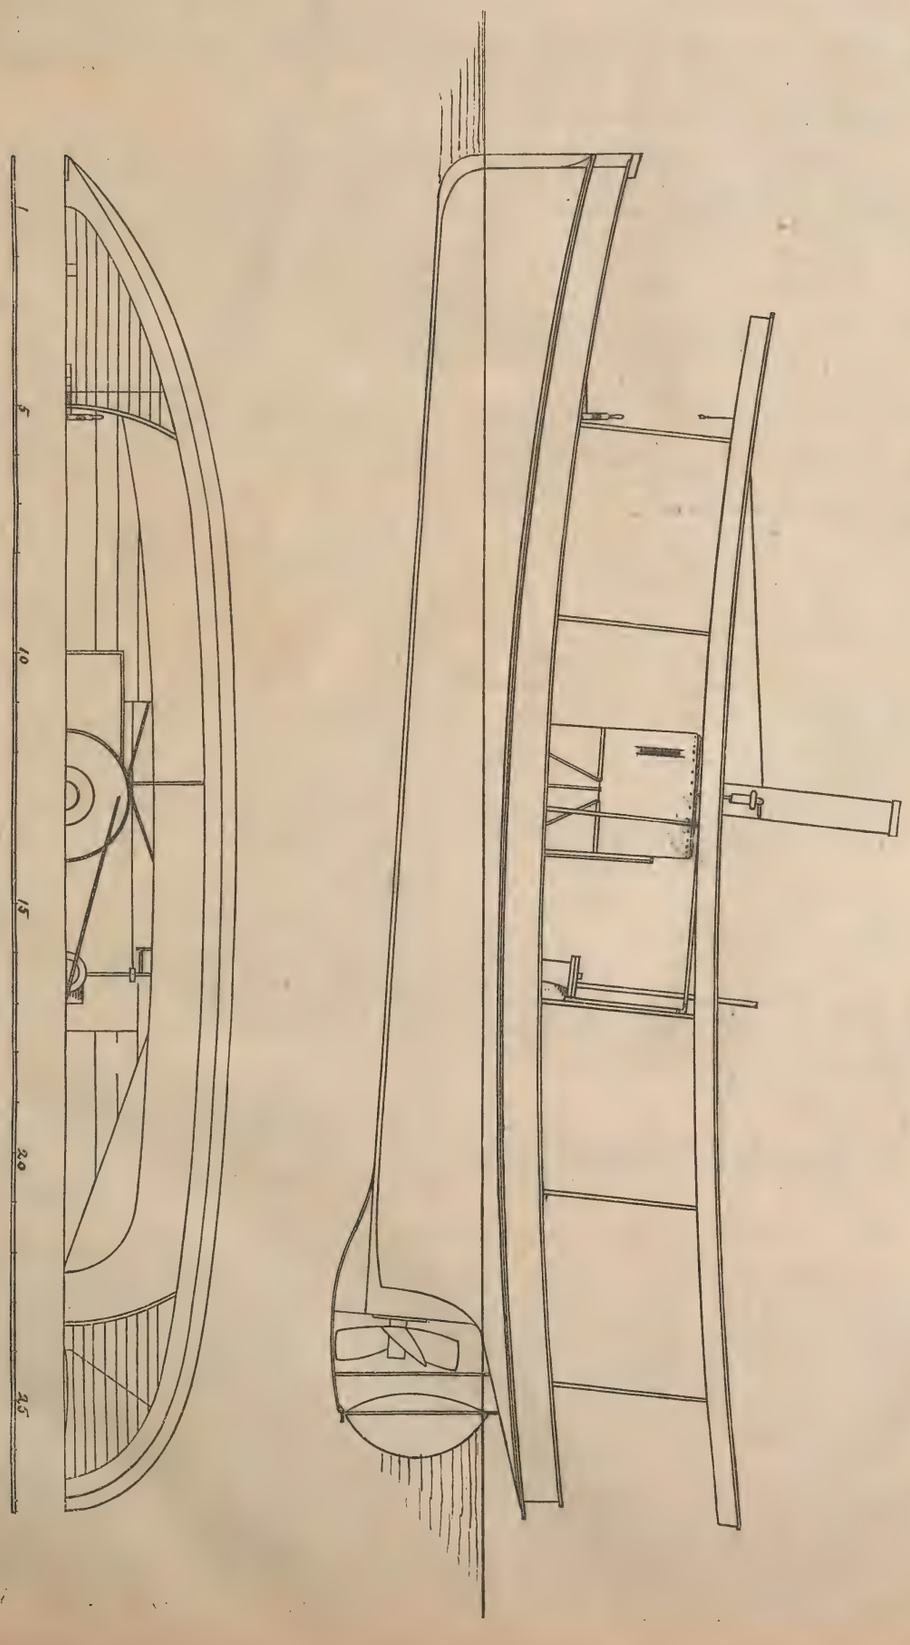
In the early days of chain manufacture the links had been made by the plain but tedious process of cutting a piece of bolt or bar iron to the length required, and then bending in places after successive heats in a common smith's fire, four heats being required to form the turns for each link and two heats for scarfing. In 1816, however, Samuel Brown introduced the mandril, by means of which the bolt or bar iron, as it left the rolls where it was manufactured, was at once wound round in a spiral coil. It only then remained to cut it in pieces, and each link was ready formed for scarfing. By this improvement not only was much labor saved, but the danger obviated of injury to the metal by successive heats. Mr. Traill traces at length the gradual spread of the trade to most of the places where it is now carried on; he also describes several unsuccessful proposals for alterations in the shape of links and mode of manufacture. One of the former appears somewhat worthy of notice. In 1838 a patent was taken out for the construction of links, thickened considerably at the ends. Cables so designed would, Mr. Traill shows, last very much longer than that made in the ordinary way. Nearly all the wear on cable is where the links rub each other at the ends, and chain is often seen which is there nearly worn through, while at the same time it has hardly deteriorated at all in the middle of the link.

It will hardly be believed that up to the year 1820 underwriters were in the habit of charging higher premiums for vessels which had chain than for those only provided with hempen cables. In 1821 Lloyd's rules only specified the lengths of cable for each class of ship, and it was not till 1846 that it was made a part of the surveyor's duty to see that the cables had been tested, and that the strain applied had been marked on each length.

It was about this date that chain cable at last superseded hempen cables in the Royal Navy, the number of the latter supplied to large ships being in 1844 reduced to three against four chain cables, while in 1847 it was further reduced to two, and in 1854 one hempen cable only was required, and five chain cables. Before iron cables were used a first-rate had as many as ten hempen cables supplied to her, and in some cases eleven. The largest sizest sizes were as much as 25in. in circumference, and weighed about six tons, and even when hemp was at moderate prices, each hempen cable cost about 20 per cent. more than chain, notwithstanding the heavy prices of the latter in the early days of the manufacture. It is characteristic of the conservative spirit of the old naval administration, that with so many obvious drawbacks, hemp for so long held its position against iron.



In 1860 the first step was taken in the direction of legislation on the subject of cables and anchors, by the appointment of a Select Committee to inquire into the question. This Committee, while reporting strongly as to the value and desirability of proper tests, did not recommend that they should be compulsory, except in the case of vessels which were to come under the provisions of the Passengers Act, or were to be employed in any way under Her Majesty's Government. It was in 1862 that Lloyd's Register took the decisive step of making it a condition of classification that the vessel's chain cables should have been tested at a public machine, and in the following year they decided not to recognize certificates unless the testing-house was under a corporation, or open to an inspector appointed by themselves. At the same time they opened Lloyd's Proving House for chain cables at Poplar, which was managed by them till 1873, when the Trinity House leased it, but only kept it open for two years, and since that date there has been no testing-house on the River Thames. At present there are, under the management of Lloyd's Register, proving houses at Tipton, Netherton, Low Walker, Chester, Cardiff and Glasgow. The only establishment in the country not under their management is that at Sunderland, which is under the River Wear Commissioners. Mr. Traill gives *fac-similes* of the certificatee, in colored ink, issued by each separate testing house, he also has taken the trouble to collect an acount of the names and marks used by every testing-house which has existed since the first legislation upon cables, so that by consulting his work it is possible to identify the test of any old chain on which the marks are distinct.



Legislation on chain cables began in 1864, and it was then enacted that after June, 1865, it should be unlawful for makers or dealers to sell unproved chain cables or anchors. Other Acts affecting the question were passed in 1864, 1871, 1872, and 1874, the latter giving certain powers to the Board of Trade to make alterations by Order in Council in the tests which had been prescribed in detail in the Act of 1871. Mr. Traill gives the text of all the Acts and of the Order in Council, with the schedules of the tests for each thickness of chain. The legal test consists of breaking and tensile strain, the tensile being from 67 per cent in small to 72 per cent. in large cables of the breaking strain in the case of stud-link chain. In short link chain, or chain without studs, the tensile strength is half the breaking strain. It is prescribed that from every length of fifteen fathoms brought to be proved the tester shall first select and cut off a piece of three links and subject it to the prescribed breaking strain. If this piece fail a second piece of three links shall be cut off, and if it also fail the length is condemned. If either the first or second piece of three lenghts stand the breaking test the length is subjected to the tensile strain, and if this be passed satisfactorily it is stamped as passed. It is considered by the superintendents of proving houses that a piece of cable has failed to withstand the breaking strain if any flaw, crack or fracture in any one of the three links is developed by it. In the event of any small fault appearing after the tensile strain of such a character as not to indicate a final defect, repairs may be made on the premises of the proving establishment, and after this the length must be again put under the tensile strain. The chain may on no account be taken away for repair. The theory of the legal system of tests is that the breaking test proves the quality of the iron in the cable, but at the same time inflicts fatal injury upon the links subject to it; and the tensile test is sufficient to bring out any defects in manufacture, such as imperfect welds, etc. On this point Mr. Traill makes some useful remarks upon the injudicious practice, sometimes admitted, of using the vessel's new chains to check her in launching, it being the case that very great strains are brought upon them, often enough to inflict permanent injury, which may or may not be visible.

He also, for similar reasons, deprecates the practice of some manufacturers, of themselves subjecting cables to a much higher strain than the prescribed tensile test before the chain leaves their works, and in order to make sure of its passing the official test.

Mr. Traill is evidently of opinion that the legislation upon the subject of cables and anchors is wise and has had good results: he is, however, quite awake to the fact that such legislation is not all gain, that shipowners are too often led by it to give up troubling about their cables further than to make sure that they have passed the test. That being all that is necessary, their only care is to get the cheapest and weakest possible, and hence, in spite of very stringent legislation, cables and anchors are often very inferior to what a slightly greater expenditure of money would make them. This is only what is to be expected; legislation on the matter may be necessary, but it cannot prove to be an unmixed good.

Thus in stud cables, while the stud is an essential feature of the cable, there is considerable latitude as to its size; it may be somewhat smaller than is desirable without affecting the result of the test, and on the other hand, if it be larger than necessary, the statutory test applied to the cable is not increased as would be the case for a comparatively small increase in the diameter of the iron in the round tackle

A HANDY SPORTINC LAUNCH.

Editor Forest and Srream:

I send you drawings of the Greenwing, a small launch built for sportsmen, purely for sporting purposes, by Messrs. Powell & Douglas, of Waukegan, Ill. She is owned by Col. B. H. Polk, of Lincoln, Neb., Mr. A. Warner, and the writer, of Vicksburg, Miss. Her length is 27½ft., beam 6ft. The hull is the work of Mr. C. W. Connett, in the employ of Messrs. Powell & Douglas, and is a faithful piece of workmanship. The model is as graceful as the greenwing teal itself, the material is of the best of its kind, and the fittings neat and strong. The keel is white oak, frame of the same and steam bent. The boiler is an upright tubular, 42 2in. flues, steel, 30x60in., the plates having a tensile strength of 55,000lbs., and has all the necessary fixtures, such as guage cocks, glass gauge, steam gauge, whistle, pop safety valve and fusible plug. It is fed by a Hancock inspirator, and also a snug little pump which is worked by an eccentric upon the shaft. The engine has a 5x6½in. cylinder. The wheel is 30in., is well below the waterline and extends below the keel, where it gets good purchase on the water and is not so liable to be interfered with by drift wood. The one objection is the draft, which will occasionally annoy us, it being 40in. at the bottom of iron shoe under the wheel. This shoe is about 15in. broad and serves as a protection to the wheel against fouling. Curtains extend all the way around the canopy, so that the severest storm can be comfortably shut out. There is provision for sleeping forward and aft by making down beds on a level with the seats. Four persons can be accommodated, though generally for camping a tent will be used, and the boat resorted to only in cases of emergency.

Before shipment to this point the Greenwing was tried on the lake at Waukegan, by the makers. In a heavy sea with fifteen men aboard she is reported to have behaved admirably and ran fast, giving a promise of making ten miles per hour under favorable circumstances. She was shipped through to this point by rail and attracted no little attention in her elevated position on the car after arriving here. She is just launched. Our trial here is not sufficient to make a report on as to speed, as the boiler is not yet thoroughly washed out, and, in consequence, foams some, and the engine wants use to limber it up. She is very steady in the water, and answers to the call of the pilot wheel admirably, and we hope for the ten miles after a bit.

With this little steam launch we will be able to reach points of interest to the sportsmen at any time we may desire to go. Duck shooting in the winter season is generally very good here. The Greenwing is to take us near the localities of their feeding grounds. We also bought of Messrs. & Powell Douglas one of their white cedar "Boss" hunting boats, especially made for duck shooting. It is an odd looking concern and looks more like a snow shoe than a boat. This boat is very flat, light draft, easy to conceal, and we have a notion that she will prove a good one for our use. We have also a good skiff 4x20ft., with two pairs of oars, which will carry comfortably four persons and their outfit of decoys, etc. W. L. P.

Vicksburg, Miss., Nov. 9.

NOTES FROM THE DELAWARE.

Editor Forest and Stream:

On my return from a late bay trip I was surprised to find many important alterations in yachts already completed. Mr. Collins, of this place, has lengthened Dr. H.'s Sea Gull with a long sightly fantail, that in a great measure dispels her former bulky appearance. But while the after body helps out the rotundity of a barrel-shaped midship section, it brings out by comparison very conspicuously the fault of a bad entrance. Some years ago she was a fine little cat yacht, perfect in every detail of form and rig, and I almost envied the Doctor the possession of so fine a craft. That gentleman, however, fell deeply in love with the yawl rig as a cruiser, and submitted to my inspection drawings of the sail plan, etc. I disapproved, and sorry I was to see her hauled overland from Humes's sparyard to Collins's shop to have twelve inches of topside piled up on her like a haystack. It was this excessive freeboard that caused her to founder at sea, a description of which appeared in Forest and Stream at the time. I doubt very much if this would have occurred in her normal condition. With so much weight above her loadline and so little below, it became necessary to place iron outside on her keel; this, from her flat round form, did little or no good, and again the "doctor" is called upon to save the dying patient. Before she leaves Collins's yard I would respectfully suggest that she be lengthened five feet forward, with long, easy-curved lines. Then it would not be a bad scheme during her "doctoring" to shim her down and make her two feet (at least) deeper in the submerged body. By this time sufficient data will have been stored away in the deep recesses, and enough money spent to build an Irex.

Our yachtsmen are running riot over long flaring sterns, no matter if all else is out of keeping, and "fantails" will hereafter be found on "creek flats," scows, floating boat houses and bay windows. I am told rafts are now so constructed. The long, slab-sided Minerva and the big bellied Olga each will sport a tail next year. Two "tuck-ups" are now being built all tail. And so, like lead on the keel, we fall into excesses and hopelessly drop in the wake of big fish with the longest tail, as Biddy would do with the fashion trail. Now and then we meet with a pleasing exception. For instance, Mr. Colburn's Venitzia has been lengthened aft by Collins and is nearly completed. This, however, makes this ship nearly perfect, all parts of the form being in keeping, and the job is a credit to the mechanic who did it. She is a beautiful yacht, and the fastest by odds of any on the Delaware. I will send you memoranda of my bay trip in another letter.

Cooper's Point, Dec. 1. R. G. Wilkins.

CORRECTIONS IN LIST OF RACES.

Aug. 29. B.Y.C. add sweepstakes for second and third classes, 4 starters: Mirage 1.
29. Island Park, Osh.Y.C. Hattie 1.
July 31. Sing Sing. Alice J. 1, Cora 2.
Aug. —. "Carrie Morgan beat Hattie." This is a duplicate entry of match of Aug. 25.
Sept. 4. Osh.Y.C. Third class: Mary 1, Sylvia 2.
Oct. 7. N.H.Y.C. Derby Cup: Happy Thought beats Marguerite by default. Special prize: Happy Thought.
Aug. 25. Mich.Y.C. Jennie J. wins, Partridge ruled out.
5. Burlington Y.C. Open Championship Race. 7 starters: Sharpie wins one leg.
26. Burlington Y.C. Second Race. 9 starters: Lulu ties Sharpie.
July 28. B.S.Y.C. 6 starters: Edith 1, Cynthia 2.
Aug. 10. B.S.Y.C.—Five starters: Edith 1, Alice 2.
24 B.S.Y.C.—Five starters: Alice 1, Vixen 2.
Sept. 7. B.S.Y.C.—Seven starters: Edith 1, Tantavy 2, Cynthia 3. Series of matches: Edith beat Alice.
15. BurlingtonY.C.—Third race, 6 starters: Lulu wins second leg.
23. Bridgeport.—Match. Americus beats Moll Pitcher.
29. New Bedford.—Match. Atalanta B.Y.C. beats Nomad N.B.Y.C.
30. K.Y.C.—Dandy ruled out, prize to Maggie.
Oct. 7. Riverton.—Three starters: Josephine 1.
10. Buf.Y C.—Turk 1, E. B. Jewett 2, Ripple 3.
17. J.C.—Keels, 4 starters: Judith 1, Zetta 2. Centerboards, 5 starters: Phallas 1, Fanny 2.
July 4. Point Clear.—Lorena took second prize in catboat class.

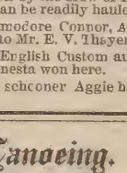
LAUNCH OF THE CHICAGO.—On Dec. 5 the third of the new cruisers building for the Government, the Chicago, was launched at John Roach's yard at Chester, Pa. Work was suspended on the vessel for some time, but has lately been resumed by the Navy Department, which will finish the vessel, and she was launched under its direction. She went off the ways about 11:30 A. M., and as she touched the water was christened by Miss Edith Cleborne, daughter of Dr. Cleborne, United States Medical Examiner, who broke a bottle of champagne over her bows. At the same time three birds—a thrush, a canary and an oriole—were liberated, in accordance with an old Japanese custom. The new vessel is 315ft. between perpendiculars, 324ft. 4in. over all, 48ft. 2in. beam, 19ft. draft and 4,500 tons displacement. Her motive power consists of two compound beam engines, each driving a screw. The hull is of steel, 9-16in. thick, double plated about the waterline, and the rudder and steering gear are below water. She will be barkentine rigged and will carry four 8in. breechloading rifles, six 6in.—one 6in. on each bow—two 5in. aft, and six Hotchkiss revolving cannon. Her fuel will carry her 6,000 miles at 10 knots.

STEAM YACHTS FOR SALE.—We have received from Messrs. Field & Young, shipbrokers, No. 6 State street, New York, their quarterly list of steam vessels for sale, among which are some thirty steam yachts of various sizes, from large cruising craft to small steam launches. Messrs. Field & Young can furnish almost any class of steam vessel that may be required, either for sale or charter, and also plans and estimates for building.

YACHTING NOTES.—The Atalanta Y. C. will hold their last meeting for 1885 on Dec. 14....American Y. C—On Dec. 1 a meeting was held at the club rooms at which the cups won last summer were on exhibition, as well as a design for the $10,000 challenge cup which the club propose to offer for international competition....Leona, Wallin & Gorman, at Bay Ridge, are repairing the schooner Leona.

GENESTA IN AMERICA.—Sec. Minton of the New York Y. C., has lately received the following letter from Mr. J. Beavor-Webb, which speaks for itself: 18 Cromley Gardens, S. W., London, Nov. 12, 1885. —DEAR MR. MINTON: Many thanks for yours of the 2d. I have Sir Richard's and Sir William's authority for saying that such a report, that we thought we had been slighted, received no attention, or had been impolitely treated, is utterly false and absurd. One and all of us were delighted with the treatment we received from the New York Y. C. and the Americans. I don't think any of us saw more than one copy of the *Spirit of the Times*, which I hear has been very bad. It distinctly lied as to Mr. Forbes's conversation with Tams, as is proved by its report on Puritan; but all such writing to us comes under the head of "garbage;" it breaks no bones, and so far as we are concerned makes no enemies. I feel sure that the large majority of the Americans do not believe what has been written in the *Spirit of the Times*, and believe that we, as sportsmen, went to America to meet the American yachtsmen and have a good time; which we certainly had to our heart's content. We are deeply sensible of the consideration shown to Sir Richard during his illness by all American yachtsmen. Yours very sincerely, J. BEAVOR-WEBB.

ASHORE ON THE ROCK.—For some time past the new British steamer Waikna has been in New York fitting out for a winter cruise to the West Indies. All preparations being completed she dropped down to Stapleton last week, where her owners, Messrs. S. M. Cauldwell and A. T. Clark, with the wife of the latter, joined her. On Sunday last she got under way and ran down the Bay, but the wind was so heavy that they ran inside the Hook and anchored. In the afternoon the wind shifted to N.W., blowing a gale all night and causing the yacht to drag her anchor and go ashore. Mr. and Mrs. Clark and Mr. Cauldwell were taken off by the crew of Life Saving Station No. 1. The vessel lies easily and can be readily hauled off.



UTOWANA.—Rear-Commodore Connor, American Y. C., has sold his steam yacht Utowana to Mr. E. V. Thayer, of Boston.

GENESTA'S CUP.—The English Custom authorities have levied a duty of $200 on the cups Genesta won here.

SAN FRANCISCO.—The schooner Aggie has been purchased for $6,000 by Captain White.

Canoeing.

Address all communications to the Forest and Stream Publishing Co.

AMERICAN CANOE ASSOCIATION.

SECRETARY—Dr. C. A. Neidé, Schuylerville, N. Y. Candidates for membership must forward their names, with $3 for initiation fee and first year's dues, to the secretary, who will present names to the executive committee. Money should be sent by *registered letter* or money order.

N. Y. C. C. CHALLENGE CUP.

LETTERS in answer to those accompanying the "Conditions" (published in our issue of Nov. 5) sent to the secretary of the Royal C. C., London, England, and Messrs. Tredwen and Baden-Powell:

11 BUCKINGHAM STREET, LONDON, W. C., 18th Nov., 1885.

C. Bowyer Vaux, Esq., Sec. New York C. C.:

SIR—I laid your letter of 30th October before the committee of the Royal C. C., and am desired to thank you in their behalf for the very generous offer made by your club of an international challenge cup.

My committee think that the modification of Condition 3 would be advisable, as probably two of our best canoeists may both wish to compete, and it would be rather an invidious task to nominate either of them the authorized representative.

Could not the condition be altered to read "An equal number of canoes from each club to sail in any race"?

I have sent a copy of your letter to the *Field*, which will be the best method of ventilating the subject in this country, and will doubtless draw forth suggestions which may be of practical utility to the canoeing community at home and abroad.

I am, sir, very truly yours,
T. G. F. WINSER, Sec. R. C. C.

3 PAPER BUILDINGS, TEMPLE, LONDON, E. C., Nov. 12, 1885.

C. Bowyer Vaux, Esq., N. Y. C. C.:

DEAR MR. VAUX—I am very much obliged for the kind expressions that you give me in your letter of the 30th October. I have fixed that nothing which I can move shall prevent me visiting New York, and the A. C. A. next August and September. I had intended a cruise of an extensive nature in my yacht, the Pearl, 175 tons; but she shall remain on her winter berth and I shall be free, I think, to get together some of our best men and come over with our canoes.

As to these canoes, you will see shortly in FOREST AND STREAM that I am moving the Royal C. C. to adopt the A. C. A. rules, as I consider they patronize the best form of canoe for general work. Our rules have in times gone by admitted canoes almost verging on the sailing boat. To keep up a good front in racing many of us have had to build up to these rules, but not from choice.

My new Nautilus of 1885 is a direct cast back toward the older relatives, Nautilus 3 and 4, and now I am working all I know to pass still more restrictions, so as to keep canoes as canoes. I am moving a limit to sail area; a limit of 60 pounds for centerplates; a senior and junior qualification on winning three first prizes, flags only to seniors unless a private prize is attached to the race; a distinctive challenge flag to accompany our challenge cup, with date of win or wins on it, so that when a man loses the cup he still has the honor of showing when and how often he held it; also, I propose to allow water ballast in no-ballast or limited-weight races.

I am, with others, objecting to those unsportsmanlike and uncruisable things, "side deck flaps." They ruin the boat and give an unfair advantage to the man who makes up to windward; where those who have fairly laid side decks have either to sit on deck or lie below. However, there are not many in number, so can be stopped—three only, I believe.

I shall be very much obliged if you will send me the New York C. C. rules, when they are ready, for 1886.

Now, a word as to conditions of the New York cup:

As to No. 3—Suppose the R. C. C. and the (say) Clyde and (say) Canada challenge? I suppose the first challenge will race, and if he win, the second challenge then race him, etc., at same place and as near as may be same time, or race him on his club's water?

No. 8—The fourth month from challenge seems a difficulty, as you may have a challenge from Canada for June, from the Clyde for July, from R. C. C. for August, etc. Is there not some fall regatta time handy after A. C. A. meet, and allow challenges to come in "at least four months previously"?

No. 10—Surely if a man wins the cup he is entitled to keep it at home (*à la* yacht club cups), his club being responsible to the N. Y. C. C. for its safety, otherwise it would be stowed away at the club bankers'.

I have every desire, of course, to race for your cup, but find a difficulty under No. 8; as, for instance, if I challenge now the race must be sailed in February; or if I do not challenge now, somebody else—say a novice—may rush in and challenge at his own time, and thus cut me out, supposing him to be authorized by his club.

I for one should have no objection to race against a dozen. We have to for the R. C. C. cup, which is fixed to a time and place, and challengers have to come there.

However, these are really small matters, and all I hope is we may have a fine breeze, a large entry, and sport will result undoubtedly. So whatever may be settled as to details, I now forward your letter to our R. C. C. Secretary, T. G. F. Winser, Esq., 11 Buckingham street, Strand, London, W. C., and at same time request him to place my name before the next meeting for nomination by the R. C. C. as its authorized representative, the challenge to be sent in in such time as may bring the date of race to September. My reason for this date is that it will be as much as I can do to get over in time for A. C. A. meet; but after that time is more open.

Of course this is all highly egotistical; but if only one can go in I'm not going to let any others "cut me out at the buoy."

With kindest wishes to the canoers of New York, very truly yours,
WARRINGTON BADEN-POWELL.

ORMSBY VILLA, GROVE ROAD, KINGSTON-ON-THAMES, 17th November, 1885.

C. Bowyer Vaux, Secretary New York C. C.:

DEAR SIR—I have the pleasure to address you with reference to the letter from Com. Minton to the Royal C. C., which I heard read in committee to-night, and your letter in FOREST AND STREAM of Nov. 5.

First, I beg to express my hearty thanks for the cordial invitation which your club has issued to English canoeists, and to assure you of the great pleasure which the prospect of joining your meets next season affords me. Second, availing myself of the suggestion that the proposed conditions of contest for your challenge cup are subject to suggestions for modification, I venture to suggest an alteration in No. 3, to the effect that instead of limiting the contest to two canoes, the contestants should be limited to an equal number of canoes from the challenging and the challenged club. I make this suggestion because it appears probable that Mr. Baden-Powell will be in America at the same time as myself, and if you can enter two American canoes against us, neither of us will be under the painful necessity of spoiling the other's sport. If you do not comply with my suggestion it will probably be necessary for us to sail a series of matches here, the winner receiving the authority of his club to challenge on behalf of the Royal C. C., and the loser being debarred from the competition.

Trusting that my suggestion may meet with the approval of your committee, and again thanking your club for its kind consideration, I am, dear sir, yours truly, E. F. TREDWEN.

At a meeting of the N. Y. C. C. Cup Committee held Dec. 3, the above letters were read and discussed, and it was decided to modify the conditions originally published, as follows: First, To accept a challenge from but one club in a season, the first one sending in a challenge. Second, To allow three men from the challenging club to enter the races; three men representing the challenged club to sail against them; the same canoes to compete in all the races; best two out of three to win the cup for either club for the year. Each canoe winning to receive a flag as a token of such win. The club winning to be responsible for the cup. There is no objection to a member keeping it at home if allowed to by his club. Third, Dates to be mutually agreed upon for the races. It is perhaps unnecessary to state that the course to be selected for the coming race will be one in which the New York members will have no advantage on account of familiarity with tides and currents. It will be on waters where steamers and sailing craft cannot interfere with the racers, and where all the conditions of wind and water will be as fair to one as another.

The revised conditions follow:

1. The canoes competing must come within the limits defined by the N. Y. C. C. rules.
2. The cup is to be held as a perpetual challenge trophy.
3. The competition is open to not more than three authorized representatives of any canoe club sailing under foreign colors, as many canoes representing the N. Y. C. C. as come from the foreign club.
4. Two victories to be necessary to either win or hold the cup, the same canoes competing in each.
5. The races to be sailed on the waters of the club holding the cup.
6. Races sailed in the United States to be contested on New York Bay under the auspices of the N. Y. C. C.
7. The distance sailed over in each race must not be less than eight nor more than ten miles, and within a time limit of three hours.
8. The races must be sailed at a time mutually agreed upon between the first club challenging and the holders of the cup; but one series of races to be sailed in any one year and between two clubs.
9. The N. Y. C. C. rules to govern the races; these are practically identical with all canoeing and yachting rules.
10. The cup must in all cases be held by the club and not by its representative. Should the club holding the cup dissolve its organization, the cup will then revert to the N. Y. C. C.

CLASSIFICATION OF SAILING CANOES.

DO THE present rules of the A. C. A. for the classification of sailing canoes meet the requirements of the Association, and are they fair and just? The writer propounds this question for the purpose of calling the attention of the members of the A. C. A. to the diversity of dimensions of canoes that can be and are entered on even terms in either sailing class of the A. C. A. under the present rules.

The rule for Class A allows the entry of canoes 16ft.x26in. and 14ft. x26in. in the same race. The rule for Class B allows the entry of canoes 16ft.x30in. and 14ft. 2in.x28¾in., and if the writer correctly interprets the rule, it further admits from the smallest canoe in Class A to a canoe 17ft.x30¾in. in the same race, and all on even terms. Yet while the diversity of dimensions mentioned is allowed in both classes, a canoe 16½ft.x30¼in. is ruled out entirely.

The Association rule requires that a canoe to compete in any of the races of the A. C. A. must be sharp at both ends, with no counter stern or transom, and must be capable of being efficiently paddled by one man. Then why rule out, from the privilege of competing for a prize and record in the sailing races of the A. C. A. any canoe that meets the requirements of the Association? Canoeists differ in their tastes, and different localities require different types of canoes. In place of encouraging our canoeists to build racing canoes to fit the class rule, induce them to build canoes to suit their own tastes and the requirements of the locality they reside in by adopting sailing rules that will fairly classify any canoe within the requirements of the Association that may be brought to the meet should the owner desire to enter the sailing races. It is certainly unjust to debar any from that privilege.

The writer respectfully submits to the members of the A. C. A. for their consideration the following rules for the classification of sailing canoes of the A. C. A., believing that these rules will give a more equitable classification than the present rules admit of:

Class A, Division I.—Length, under 15ft.; beam, not over 29in.

Class A, Division II.—Length, under 15ft.; beam, greater than 29in. and less than 33in.

Class B, Division I.—Length, not less than 15ft. nor greater than 16ft. 6in.; beam, one-sixth the length or greater, but less than 33in.

Class B, Division II.—Length, not less than 15ft. nor greater than 17ft.; beam, less than one-sixth the length.

It will be seen from the above rules that no considerable variation in length or beam will exist in any of the divisions; that every sailing canoe "that can be efficiently paddled by one man" is fairly classified and can be entered in only one division.

CLASS A.

DIVISION I.			DIVISION II.		
Name.	Length.	Beam.	Name.	Length	Beam.
	Ft. In.	In.		Ft. In.	In.
†Nirvana	14 0	27½	‡Isabel	13 11	32½
†Day Dream	14 1	26	‡Thetis	14 4	30¼
†Lady Jane	14 1	26	‡Freyja	14 5	30½
‡Bertha	14 2	28	‡Snake	14 6	30
‡Star	14 2	29	‡Katrina	14 7	31
‡Beatrice	14 2	29			
†Irex	14 6	27¾			
†Gnuz	14 6	27¾			
†Nereid	14 7	28½			
†Nettie	14 2	28			

CLASS B.

DIVISION I.			DIVISION II.		
Name.	Length.	Beam.	Name.	Length.	Beam.
	Ft. In.	In.		Ft.	In.
‡Sophronia	15 0	30	†Irene	15	27¾

‡Germaine	15 6	31			

* Class A, 1884. † Class A, 1885.
§ Class B, 1885. ‡ Class B, 1885.

Of the merit of these rules the reader may judge for himself from the appended classification, made up mostly from entries at the A. C. A. meet of 1885. Those from the entries of the meet of 1884 were selected to illustrate more plainly the improvement in classification.

LONG SHANKS.

[Like a motion to adjourn, a discussion of measurement rules is always in order, and the above suggestions offer an ingenious plan. Nearly all members of the A. C. A., however, dispose of the matter by an affirmative answer to "Longshanks's" question, as there is now little complaint about the rules. They do meet the full requirements of the Association, they work perfectly in respect to racing, and they encourage the building of the two sizes of canoes best fitted for general cruising, and they have proved fair in practice. The confusion that once prevailed in consequence of a great diversity of sizes has now entirely disappeared and each year the boats are approaching more nearly to a standard size in each class, 15×28 and 15×30, which sizes seem to be the best both for racing and cruising. The only boat disbarred in 1884 was one built with an exaggerated overhang which increased her length over all and which was finally sawed off. This year one or two boats were thrown into other classes by being over or under the limit through the fault of the builder, but no complaint was made. The rules provide for the boats that are present and the Association is ready to add new classes as soon as the necessity for their formation is apparent. It has been proposed to add a C class of larger boats, but none have yet been present at the meets or have made any application for a class. The leading canoeists are well content with the dimensions which the rules, especially the average prizes, encourage; the boats of odd sizes are built by amateurs, novices and men who are not in the Association and care nothing for its rules. It is true that a 16×26 and 14×26 canoe would be admitted to the same class, but practically the class has been made up of boats 14×26 to 27in., the two 16ft. boats noted above being open Canadian canoes, and in another year we may expect to see Class A entries all 15ft.×28in. No special virtue rests in an inch of beam more or less in a canoe. A man can build a 28in. boat that will be as good as a 29in. or 29½in., and, similarly, a 30in. is no way inferior to 29½in. or 31in.; so it is not unfair to encourage, for the sake of simplicity, these two sizes. A number of considerations enter into the choice of dimensions under the present rules, and they dictate two sizes of boat. If a man wishes to avail himself of the full limit for sailing he can exceed these sizes, building, say, 15ft.×31½in.; but then he must pay in the paddling, as his boat will be wider than the majority. The object of the rules is not to afford a race to every possible size of canoe that may present itself, but to encourage the best possible boat of each class, and the new Class A and Class B boats are sufficient evidence of its successful working. If there are any owners of larger canoes, or any who contemplate building them, who wish to race them at the meet, they should apply to the Regatta Committee, and if enough entries are found to warrant it, a class would no doubt be formed for them, as it is the policy of the A. C. A. to encourage all legitimate cruising craft. One objection to the plan is that it makes four sailing classes for the same boats that the present rules place in two, thus lengthening the programme unnecessarily, a point that is of much importance. We need say nothing at present of the confusion that would ensue from a change of the rules, as it is improbable that any will be made; but we shall be glad to have the views of canoeists on the proposed scheme.]

WIDE OR NARROW CANOES?

Editor Forest and Stream:

In your issue of Nov. 26 Mr. Clapham comes to the front with several statements concerning canoes which, as an old canoeist, I am inclined to question and to ask for the proof of. His statement that many prominent canoeists have given up canoes for square-sterned boats infers that they have done so owing to the danger, unhandiness and discomfort of the latter. Now, who are the prominent canoeists alluded to? Mr. Bishop, a canoeist, advocates the sneakbox for extended cruises on open waters, but he has not condemned the canoe for its own purposes. "Seneca," also a canoeist, has lately taken to the same boat, but his purpose is also peculiar; as he has no place to house a canoe, he uses the boat for hunting purposes, and wishes to carry two, while on his cruising ground there is no occasion to haul the boat ashore or to transport he on land. Canoeing is the primary school of yachting, and many of the canoeists of fifteen years since now own larger craft; but that does not prove that they were not satisfied with their canoes at one time. Boys and young men go into canoeing as the most available form of sailing, nearly all of them with the hope of some day owning a larger craft—probably in a few years a 20 foot sloop or five ton cutter, to be succeeded in time by a large yacht; but this progression argues nothing against each boat in its place. On the other hand, Dr. Neidé first cruised in a rowboat before discarding it for a canoe; Mr. Nate Smith did the same, camping and cruising in 1880-1 in an excellent rowboat; Mr. Tyson went down the Mississippi in a skiff several years before he owned a canoe; "Surge," of the N.Y.C.C., is a reformed boat sailer, now an ardent canoeist; Ex-Com. Alden and Mr. Morse first cruised in a rowboat, and another of the older N.Y.C.C. men began his cruising ten years since in another, only to drop it for a canoe, still using the latter.

Why is the canoe neither safe, handy nor comfortable, can Mr. Clapham tell us? Those who use her do not find her so, and they should know. How has canoeing been debased, and what has been the effect of the introduction of the modern canoe? We have a large and powerful organization working for the advancement of true sailing and cruising, a fine fleet of boats, a set of rules and methods of racing that put to shame the yacht clubs, and yet we are told that we are "debasing" sport. Of course a large boat is less cranky, safer and more comfortable than a small one; that goes without saying. But such a boat would be utterly useless as far as two-thirds of our canoeists are concerned. Two features make the canoe specially adaptable to a very large class; its adaptability and portability, and in these two all the others, "Deja's" boat, the sneakbox and the proposed boat are lacking. The canoe can easily be paddled in smooth or rough water by a boy of ordinary strength, and so is independent of wind and tide, while the motion is far less monotonous and tiresome, though less effective than rowing. It can sail very fast when properly rigged, and with care and knowledge such as is needed in any boat, it is safe for cruising. It affords ample accommodation for the crew, not such as a large yacht, but all that the camper requires. It can be housed, handled on shore, transported by rail, or in an emergency can be locked up and stowed in a garret, a cellar or a barn, and it can accompany its canoeist in time by a boat's. These are the qualities that make it so valuable, and the ones that are lacking in the sneakbox and its fellows. None of them can be paddled or efficiently handled on land by one man.

Now for Mr. Clapham's boat, it must be rowed and not paddled, it may, perhaps, sail better, but it can not be handled, under oars and in all ways, as a light canoe can; the capacity of our club houses would have to be doubled to obtain storage room; it would be too unwieldy to transport, as a canoe is carried, over three or four railways in two days, and the cost of transportation would be much greater. One man could haul it out on a beach, but it could not be handled as a canoe is and must be, for instance, to run alongside a dock, three or four feet high, in the dark and a tideway, to jump out and haul up the boat after one; or even the easier task of lifting on and off the house racks, toting along a railway platform, or launching alone in a hurry. Would this light, buoyant boat, with no ballast, go to windward in a sea, and with her larger area would she be safer than a canoe? If what Mr. Clapham says about canoes is true, there must be plenty of deluded canoeists who would welcome such a boat as he promises. Let him then build her and show us what she can do that cannot be done by a CLASS B CANOE.

Editor Forest and Stream:

Now that Mr. Clapham has joined "Deja" in the great work of reforming canoeing, let us have lines and figures from him, that we may fairly compare his boat with the canoe. Cannot you publish the lines of Mr. Clapham's boat, if he has yet designed her? In the meanwhile perhaps he will tell us how much she will cost, the weight of empty hull and with full rig, whether the railroads will handle her as they now do canoes, whether she can run rapids, how large a paddle is required, what average speed can be obtained in a calm and how many men it will take to handle her as a canoe is handled.

A. C. A.

Editor Forest and Stream:

Although canoeing seems to be well established in this country, it is evident that it has excited the jealousy, or some kindred spirit, of owners or builders of cutters and sharpies. We are now warned that a degeneration to a "mongrel sport" and the only remedy apparent to these self constituted advisers is the substitutes so kindly offered, first by an advocate of the cutter and now of the sloop. How many canoeists will sell their canoes and invest in the safe and commodious cutter, sailboat or sharpie cannot be known, nor is it a matter of much importance; but a novice buying a canoe 15ft.x4ft. to cruise down a river, to compete in the paddling races, or even to paddle at all, might be sadly disappointed.

A party of canoeists were starting for a cruise down one of our rivers, the headwaters of which were distant some hundred miles from the departure, and it was therefore necessary to ship the canoes by rail to the place where the cruise was to commence. Among the canoes was a boat 16ft. long by 28in. beam, sharp at both ends and partially decked, a good enough boat in its way, but outside the limits of classification of the American Canoe Association. This boat was an endless source of trouble to the whole party. It was heavier and difficult to carry even for a short distance. It occupied more space in the car than the canoes, and owing to this fact, sufficient room not being found in the baggage car at a point where a transfer had to be made, the canoes did not arrive at their destination at the proper time; so a day and a half was lost in a country town, which was sufficiently disagreeable without the accompanying thoughts of possible smash up and an absence of insurance. When started on the cruise the double crew in the boat found it difficult with their single paddles to keep up with the canoes, and finally when one of crew deserted and the captain was left to paddle his own canoe a

mutiny was scarcely averted. It is true that the oars were there, but the captain had come for pleasure and not for toil; the sail was there, but the wind would blow up stream or not at all. This boat was called a canoe by its captain, but it was not properly a canoe, and is not now used as such. The name was insufficient to change its nature. The chief trouble was the excess of beam which rendered the boat incapable of being efficiently paddled by one man. Where, however, the paddle is discarded the canoe is also discarded and a rowboat, sailboat or other craft takes its place. Whether or not the boat is superior to the canoe is another question which has already been discussed. L.

Editor Forest and Stream:

When we remember the constant attacks which canoe sailing and racing has been receiving, it is very amusing to read a letter written from so diametrically opposite an standpoint as that of Mr. Thomas Clapham. Among both for the picture it brings to our imagination of the discomfiture such heresy will carry into the ranks of our friends on the other side of the question, as well as for the misconception of canoeing evident in its suggestions. Mr. Clapham, though an A. C. A. member, has evidently allowed himself to forget entirely what a canoe is and why it exists: and it is difficult to see how the legitimate canoe is to be benefited by the admission of canoe yawls to form an entirely separate and independent class in A. C. A. races.

KATRINA.

Editor Forest and Stream:

Canoeists have been engaged in making toilsome improvements in their craft for the last half dozen or more of years. Each step in advance in model and rig has been the result of patient study and experiment by those who, by their familiarity with the subject, would seem to be the ones best qualified to achieve success. I am one of those who believe they have done so, within the limits, the very wise limits prescribed by the Association rules.

If they had been at liberty to design boats for any one purpose, without having to conform to all the requirements of the canoe, and with unrestricted measurements, it would have been very easy indeed to plan a boat which would carry double the amount of sail with proportionate speed, or to be towed with twice the speed that a canoe can be paddled, if sailing was no object, or a combination of both if weight were of no consequence, and it was not necessary to remove her from the water, except to put her in the dry dock occasionally.

It seems to me that Mr. Clapham, in his letter in last week's FOREST AND STREAM, loses sight of the above facts, when he proposes for sailing canoeists a craft very much superior to what they are at present using. He proposes for 15ft. in length, a beam of 42 to 48in. This would at once dispose of paddles, which would of course be useless in so wide a boat. He says she could be easily hauled out of the water by one man. But how about picking her up and carrying her into a boat house up a steep bridge at low water? I think we would have to anchor her out, and I call to mind a canoe of only 31½in. beam which was disposed of in that way, on account of her uncomfortable weight; and a storm came and her bones are now bleaching in the sand, or would be if they were not covered up by the dumping scows.

Supposing we have got rid of the useless paddles and anchor our boat out, thereby saving the trouble of carrying her into the house. The next step would seem to be to wedge the mast in, making it stationary, and to rig the sails with gaff and boom, saving the trouble of taking them in and out. Yes, that is splendid; but in the meantime what has become of the canoe? Alas! she has vanished, and in her place we behold the old time cat or combined rowing and sailing boat.

It is not at all likely that the Association would consent to such an alteration of rules as would be required to admit to their races such a craft of the dimensions which Mr. Clapham gives, especially as the rules were framed to exclude such. Nor is it any more likely that canoeists as a rule would be willing to accept Mr. Clapham's assurance of what such a boat is capable of until it has been proved, nor would it be fair for him to expect a canoeist, on the strength of such an assurance, to go to the expense of making the experiment. The best thing then for Mr. Clapham to do would be to build such a boat as he describes and prove its capabilities by practice, as well as on papers, and if he is so much superior to our present canoes, I think I can guarantee there will be plenty of canoeists to recognize it and take advantage of his suggestions. But I would warn him that they will use their own judgment, and he must not be disappointed if it does not always coincide with his any more than with that of the cuoglist of sneakboxes and special cruisers. SERGE.

Editor Forest and Stream:

In your last issue I noticed an article on wide canoes, by Mr. Clapham, I am of his opinion that it would be to the interest of canoeing for the A. C. A. and the W. A. C. A. to form a class for canoes 15x36 to 48in. A canoe is a very capable little boat, and canoeing is a grand sport, but the ordinary 31in. canoe is not adapted to cruising in open water. The sneakbox is also an excellent boat, and for handiness and speed in smooth water I have never seen their equal, they will also ride a large sea but are indifferent performers to windward in a choppy sea. I have tried both the above boats for cruising on Lake Michigan, but neither of them filled the bill. I am having a canoe built this winter 15ft. x36in., which I think will be about the boat needed, she is to weigh about one hundred pounds and will carry two men and their duffle, if necessary, nicely. I expect to cruise around Lake Michigan in her next summer. I know of other canoeists who are having boats built similar to mine, and I know that a class that would admit a canoe as described above would be very popular in our waters. CAPTAIN.

CHICAGO, Dec. 3.

Why was it that canoeists jumped in so quickly to answer "Deja" and "Seneca" when they wrote of sneakboxes and canoe-cutters? Was it that the canoeists did not like these boats, did not think them safe or useful, and did not want any right-minded person to use them? Not at all. Not one among all the canoeists has objected to the use of the box or the cutter. Many canoeists own and sail the homely but serviceable box. They jumped up to defend themselves—not to attack a foe. Toleration is a lesson the canoeist learns when young. Canoes vary so—are used for such radically different purposes that no one thinks of saying "this is canoeing—and only this." Now, "Seneca" and "Deja"—and "Spike," too—had better learn as soon as possible that the canoe is a fact; that an ever increasing army of canoeists exist, and propose to use their canoes for any and all purposes pleasing to them. They don't object to the box, nor the canoe-cutter, nor the nickel-plate; but they don't propose to substitute any of these for the canoe of their fancy because they are told they must or be considered fools; nor do they propose to use only one canoe, and call one kind of canoeing, and that only, true canoeing. It would do "Deja," "Seneca," "Spike"—and "Sharpie Clapham," too—a world of good and teach them something if they would only drop down on Grindstone Island next August for a day or two. Gentlemen, what say you?—*American Canoeist.*

CANOE COMPLICATIONS.

Editor Forest and Stream:

I agree with "Spike" that the novices are not responsible for the many new contrivances in canoeing: they are mostly the work of experts, and good in their places. The drop rudder is an excellent device in some cases and so is the cam cleat, but the novice may have no use for them; but still he sees them and has them. Now when he finds that they are only an annoyance, let him shoulder the blame himself instead of calling for more rules to protect him. I cannot follow his fine distinction between seamanship and—what? It is impossible to analyze boat (not yacht) sailing into its various components of trim of sails, steering, attention to tides, etc., which may be called seamanship; and the other factors of personal activity and skill. Without the latter the open boat or canoe sailor would find his seamanship of little use, and while he might sail his boat to perfection in one respect, he would soon upset her. I still repeat my assertion that the leading racers, the winners, do not carry such large sails.

I admit that some canoes have large areas and some are oversparred, but I referred only to well-known racing canoes that have won regular A. C. A. races, and this does not include the boats mentioned by "Spike." The limit of 80ft. is small enough for the average Class B canoe; 75ft. is far too little in ordinary weather, such as prevails in summer. I hope to meet "Spike" next August and to show him a "complicated" canoe that he will admit is what a canoe should be. BRASS CLEAT.

CRUISE OF AURORA AND PETREL.

DR. Charles A. Neidé, in canoe Aurora, and Mr. George E. Andrews, in his new "Barnegat cruiser," the Petrel (14ft. by 32in), were on the St. Johns River, near Jacksonville, Fla., Thanksgiving Day. These cruisers tied up in a small creek above the city, and Mr. Andrews, as chef, cooked a royal Thanksgiving dinner on board his sneakbox. Dr. Neidé, in a letter to a canoeist friend, describes Mr. Andrews's outfit as the most perfect he ever examined. Mr. Andrews cruised last winter on the southwest coast of Florida. We believe it is his intention to cruise—possibly with Dr. Neidé—about Feb. 12, southwest, via Indian River to its end at Jupiter Inlet, then through Everglades thirteen miles southward to Lake Worthhaulover, where a portage of 400 feet on a small car, which runs on a wooden track, makes connection with Lake Worth and its settlement of Northern people.

Lake Worth is about twenty-four miles long and half a mile wide, running southward inside the beach. At its southern end is the "Wreckers' Trail," a haulover into the Atlantic Ocean of a few hundred feet length. It will be necessary to follow the beach outside, down to Key Biscayene Bay, inside of which is the settlement of Miami, where live several Northern families. From Miami it is easy cruising inside the long line of Florida Keys, to Key West, in such staunch craft as the Aurora and Petrel. The "Barnegat cruiser" draws but 6 inches, and can go in as shoal water as the Aurora.

From Miami, following around the point of Florida to lonely Cape Sable, and up northward toward the camping grounds of "Nessmuk" and Kendall, is a cruise of two or three hundred miles. For 150 miles to Cape Sable the A. C. A. men must depend on each other for society, unless they cross to the Florida Keys, some of which are inhabited. Neidé and Andrews are self-reliant men; the first was a staff officer at sixteen years of age with Gen. Butler in the late war. He is known to all canoeists as one of the best of men. Mr. Andrews is also an excellent companion, a true sportsman and an enthusiastic cruiser. He is the second man to raise the flag of the American Single-Hand Cruising Club, under which he will cruise around Florida.

Our best wishes will follow these gentlemen in the cruise they are about to undertake; and we believe that the people of the Indian River country and of Lake Worth will give them a cordial welcome when these representative craft of the American Canoe Association and the American Single Hand Cruising Club, flying the flags of both organizations, penetrate the regions of those distant watercourses.

N. H. B.

STOVES FOR SMALL BOATS.—I believe there is no perfect stove for cruisers in small boats. Alcohol is cleaner to use than kerosene, but costs more. If cost is no objection I can recommend what I mention in "Canoe and Camp Cookery," viz: three alcohol flamme forcé lamps, place them side by side for cooking in large vessels, and use only one when making coffee or boiling eggs. I use an oil stove when cruising during cold weather, because it warms my canvas cabin better than an alcohol stove, and I can keep it going for hours, if desired. An oil stove for cruising should have a reservoir with no openings, and the whole thing should be carried in a pail when not in use, so that if it slops over it won't soil anything but the inside of the pail.—SENECA.

PHOTOGRAPHS OF THE 1885 MEET.—One of the handsomest photographs of a canoe we have yet seen is that of the Marion, Com. R. S. Oliver, taken at Grindstone by Mr. S. R. Stoddard, of Glens Falls, N. Y. The canoe is shown coming directly toward the spectator, with boom to starboard, showing the boat and sails to advantage. Mr. Stoddard's collection this year, including Mr. Seavey's negatives, numbers some thirty views of the races, the fleets under sail and paddle, a large group and a number of views of the camp, and altogether they form a very valuable souvenir of the meet.

FLORIDA NOTES.—Dr. Neidé writes under date of Dec. 2 that the weather in Jacksonville is cold, with sleet showers. Aurora is afloat now. Com. Munroe, N. Y. C. C., will soon leave for Key West, and Mr. Chesebrough, N. Y. C. C., will spend some time about Jacksonville. Mr. George E. Andrews, No. 900 A. C. A., is ready for a cruise in his sneakbox Petrel. Mr. George M. Peterson, of Chicago, will cruise on the Upper St. John in his canoe Mary. Mr. W. B. Barnett, of Jacksonville, is now at Maypert with his canoe, duck shooting.

NEW YORK C. C.—The annual dinner and election of officers will take place on Saturday next at the Hotel Hungaria. The house is now moored in Sel midt's Basin, at Tompkinsville, Staten Island. The Mama P., Sea Urchin and Tomboy were out on Dec. 7, in spite of the opening of the blizzard season. A new canoe has been added to the fleet, 15×30, with two boards, one almost against the sternpost.

THE CHALLENGE TROPHY.—New York, Dec. 8.—*Editor Forest and Stream:* I beg to acknowledge, through your journal, the following International Cup subscriptions: W. M. Carter, Trenton, N. J., $1; George W. Wilkin, A. C. A. No. 124, $1; H. O. Bailey, $1; previously acknowledged, $54. Total to date, $57.—WM. WHITLOCK.

CANDIDATES FOR A. C. A. MEMBERSHIP.—Secretary Neidé has received applications from Mr. Maurice McMicken, Seattle, Wash. Ter., and Mr. Joshua B. Fordick, New Brighton, Staten Island.

OVER ONE IN SEVEN of those insured under the accident policies of The Travelers, of Hartford, Conn., in 1884, was killed or injured by accident, and received cash benefits.—*Adv.*

Answers to Correspondents.

C. A. J.—You can probably find a ducking boat for sale at Fairepat

C. F., New York.—The country back of Fort Lee will probably prove what you wish.

BEE, Tallahassee.—You will find an extended description of the public parks of different cities in Appleton's Cyclopedia.

F. C. W., Auburn, Mass.—The Fish Commissioners of Massachusetts are: E. A. Brackett, Winchester; F. W. Putnam, Cambridge; and E. H. Lathrop, Springfield.

L. G. D.—We know of no better makes of guns than those advertised in our columns, and we advise you to communicate with the manufacturers whose names are there given.

F. M. D., Wheeling, W. Va.—In shooting at glass balls and other flying objects, with which can you get the quicker aim, a double or single barrel? Ans. With the one you are accustomed to use.

R., Springfield, Mo.—Can you name duck, killed here, an entire stranger? White breast and belly, brown under wings, balance black, high crest or top knot, each side of crest white, front and top edge black, narrow bill, upper lip hooked, web feet; weight 1¾ pounds. Ans. The bird was no doubt a hooded merganser (*Lophodytes cucullatus*).

F. A. N.—Please give me extended pedigree of Pessie. Was imported from England in 1879 by T. W. Harvey, of Chicago, when she was six months old, and in 1881 he gave her to Hon. J. Sterling Morton, who the same year gave her to O. J. Stowell. She has had eighteen pups since she has been in my possession, and none of them have ever had a spot of any description. I have been tracing my bitch's pedigree since July, and I hope this will clear the case with it in full. I have sold some pups, but did not wish to send pedigree unless genuine, and I have traced thus far and think this is sufficient for them. Ans. What is your bitch Pessie—dachshund, coach dog, mastiff, bull-terrier, or what breed?

F. C., Providence.—1. Can you inform me of the best localities for trapping in Maine or New Hampshire? I wish to capture the smaller fur-bearing animals, such as otter, lynx, mink, sable and muskrat. I should like to go to a section where the black bear and deer are comparatively plenty, but should prefer to go to the Coos country if possible. 2. Have you a book relating to the animals to be found in either of these localities, and giving their habits and mode of capture, also containing description of country and best places to go. Ans. 1. Write to John Danforth, Rangeley, Me., or Ned Norton, Colebrook, N. H. 2. "The American Trapper," by Gibson, will meet your requirements. Price, $1.50. It does not give description of Maine country.

PUBLISHER'S DEPARTMENT.

IT IS SETTLED.—By the testimony of thirty years' experience, and of thousands of reliable, conscientious people, that Humphreys' Homeopathic Specifics are unrivaled as household remedies. The tens of thousands of families who habitually use and rely upon them have less of sickness, better general health, live longer and pay less for it than any other class in the land. They are not poisoned, their systems are not drugged, or depleted or undermined with medicines, their little ailments are soon cured and graver ones prevented, and every dose is a builder up of constitutional vigor and stamina. No wonder the families who have been raised upon them cling with such tenacity to them. The diseases incident to children and location, mumps, measles, scarlet fever and whooping cough, malaria and rheumatism, pass off as harmless visitations or are summarily suppressed, while severer diseases find slight lodgment in organisms so well fortified. Thousands of farmers, breeders, stablemen, express, manufacturing and mining companies, confess that his Veterinary Specifics have emancipated them from the druggery of sick stock, as well as having saved them thousands of dollars.

Quite a number of correspondents have drawn our attention to an offensive paragraph, which, under the heading "Pope Leo has taking up his favorite autmun amusement of lark-catching in the Vatican Gardens," recently appeared in the *Graphic*. Our contemporary then proceeded to comment upon what it was pleased to describe as "a strangely cruel pastime of the Infallible Head of a Christian Church." The conclusion of the paragraph was as follows: "Numbers of fine singing larks are blinded with a red-hot needle, and concealed in cages in a fine laurel grove, where flocks of larks fly across from seawards during their autumn migrations. The blind songsters decoy their fellows by their loud strains, and nets are then deftly dropped over the unlucky birds attracted. His Holiness gets very angry with any awkward attendant who fails to drop the net at the critical moment, and himself often extricates the birds, and kills them in the approved fashion by crushing their heads between thumb and finger." Any one at all familiar with Italian customs will know that the roccolo is a favorite pastime of the Romans in the month of October. Little birds, not always larks, but often bullfinches, and even sparrows, are placed in cages among bushes or shrubs, smeared with birdlime. The loud singing of the decoy birds attract others, who, getting fast in the birdlime, are caught easily in nets by men watching for the purpose. It is true that birds sold as decoys are often blinded, under the impression that it improves their singing—a piece of mistaken cruelty which used to be commonly practiced in this country upon canaries. So much is matter of common knowledge. We may add that the roccolo is yearly practiced in the extensive grounds of the Vatican for the amusements of the *famiglia i.* But that the Holy Father has ever taken any personal part in this somewhat childish form of "sport" is wholly, and we might have hoped obviously, untrue. The story of the "anger" of the Holy Father and the picture of him crushing the heads of little birds between finger and thumb are mere malicious inventions of the *Independence Belge*, and we can only regret that our contemporary, the *Graphic*, should have swallowed them so blindly.—*London Tablet.*

"Highest Quality" Fish Hooks.

Anglers are so familiar with our name and Trade Mark and the quality of our goods, that we have no hesitation in calling them to witness to the excellence of all hooks made by us. Though our hooks have always been fully equal to any ever made, about seven years ago we came to the conclusion that anglers would welcome a very high grade of fish hooks—something far beyond what they had ever used. Consequently we perfected arrangements for the manufacture of what has become so widely and favorably known as "Abbey & Imbrie's Highest Quality" fish hooks. All boxes containing these hooks have our trade mark and the words "Abbey & Imbrie's Highest Quality," distinctly printed on the label. Also the name of the hook, viz.: "Sprout," "O'Shaughnessey," "Aberdeen," "Carlisle," "Sneck Kendall," or "American Trout." When "snelled" on silk worm gut or gimp the hooks are put up in packages containing one-half dozen of hooks. Each one-half dozen is labeled.

If your dealer does not keep our goods in stock, or will not order them for you, send us 50 cents for our 180-page folio illustrated catalogue.

"FOREST AND STREAM SERIES."

DEER HUNTING.

BY JUDGE JOHN DEAN CATON.

BY and by it will be time to hunt antelope and deer. It is always time to read about them. Judge Caton's book on the antelope, elk, deer, moose and caribou of America discusses in a readable way the life history of these animals and the methods of their capture. It is the work of an enthusiastic sportsman who has had a wide experience and has devoted the leisure of years to studying these interesting game animals. The volume is very fully illustrated, and is a perfect storehouse of information and entertainment. The first edition was sold by the Boston publishers at $4. Price $2.50.

WOODCRAFT.

BY "NESSMUK."

A COMPACT pocket handbook of condensed, boiled-down, concise, clear, comprehensive, sensible, practical camp gumption. "Nessmuk" has been "in the woods" in Michigan, New York, Pennsylvania, and South America, and this is a book for outers, wherever they kindle their camp-fire. The author believes in "smoothing it." He has learned how; now he tells others. It is much easier to learn from "Nessmuk" than from Dame Experience. We should not be surprised if "Woodcraft" completely revolutionized the methods of camping out. If you are going to the woods, read "Woodcraft" before you go. It may add to your trip a hundred fold. Price $1.00.

DOG TRAINING.

BY S. T. HAMMOND.

HE was a promising puppy, and when you turned him over to the breaker to be educated, you thought he was bound to make "the best dog in the world." And you'll not soon forget how disappointed and disgusted you were when the dog, the breaker and the big bill—all three turned up together, and you saw that the animal's spirit was broken and it would take a steam calliope to make him mind. Now, this could not have happened if you had been wise enough to buy a copy of Hammond's book, and in your odd leisure moments *train* the dog yourself instead of having him *broken* by some one else. We are selling edition after edition of this book, and it is revolutionizing the system of preparing dogs for work in the field. Price $1.00.

SHORE BIRDS.

A PAMPHLET for those who "gun" along the shore. Tells of: I. Haunts and Habits—Where the bay birds live and what they do at home. II. Range and Migration—Where they go to breed and where to spend the winter. III. A Morning Without the Birds—An episode of shore shooting. IV. Nomenclature—A list of our American species of *Limicolæ*, with a description of each species. V. Localities—Where to go to shoot them. VI. Blinds and Decoys—How to shoot them after you have reached the grounds. 45 pp., paper. Price 15 cents.

ANGLING TALKS.

BY GEORGE DAWSON.

AS a political writer of conceded power, Mr. Dawson wielded a trenchant pen; when he terned from the conflict of parties to the praise of the favorite pastime of "simple wise men," his essays, limpid as the crystal streams, are aglow with the soft summer sunlight and melodious with the songs of birds. When angling was the theme, he wrote from a full heart and in closest sympathy with the scenes and pursuits described. These "Talks" are brimful of manly, wholesome sentiment; there is in them all not a particle of cant. Their sincerity and overflowing spirit at once win the reader, and he perforce shares the author's enthusiasm. The effect is magical, like that of the mimic players in Xenophon's *Memorabilia:* he who reads, if he be an angler, must go a-fishing; and if he be not, straightway then must he become one.—*Extract from Publishers' Preface.* Cloth, price 50 cents.

CANOE "AURORA."

BY DR. C. A. NEIDÉ.

A CHARMINGLY written and always entertaining account of a canoe cruise from Lake George, New York, down the Ohio and Mississippi Rivers to the Gulf of Mexico, by the Secretary of the American Canoe Association. To read the cruise of the "Aurora" is the next best thing to having made it; and the reading is decidedly more pleasant than would have been participation in some of the misadventures related. 216 pp., cloth. Price $1.00.

Second Volume of the Lake and Forest Series.

WILD WOODS LIFE;

OR,

A Trip to Parmachenee.

BY

Capt. CHAS. A. J. FARRAR.

In this volume the party of young men who figure in "Eastward Ho!" make their second trip to the Maine Woods, going further into the wilderness, and meet with many unusual incidents and exciting adventures. Sure to please all who read it. Charmingly illustrated with full-page engravings. Bound in cloth, 400 pages, uniform with "Eastward Ho!" Price $1.25. Mailed on receipt of price by

easy it might become to trace back to a single stirps the various races of the plains and mountains.

That evening Yellow Fish gave us his views on the game prospects of the region which we were nearing. He had something to say about *Eh-mah-kee kinny* (big horn, or literally in Piegan, big head) and *Ah-poh-mah kee-kinny* (white goat, literally white head). The former he said, were very plenty. So plenty in fact that if we tried not to see them we could not help doing so. They were on almost all the rough mountains, except those on which the goat lives. The best place for these is on the west side of the upper lake on a great mountain where there are no sheep. "The buck goats," said he, "camp far apart, for they are great fighters. Often you find them with round holes in their sides, made by the sharp-pointed horns of those with which they have been fighting. During the rutting season, which is in the last of September and in October, they have just back of each horn a round ball [gland] as big as a grouse's egg. These smell very strong [of musk], and if when you shoot or skin one or when it falls down from the high rocks, these balls are broken, they spoil the skin and the meat. They must be cut out very carefully."

What I have so briefly summarized he told with a great deal of detail, and the hour was late when the talk ended and we were ready to turn in. A glance out doors showed that the rain had turned into snow, which was coming down softly and slowly and melting as it fell. No signs of clearing weather were visible in the sky. Yo.

The Sportsman Tourist.

A SHRIEK FROM THE BRANCHES.

SOME years ago, before the outbreak of the Ute rebellion in Colorado, which resulted in the death of Major Thornburgh, Agent Meeker and others, my brother and I were returning from a sojourn hunting and fishing on Grand River, in Middle Park, near the Hot Sulphur Springs. One Saturday evening we went into camp on the western base of James Peak at a place called Hay Stacks, where the dripping snows form the rivulets that quickly grow into larger streams, making successively the Frazer River, Grand River and the Rio Colorado, which only cease their speed and impetuosity when they reach the Gulf of California and the Pacific Ocean. The journey was to be continued the next day over the great range among the snow-covered peaks by the way of the Berthoud Pass.

On leaving Denver a few weeks before, we had been warned that the Indians might somewhere entrap us, that the discontented chief, Colorow, who subsequently proved so troublesome with a band of ostracised followers, was roving along the Frazer and Grand rivers, that white desperadoes were shooting and stealing and laying their deviltry to the Indians, that some Arapahoes, enemies of the Utes and whites alike, were raiding the Parks, while an occasional cinnamon bear and mountain lion was making it lively for prospectors and hunters. The cinnamon bears would come stealthily into camp in the night without notice, and suddenly break up housekeeping, to the great consternation and peril of the sleeping campers, and the mountain lions had a disagreeable way of dropping from the outreaching limb of a spruce tree on to the head of a hunter or prospector.

We had made mental memoranda of all this; we had slept on the ground in cañons, on meadows and in the deep woods, had shot a savage gray wolf and fired effectually at a mountain lion, had seen recent evidences of prowling Indians, but so far had escaped without thrilling adventures. Still, we were always watchful, and had learned by heart the good old legend, "never be surprised."

During the day we met a lone Ute Indian, who came suddenly into view at the crossing of a little stream, who was in a great hurry and much excited about something. He reined his pony suddenly, almost bringing him to his haunches, and inquired, in his jargon of Indian, English and Spanish, if we had seen any Arapahoes. He expressed great surprise by look and manner when I told him we had not, and lashing his pony across the shoulders with his stubby whip, disappeared in a forest of quaking aspens. Later on we met two prospectors and a tall tenderfoot, a Boston man, who inquired anxiously about Indians and told us we had better be on the lookout. At noon, where we stopped to rest the horses and pack-mule and eat lunch, we caught sight of three tepees two miles to the right, nearly hidden among blasted pine trees, and thought they belonged to some raiding Arapahoes. This robbed us of some comfort and added correspondingly to our apprehensions.

And so, when evening came and the long, dark shadows of pines and firs fell upon the wild meadow, and the hermit thrush sung his sweet but plaintive song, and the little birds in the bushes uttered their vesper calls, and a shaking cluster of alders in a ravine told of some sneaking animal, why, we naturally felt a little uneasy—perhaps a shade lonesome.

We at once picketed the horses and the mule where they could eat heartily of the wild blue grass, and then set about to get supper. A very small fire was built, so that it could be easily extinguished when we were through with it. Coffee was made and pieces of grouse were fried, which, with cold biscuits made of Sonora wheat flour, furnished a very satisfactory repast. While we were cleaning up the camp preparing for the night, the mule suddenly uttered a snort and came galloping toward us, apparently in great fright. Mules are frequently frightened by shadows and are evidently superstitious, and will "break" for the camp fire if they see a ghost or anything of mysterious nature. We quieted the old fellow and got the horses and tied them all to a log near, and put an armful of grass for each to browse on as he choose. It was still early when the fire was wholly extinguished. Our blankets were then spread, and with Ponto, our trusted pointer, at our heads, and each with his gun and revolver on the ground at his side, we turned in.

But somehow I could'nt get asleep. The warnings we had received, the meeting with the Indian and the other incidents of the day, which also included riding over the fresh trail of a cinnamon bear a distance of three miles, all tended to banish slumber or keep me in a troubled doze.

Some time between 12 and 1 o'clock I was startled into wide wakefulness by what seemed the shout of an Indian or the scream of a panther. Rising instantly to my knees I grasped my rifle and strained my eyes to see if possible what dreadful calamity was upon us. I fully expected to see the flash of guns, hear the yells of hostile Indians and feel their cruel messengers of death, the bullet and knife. In the moments of terrible suspense, I keenly regretted that my passion for travel and sport had taken me so far away, exposing us to unnecessary dangers and perils. And then a feeling of great surprise followed. There was no shooting, no scalping, no rush of man or beast, nothing to indicate the cause of the noise and my alarm. Was it a dream? Was it unusual cerebral activity, attributable to disagreeable signs threatening appearances, or was it too much fried grouse and Sonora biscuit? No, for the dog was also alarmed and stood with raised mane on a prostrate log, sniffing the midnight air. The horses, too, were on the alert and the mule was trying to hide between them. There was something wrong, of that there could be no doubt. But what was strange, my brother had not wakened. He was fast asleep; his breath as soft as an infant's, though one hand was outside the blanket resting on his gun. A bird chirped in a lonely way in a bush near, the waves of Frazer River lapped and rippled monotonously, and a low wind moaned among the trees.

"Lew," said I, carefully, "wake up, there's something the matter."

"Is 't morning?" he asked, sleepily.

"Morning nothing! Indians or something. Keep quiet."

Then I explained, under my breath, and we both, on our knees, guns in hand, awaited the next demonstration. The suspense was fearful. I could have sworn that either Indians were about to murder us, or that a bloodthirsty animal was crouched near ready to spring. The situation was simply maddening. The wind whispered and muttered, and came over the grass and among the trees with increasing energy, the branches overhead swayed and murmured, and dry twigs snapped and fell, a dark cloud shut out the starlight, the boom of distant thunder fell on our ears, and then two dead limbs in tall contending pine trees by the river were moved violently, one across the resinous surface of the other, making a noise like forty fiddlers out of tune. That was all.

In less than two minutes the dog had curled himself up again by our heads, the horses became quiet, the mule shook his ears in relief, the bird went to sleep, and two quiet travelers were hastening to a beautiful land of dreams.

JEROME BURNETT.

FLORIDA ROUTES.

Editor Forest and Stream:

Old Boreas will soon tune his harp of a thousand strings, and sportsmen and tourists will wend their way to the American Italy—sunny Florida. In days gone by I have written so much regarding the fishing and shooting of the State, that I have but little to add. Railroads are being so rapidly built, and steamboat communication is being established to so many points, that I deem it best to briefly refer to the new lines of communication, in order that intending visitors may have something to guide them before they depart from their homes.

In the city of Jacksonville the owner of the Windsor Hotel has made an addition to that building of about three hundred feet. Under the management of Orvis, of Manchester, Vt, who is also the proprietor of the Putnam House, Palatka, visitors may rest assured that every attention will be paid them in the hotel of Florida. The owner of the Everett House, on the corner of Bay and Julia streets, has made an addition of nearly four hundred feet in length, and six stories high, rendering it the largest hotel in the South. It is constructed of brick and has a frontage of nearly eight hundred feet. This house is located near railroad depots and steamboat landings, and will be found admirably adapted to the wants of sportsmen and tourists. It will be under the management of Mr. J. M. Lee, and we can unhesitatingly recommend it to the favorable notice of the readers of the FOREST AND STREAM.

A large hotel has been erected at Rock Ledge, Indian River, and will be ready for the reception of visitors by Jan. 10, 1886. It will be under the management of J. M. Lee, of the Everett. A hotel of thirty rooms, known as the Cocoa Nut Grove House, has been opened at Lake Worth, south of the inlet. A hack line has been established from the southerly end of Indian River, and will run on the westerly side of the lake to a point opposite the hotel. Two commodious and seaworthy sharpies have been placed on the route between Jacksonville and Indian River, and they will make semi-monthly trips. Their cabin accommodations are comfortable and the captains will be found accommodating. A line of railroad from Enterprise to Sand Point, on Indian River, will be completed before Jan. 1, 1886. A seaworthy propeller (the Peerless), with good cabin accommodations, has been placed on the route between Jacksonville and New Smyrna, and will make two trips each week. The time from bar to bar will be about ten hours. A steamship of 300 tons burden will ply regularly during the winter between Jacksonville and Nassau, New Providence.

The J., T. & K. W. Railway will be completed from Jacksonville to Sandford by the latter part of December, and the time between Jacksonville and Tampa will be reduced to about twelve hours. At many points along the line on the Sandford & Tampa Railroad excellent black bass fishing will be found.

By the Florida Southern R. R. persons may leave Palatka after the arrival of the morning train from Jacksonville, and arrive in Tampa the same evening. Tampa can also be reached by train on the Florida Railroad and Navigation Company, passing through Waldo and Ocala.

My favorite Homosassa has been purchased by a rich syndicate, and at an early day a large hotel will be erected on the old plantation, and in addition a number of cottages will be built. The proprietors are gentlemen of wealth and influence and we are satisfied that they will center on the old plantation a refined and intelligent winter population. A railroad is being constructed from Ocala to Point Pinellas on Tampa Bay, passing within four miles of Homosassa. The estate, consisting of nearly six thousand acres, has been surveyed and lots will be for sale at an early day. We are of the opinion that the day is not far distant when the banks of the beautiful Homosassa will be studded with winter residences.

The steamer General Safford leaves Cedar Keys twice each week for Anclote, Tarpon Springs, Clearwater Harbor, Palma Sola and Manatee. Capt. Warner, of the yacht Mischief, is a resident of Palma Sola, and persons desirous of indulging in a cruise to the southward should secure his services. He is a good sailor and possesses a thorough knowledge of the coast. His yacht is able, cleanly, commodious and in every way adapted to the navigation of the bays, rivers and inlets. The staunch steamer Manatee leaves Tampa and Manatee each week for Hickory Bluff and Punta Rassa, on Charlotte Harbor, and Fort Myers, on the Calloosahatchie River. By this arrangement, rodsters will be enabled to reach the unrivaled fishing grounds of Charlotte Harbor. Last winter Spanish mackerel and bluefish collected in immense numbers at Big Gasparilla pass, affording unrivaled sport.

One of the greatest additions to Florida travel is the new steamship Mascotte of the Plant line. She has been constructed in the best possible manner, and all modern appliances and improvements have been adopted. She will attain a speed of seventeen miles an hour. She will accommodate seventy first and fifty second class passengers, and will make semi-weekly trips from Tampa to Key West and Havana, carrying the U. S. mail. The Mascotte is probably the most perfect steamship at present in existence, and an excursion trip on this vessel will be indulged in by many visitors to Florida. A company has been organized in the city of New York to establish a health city and large sanitarium on the Gulf coast, and thereby supply a much-needed want. At present invalids are compelled to accept such accommodations as hotels and boarding houses furnish. The institution will be under the charge of competent medical men, and every modern improvement and appliance for the treatment of invalids will be introduced. When I penned my letters for the FOREST AND STREAM in 1875 regarding the southwest coast of Florida it was almost a *terra incognita*, and I was ridiculed for my opinions and predictions. At present four railroads are stretching out their iron arms for the travel and traffic of that section; settlers are rushing in, hotels are being erected, and my favorite section is receiving its merited praise and notice.

The hotels and amusements of Jacksonville induce many persons to spend their winters in the city, especially those who are devotees of the "gentle art." The new, fast and comfortable steamboat Kate Spencer (mainly owned by your valued correspondent "Onondaga"), leaves this city daily at 3 P. M. for Mayport and Pilot Town at the mouth of the St. John's River. Fair accommodations for fishermen can be obtained at the points mentioned for $10 per week. Since the jetties have been constructed excellent sheepsheading and sea trout fishing can be enjoyed. A new railroad has been finished from Jacksonville to Pablo Beach on the Atlantic Ocean. The distance between the two points being sixteen miles, and the beach eight miles south of the mouth of the St. John's River. A large and first-class hotel is in course of construction at the beach, and will be finished at an early day. Trains leave the city for the beach twice daily, permitting persons to spend from three to eight hours near the ocean. Our old piscatorial friend, General Spinner, has made a canvas settlement at this point, and the ozonic atmosphere has limbered up his ancient joints and given him a new lease of life. For smoothness and width, Pablo Beach cannot be excelled by any point on the Atlantic coast. To those who suffer from dyspepsia, neurosthenia, anæmia, insomnia, and some forms of pulmonary disease, this sanitary resort will prove a boon. Owing to the absence of malaria, purity of water, an ample supply of ozone and the bracing effects of salt air, this will undoubtedly become a popular resort for invalids, and a pleasant place for tourists to spend a few days or weeks. AL FRESCO.

JACKSONVILLE, Fla., Dec. 1, 1885.

"Nessmuk" writes us as follows in regard to the boats to be had on the west coast of Florida: "I have several letters from parties who contemplate a winter cruise on the Gulf coast, and wish to know just what can be done in the way of hiring an available boat with a competent captain, the boat to be large enough for parties of four to six persons. There are four such craft here that can be hired for a cruise up or down the coast, or to Lake Okechobee and other points. The Vanessa, a fine centerboard yacht, draft three feet. Good for a party of five. Address J. M. Vinson, Tarpon Springs, Fla. The Tantalus, an able, light draft sloop, will give cumfortable quarters for a party of six. Address J. Boyer, as above. The Tantalus was built expressly for coast cruising. The Grover Cleveland, sharpie, with cockpit and awning. Good for a party of three or four. Address as above, Capt. Edmondson. Her skipper is guide for this coast. The Nessmuk, sharpie, yawl rig. Flush below from eyes to counter, giving abundant room for six. She will be in charge of Capt. Kendall, who is an able sailor and a guide for the Lake Okechobee region. Address Merrick Whitcomb for terms. There are other and smaller sailing craft that are held for hire. But the four named above are the only ones large enough to rate by tonnage.—NESSMUK.

MR. D. C. BERGUNDTHAL.—Indianapolis, Dec. 6.—It is my painful duty to inform you that your old friend, Mr. Bergundthal, has met with a very serious accident, which will deprive him of the use of his eyesight for some time. The full particulars of the same you can gather from the inclosed account: "The host of friends of Mr. David C. Bergundthal, the well-known sportsman, will learn with great regret that he met with a mishap on Thursday, which may result in the loss of both his eyes. In company with his friend, Dr. Larrimore, Mr. Bergundthal was quail hunting near Freeport. The two became separated while hunting in the brush, and neither was aware of the close proximity of the other. Dr. Larrimore flushed a covey of quail, and ignorant of the fact that his comrade was directly in range of his gun, shot at one of the birds. Six shot struck Mr. B. in the face, one entering each eye. He was brought to his home in this city, No. 483 North Illinois street, and is doing as well as can be expected. The doctors say his eyesight may be saved, but he is extremely liable to become totally blind as the result of the mishap. Mr. Bergundthal is one of the most popular sportsmen in the country, and is widely known to lovers of the sport in all parts of the United States." It is a sad calamity to his family and friends, and we can only hope for the most favorable results possible under the circumstances.—E. J. HAYES.

AS I HAVE about exhausted my favorite topics I think I shall in great degree lay down my pen and content myself with perusal of the sporting experiences of a younger generation. I can truly say that FOREST AND STREAM is "perfectly splendid" under its present management, and I do not find in other literary journals such fine writing, such entertaining matter, such interesting narrations as I always get in the FOREST AND STREAM.—ISAAC MCLELLAN (Greenport, L. I., Nov. 27, 1885).

CAPTURE OF A SEA DEVIL.

THE fish known in different localities as sea devil, giant ray and ocean vampire (*Cephaloptera vampirus*), names each of which has a certain appropriateness, is, I think, not very familiar to those cruising in Southern waters, though they may occasionally get a glimpse of it at a distance.

In the month of April last a small company of us chartered the schooner Vision, owned by the Webbs, at Osprey, on the Gulf coast of Florida, for a month's cruise among the keys of Charlotte harbor. The party consisted of Mr. E. R. Marsh and wife, of Colarado; Mr. G. W. Acton, of Dublin, Ireland, and your present correspondent, from Massachusetts. The management of the schooner was intrusted to Capt. Frank Guptill, a skillful sailor, hunter and fisherman, while his wife presided with equal ability over the cookery department. We had spent about two weeks on the waters and shores of the harbor, and of some of the larger streams emptying into it; shooting deer and turkeys in the neighboring forests; collecting specimens, and studying the habits of many Florida birds; capturing fishes of more kinds than I can now tell, including among them the famous tarpum, beautiful as a rainbow and swift as a thunderbolt; also the huge sawfish, a kind of shark-like fellow, whose teeth, by some mistake, appear to have located themselves upon each side of his long nose rather than in the jaws. We had experimented, too, with a small harpoon I had devised for use in these shoal waters, and found it to do its work in the most satisfactory manner.

Cruising slowly southward, with many stops and some incidents of unusual interest, we one night cast anchor in Wyville Bay. This is a small, nearly circular sheet of salt water some two or three miles in diameter, lying entirely within the southeastern end of Sanibel Key. This is a wonderfully secluded place. One might sail by within a half-mile nor imagine its existence, so completely is it shut in by surrounding forests. A narrow, tortuous channel affords entrance to vessels of light draught only. Nowhere within the bay is the water, as I think, more than eight or ten feet deep. During the night nothing occurred to indicate the presence of any very large or unusual creatures in our neighborhood, save that, from time to time, lines of phosphorescent water showed us where some shark or other fish was roaming around in search of food. The next morning, while lounging upon deck, but with that constant watch which every lover of nature keeps in new places, that they may not miss any possible discovery, I saw, at quite a distance, something lift itself above the surface of the water, having nearly the form of the dorsal fin of a shark, but of such gigantic proportions I could think only of those monsters whose huge remains are now found in the fossil beds about Charleston, S. C. I called Mr. Marsh's attention to it and found that his judgment concerning its size was like my own. It very soon disappeared, and I should have thought no more about it had not subsequent events convinced me that it was not the fin of a shark, but part of quite a different fish.

It was not long after this that we were startled by the report of a rifle, followed by a loud halloo. Looking in the direction from which the sound came we saw the Captain, who, with Mr. Acton, had been ashore, now far across the bay, standing in his boat and beckoning us to come. It was the work of seconds only to seize a harpoon and line, leap into a little boat standing alongside, and, with Mr. Marsh at the oars, start on a voyage of discovery. On reaching the Captain he told us a sea devil was in the bay and where he had last seen it. My friend plied the oars with a will, while I, having arranged my harpoon and coil of line, stood at the bows, watching intently for some sign of the strange creature I was so anxious to find. I had not long to wait before I discovered a dark mass, only a little way under the water, steadily gliding on before us. Directing the oarsman by the words "right," "left," "right," etc., as the course of the fish changed, we at last succeeded in getting so near that I thought him within casting distance. Lifting the harpoon into the air, holding it poised for an instant, while calculating distance, the effect of refraction and the force required, I sent it swiftly down. A single second was sufficient to show the effect of the cast. First the great creature lifted his great flippers from the water with a motion that threw bucketfuls of brine over my head, drenching me to the skin; then the line began to disappear rapidly over the gunwale of the boat. The harpoon, as we afterward found, anchored itself well into the muscles near the median line, well back toward the tail.

Now began a most novel and interesting race. By gradually checking the outflow of the line, the boat was soon brought into motion, and we were driving one in hand at a high rate of speed. Backward and forward went the monster, sometimes faster and sometimes slower, turning abruptly upon his course, then speeding on again, in a vain endeavor to get rid of his pursuers, but wherever he went we followed. It soon becoming evident that he could not be tired out, we sent to the schooner for a lance, with which to end the fight, and in the meantime continued our exploration of the bay under the guidance of the vampire. On the return of the captain with the lance I transferred Mr. Marsh to the other boat, to assist the captain in heading off the fish and stabbing him as he came up. This effort proved a failure. His speed was too great to be circumvented in this way. When he found his load somewhat lighter he put on a new burst, and gave me such a ride as I never expect to have again. At times the little dingy stood nearly on end, while lines of foam streamed away backward from either side. But I will not detain your readers with the details of the chase, nor describe the manner in which I contrived to prevent his carrying out an evident design to tow me out of the bay into the deep water of the harbor, where he would inevitably be lost to us. How long this race was kept up I do not know, but think it must have been some two or three hours. Eventually, watching my opportunity, I took Mr. Marsh aboard, with the lance, and drawing up to the monster, a few well directed thrusts by him ended the struggle.

We now began to understand, for the first time, what a huge fish we had been following. Finding that we could not lift him from the bottom, the schooner was brought alongside, and purchases were rigged, first to one mast and afterward to both, and when all the force was applied we thought safe, we succeeded in getting not more than a third of the body out of water. However, by changing the points of attachment, we succeeded in making measurements and noting various interesting peculiarities of structure. The shape of the fish is much like that of the smaller rays—a flat disk, somewhat broader than long. He has no fins, but uses the extended edges of the body as means of propulsion, somewhat as the bat uses its wings; hence, I suppose, the name vampire. The tail, once, in the remote ages, like the tail of an ordinary fish, for want of use, has gradually dropped away, until now there is only left the lower ray; the scar from which the others have fallen is still visible. This ray was five feet in length and slender as a whip-stick, a ludicrous appendage to such a monster. The measurement from side to side was twenty feet, the length about eighteen feet. We had no means of determining its weight. The authorities say such a vampire weighs from three to four tons.

The head was the part of greatest interest. The mouth presented an oval opening of perfect regularity, three feet by one foot; it was beautifully white and smooth inside and without the least trace of a tooth. At each angle of the mouth were strange, nondescript, fleshy protuberances, about eighteen inches long and standing out obliquely appearing to have the object of aiding the fish in gathering its food. I suppose he feeds upon small organisms of some kind, and when swimming rapidly in the tideways is able, by means of these organs, to direct into his mouth a larger amount of food than he could otherwise do.

The gills are a marvel of beauty and skillful workmanship. The gill structures are six in number; three on each side, about two feet long and six inches wide. They are furnished with about fifty pockets each, opening inwardly, but closed on the outside by a most delicately wrought network of little arches, studded with points, and fitting so closely that the animal must be able to strain from the water which it forces through them everything except that which is fairly microscopic. No description, without elaborate drawings, can give an adequate picture of the extreme beauty and delicacy of these structures. I have now a part of one of these gill structures and the tail as trophies. It was much to be regretted that we had not time to take the skin for preservation in some museum of sea monsters. I think there are very few such specimens. I should be very glad if any of your correspondents who have encountered these fishes would tell us about their experience and give us any discoveries of interest they may have made.

WRENTHAM, Mass.

BIRDS AND BONNETS.

THERE is only one way in which the slaughter of song birds for millinery purposes can be stopped; that is to create a sentiment among women which shall lead them to discountenance the destruction of songsters for bonnet adornment. The following extracts from a letter written from Smith College to the Waterville *Times*, by a sister of Dr. C. Hart Merriam, contain some pertinent suggestions, which ought to appeal to every lady who may read them. There is more to be said; and it is an encouraging sign of the times that such words as these should have come from a lady's pen:

"Foremost in the circle of lives among which we move is that of the bird-world. In the spring the happy songsters come flocking back from the south, driving away the wintry thoughts that oppressed us, and preparing the way for the gladness of the spring. All summer long they cheer us with their songs, and in the fall when some of them go back to the south, their places are taken by those who know best how to brighten us, and make the snow look less wintry, and the cold feel less bitter.

"This beautiful bird-world is always about us, or rather, we are always in its midst, and, absorbed in our own thoughts and feelings, often pass along and think nothing of it. But we do more than this. We wrong the bird-world more actively, and though thoughtlessly, it is no less a wrong.

"Probably there is not one of us who has not aided and abetted the extermination of entire species of birds for the gratifications of our personal vanity. At first sight this seems rather a startling statement, but it is literally true, and its significance is graver than it appears. To ignore the bird life about us is bad enough, but that is our own loss. But to d[illegible] our moral susceptibilities to such an extent, that we are utterly insensible to the loss of life that we are occasioning—to the wholesale slaughter of the exquisite winged life of the little songster that does so much to make our world happier and brighter—that is not only belying our better natures, but is ignoring the relations that we bear the rest of the world with which we live, and inflicting cruel wrong on a life that it should be our tender care to protect. * * * * *

Every time that we buy a wing or head, and part of what once helda happy bird's life, in order to add to our own attractiveness, we are not only committing a crime against the bird-world, not only violating our own best natures, but we are retarding the progress of civilization by an act of barbarity.

It is asked why the game laws do not protect the birds and reduce this wholesale slaughter, this extinction of species which, perhaps, it would be better to leave alive, to the destruction of a few millions of birds—an insignificant trifle when we consider the paramount importance of birds as decorators, to their utility as songsters, beautifiers and brighteners of this utilitarian world where such considerations are unimportant. Why are there no laws? First and foremost because every man knows too well the disapprobation he would meet from his wife and daughters if he were to attempt any such act of humanity. First and foremost because he shrinks from offending the delicate sensibilities of those who must have their feathers and finery, you know. No, it is not for man to make laws; it is for women to awake to a realization of the gravity of the case and make these laws possible. For such cruelty, such immorality—for it is nothing less—is due to a great measure to thoughtlessness. We have become hardened to the use of birds for millinery purposes, and think no more of buying the wing that once helped its owner to fly with light-hearted gladness up toward the blue sky, or the throat that used to tremble with exquisite song; we think no more of putting down our money (in this case such a bitter sarcasm on our vaunted civilization) and taking away the dead remnants of these little lives to wear on our hats, shamelessly before the face of the world, to make us look more attractive; we think no more of this than of buying a piece of machine-pressed paper. With such a state of public opinion, laws, if made, would be worse than useless. The birds' lives are in our own hands—it is for us to awake to the true nature of our responsibility—it is for us to make those laws possible—as with the Roman ladies of the circus, we have but to raise our hands and the doom will be averted, and the earth will resound with the glad songs of the rescued bird-world. It is for us to make the laws possible, it is for each one of us, as we value true sentiment above personal vanity, as we love everything that is beautiful and good, and hate cruelty and selfish vanity—it is for each one of us to resolve that never, through our agency, to gratify vanity or respond to the demands of a cruel fashion, will another song be silenced, another glad life be cut short."

A PET DEER ON THE RAMPAGE.—New York, Dec. 4.—*Editor Forest and Stream:* A press dispatch in yesterday's papers reads: "Denver, Col., Dec. 2.—A strange and what threatened to be quite a serious incident occurred in the city of Gunnison last evening. As Mrs. Robert Harris and Mrs. E. W. Eastman were taking a walk near the western edge of the town with a baby carriage containing an infant and a child three or four years old, they encountered a pet deer, which immediately showed a disposition to fight. The mother grabbed her child from the carriage just as the deer fastened his horns in the wheels and sent the vehicle over his head. Rushing upon the woman with the infant, he gave them a similar toss, landing them in the brush near the roadside considerably bruised. While the other woman was endeavoring to avoid his sharp horns a young man rushed to her rescue with a dog, but the angry beast settled the dog with one thrust, and then sprang upon the young man, who fired two ineffectual shots from his revolver, which only seemed to increase the deer's anger. He sprang upon the man and thrust one of his antlers through his thigh, inflicting an ugly wound, and as he stood over his prostrate victim a second man, who had been attracted to the scene, killed the animal with a double-barreled shotgun. The injuries of the women are not serious." Do you not think that is rather an exaggerated account? I know from experience that a wild deer would never cut up in the manner this tame one appears to have done, and I write to ask you if a pet deer is more dangerous than a wild one?—S. A. [Bucks, both wild and in captivity, are liable at certain seasons to develop such savage dispositions. Many instances are on record. It has sometimes been necessary to kill captive deer because of their ugliness. We know of at least one authentic instance of a man having been killed by a wild deer; and on another occasion if an infuriated buck had carried out his programme the FOREST AND STREAM readers would never have heard of one "Nessmuk."]

ANSER HUTCHINSI.—Cleveland, Nov. 11.—On the market to-day I saw for sale four geese that attracted my attention on account of their small size and resemblance to the big wild Canada goose. On close observation I found them to be the rare *Anser hutchinsi*, first mentioned by Dr Richardson in his "Fauna Americanica Borealis." The Doctor says: "This bird is common about Hudson's Bay, and breeds there in numbers. At first it was taken for a brant or an emaciated Canada goose." Wilson and Audubon never saw the bird. The latter described it in his ornithology from a skin procured by Sir John Clark Ross, who discovered the magnetic pole, and carried the skin, after he and the crew and his uncle, Sir John Ross, quit their ships at Felix Harbor, Boothia Bay and Boothia, for fifteen months before they were rescued by the whale ship Isabella. There is a mounted specimen of the *Anser hutchinsi* in the Kirtland Society rooms. It was shot by Dr. Morgan, of New London, Conn., at the upper end of Sandusky Bay, Nov. 20, 1842.—DR. E. STERLING.

THE OWL IN THE CHERRY TREE.—From an out-of-door paper by John Burroughs, in the December *Century*, we quote the following: "The great bugaboo of the birds is the owl. The owl snatches them from off their roosts at night, and gobbles up their eggs and young in their nests. He is a veritable ogre to them, and his presence fills them with consternation and alarm. One season, to protect my early cherries, I placed a large stuffed owl amid the branches of the tree. Such a racket as there instantly begat about my grounds is not pleasant to think upon! The orioles and robins fairly 'shricked out their affright.' The news instantly spread in every direction, and apparently every bird in town came to see the owl in the cherry tree, and every bird took a cherry, so that I lost more fruit than if I had left the owl indoors. With craning necks and horrified looks the birds would alight upon the branches, and between their screams would snatch off a cherry, as if the act was some relief to their outraged feelings."

MISSISSIPPI DISRUPTED BY ENGLISH SPARROWS.—A newspaper report tells that the sparrows that have built their nests, grown and multiplied in the New Orleans Exposition buildings during the summer, are getting to be a source of much annoyance. They are, in fact, intolerable nuisances, and a case in point happened on Friday which wrought much discomfort to the commissioner from Mississippi. The commissioner had spent a great deal of time and artistic labor to arrange a certain quantity of grain and seed so as to spell the name "Mississippi." When completed it was a beautiful sight, but during a brief and unfortunate absence of the commissioner the sparrows swooped down upon "Mississippi" and played sad havoc with its component parts. When the commissioner returned he could not, for a million dollars, spell out what remained of his State. As a consequence the cry is "The sparrows must go," but how and where will they go is the question.

THE SWAN WITH THE COPPER ARROW.—Cleveland, Nov. 23.—In Frederick Schwatka's "Nimrods of the North," page 107, we read: "I found the Eskimo of King William Land and vicinity using copper stripped from Sir John Franklin's ships to rivet their bows together." Some time ago FOREST AND STREAM illustrated a wild swan with a copper arrow head in its wing that had been carried by the bird for at least one migratory season. The copper from which the arrow point was made being of manufactured origin, the idea was that the metal was found alongside of one of the ships, Erebus and Terror, left northwest of King William's Land by the heroic crew of Sir John Franklin —DR. E. STERLING.

A VIS MEDICATRIX NATURÆ.—Nov. 23.—Truth stranger than fiction. Several years ago two of our local sportsmen were gunning near the village, when a grouse was flushed and killed by one of them. Upon examining the bird it was found that a stick about the size of a pipestem had penetrated its breast, passing entirely through the bird and protruding from its breast and back nearly an inch. It must have carried the stick some time, as the wound was partially healed.—L. B. (Dansville, N. Y.)

EIDER DUCK IN MICHIGAN.—*Editor Forest and Stream:* On Tuesday last I received from Monroe, Michigan, a young female eider duck, which was shot on the marshes of Lake Erie, near that place. The bird was shot on Thursday, Nov. 12, 1885. It was in fair condition and proved, on dissection, to be a female. Is not this the first record for Michigan or Lake Erie? Being a typical sea duck its occurrence so far inland is worthy of note.—R. B. LAWRENCE.

Game Bag and Gun.

A VAGABOND DOG.

DURING the year 1883 I happened to be residing in the island of Antigua, in charge of a small sugar plantation situated some eighteen miles in the interior and surrounded by waste lands, or "savannahs," as they are termed in that part of the world. The island, though very fertile in general, is so broken in its topography in some districts as to render the cultivation of the sugar cane impossible, even if the soil were sufficiently productive to reward the planter for the trouble and outlay necessary to clear away the heavy undergrowth of cactus and brushwood, which is, in many places, impenetrable. The term "savannah," curiously enough, embraces the small hills interspersed through the lowlands as well as the latter, and these districts are inhabited by an occasional "squatter" negro family who prefer the precarious living they pick up to more remunerative, but harder, work on the plantations.

One evening, the day's work concluded, I was sitting on the small verandah of my house, enjoying the rest so satisfactory after being in the saddle from early morning, when I observed my night-watch, accompanied by another negro, approaching the house, while they conversed with the loud voice and extravagance of gesture peculiar to them. Upon their arrival the stranger turned out to be a deputation of one from a village about four miles away, sent by the villagers to beg the "backra" (white man) to be good enough to come with his gun at his earliest convenience and rid their neighborhood of a "wild dog," whose depredations were threatening to clean the village of all live stock small enough to succumb to his rapacity.

This *bete noir* (for by all accounts he was black) had been seen by many, and always at night, and had several times been obliged to relinquish his ill gotten spoil and seek safety in precipitate flight, himself the center of a storm of stones, bill-hooks and other missiles sent after him by an infuriated and yelling populace. So manifold had been his escapes, so marvellously had he survived the numerous ambuscades laid for him, that by the majority of the superstitious negroes he was at last regarded as savoring strongly of the supernatual, a being closely allied to "jumbies" (a ghoulish order of departed evil-doers, firmly believed in by the West Indian darky) and hence impervious to their attempts at extermination. His immense size enabled him to overcome sheep and even large calves easily, and it was of common occurrence for an irate proprietor to find half a dozen sheep dead in their fold, the canine epicure having glutted himself on the blood and gnawed choice morsels from each of his victims. On the occasion on which he had fully established his supernatural reputation, the villagers had hemmed him in a corner and poured their missiles on him until it seemed a wonder that he survived "to tell the tale," but he had escaped by a desperate rush, overturning in his flight the patriarch of the village, who, on recovering his feet, had declared with great solemnity and much concern as to his bruises, that "dat darg no darg, him sperrit." This opinion, pronounced by an oracle among them, became the universal verdict, and by his further advice the present deputation had been despatched to me for assistance, "jumbies" being considered vulnerable to white men. The messenger wound up by declaring that "de darg was jumby, bekase he black, ebryting black no good," a rather singular theory considering the sable hue of his own skin. I comforted him with assurances of help and a glass of grog, and sent him away rejoicing.

Several instances of wild dogs, as they are called, had previously come to my notice, and investigation had confirmed my opinion as to their being the degenerate descendants of domestic animals which had taken to the bush from some cause, very possible ill-treatment consequent upon an act of depredation, and being "under the ban," had been hunted from every dwelling, and forced eventually to take up their residences in the waste "savannah" lands, and live upon the proceeds of their nocturnal prowlings, returning to their haunts at the approach of day. These instances were few, however, and I had never heard of one where the large size and unexampled boldness of the vagrant canine had led to such serious loss of property as in this case.

Next evening, together with a brother planter, summoned to aid in the killing, I rode across four miles of country to the village. We were greeted with acclamations, and inquiries adduced the information that Sam Thomas had last seen the dog. Sam, upon being cross-examined, stated how he had come suddenly upon the animal at an early hour that morning, while on his way to his yam patch, and, cutlass in hand, had advanced upon him. Now, Sam was regarded as the dare-devil of the village, but the lonely path, the still hour, and the uncanny reputation and appearance of the dog acted unpleasantly on his nerves, so that when, instead of retreating, the beast stood its ground and snarlingly displayed a row of yellow, gleaming fangs as a welcome to the advancing negro, that worthy had betaken himself to the back path with utmost celerity, never halting until he had gained the village and the refuge of his own shanty, breathlessly declaring that he had seen and encountered "de debbil w'at tief de sheep." We also gleaned that the dog usually postponed his predatory sallies on the village until a late hour, we therefore had ample time for our preparations. These consisted of a young sheep and a light chain with stake attached, procured from the aforesaid patriarch (somewhat grudgingly given), and at about 10 o'clock, with these and our guns, we proceeded to the outskirts of the village, having sternly cautioned the excited crowd of negros to remain quietly in their houses. We took our stations behind a thick clump of acacia and cactus, after staking out the unfortunate bait about ten yards from this stand, and with guns cocked settled ourselves to wait patiently.

Slowly the hours dragged on, the night radiant with the brilliant moonlight, and filled with the chirping and whistling of countless nocturnal insects and the hoarse bass rolling of huge frogs down in the ravine below us. The monotonous bleating of the lamb eventually acted on me so that I must have fallen into a doze, for I had an impression after a time, as of some one persistently trying to bore into my forehead with a pin. When I opened my eyes, I found that being close to the prickly screen in front of me, my head had fallen forward gradually against a leaf of cactus, one of the long spines running through my soft felt hat and at the same time a murmured execration alongside came from my friend, who incautiously shifting his seat, had come down upon some of the same spines. Just as I was endeavoring to stifle the laughter caused by this example of "misplaced confidence," I saw something which quickly centered my attention. About thirty yards away, a little to the left of us, there suddenly emerged from out of a ravine an object darker than the shadowed background of hillside behind it, which, advancing into the clear moonlight, developed gradually into a huge black dog, sneaking toward the lamb with dire intent evinced in his gliding motion and sinister gleaming eyes. Slowly he advanced, and when but a couple of yards from the lamb (which had now ceased its cries and stood trembling with terror) at a whispered "now!" from my friend, our guns sent two charges of buckshot right at the breast of the beast. A loud howl and he rolled over and over, kicking the dust about in his frantic struggles to regain his legs and flee, while we hastened out of cover to end his miseries. But here an unsuspected and ludicrous circumstance interfered.

It seems that Sam Thomas, with a dozen of his friends and admirers, had followed us secretly to the scene of action, and carefully secreted themselves at our rear among the bushes. Here most of them had fallen asleep, but the indomitable Sam had kept awake, fully resolved to rebuild his shattered reputation for courage by some brilliant deed that would stimulate the waning respect of the villagers and restore him his former precedence for fearlessness. Accordingly, as we sprang from cover, Sam and his friends simultaneously appeared, and Sam, whooping wildly, rushed upon the wounded beast with raised cutlass, to finish him. But when under full impetus he tripped over the chain with which the frightened lamb was now rapidly describing a circle, and pitching flat on his face, rolled right on to the furious animal. For a couple of seconds we could not distinguish Sam from the dog, and thought was impossible in the atmosphere of screams and howls around us; but suddenly the negro separated himself from the dog, yelling lustily and half mad with fright, and continuing his revolutions with the speed of a trained acrobat, never stopped until he had placed some dozen yards between himself and his enemy, when he limped away groaning in a terrible manner. My friend lay upon the ground, kicking and shouting with uncontrollable laughter, and I hastened to send a quietus into the dog. By this time the entire village had turned out to inspect their conquered foe, and in the nearest house we examined Sam. The only injury he had received was a severe bite on the foot, which had nearly severed the great and second toes from that member, and a hastily summoned doctor completed the amputation How on earth the dog got hold of him there puzzled me, but Sam explained the mystery by stating that, when on his back, he "kick' at de debbil beas' an' he nyam [eat] me toe."

The dog was a huge, gaunt, mangy hound, black as night and villainous of aspect even though dead, his hide bearing innumerable scars, souvenirs suggestive of rapid flights through the razor-like cactus under fire of raining missiles. One eye was out, and the loss by no means tended to lessen the furtively ferocious style of his beauty—a sadly demoralized specimen of man's noblest companion. The rejoicing of the negroes was kept up for hours after, and a vote of thanks was tendered us through their mouthpiece, the patriarch, who concluded his oration by saying: "We berry glad de darg dead, and me more gladder de lamb not dead too." The old sinner!

DON JUAN.

THE ADIRONDACK DEER.

Editor Forest and Stream:

The season for deer hunting in this State closed yesterday, and a brief summary of the season's sport in the Adirondack region may not be out of place at this time. In Lewis, Herkimer and Fulton counties and the western part of Hamilton county, the portion of the wilderness most frequented by Central New York sportsmen, the hunting has generally been fair, though perhaps not quite as good as last year. In the northern part of the woods game has been comparatively scarce, while in Essex and the northern and eastern portions of Hamilton county it has been plentiful. In the Lake Pleasant country an Albany party killed twelve deer in eight days, besides securing a large quantity of smaller game. The hunting in the vicinity of Big and Little Tupper lakes has been very good, as it also has been at and near Schroon Lake. Quite a number of deer have been killed at Piseco Lake this season, and near Moorhouseville many have been taken. At South and Jock's lakes the hunting has been fair, and at the Fulton Chain and in the Beaver River region the season has been nearly, if not quite, up to the average. The hunting at the Bisby Lakes and on Moose River has been very poor, as is shown by the record of the Bisby Club. During the open season last year twenty-three deer were killed by members of the club on the south branch of Moose River, whereas this year but six were killed.

There have been more hunters in the woods than ever before in one season, and as a natural sequence the number of deer killed has been very large. On the whole, however, deer are said to be less numerous than last year, and experienced woodsmen attribute this fact to the great havoc among the animals by the hunters and their hounds during the past two years.

Complaints are continually coming in concerning the inroads made on the deer by the pot-hunters or men who hunt deer solely for the money there is in it. Heretofore the men who have supplied the market with venison have generally hunted with dogs, but since the passage of the act making the practice unlawful, other measures have been adopted by many, although some of them openly defy the law and cling to their hounds. As a rule it requires long experience to successfully still-hunt deer, and the pot-hunter rarely has the patience or disposition to depend on this method. Other more certain and speedy means of capturing the animals are resorted to. In many parts of the woods salt licks are constructed, and the deer thus attracted are shot down in large numbers. This is a violation of the law, but is not as noisy a mode of hunting as hounding, and can be practiced with comparative impunity.

A party of four hunters from Pennsylvania recently encamped on the West Canada Creek, near the outlet of Jock's Lake, and have since thoroughly canvassed the Metcalf, Indian River and other valleys in search of deer. One of the party owns a pointer dog, which has been trained to follow the track of a deer. The dog is kept in leash, but takes the scent and follows the trail as steadily as the best trained hound. The hunter brings up the rear, and when approaching a deer is warned of its presence by the actions of the dog, which stands or points the game when ten rods distant. The Pennsylvanians have thus far killed over fifty deer, all of which have been shipped to market. The hunters who seek to evade the law in this manner claim that the anti deer hounding act does not cover their mode of hunting. The law says, however, that "no person shall hunt or pursue any wild deer in this State with any dog," etc.; and if the act were framed especially to prevent this manner of hunting, it is difficult to see how it could have been more strongly worded. It certainly affords sufficient excuse for a prosecution, and State Game Agent Phelps will doubtless make a test case of the Pennsylvanians. He has gone into the woods to look the matter up.

The law making it unlawful to hunt deer with dogs has been in force so short a time that it is impossible to judge accurately of its effects. There is, however, every reason to believe that, were it properly enforced, it would prove a great protection to the deer and prevent the extermination which has been so seriously threatened of late years.

In Franklin and Hamilton counties the anti-hounding law has been practically a dead letter, and in some parts of Herkimer county it has been but little better. In the counties of Clinton, Essex and Warren, however, the law has been well observed and productive of much good. The rule appears to hold good that in sparsely populated districts the law cannot be enforced, while in the more settled portions of the country it is quite generally observed.

State Fish Commissioner R. U. Sherman, of New Hartford, to whom all the protectors report, says that in order to have the laws enforced the number of protectors will have to be materially increased. He is of the opinion that it would be wise to have the shooting season for deer begin Aug. 1 and close Oct. 15.

UTICA, New York, Dec. 1.

Editor Forest and Stream:

In your issue of the 26th ult. I notice an article headed "Pot-hunters in the Woods," which goes on to say that Hamilton county (it is thought) is being plagued by some two hundred vagabond Pennsylvania pot-hunters. I also notice an article in the Boonville *Herald* of recent date stating that one Williams, from Pennsylvania, had during last month, by the aid of a still-hunting dog, killed and shipped from the Moose River country thirty-six deer. "That more deer were being shipped from the woods by still-hunters than had been killed for years previous by all other methods combined." If the above assertions were true there would be little use of replying to them. But as they are far from the truth and given circulation for certain objects only, I deem it but just a true state of affairs be presented.

I have just returned from a six-weeks' camp-out in Herkimer county, and during that time saw, conversed with and heard from a good portion of the hunters, guides and hotel men in the Beaver and Moose River country. The total number of deer killed on the former river during last open season by still-hunters does not exceed fifty. The law regarding hounding was faithfully lived up to. Not one sound of any hound in pursuit of deer did I hear. Every one seemed to rejoice that the time had come when a deer could venture forth unmolested by the baying of hounds to its once favorite haunts. During the open season of 1884 it was acknowledged by competent judges that at least two hundred deer were slaughtered and taken from the same locality.

The Moose River country it seems has not fared so well, the law being but partially lived up to, owing in part presumably to the bad advice given by this same Boonville paper. Two hundred Pennsylvania pot-hunters, with one hundred native still-hunters, fifty hounders and twenty-five floaters have succeeded in capturing some seventy-five or one hundred deer. Just where the profits accrue in this transaction is left for some one else to figure out.

But is it true that two hundred, one hundred, or even ten still-hunters from the State of Pennsylvania have the past fall been hunting in Hamilton county? I think not. Mr. Williams, of Corydon, Pa., accompanied by three of his friends, went out into Hamilton county the 29th day of October last, the former took no dog of any kind with him, but the latter took with them three trained bear dogs, which, however, were not out from camp during their stay, as no signs of bruin were observed. The party killed during last month thirty-four deer. Mr. Williams bringing to bag thirty-one of the number. No salt licks were made or watched by any of the party. Had Mr. Williams during the month succeeded in capturing only a deer or two, then the exploits of Pennsylvania hunters would have passed unnoticed. But because another Dr. Carver has been exhibiting his skill in shooting deer on the run instead of glass balls thrown from the trap, comes all the bluster and nonsense about the still-hunters now speedily going to annihilate the deer.

It is a fact well known by all hunters and others who care to search the records, that the still-hunter does not kill on the average to exceed one deer to the man per season. Not one-half of the number going into the woods succeed in bagging even one. Now, because one sportsman from the State of Pennsylvania has been found (and I affirm that he is one out of at least five hundred) that can average his deer per day while in the woods, shall the other four hundred and ninety-nine sportsmen be debarred from taking a few days' recreation? or because of this single instance shall the dogs be let loose again?

I am happy to learn that some of our sticklers for hounding are becoming convinced that it is not so easy to sly up to a deer unaided by dogs and shoot it as they imagined. One gentleman of note in Lewis county has always insisted that it was no trick at all for a hunter to sneak up to a deer and shoot it unawares; that it gave the deer no chance for its life. Well, he went into camp last month north of Beaver Lake, where game was plenty, and after sneaking around on track, ridge-hunting on the leaves, and all other modes that he could conjure up, for two weeks, left for home a much wiser man than before and with a blank to represent his score on bagging deer by still-hunting.

Let the present game law stand as it is and every one live up to its requirements, and my opinion is that within five years deer all through the Adirondack woods will more than treble in numbers. Those impenetrable spruce and balsam swamps, rocky heights, dark and almost inaccessible gorges, with uplands interspersed with dead and fallen spruce timber, tripshin and dry brush, form a barrier that protects the game so completely from the ordinary still-hunter, that it cannot be depleted by that mode of hunting. But the dog can pursue, follow out, and drive to water in weather wet or dry, warm or cold, still or noisy, over rough ground or on a plain—it's all the same, extermination follows his path.

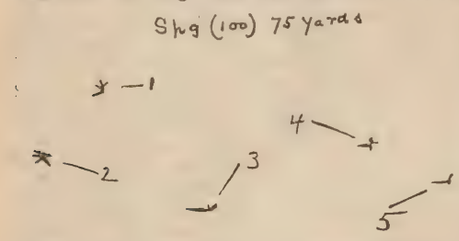
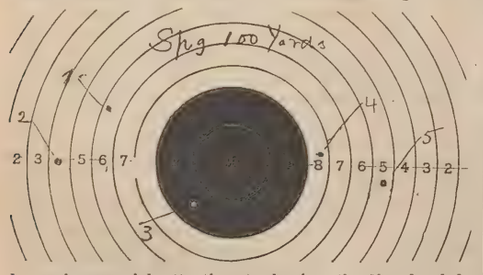
"Forest and Stream" Trajectory Test.

(*Continued from page* 367.)



THE exact manner in which the tests were made, and the subsequent calculations to get at the tables published may be best and most clearly explained by taking the following illustrations of one set of screens with the accompanying target, and showing by them the method of working down the results into their published form The Springfield rifle may be taken since this shows bullet marks on the target above and below the center line. First of all it should be understood that the weapon was fitted to the rest and special attention paid to having it level across the piece, that is, having the sights in a vertical line above the center of the bore. Then it was sighted on the target and a shot fired.



The position of the hit was noted, the bullet hole stopped with a patch and a second shot fired to get the arm bearing well toward the bullseye. In the case of this particular rifle the first trial shot struck rather high to the left, the second was in good elevation, just to the left edge of the bull. All was now ready for measurements, and a plug fitting the bore was put in the muzzle, a pin in the center of

this plug of course gave the center of the bore at the muzzle. The distance in a plumb line from this pin to the 100-yard stake set by the surveyor was then taken by Mr. Sinclair with a Brown & Sharpe improved vernier caliper having a steel rod with points tempered and jaws ground, and capable of measuring with unerring accuracy to the thousandth part of an inch. This height was recorded in the note book.

Upon a notched stick the same distance was given as close as a carpenter generally measures, and with a spirit level the carpenter assistant set out to set up the screens on the 25, 50 and 75 yard posts respectively. Upon each of the screens already stretched and dry was drawn with a right-line pen a fine ink line at right angles to the frame. This line was set about the same level as the gun muz-
